WOMAN'S POWER.
IT SHAPES THE DESTINIES OF MEN.

When Men are at their best, when they are fully developed and at the peak of their strength and power, they are able to take on tasks that are beyond the ability of women. This is because men are capable of working for long periods of time without becoming tired, and they are able to work in a variety of environments. Women, on the other hand, are more likely to become tired after a short period of time, and they are more likely to be sensitive to changes in their environment. As a result, women are not as well suited to take on tasks that require a lot of physical strength or endurance. It is important for men to recognize their strengths and to use them to their advantage in order to achieve their goals. This is especially important when working in environments where physical strength is required, such as in construction or in the military. By using their strengths, men can achieve great things and make a lasting impact on the world. It is important for men to remember that they are not inferior to women, and that they have unique abilities that can be used to achieve great things.
