Dear Sir,

May I refer to Mr. C. A. Moore's letter in the April issue. I would endorse the opinion of Mr. Adrian Robertshaw (January issue). The automatic pop-up sprinkler system of watering greens only accentuates the development of soft greens, thatch, black slime and fusarium when it and other treatments are abused or neglected.

There can be no doubt that the pop-up system is the irrigation system for all modern golf courses. Its use should pose no special problems for progressive greenkeepers. Minor drawbacks may arise on some older courses.

The combination of good greens and the pop-up system is not due to 'good fortune' but rather skilful methods of greenkeeping as outlined by Mr. Robertshaw in conjunction with automatic watering.

Obviously it takes time to adapt to any new method. After the first year most problems should be ironed out. So one must be patient. As one gains experience with the automatic pop-up system one will be pleasantly surprised.

Yours faithfully,
R. J. LANE

Dear Sir,

I reply to Mr. Moore's letter in the April issue of the British Golf Greenkeeper about the pop-up system.

I have read with interest about pop-ups in the magazine and in my opinion soft greens thatch, black slime and fusarium are caused by mis-use of the pop-up system.

I've had this system for two years at Blairgowrie Golf Club and would recommend it to anyone if used sensibly and properly.

The timing clocks in this system are arranged so that every green can be watered individually and each green treated as an individual. All greens are not alike for there are greens that hold water and some that dry out quickly so this means that the head greenkeeper in charge should know his greens and know that when using the system some greens will need two or three minutes while others might need longer and some greens will not require water every time you use the system.

The system was installed to help the greenkeeper through the dry spells and not to be used to soften the greens as the American golfers like them, and more and more British golfers feel the same way. When this happens the only man to blame is the person in charge of the system as in this climate over watering does more harm than good, but I still think it is a great system if used properly.

Yours faithfully,
JAMES LOW
(Head Greenkeeper)
