Warren's A-34 Kentucky Bluegrass Comes Back Faster!

Warren's A-34 Kentucky Bluegrass (Poa pratensis), grows vigorously in shade and sun alike. It is proving to be the best all round grass for use on sports-grounds, parks and recreational areas. Its ability to recover quickly from injury makes it ideal for sowing down golf tees and all those areas receiving wear and tear.

Warren's A-34 Kentucky Bluegrass will tolerate up to 65% shade when maintained at a two inch cutting height. On open sites it can be mown down to 3/8ths of an inch, still grow vigorously and retain its power to recover quickly. It is the one pure strain of bluegrass seed that will thrive in shade and sun and tolerate a wide range of soil and climatic conditions. It is not necessary to blend A-34 with seed of other species or strains and the best results have been obtained from using it neat at a low seeding rate.

Warren's A-34 Kentucky Bluegrass has been under observation by turf grass research departments of leading Universities and other research organizations in the United States and they have all given it a high rating for disease resistance and shade tolerance.

FAST, ACCURATE HOLE CUTTING AND RENOVATION

The 'Supercut' Hole Cutter and the 'Squarecut' Turf Repairer are precision implements. Every plug or sod fits exactly into the hole made for it with the same implement. Clean cut ensures minimum disturbance of root-soil structure.

Square shape means unlimited adjacent cuts for any size of patch. No 'in-between' spaces as with round cutter. Greens can be back in use immediately after renovation.

Perfect holes, perfect plugs. This hole cutter of a completely new design cuts vertically, eliminates wobble, and makes a clean cut simply and quickly.

The British Golf Greenkeeper
Tee Shots

It is good news that the proposed trip to Boston in January has already reached support level and is still filling up. We have received a very kind letter from Richard C. Blake, who is President Emeritus, welcoming the visit. We had to advertise the idea before approaching the American Society and hope it did not seem too much like inviting ourselves.

I was in North Carolina last month. Golf shows no sign of easing in popularity. Florida is said to have about a hundred new courses in the past few years, nearly all associated with estate development. A new course in Dominica has two greens completely surrounded by sand.

If the course doesn’t fit the land, the land is remodelled to suit the course. A notice in the clubhouse at the Hickory County Club said that top soil stripping of the back nine would begin soon and it looked as if they really meant top soil off the complete nine holes.

The Hickory County Club incidentally boasts a Health Club within itself, with pretty well every device mechanical, electrical, chemical or luminous to keep you in a deeply religious state of fitness. I felt a bit of a heathen.

Yancey County where I stayed (and several others) are still ‘dry’. You can carry the stuff about in a brown bag but don’t be seen quaffing it. As if you would be.

The Customs make pretty sure that other addictive chemicals do not get in the County easily. Those with long hair can expect an in-depth investigation of their luggage. (Warning to those on the Boston trip). In any case there is a more conservative attitude to tonsorial self expression. The average hair cut will include a section maintained by the Autocertes as well as fairway and semi-rough. The deep rough and jungle country does not go down too well. Too many lost balls.

Annual Report 1972

Administration
IT IS WITH REGRET that we find we have reached the end of the Chairmanship of Mr. J. Carrick who for the past twelve months has proved such a worthy Chairman and we offer our very sincere congratulations and thanks for his services. We now look to our Vice Chairman, Mr. H. M. Walsh, to succeed Mr. Carrick and we have every confidence in his ability to occupy this office to our complete satisfaction.

The Annual Draw was again held during the year and, although the financial return was not quite up to standard, we do thank all our members who assisted with the sale of tickets.

We were indebted to the R. & A. who once again sent free passes for our members to visit the Open Championship, and we would express our sincere appreciation for this continued privilege.

The Wage Scale was again reviewed by the Executive Committee and their new recommendations, including holiday periods, should again prove to be beneficial to our Members.

The Apprenticeship Scheme is still going ahead and the latest figures available show that 304 Deeds have been issued, 208 registered and 132 completed. This continued increase in Deeds completed is most encouraging and our thanks are due to the officers of the Joint Council of Apprenticeships for their efforts in developing this Scheme so satisfactorily.

Membership
According to the latest Section returns of Membership our present figure is approximately 890, as against 826 last year. Very satisfactory progress.

Annual Tournament
The 54th Annual Tournament was held last year at Notts Golf Club, Hollinwell, with approximately 70 members taking part. Once again we had a very enjoyable meeting and on a course that was much appreciated by the players. Our thanks are due to all the Staff at Hollinwell for their efforts on our behalf, which did so much to make our visit so enjoyable. We would also express our sincere thanks to all the Firms and individuals who contributed to our Prize Table, and to the practical assistance which was so generously forthcoming.

Sections
Our thanks are again due to the officers who take such an active part in Sections’ activities, which undoubtedly is one of the chief essentials of a satisfactory Association, the membership of which covers the whole country.

British Golf Greenkeeper
Our Journal, this year, has taken on a new picture, and is now being handled by a publishing firm, although our Editor and his staff will still be responsible for Association affairs. We hope that, after initial teething troubles, members will find an attractive Journal for their reading. And our thanks must be expressed to the Editor for his efforts in bringing about this new production.

Benevolent Fund
We have, unfortunately, had several calls on our Benevolent Fund during the year and £140 has been paid to dependents since our last report.

October 1972
Greenkeeper 1 helps put back what the season takes out.

How well your fine turf stands up to the treatment next season, depends on how well you treat it at the end of this one.

Greenkeeper 1 has the right amount of phosphate to encourage good root growth in balding, battered areas.

The right amount of potash to harden off soft growth.

And a relatively low nitrogen content. This provides a balanced feed, without encouraging unwanted top growth at the end of the season.

Greenkeeper 1 is packed in polythene bags that can stand outside storage; it is free-flowing and easily applied.

So don’t put off ’til next season what you should do this.

The British Golf Greenkeeper
F. G. Hawtree Memorial Fund
Only one application has been received during the year for a course at Bingley under the auspices of the F. G. Hawtree Memorial Fund. This Fund is still in a healthy condition and would welcome enquiries for future training at Bingley.

Sports Turf Research Institute
We would again express our thanks to the Sports Turf Research Institute for all the help and assistance they are always ready to extend to our members.

In Memoriam
We record with sorrow the death of the following Members announced in the British Golf Greenkeeper:-

The new Atco Groundsman.
A cut above other mowers.

Atco introduce two new models to their range of professional mowers. The 28" and 34" Groundsman. Apart from the difference in their cutting widths, they share the same features.

To start with, they’re both fitted with six heavy duty blades which give 81 cuts per yard—an unusually fine cut for their size.

Both have a 12 volt electric self-starter, battery and automatic charging system as a standard fitment. They can be power driven with the cutters stationary by operating a cutter release clutch.

What’s more, either machine may be used with or without the optional standard Atco trailer seat.

Another feature is the continuous chrome tubular handle specially designed for added manoeuvrability when turning.

It can be adjusted quickly to suit individual operator heights by means of an instant clamping lever.

There’s a new ‘swing over’ type glass fibre grass box. It is mounted on tubular steel support arms and its lower section is recessed so it can be used with swivel front rollers.

Then there’s a large capacity fuel tank which holds one gallon of petrol.

It takes one professional to recognise another. Is it any wonder then that Atco mowers are used on some of the most famous stretches of turf in this country.

**ATCO**

As famous as the lawns we cut.

For full details of Atco mowers write to Charles H. Pugh Ltd., P.O. Box 256, ATCO Works, Birmingham, B9 4PR.

Control of Casting Worms

by

S. H. Goss

The control of casting worms, Allolobophora Longa and Allolobophora Nocturna, has long been desirable from the greenkeeper's point of view. Trodden down and flattened, worm casts cause considerable damage to grasses and can lead to a course becoming virtually unplayable in the autumn or early spring when casting worms are most active.

Severe worm infestations are usually associated with soils with a high Ph factor so the long term aim for effective worm control must be to reduce the Ph factor on any area where worms are a continuing problem.

In the short term, several effective treatments are available using either traditional materials, such as Mowrah meal or Lead Arsenate, or the more modern insecticide chlordane and carbaryl.

Mowrah meal has proved a useful control agent for many years but its application is laborious and it has no residual effect. Lead Arsenate is certainly persistent and toxic to worms but its application to golf courses or playing fields accessible to the public is extremely hazardous.

Chlordane, an insecticide of the organo-chlorine group, has proved to be an easily applied residual worm killer and, used carefully, provides little danger to human or animal life. Its very persistence in the soil has, however, brought it into disfavour with some authorities.

Carbaryl is an effective, quick acting insecticide which will act much more quickly than chlordane and which has none of the disadvantages of chlordane. It is non toxic to birds or animals and can be safely used on public open spaces. However, it does not usually have such a long lasting effect as chlordane and normally an annual treatment is desirable although the writer has experience of one heavily infested course in North East London that was treated on two successive years in 1966 and 1967 and has not since required any further treatment.

Another characteristic of carbaryl is that due to its fairly rapid breakdown in the soil, it will only kill casting worms and not worms which are active at lower levels and which are wholly beneficial. This "selective" kill is therefore an advantage, particularly on heavy soils which have a drainage problem.

Both chlordane and carbaryl will control leather jackets and wireworms, cluster flies and those species of mosquito which rest on grass.

Although chlordane and carbaryl have made worm control easier, it is still very necessary to carry out the work under the right conditions. In the autumn or early winter, from September to early December, worms become more active near the surface. Damp humid conditions after the fall of leaf favour worm activity while the ground is still fairly warm. Winter frosts drive worms underground and treatments should not be made in frosty weather.

Spraying machinery used for worm control should be of the high volume type with the capacity to apply 80-100 gallons of mixture per acre.

Inexplicable failures do sometimes occur with both chlordane and carbaryl. It must be admitted that we do not yet fully understand all the factors involved in a worm control treatment but our experience over the last few years has shown that worm control is now much more widely carried out, particularly where there is a heavy demand for good playing surfaces all the year round, and that in the majority of cases carbaryl and chlordane are very effective.
The general rules for successful worm control are:- use the best materials at the right dosage rate, at the right time, when worms are near the surface. Always treat as large an area as possible and try to treat the fairways as well as the greens and tees.

If in doubt about materials or equipment, there are several specialist contractors who will undertake this work on a contract basis and so leave the greenkeeper free to concentrate on his many other tasks.

---

**SOME CURRENT WORM KILLERS**

**VITAX WORM KILLER AND INSECTICIDE** (Contains Chlordane)

Vitax wormkiller has the advantage of killing the worms underground and also killing leather jackets, ants and chafer grubs at the same time. These grubs feed on the grass roots causing withered patches to occur. Damage is more severe if the autumn of the previous year has been wet.

The product is available in liquid or granular form. For the liquid formulation, the grass should be mown just before application and not mown for 3-4 days after application. This first mowing should be made without the box. On compacted areas, or where the sward is thick and matted, spiking prior to application and additional watering is advisable. The recommended rate of use is one gallon in at least 20 gallons of water per 1000 square yards.

**M & B WORMKILLER**

‘M & B’ Worm Killer is a wettable powder formulation containing 50 per cent of the active constituent carbaryl. This new product works quickly and effectively and eliminates the need for costly hand-sweeping operations.

One annual treatment, during September and October is usually sufficient, but heavily infested areas may require re-treatment in the following spring. Alternatively, the treatment may be initiated in the spring during March and April.

The worms die underground and results should be visible in four days. Apply to freshly-mown turf when the ground is moist.

**SYDANE 25 LIQUID WORMKILLER**

One of the new range of Synchemicals professional user products

Sydane contains 2½ lb Chlordane per gallon. It is an oil emulsion and is diluted with water prior to spraying.

Sydane is applied at a rate of 1 gallon to 1300 sq yds (quart to 325 sq yds) being diluted with between 40/60 gallons of water depending on the type of spraying equipment being used. It is for use only as a turf wormkiller.

It is harmful to livestock and fish. Keep all livestock out of treated areas for at least 14 days and do not contaminate ponds, waterways and ditches.

**KYPCHLOR 25E Containing 2·5 lbs Chlordane**

Turf treatment with Kypchlor 25E should be carried out in late autumn or early spring for the control of earthworms.

Kypchlor 25E incorporated into the soil prior to laying new turf or sowing seed is a preventative measure which greatly assists in the establishment of a pest free sward.

The dosage for golf greens of 20 yds radius, 1260 sq yds is 10 pints Kypchlor 25E.

**FISON CHLORDANE WORMKILLER 25% w/w Chlordane**

Fison wormkiller kills worms underground. The manufacturers recommend you mow.

Apply 3 fl ozs in 2 gallons of water per 20 sq yds; 1 gallon in 20 gallons of water per 1000 sq yds or 5 gallons in 100 gallons of water per acre.

The British Golf Greenkeeper
Autumn Fertilisers

By John Stephenson B.SC(ONS) Maxicrop Limited

THE CURRENT PRACTICE of using high amounts of the major plant nutrients – N.P.K. – has left the role of the trace elements, the minor plant nutrients, rather in the background. But is it worth considering the role to which trace elements are put within the plant. They are used in the main within the molecules of enzymes; these can be considered as chemical converters. They assist the countless chemical conversions that go on within the plant and which are designed to convert the basic elements — carbon dioxide, water, N.P.K. — into the many substances which go to make up the finished plant.

Trace elements are also vital in the molecules, hormones, auxins and so on, which are so vital in controlling the rate of growth and development of the plant. Trace elements, if you like, are vital to the health and vigour of the plant and we’ve no need to tell you what healthy grass looks like. High levels of N.P.K. on the other hand are responsible for promoting healthy growth. Trace element application does increase yield, but not to the extent that applications of N.P.K. do.

Where does this leave the greenkeeper at this time of the year? Being interested in the appearance and health of his grass, there should be no need to convince him of the need for trace elements; but what is the best way and time to apply them? There is little doubt that the quickest way to get these vital trace elements into the plant is by foliar feeding; the trace elements in the spray are absorbed through the leaves on which they fall in a very short time, a matter of ten minutes or so. They are also absorbed into the part of the plant where they are required in the greatest concentration, the manufacturing areas, the leaves.

One of the difficulties in concocting a foliar feed containing trace elements is the balance — the proportion relative to each other of trace elements which should be included. Trace elements can compete with each other for uptake by the plant and an excess of one, however slight, can inhibit the uptake of another. Also in too great concentrations they can even become toxic to the plant. This is one of the reasons why seaweed extract is so successful as a foliar feed. The trace elements are there in the proportion required by the plant, because they are in the proportion in which they were in one plant already, that is the seaweed. Maxicrop was the first product to be sold in this country as a foliar feed and it’s a lead we hope we’ve maintained.

As the temperature falls, the metabolic activity of the growth of the grass or any plant decreases to an almost static point. This does not mean that during the winter months grass stops growing and developing, it means that during the colder periods it slows down and speeds up again if the temperature should rise. It is important, therefore, that if you are not going to feed during the winter, you ensure that the grass has everything it requires during these months, so that should the temperature rise sufficiently it can make progress.

Remember we are not only talking about growth, in which sports turf growers are disinterested, but in the ability of the grass to repair damage, to resist and survive periods of stress and strain (such as too much water, too little water and physical damaging) and to keep up an attractive appearance. In these functions metabolic activity, and thus trace elements, are vitally important.

So, if your grass is going to survive the winter and all that the winter brings with it, it must have a full stock of trace elements. The time to apply these as a foliar feed or in any way is in the Autumn when the temperature is still sufficiently high and the metabolic activity of the plant great enough to absorb and utilise the trace elements. If you apply them during the colder months, the chances are that the metabolic activity of the grass will be so low as to absorb and utilise very little of the foliar feed you are applying.

To summarise, trace elements are vitally important as chemical constituents of enzymes, hormones, etc., which in turn are responsible for the metabolic activity that goes on...
With pleasure announce that they hold the greatest concentration of lawn mower spares and lawn mower engine spares in the country.

within the plant: trace elements thus promote the health of the plant, its ability to repair damage, to survive periods of stress and still look attractive. The best way to apply trace elements is as a foliar feed, preferably a seaweed extract, since this is a natural and balanced form of application and an important time to apply is in the Autumn so that a good supply of trace elements remains within the plant until next Spring.

Reseeding Golf Greens in the Autumn

by R. W. Palin Sutton Seeds Ltd.

We are all aware that it is dangerous to put new wine into old bottles, but it is often a good thing to put new grass into old greens.

Many of our greens, while offering excellent putting surfaces at certain seasons, are far from good at other times of the year. One of the main reasons for this changing pattern is the actual composition of the sward. There is scarcely a green without some Poa Annua in the herbage, and this insidious plant is a most prolific seeder, producing many generations in the course of a year, even under very close mowing. It colonises rapidly, to the disadvantage of the desirable Agrostis and Festuca species.

Being of annual duration and often short-lived, we have a changing pattern of colour and texture as one generation of Poa succeeds another. Nature has a habit of putting new grass into old swards, but not necessarily of the type we require for golf, and our answer, therefore, lies in oversowing periodically with the proper grass seeds, to produce the ideal turf.

Where the existing turf is really very sparse, it is necessary to scarify severely to remove the old plant debris and create a seed-bed – seldom looked upon with favour by the members, yet essential to the future of the course. The alternative is to give sparse areas a thorough spiker/slitting, or sarel rolling, to perforate the surface, and then sow the seed and literally rub it into the surface. In either case, a top-dressing of compost at about 5-7 lb. per square yard is necessary to cover the seed. September is the ideal month for such work, bearing in mind that the seeds will take a week or so to germinate, and the seedlings will need to be well developed before the onset of winter.

It is, of course, a good idea to mix some suitable seeds with the autumnal or early spring compost, and it is surprising how many plants and colonies of desirable grasses develop as a result, to the benefit of the turf as a whole.

RENOVATION

Even the finest putting surfaces can be improved by overseeding during Autumn renovations with Mommersteegs Golf Green mixture, sowing rate ½ oz to the sq yd.

This is a mixture of 'Koket' Chewings Fescue, and 'Tracenta' Browntop, both varieties being internationally accepted in the OECD Certification Scheme. Its fine leaves, say Mommersteeg, have a proven persistance under close cutting conditions, an in-bred disease resistance, and its consistent dark green summer colour are some of the outstanding features in its rising popularity with leading professional Greenkeepers.

Carters recommend an oversow rate of ½ oz per square yard any time from mid August to late October.

Oversowing for renovation should be carried out during showery weather or at any time if the course is equipped with an irrigation system.

Hon. Secretary: 4 Queens Drive, Leicester Forest East, Leicester

Annual General Meeting
The annual General Meeting was held at the Anchor Inn, Hathern, on Monday 31st July 1972 at 7.30 pm. There was a very good attendance of greenkeepers. The Treasurer reported a good year financially. The following were elected:- President Mr. R. Bailey, Chairman Mr. G. Darby, Vice-Chairman Mr. W. Woods, Secretary Mr. S. Fretter, Treasurer Mr. A. Thornton, Committee Mr. J. Carrick, Mr. P. McCarron, Mr. D. Whitehead, Mr. B. Mott, Mr. G. Arnold, Mr. S. Fretter, Mr. W. Woods, Mr. G. Darby, Mr. A. Thornton, Mr. W. Tuckwood, Mr. W. Cole.

A vote of thanks was given to Mr. J. Carrick for his two years as Chairman of this section.

New members
I would like to welcome to this section two new Vice Presidents. Mr. L. F. Bull, 64 Glenfield Frith Drive, Leicester. Mr. D. Baum, 4a Elms Drive, Quorn, Loughborough.

Subscriptions
On checking we find that we have still some subscriptions for greenkeepers outstanding for this year. As stated these are to be paid by 3rd October 1972. It would be appreciated if those still owing would forward as soon as possible to save us postage etc. in reminders.

Bereavement
We would like to offer our deepest sympathy to the family of Mr. W. Roberts who passed away suddenly. He was greenkeeper until retirement at Radcliffe on Trent Golf Club. He will be sadly missed at our Annual Golf Tournaments.

SOUTHERN

Chairman: C. A. Moore (Stanmore)

Hon. Secretary: 68 Salcombe Gardens, Mill Hill, N.W.7. Tel: 01-959 2847

October lecture
A reminder that a winter programme of lectures commences on Wednesday, 4th October, at the new meeting place in the 'Adelphi' Bar, George Hotel, George Court, WC2 at 6.30 pm. Philip Marshall of Ransome-Hahn Tournament Triplex Greens Management System, and I, shall look forward to seeing you in full strength again.

Also for your diaries, Wednesday, 1st November, a first time visitor to the section Pat Moran OBE, NDH (BEL), a tree specialist and judge on national level. Wednesday 6th December, another first timer, STRI Biologist, Mr. A. R. Woolhouse BSc with the subject 'Turf Diseases'.

Match
A 20-a-side match versus a Stowmarket society could be arranged for late October providing there are sufficient interested members and providing the Match Captain is notified in time. Royston Golf Club has been suggested as a mid-way venue. Entries

The British Golf Greenkeeper
should be sent in at the earliest possible time to R. Tempest, The White House, Hartsbourne Avenue, Bushey Heath, Herts. and NOT TO ME. This could develop into an annual event.

**Bereavement**

As you all know by this time another stalwart supporter of the BGGA passed away after a long illness very patiently borne. Mr. C. R. Cooke, 'Clary' to all who knew him well, died on 16th June. Flowers were sent from all his friends in the Southern Section and J. McWilliam represented the section at the crematorium. The following letter was received from his widow:

Dear Mr. Ford,

Many thanks for your letter and cheques for which I was most grateful.

I would specially like it to be mentioned in the journal that my husband was the founder of the Sheffield Section of the BGGA which was a very hard task to get started.

Also he was the first greenkeeper to experiment with lead arsenate for worm eradication which eventually proved such a great success, and it is widely used nowadays. Despite a lot of criticism he stuck to his guns to prove its success.

I am going up to Sheffield for a holiday, so I expect I shall see some of the old greenkeepers as I have always taken a great interest in greenkeeping in all its trials.

I am, yours sincerely,

EDITH COOKE

**New members**

I would like to extend a very warm welcome to the following: A. J. Covey (Harefield Place), V. F. Brenes, R. H. Cox, D. Hudson, and K. L. Miles of Surbiton Golf Club, and J. Risbridge of Beaconsfield.

A warm welcome also to M. C. Owen who has moved to Roehampton from the North West Section.

Visitors Prize
J. D. Monk   Nett 71 5 Golf Balls

The Prizes were presented by the Captain of Habberley, Mr. R. A. Pratt. For the greenkeepers, George Hart, the Chairman, thanked Mr. Pratt and all the members of Habberley Golf Club for the courtesies of their course and clubhouse, and for once again providing all the wonderful prizes.

Our Chairman also thanked John Grealy, Head Greenkeeper, for the tip-top condition of the course, and the stewardess, Mrs. Grealy, and her lady helpers, Mrs. Robinson, Mrs. Bennett and Mrs. Binns, for the excellent meals and service throughout the day.

Annual General Meeting
The AGM was held in the clubhouse of the Habberley Golf Club on Monday 24th July.

Thirty six members attended the meeting which was presided over by the Section Chairman, G. Hart. Apologies were received from Peter Hart.

The minutes of the last AGM were read and passed along with the Secretary's report of the year's activities. The Treasurer reported a healthy Balance Sheet once again, and was accorded a vote of thanks from all members.

The following officers were elected for the year:- President, Mr. Carl Bretherton, Vice-Presidents, last year's Vice Presidents were re-elected with the addition of J. D. Monk and G. Hiams, Chairman, G. Hart, Vice-Chairman, V. Smith, Secretary, R. Goodwin, Treasurer, F. Cashmore, Committee: The following members were elected to form a committee: R. Smith, A. Boffy, L. Greenow, A. Boraston, G. Smith, R. Pullen, A. Cutler and A. Kite. Representative to the Executive, V. Smith, Honorary Auditors, Messrs K. Sargeson and E. Ballinger.

A vote of thanks was expressed to Mr. Sargeson and Mr. Ballinger for the wonderful job they were doing in keeping our financial affairs in good order.

It was approved that the Secretary be given an Honorarium of £20.00.

We can make the sporting world a better place.

What the papers say has led us to believe that not enough people are using Fisons Sports Turf Compost. Perhaps because not enough people know that it’s a fertilizer/compost all in one. (Turf needs both if it’s to stand up to a season’s bashing.)

It offers you the right balance of peat, sand and nutrients – every time – for strong healthy root growth and a sward that turns visitors green.

(Just one application: think of the time and labour you save.)

What’s more, Sports Turf Compost is free flowing and packed in polythene bags that can stand up to outside storage.

You don’t have to get your name in the papers to get turf that everyone talks about.
