Greenkeeper

Parkers get down to grass roots

AND ALL PROBLEMS INCLUDING ARTIFICIAL SURFACES

The Parker service to grass is the most comprehensive of its kind. No less than 44 varieties of grass seed, fertilisers, loams weed and worm killers to maintain the turf in first rate condition. The finest stock of equipment in the country from rakes to leaf sweepers, mowers to sprayers. Ground accessories for every sport. An advisory panel which thrives on complex problems. But we are just scratching the surface. Do write for our 88 page brochure - it tells you everything about us.

ENQUIRY BUREAU.—The Editor desires to point out that he will be pleased to answer enquiries from our readers, and forward to them the name and address of the manufacturer or supplier of any particular proprietary article or product used in the construction, maintenance and upkeep of a golf course. Enquiries are coming in from greenkeepers asking for such information. They may, for example, know the trade name of the article or product they wish to purchase, but may not be conversant with the name and address of the actual manufacturer or supplier. The Enquiry Bureau will gladly supply this information, and thus enable the greenkeeper to contact the manufacturer or supplier direct.

TO MANUFACTURERS.—In order that our information may be kept constantly up to date, manufacturers or suppliers are requested to forward their latest trade lists, catalogues, and any other confidential information regarding their products. By so doing the Bureau will be able to forward information to the mutual benefit of all concerned.

TRADE REVIEWS.—The Editor will be pleased to arrange to devote space in our editorial columns to a review of our advertisers’ products, etc. Will advertisers please forward details for this purpose.

We cannot guarantee your form, but when it comes to the condition of the course, May & Baker Ltd have the answer in their range of selective weedkillers and fungicides. No matter what the sport, May & Baker brand products will improve conditions, by giving you perfect turf.

'MOSTOX'*  A really effective moss killer.

'CLOVOTOX'*  Selective weedkiller for controlling clovers.

'DICOTOX'*  Showerproof selective weedkiller for general weed control in turf.

'DICOTOX' EXTRA*  Four times as concentrated as 'Dicotox*', for greater economy on larger areas of sports turf.

'SUPERTOX' 30*  Broad spectrum selective weedkiller for turf. Kills weeds and clovers.

'MERSIL'*  Concentrated turf fungicide with rapid and lasting activity. Recommended for moss control.

'MERFUSAN'*  Turf fungicide with similar range of action to that of 'Mersil*'. For dry application.

DDT CONCENTRATE  For the control of turf pests including leatherjackets.

In order that you may obtain these products quickly we have established a network of distributors, all of whom have been carefully selected for their sales service and knowledge of your special requirements. In addition the M&B representatives will be supporting them in the field and available to help with your particular problems.

For details of this new network, and an up to date list of products and prices, post this coupon to:
May and Baker, Dagenham, Essex.

Please send me details of May and Baker Main Distributors, and a list of products and prices.

Perhaps I dreamed it. At any rate, it was 1st April before noon when the letter plopped on to my mat. It came from a body which called itself the IRTS. I gathered this had something to do with research into turf science and that one of their representatives had called to look at my lawn while I was away and wanted to send me his sympathy.

"The trouble is," he said, "it is too big. But fortunately modern techniques can ease your task more than you might wot of."

I was puzzled by this "wot of." In the first place, I was taught never to end my sentences with a preposition and in the second place — "wot" — well, I ask you. But I read on.

He thought a good deal of my daisies which, he said, if not cut too short, would give the grass an agreeable mediaeval appearance. (I now began to see the point of his "wot"). I was at all costs to avoid any preparations containing the Sulphates of Ammonia or Iron which tended to blacken and destroy the pretty plants.

He also took a good view of my moss. "While," he said, "there may be certain mercurised products designed to discourage the elegant fern-like fronds of Polytrichum, there can be no doubt that the basic conditions of poverty, bad drainage, compaction and, what have you (it seemed to me I had the lot already).

Continued on pages 10 and 11
PROVISION AND APPLICATION OF WATER TO THE GOLF COURSE

By E. M. BAYLIS, N.D.A.
Advisory Officer, The Sports Turf Research Institute

After such a long wet winter any remarks about watering may appear totally inapt but it often happens that very hard or wet winters are followed by particularly dry summers. From the point of view of maintenance it is generally recognised that a club having a good watering system available is in a stronger position than a course where no artificial watering is possible.

Efficient irrigation provides more uniform playing conditions throughout the summer and also allows the Greenkeeper to follow a much more intensive and flexible maintenance programme. To date far too few courses possess a really first-class watering system, although a number of clubs are making efforts either to lay on water or to bring an existing system up to date and improve its efficiency. Where this is being done many points have to be borne in mind, including the following.

Where streams, lakes or wells exist on the course these should be considered first of all as sources of supply but it is essential to establish whether they will provide sufficient water to meet peak needs in a prolonged dry period. Sinking special bore holes can often be justified although this work will raise the cost of the installation. Occasionally streams become polluted with substances injurious to turf and if there are any doubts about this point it is worthwhile having samples analysed before using the water on greens. Most private water supplies contain a great deal of suspended matter and provision must be made for filtering otherwise sprinkler jets can become blocked or badly worn.

There is often no alternative to using the mains supply but this has its disadvantages. Firstly, mains water is expensive. Charges are usually upwards of 2s. 6d. per 1,000 gallons. Also, restrictions are frequently imposed during dry weather just when the system will be needed most to keep the turf healthy. In a few cases mains water is delivered at sufficient pressure to allow direct application, thereby avoiding the cost of a power unit and pump. However, it is possible for some form of booster pump to be required.

Choosing the correct type and size of underground mains requires careful calculation in order to allow for losses in pressure due to friction and heat. In addition metal pipes tend to corrode over the years, reducing their effective bore. A pump unit of the correct capacity must also be chosen. These factors must all be taken into account to ensure that sufficient flow and pressure are available at the distribution points to operate several sprinklers at one time. The only way to make absolutely sure the system will be sound is to consult a firm of experienced water engineers before work is put in hand.

Methods of applying water can vary a great deal and include fully automatic systems using pop-up sprinklers which are permanently left in position, require no movement and consequently cut down the running and labour costs. Systems of this type can be set to operate completely automatically under electric control, if required. Their main disadvantage appears to be the relatively high initial cost.

Conventional sprinklers are more widely used and those operating on the rotary principle are usually found quite effective, being light to transport and cheap to purchase. The majority of sprinklers require a water pressure of at least 25 lb. per square inch to operate effectively although some will perform satisfactorily at much lower pressures.

Where water pressure is particularly poor a few clubs still hand-water using open hoses but this practice is now accepted as being very inefficient in labour utilisation and seldom achieves good results.
ATCO FOR THE GOLF COURSE . . . and for Life

ATCO GANG MOWERS
FOR THE FAIRWAYS

There are three models available. The popular general-purpose model No.1, the heavy-duty No.2, and now The NEW MODEL No. 3 with these star features:

★ Special two-section gearbox makes cutter changing a moment’s job — no stripping!
★ 10” Heavy-duty cutter unit of advanced design for outstanding cutting and clearing efficiency.
★ Even less time needed for maintenance — For example: oil bath changes, ONCE A YEAR only! — making more time for mowing!
★ Full width rear roller for fine turf mowing — Easily attached and detached to suit varying conditions.

Atco Gang Mowers are only some of the many machines in the Atco complete range, from the 12” to the 34” roller type, as well as rotary grass cutters and side-wheel mowers.

PRICES FOR TRIPLES RANGE FROM £289.

The 20” SPECIAL
FOR 'SUPERFINE' MOWING OF GREENS

This ‘self-contained’ motor mower has become recognised as the best machine of all for the maintenance of the perfect finish required for the Greens. The specification is complete and will maintain peak performance for life.

£95

and perhaps most important of all . . . IMPECCABLE SERVICE

EVERYWHERE there is an ATCO Engineer attached to an ATCO owned Branch ready to advise on any problem in connection with grass cutting.

DEMONSTRATIONS OF ANY ATCO CAN BE ARRANGED TO SUIT YOU OR YOUR GREENS COMMITTEE.
The following principles for applying water are fundamental but often become overlooked to the detriment of the turf. It is important to begin watering before the grass cover shows any sign of suffering from drought. In a particularly dry and windy spring, greens may well benefit from watering as early as April or May although it is more usual for turf to suffer from drought in the summer when temperatures tend to be higher and evaporation losses greater. Water should be applied slowly enough for it to be absorbed by the surfaces. Soils vary in the rates at which they are capable of accepting moisture and although very sandy soils usually permit rapid percolation, the heavier loams absorb water much less readily. Fibrous turf tends to retain moisture in wet weather giving soft soggy playing surfaces but if the mat is allowed to dry out it becomes exceedingly difficult to re-moisten, the turf therefore suffers badly from drought since most of the water applied is shed off the area. Penetration can be assisted by intensive solid tining before water is applied. The aim should be to keep the top soil moist to a depth of at least 4 inches and preferably more. In order to achieve this something like the equivalent of 1 inch of rain per week is necessary in very dry weather. This means providing approximately five gallons of water per square yard per week under these conditions. In practice it is better to water thoroughly twice or three times per week rather than give small amounts each day.

On the other hand, over-watering can be detrimental to the turf since it can under certain circumstances cause the surfaces to puddle and become badly

J. GIBBS LTD. BEDFONT-MIDDLESEX Phone Feltham 5071

LEIST DISTRIBUTORS AND AUTHORISED REPAIR AGENTS FOR RANSOMES LAWN MOWERS
1. **Fisons Humull**  
For dressing lawns, laying turf, or sowing grass seed.  
Wholly organic, this superfine peat is specially blended to promote the growth of fine grasses. It encourages turves to knit, and assists in the essential moisture retention after they have been laid. It’s invaluable for top-dressing turf during maintenance treatment in the autumn because it promotes root activity, so necessary for growth next spring. Available in 1 cwt. bags. Minimum order 5 cwt. @ 28/- a cwt. carriage paid home.

2. **Outfield Sedge Peat**  
For general soil improvement, especially on sports grounds.  
This is a moist peat, very good for sports grounds with sandy or thin soil or with heavy soil which bakes during drought and becomes sticky in winter. Outfield Peat will ‘open’ the surface and allow the freer growth of grass. It will also counteract wet and sticky surfaces.

3. **Fisons Selected Peat**  
For all-purpose soil improvement.  
More decomposed than Sphagnum peat, this rich Sedge peat provides greater quantities of humus and therefore it is excellent for opening up heavy soils. Good too for making composts—John Innes Composts included, feeds humus-hungry beds and borders to produce optimum friable tilth.

4. **Fisons Rhododendron and Shrub Peat**  
For root establishment and mulching.  
An acid peat, this grade is specifically prepared for planting and mulching rhododendrons, azaleas and ericas. It not only improves the soil with humus, but brings strong quick root establishment and provides a perfect mulch which helps in keeping down annual weeds.

Don’t forget Fisons Fertilizers and Weedkillers—all research-proved for best results.  
County prices can be provided by your merchant;  
or write to—Fisons Horticulture Limited, Ipswich, Suffolk.
waterlogged. Playing on very wet turf results in compaction and destroys soil structure. A relationship also exists between heavily watered turf and fungal diseases. Warm moist conditions in the turf encourage the development of, e.g. Fusarium patch disease and Ophiobolus patch disease, the incidence of both are, of course, to be avoided if at all possible. It must also be remembered that money is being thrown away whenever the irrigation system is being kept in operation unnecessarily.

Applications of water should always be timed to cause as little interference with play as possible and naturally one does not expect to see sprinklers in operation during competitive golf. Automatic night watering meets this requirement without the need for staff working overtime. Watering during the day is however, often the only practical method and some inconvenience may be created for the player. This, of course, is much less detrimental to his game in the long run than a turf badly affected by drought.

### SITUATIONS VACANT

**HEAD GREENKEEPER REQUIRED**

West End Golf Club Ltd., Halifax, Yorkshire. Good house provided. Remuneration to be negotiated. Applications to the Secretary at the above Club.

**GREENKEEPER REQUIRED. REPLY giving age and experience to Secretary**

Theydon Bois Golf Club, Epping Essex. No accommodation available.

**ASSISTANT GREENKEEPER WANTED.**

£13 per week plus free house. Golf course experience essential. Permanent and progressive post to right man. Apply giving details of experience, age and present employers to the Secretary, Hartlepool Golf Club Ltd., Hart Warren, Hartlepool, Co. Durham.

### MISCELLANEOUS

Professionals and Greenkeepers having stocks of used golf balls contact Sparkbrook Golf Ball Co., 295 Highgate Road, Stoney Lane, Birmingham, with a view to filling export orders.

**NITROFORM**

**CONTROLLED RELEASE**

**Nitrogen Fertilizer**

Nitroform is an organic turf fertiliser containing 38% nitrogen.

- Does not scorch
- Is labour saving—only one application needed a year
- Releases nitrogen—the vital plant food for grass throughout the growing season
- Has no smell
- Easy to spread by hand or distributor

One application feeds the grass for a whole year giving a healthy sward of a rich deep green colour and a strong root system. Also available in compound fertilisers.

Ask for Nitroform at your usual supplier of fertilisers. In case of difficulty write to

GREENS MOWERS
A SHORT CUT TO PERFECTION

HAWKER SIDDELEY

THOMAS GREEN AND SON LIMITED, NORTH STREET, LEEDS 2

Telephone : Leeds 20357

Hawker Siddeley Group supplies mechanical, electrical and aerospace capital equipment with world-wide sales and service.
are those best suited to your idle circumstances." He therefore advised trampling the turf while the surface was wet as a temporary remedy, but he thought that one of those hopping machines, saying "Ouf-Plonk" used by contractors in an endeavour to get back into the trench the same amount of soil that they took out, would in the long run be a sound investment. Steam rollers, he opined, were now difficult because non-turf enthusiasts were acquiring them as garden ornaments rather than essential equipment. In any case, the shrubbery tended to suffer if the driver failed to wind his little steering-wheel quickly enough.

There followed a good deal of technical advice with which I will not bore you beyond the odd quotation: "Mowing once a month at 3/16 in. will tend to reduce vigour and increase deck-chair time." A useful point, I thought. "Worm casts and mole-hills if suitably flattened with a blunt instrument will eventually produce a smooth, earth-like surface on which grass will find it difficult to compete with the more desirable weeds." Heavy top-dressing with a suitable clay soil would assist this condition.

Watering was to be restricted to the months of December and January, when the frozen droplets, besides reflecting the winter sun, would help to do the few remaining grass blades a bit of no good.

There was a useful hint on fertilising. Sodium Nitrate or Nitro Chalk, applied at 6 oz. per square yard in early September, had generally been shown to produce conspicuous bare patches before October was out and with careful neglect these
might go right through the following year. This rate of application, provided the material was not too evenly spread, would also scorch the remaining sward, so that I could put the mower away for a full year.

The same goal could be reached if cubes of bread soaked in a 10:15 10 solution of rum, brown sugar and water were put out at night from early Spring onwards. The passions of the grubs of Tipula oleracea and related species became inflamed by the sweet alcoholic bait and these thick-skinned but intensely romantic creatures multiplied rapidly at the expense of the grass roots.

Aeration had been advised in the past by the older generation of lawn expert but those, like the writer, who were opposed to blood sports, had proved that not only leather-jackets, even when intoxicated by one thing and another, but also earthworms and cock-chafer grubs could suffer as the cold steel passed through them. There had, consequently, been a popular revulsion of feeling against this cruel practice and one firm specialising in turf-piercing equipment had sent all its old customers a set of soft rubber tines, guaranteed to be humane, and switched its production to wind-screen washers.

By this time I began to wonder (having been properly brought up) what he was selling. It turned out to be typewriters — The Instant Typewriter Replacement Service — the quick brown fox jumped over the lazy lawn owner. What ever happened to the dog?
Berk Summer Range
of turf treatments for busy

Watering

Supplex Sprinkler

This triple-bore plastic hose is minutely perforated throughout its length. One end is closed so that when the perforations are opened by water pressure, a fine rain-like spray is produced which soaks without flooding—in a rectangular pattern. Supplex is the logical choice for rectangular areas. Lengths are available to cover, in one operation, tennis courts, bowling greens and cricket pitches.

'Microflex' Reinforced Plastic Hose

For conveying water, Microflex is three ways superior to rubber hose. Microflex withstands the kind of rough handling that soon destroys a rubber hose; it weathers better—it is particularly resistant to long exposure to the sun—and its light weight and suppleness make it easier to coil and carry. Microflex hose is constructed of 3 layers black P.V.C. inner tube, with mirror finish for optimum water flow, knitted jacket of 'Tergal' polyester fibre and an opaque vivid yellow outer cover of polythene. Microflex has been proved in rugged tests on building sites — will last you years.

Moss Control

Berk Moss Control compounds are based on mercury—this is present in an insoluble and harmless form. Mercury not only kills moss but prevents subsequent growth. It can control moss for up to three years. Three compounds are available—the choice depends on the individual requirements and the time of the year.

M.T.S. (Mercurised Turf Sand)
(M of A. 1477)
This is applied at 4 oz. per square yard from early spring to late summer. It kills moss immediately, reduces weed population and, because it contains a quick-acting and green fertilizer, stimulates grass growth.

Moss Killer
(M of A. 1478)
This is applied at 4 oz. per square yard at any time of the year but especially prior to normal autumn treatments. Moss Killer does not contain a grass stimulant but gives rapid control over moss.

Moss Eradicant
(M. of A. 1479)
A special formulation to control the following crop of moss while killing the immediate crop gradually—so there is no disfigurement from dead moss.

Hints on Moss Control
1. Moss will always invade and colonise neglected turf.
2. Do not rely on raking alone to remove moss. This spreads moss spores and fragments which can re-infest the site. Always use a moss killer in conjunction with raking.
3. Correct turf management should always be practised. After using a moss killer, the factors responsible for the appearance of moss should be removed.
4. Some common causes for the appearance of moss are:
   * Poor drainage and aeration
   * Bare patches
   * Over-rolling and compaction
   * Acid and undernourished soils
   * Persistent close mowing.
Wormkiller

Berk 25% Chlordane Wormkiller
Berk Chlordane kills worms underground, also controls leather-jackets, ants and chafer grubs. It is cheap and easy to apply—calling for little watering and minimum labour. Best applied in warm, showery weather during autumn or spring when worms are most active and near the surface.

Berk 20%, Chlordane Wormkiller (Granular)
Applied at 80 lb. per acre, granular can be particularly useful where grass is kept long or the sward is thick.

Turf Fungicide
This fungicide contains the equivalent of 2 ½% Mercury and gives excellent control of Fusarium Patch (F nivale) and Dollar Spot (Sclerotinia homococarpa) in turf. Apply in late summer or spring for Fusarium control, or when symptoms appear for control of Dollar Spot.

Application. 1 oz. per 40 sq. yards in 2 gallons of water or with 14 lbs. sand for wet and dry methods respectively

POST THIS COUPON NOW FOR LEAFLETS AND PRICES

Weedkiller

Turf Weedkiller—Standard
(Ministry Approved)
A selective weedkiller controlling broad-leaved weeds in turf.
Applications 2-4 oz. per 120 sq. yards in not less than half gallon of water (4-8 pints per acre in not less than 20 gallons).

Turf Weedkiller—Super
(Ministry Approved)
A selective weedkiller controlling clover and chickweed in addition to other common broad-leaved weeds in turf.
Application. 4-8 fl. oz. per 120 sq. yards in not less than half gallon of water (6-8 pints per acre).

When the grass
on the other side
looks greener

yours needs
SPORTSTURF VELVETONE!

I.T.P. Sportsturf Velvetone is
the organic lawn conditioner proved
in action on the royal lawns at Ascot
and the grass courts at Wimbledon.

For less than £1.5 an acre, the
autumn/winter formula of Sportsturf
Velvetone will condition your fine
turf areas beautifully. Forty per cent
organic, it contains trace elements
and carefully balanced lawn foods
exactly suited to the finer grasses.

It assists root action all winter long
but doesn’t encourage vigorous top
growth until spring. (If you’re a
greenkeeper who hasn’t the time or
labour to apply turf dressing during
the playing season, you’ll find Sportsturf
Velvetone extremely useful.)

For less-fine turf—I.T.P. Winter
Outfield Fertilizer Seventy-four
per cent organic, this high-grade ferti-
lizer costs less than £10 an acre. It’s
excellent for cricket outfields, golf
fairways, football grounds and other
large sports areas. Good for construc-
tion of new grass surfaces too. (Also
available with selective weedkiller.)

Order now from your local merchant
or Fisons representative.

Spring Tournament

MEMBERS ARE REMINDED THAT the closing date for entries for the Annual Tournament, to be played over the course of the Pannal Golf Club, Harrogate, on Tuesday 26th April, is Monday, 18th April. This is essential so that the draw and necessary catering arrangements can be made.

Film Show

Thirty-five members attended this show on Thursday, 24th February, held in the club house of the West Bowling Golf Club, Bradford. The film presented by Carreras Ltd., was their newest, this being only the second showing of the 1965 Picadilly World Match Play Tournament. I am sure that all members will agree that this was a most fascinating and first class film of outstanding golfers in action over the famous Wentworth course. A vote of thanks was given by our President and seconded by the Chairman, Mr D. Roberts, to Mr C. Norton, who presented the show.

Dinner

The first ever held by the section for members and their wives was held in the club house of the West Bowling Golf Club on Thursday, 10th March. Although we approached the venture with a certain amount of trepidation the evening was an outstanding success and I am sure all fifty-five attending thoroughly enjoyed it. The whole affair was made free and easy with no speech making and the entertainment which followed was first class. It came as a great surprise to most of us to know that one of our members, G Hartley, was a ventriloquist of outstanding ability. A vote of thanks to the catering staff of the club for their excellent service and the club committee for their kindness in allowing the use of the club house was given by our President, Mr W Mountain. As usual, on these occasions, the generosity of our President was evident and for this he was thanked by our Chairman, Donald Roberts. I feel sure that this will now become an annual occasion in the section’s events.

New Members

We welcome to the section the following new members: Mr J Cogan (Vice-President) and Mr W Heeles, Oakdale Golf Club.

Lectures
OUR THANKS TO MR JOSS OF S.T.R.I.
for a very interesting talk indeed, illustrated
by some extremely good coloured slides.
This concludes the present series of winter
lectures and I would like to take this oppor-
tunity of thanking the members of the section
for the very good support they have given
to the various speakers concerned.

Spring Tournament
This will take place as stated in last
month's journal at the Wallasey Golf Club,
Wallasey, Cheshire. The competition will
consist of 9 holes in the morning and 18
holes in the afternoon, a total of 27 holes.
Visitors play a competition in the afternoon
of 18 holes. This does not prevent them
from playing in the morning if they wish
to do so.

I would be grateful if all members who
intend to partake would kindly let me
know as soon as possible so that I can make
the necessary catering arrangements.

Members may invite one visitor only. A
cordial welcome is extended to all associate
members who wish to take part.

Annual General Meeting
Will be held at the Garrick Hotel, Foun-
tain Street, Manchester on Monday 9th
May at 7.30 p.m. Can I count on a big
turn out for the occasion?

FOR HIRE

SISIS AUTOTURFMAN Aerator for hire, £25 per week Do it yourself. J B.
Burnell, 2 Clarence Road, Eaglescliffe, Stockton on Tees.
If you like cheese, there are a number of tasty dishes you can make. Here are a few easy ones and very adequate they are too.

**Cheese Balls**

Grate the cheese and mix it with the flour, salt, pepper, egg yolks and cayenne. Whisk the egg whites stiffly and stir in gently. Drop into deep fat (HOT) from a spoon and fry until golden brown.

**Cheese Cakes**

2 eggs — 1 teaspoonful of chopped parsley — breadcrumbs — pepper — 1 level teaspoon salt — 4 oz. cheese — 12 oz. potatoes — fat.

Boil the potatoes and while they are still hot, mash them. Mix in the parsley, salt, pepper and one egg. Grate the cheese and add. Shape the mixture into balls or flat cakes, coat with the other egg and roll in breadcrumbs. Fry in hot fat for several minutes until golden brown. If you prefer they can be grilled for about five minutes on either side or baked in a hot oven for 20 minutes. If left to stand for 30 minutes after coating, they will keep their shape better when cooked.

**Cheese Delights**

\[ \frac{1}{2} \text{ teaspoonful of mustard} — \text{salt} — \frac{1}{2} \text{ oz. butter} — 8 \text{ oz. cheese} — 1 \text{ egg} — \text{Worcester sauce} — \text{bread} — 6 \text{ rashers of bacon.} \]

Grate the cheese and mix with the beaten egg, Worcester sauce (1 teaspoonful), mustard, a good pinch of salt and the butter. Cut six slices of bread about the size of the bacon rashers and spread thickly with the mixture, then put the bacon rashers on top. Bake for 10 minutes in a hot oven and serve immediately.

**Cheese Fritters**

3 oz. butter — 2 oz. grated cheese — 3 heaped teaspoonsful of breadcrumbs — 1 egg — salt — pepper.

Put the grated cheese in a basin and mix in well the beaten egg, breadcrumbs, 2 oz. of the butter, pepper and salt. Put the other ounce of butter in a frying pan and make very hot. Drop tablespoonsful of the mixture into this and fry until golden brown.

**Cheese Pie**

8 oz. cooked potatoes — \( \frac{1}{4} \) oz. butter — 1 pint of white sauce — 3 onions — 8 oz. tomatoes — 4 oz. grated cheese — salt — pepper.

Fry the onions. Slice the potatoes and tomatoes and put them in a pie dish, alternate layers of potatoes, tomatoes and fried onions. Sprinkle with salt and pepper. Into the white sauce mix all but a little of the grated cheese and pour this over the vegetables. Sprinkle the rest of the cheese on top and lay on some slices of butter. Bake for 20 minutes in a hot oven.

**Cream Cheese**

Collect sour milk and cream in a bowl and keep in a warm room until it has set. Pour into a clean cloth and hang up to drain. When almost dry, take down and mash thoroughly with salt and a good pinch of paprika and very finely chopped garlic or onion. This make a delicious cheese for serving on buttered rolls or dry biscuits.

— Until May...
