

FUSARIUM PATCH

Cultural Operations Assisting in Prevention

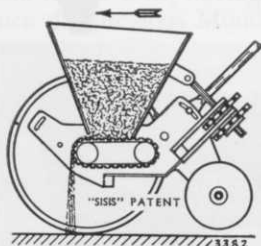

1. Regular removal of surface dew and surface debris.
2. Maintain a good air flow over the surface by keeping hedges down to a realistic height. Thinning of surrounding trees to allow sunlight on the sward during winter should be encouraged.
3. Never allow the grass to become long in the autumn. Keep cutting until weather conditions prevent further use of the mower.
4. Avoid smothering the surface with top dressing materials.
5. Intelligent use of lime and nitrogenous fertilisers particularly in the autumn.

From Pan Brittanica Industries Technical Bulletin No. 10.

P.B.I. make a PCNB dust costing £1 1s. 0d. for 7 lbs.; £3 17s. 0d. for 28 lbs.

Rate of application is $\frac{1}{4}$ oz. per sq. yd.

"SISIS" SPREADERS

- ★ Operate on the most EFFICIENT and ACCURATE PRINCIPLE for spreading of granular fertilisers, powdered dressings, turf chemicals and grass seed.
- ★ TRUSPRED Many Purpose Spreaders
Hand Models - 24 inch and 36 inch.
Tractor Mounted or Towed Models - 60 inch, 72 inch and 90 inch.
- ★ SUPER COULTAS Spreaders.
There is also the 36 inch Spreader which includes the features of the TRUSPRED but is fitted with a Rotary Brush and Reduction Gears which ensure extreme accuracy at the lowest rates.
- ★ The SUPER COULTAS can also be power-assisted ensuring constant speed, greater coverage and accuracy, with less fatigue.
