These three machines have been designed to remove all the thatch, thus stimulating recovery and growth of strong healthy grasses. You will find that each machine will clear the difficult, dead, matted, fibrous grass that is so often so difficult to get rid of.

We have a machine for every purpose from the small golf green to the largest Municipal playing fields. One great labour saving device we have fitted on our P.V.R. model is the very large glass fibre collecting box which saves an enormous amount of time and energy that would otherwise be wasted in sweeping up afterwards.

Front Cover Picture

Recent Scottish guests of Atco at their factory included Mr. John K. Campbell, Links Supervisor of St. Andrews, pictured third from the left. The visit coincided with the Institute of Groundsman’s Conference at Nottingham University at which Mr. Campbell was invited to present a paper. Also shown are left to right Mr. David Mitchell—Parks Superintendent Glenrothes Development Corporation, Mr. Jim Ferguson, Mr. Campbell, Mr. H. J. Jebett—Sales Manager, Atco Professional and Heavy Duty Mowers, Mr. Willie Anderson, and Mr. Andrew Murray—Fife County Parks Superintendent.
Everything you need in turf maintenance & equipment

This is what you get in the Parker Package:

- FREE Turf Advisory Service
- Big selection of grass seeds, including Mommersteeg pedigree mixtures
- Parker's own "Verdant" range of fertilisers and grass seeds
- Watering Equipment and Disease Control products
- Complete After-Sales Service for Mowers, Tractors & Machinery.

And there's more for you in the Parker Package!

Parker are main distributors for Leyland Tractors
Sisis • Lodge • Ransomes • Dennis • Hayter • Allen
Flymo • May & Baker • Synchemicals • Proctor Nets
Perfecto Golf Accessories • Deckson

Find out more about the Parker Package. Write for our complete catalogue.

It is hoped that it will lead to similar qualifications at the appropriate level.

The Lancashire course will be free and trainees will receive tax free payments during training. The postal course is likely to be one for which students can get grants from their Local Authority.

In Scotland, training is also now directed towards a City & Guilds examination.

Extract from “Evening Echo, Bournemouth, Tuesday, April 30th 1974

CRACKS IN GOLF COURSE

A nine-hole golf course, Ashley Wood, near Blandford is cracking up because of the weather.

The cracks first became apparent nearly two weeks ago. Some of them are about one-eighth of an inch wide and they run round in small circles, said Col. Shove, Club Secretary.

He said the damage was not permanent “All we need is a change in the wind, some rain and a warm spell, he said.

Greens at Ashley Wood are not artificially watered because water has to be pumped to the clubhouse from a deep well. In any case we would not have dared used water on the greens with the cold north-east wind and frosts”, said Col. Shove. “That would only have caused more damage”.

With acknowledgement to “EVENING ECHO” Bournemouth. Tuesday April 30th 1974.

TURFACE—WHAT IT DOES

Soil Amendment for Golf Courses

J. R. David Palmer, Supaturf Products Ltd.

Turface is a calcined mineral aggregate designed to provide a constantly friable soil—year after year.

Friable soil produces many benefits:
1. Resilient turf.
2. Faster and more complete water infiltration.
3. Free air movement.
4. Lower maintenance cost.
5. Greater control over disease.

A well-conditioned turf is better able to resist wide variations in weather conditions.

Prior to Turface, soil additives often overcame only a few of the conditions which cause poor turf, and they sometimes compounded these problems because of their physical properties. There was no single product that could economically promote better turf growth in all kinds of weather without difficulties.

There are five major turf problems which usually plague turf managers:
1. Poor drainage.
2. Inadequate ventilation.
4. High maintenance cost.
5. Disease.

During the many years of field testing and commercial use throughout the country, Turface has proven itself in minimizing, if not completely eliminating, all of these conditions.

1. Poor Drainage

This problem usually results from the compaction of the top three or four inches of soil. Compaction is either immediately noticeable or develops gradually. Immediate compaction usually results from the use of unsuitable soil mixtures. Gradual compaction indicates organic decomposition from traffic and weathering. Using organic materials as top dressing to overcome this difficulty will at best serve only as a temporary cure. In a short period of time, due to decomposition of the organic matter, the compaction problem returns to a greater degree. Various grades of sand are often used as top dressing to provide friable soil.

Although these inorganic materials will not decompose, their use results in poor resiliency, high leaching rates, and low water holding capacity of the treated soil. Where bad design or preparation causes drainage difficulties, a poorly designed area will drain better if the soil is not compacted. Friable soils on sloping areas will allow water to penetrate the soil rather than run off and collect in low areas.

Turface is recommended for use as a top dressing on established turf, or as part of the soil mixture during construction, to aid in maintaining constantly loose soil. Turface, whether wet or dry, will not compact, cake or break down to smaller particles. This is because Turface particles are angular, not flat, round or square. Being of varying size, a continuous network of particles is formed, which serves as a “separator” in sticky, gummy soils. In many years of testing.
Keep turf at its best - all season

with a single feed from new Gold-N

Gold-N is completely different from conventional turf fertilizers. Following an initial boost of nitrogen, it supplies this vital nutrient slowly and continuously over a period of 3 to 6 months. All from a single application!

Constant Quality
This steady supply maintains turf at its best. Keeps it thick and green. There isn’t the intermittent “too lush, too little” effect of more soluble fertilizers. And because Gold-N resists leaching in wet weather, grass vigour is maintained even on free-draining soils, golf courses, public open spaces and reclaimed derelict sites.

It's Consistent
Gold-N minimises scorching, tolerates variations in temperature and moisture. And because it’s made to rigid specifications, every bag is as good as the next. It’s easy to handle and spread – by hand or machine. And it’s hygienic so there’s no danger of the diseases associated with organics like hoof and horn. What’s more the nitrogen content is virtually all usable.

Superior Performance
Gold-N saves money by eliminating leaching and other wastage. It works economically in situations where perhaps five or six dressings of the usual fertilizer would be required – keeping time and spreading costs to a minimum and increasing playing time. It will help to transform sparse growth areas to lush swards in one or two seasons and after only one application per season.

For full details of Gold-N, contact:
England & Wales – Chipman Chemical Co., Horsham, Sussex EH6 7EN.
Tel: Horsham 60341

Scotland – SAI Horticulture Ltd., Hortus House, 3 John’s Place, Edinburgh. Tel: 031 554 5451/6

N. Ireland – Richardsons (Ulster) Ltd., 1 Short Strand, Belfast BT5 4BS. Tel: Belfast 57424/5/6

Eire – ICI (Ireland) Ltd., 5/9 South Frederick Street, Dublin 2. Tel: Dublin 771831

NEW Gold-N keeps grass lush and green

The British Golf Greenkeeper
Turface survived many freeze-thaw periods. Leaching tests run in Wyandotte Research Laboratories verified the breakdown resistance. No ingredients were found which would adversely affect plant life.

2. Inadequate Ventilation

Healthy root structure requires oxygen. Compacted soil will not allow air to reach the roots. Field research has proven that roots will grow toward available oxygen in the same manner as they grow toward moisture. Soils that highly restrict air penetration from above, and movement below, the surface will become stagnant. The green is therefore susceptible to infection and poor root growth. Greens properly built and maintained with Turface breathe more freely because the soil remains loose.

It is important to examine the top one or two inches of turf periodically for compaction. Continual traffic and decomposition of cuttings and other organic matter will form an impervious layer. Since oxygen and moisture must penetrate this layer to reach deeper roots, it is important to reduce the degree of compaction. Periodic top dressing with Turface will allow freer and deeper movement of air in and out of the soil.

3. Shallow Root Growth

This mainly occurs from the inability of water and oxygen to reach and remain at the deep roots. On a hard, compacted green, the water will remain near the surface. Water penetration in compacted soil may be as low as 0.1 inches per hour. During a rainy season, or when manually watered, the shallow roots take all of the water capable of penetrating such a surface, and deep roots will not develop or survive, since there is no moisture available to them. Because of rapid evaporation near the surface, the shallow roots need frequent watering. Soil conditioned with Turface allows water to penetrate quickly to greater depths. Turface absorbs its own weight in water. This means that moisture will remain deep in the soil long after the soil near the surface has dried out. A friable soil with a material that will not decompose, will permit freer air movement and retain moisture.

4. High Maintenance Cost

Labour, fertilizers, equipment, and the use of chemicals are the principal cost factors in maintaining turf. Of these, labour is the most expensive. The presence of even small amounts of Turface in soil effects definite savings in labour.

A Turfaced soil will take approximately twice the water in half the time that a standard golf course mixture will. Watering time is thus cut by more than half. Repair of damaged turf is easier with the loose Turfaced soil, and recovery is definitely quicker. Labour is saved because of less ball damage on greens, less scuff damage caused by spikes, and quicker turf recovery of heavily played areas such as tees.

Because Turfaced soil resists infection, the cost of applying preventive chemicals is normally reduced.

5. Disease

Many soils incorporate large amounts of sand, which is used because it assists in drainage. Sand does not, however, hold or absorb water, which is so beneficial for healthy root structure. Turf having healthy root structure fights disease, whereas weak root structure is more susceptible to disease. Disease is more common under high moisture, drought, or stagnant conditions.

Turface provides faster drainage than sand, and also holds enough moisture to minimize drought. Stagnant conditions prevail when excessive

HORWOOL
moisture is trapped in the soil. Since Turface works to control moisture, it will assist in the prevention of disease due to stagnation.

In summarizing, Turface produces a better turf structure because it works toward satisfying all the conditions that must be met for good root growth. It does this by delivering moisture to deep roots, allowing the soil to breathe and providing excellent drainage.

On golf courses, Turface is widely used as a top dressing material following aeration of the greens. Maximum effectiveness is obtained by top dressing with straight Turface, although Turface may also be incorporated into any top dressing mixture.

Turface is a montmorillonite clay. It is mined from a specially selected earth deposit in Mississippi. Obtaining special cuts of material from the mine is only the first step of many important operations. The crude clay is crushed and ground only after analysis verifies top quality material. Materials of uniform particle size are then fed to a calciner. A calciner is an inclined, revolving cylindrical chamber, flame fired to temperatures above 1300 F. The humidity in the calciner is exactly controlled. The crude clay enters at the top and leaves at the lower end. It has been subjected to constant high temperatures over a definite period of time. Through the use of specially designed ribs in the calciner it is possible to get a uniform degree of calcination. Careful control of particle size, temperature, time and tumbling action is absolutely necessary to produce a product that will absorb moisture, allow free air movement, and not disintegrate while in the soil. High temperature calcining over a short period of time is not enough to ensure complete calcination. Also, if the particle size varies, it is possible to over-calcine small particles and under-calcine large particles. Following the calcining procedure, Turface is reground and screened to ensure the exact particle size and distribution. Finally, the product is packaged in attractive 50 lb. bags.

HOW TO USE TURFACE FOR TURF CONSTRUCTION

When new greens or tees are constructed, Turface is an excellent choice as a component of the topsoil mix, usually replacing part of the sand. Where practical, it is desirable to condition the top six inches of soil with approximately 20% to 25% Turface (by volume), depending upon the physical structure of the soil.

It is important to distribute the Turface evenly throughout the top several inches of soil; this is true whether Turfing or sowing. There are many ways of accomplishing even distribution. The following are suggested methods which have proven satisfactory:

A. Direct Application

Roto-till or cultivate one bag of Turface per 10 square feet into the top 6 inches of soil (Soil is usually a mixture of sand, top soil and peat). At this rate, the top 6 inches of green surface will be conditioned with approximately 22% Turface. After levelling, turf or sow.

B. Pre-Mixed Soils

With the use of a mechanical soil mixer, mix 5 bags of Turface with each cubic yard of soil. One cubic yard of the mix will cover 54 square feet of the green surface to a 6 inch depth, or 27 square feet to a 12 inch depth. The soil will be conditioned with approximately 21% Turface.
For expert help and advice with their game, most club members have a professional to turn to.
But who can a green keeper turn to for help in keeping his turf up to par?
His own professional: SAI TURF FOOD
Courses like Carnoustie and Muirfield use SAI Turf Foods. It works wonders with grass.
It comes in the form of mini-crumb granules which makes it easy to spread.
It also stays where it's put, releasing its goodness slowly into the soil to strengthen grass growth.
For stronger, greener, cleaner, healthier turf, try SAI.
All enquiries to the manufacturers or to our accredited suppliers for England and Wales:

Chipman Chemical Co. Ltd., Horsham, Sussex.
Telephone 60341/5

SAI
Hortus House, 3 John's Place, Edinburgh.
Telephone: 031-554 5451

Just like your club, your turf needs a professional.
HOW TO USE TURFACE FOR TURF MAINTENANCE

Since compaction is always a problem on greens, a good maintenance programme is important. Top dressing with Turface will help to ensure a friable soil, good drainage, and optimum root development of the turf.

A. Straight Top Dressing

Aerify, remove plugs, and apply Turface through a spreader, using one bag for each 250 square feet of surface area.

With reverse side of rake, pushbroom, or drag screen, work Turface into turf and aerification holes.

Verticut machine may be used before Turface application, to provide additional avenues of entry into the soil. Turfacing is recommended twice or more a year (once a year for Turface-built greens).

B. Surface Levelling by Top Dressing

Greens develop low areas which need to be relevelled. A soil mixture similar to that in the green plus Turface can be used to facilitate excellent drainage.

Premix 1/3 Turface with 2/3 soil. Soil may be mixture of sand and peat or sandy loam. Verticut area to remove thatch, and apply Turface mix to area in regular levelling manner.

FORMULAS

The following formula is used to determine the number of Turface bags necessary for construction when depth of mix in inches, per cent Turface, and square feet are known:

$\text{Bags} = 0.0007 \times \text{Depth} \times \text{Per Cent} \times \text{Square Footage}$

Example

5000 sq. ft. green
15% Turface desired to a 4" depth.

$\text{Bags} = 0.0007 \times 4 \times 15 \times 5000$

$\text{Bags} = 210$

If, however, a greenkeeper wishes to put so many bags into a green to a certain depth, the following formula is used to determine the percentage Turface in the mixture:

$\text{Percentage Turface in Mixture} = \frac{1550 \times \text{Bags} \times \text{Depth} \times \text{Square Footage}}{150}$

Example

150 Turface Bags
6000 sq. ft. green
4" depth to be conditioned

$\text{Percent Turface in Mixture} = \frac{1550 \times 150 \div 4 \times 6000}{232,500 \div 24,000}$

$= 9.7 \text{ or } 10\%$

This means that if 150 bags of Turface are worked into a 6000 sq. ft. green, the top 4 inches of soil will be conditioned with 10% Turface, by volume.

HUXLEYS HIRE

FOR THE PROFESSIONAL USER

Sometimes the purchase of equipment is not economic. We offer for hire specialised machinery for that seasonal job. Send for brochure and price list.

HEAD GREENKEEPER

Owing to the impending retirement of the present Head Greenkeeper, Gullane Golf Club require a first class Head Greenkeeper to supervise the work on three 18 hole courses.

Good salary and house provided.

Apply by letter giving details of age and experience to:—

The Secretary,
Gullane Golf Club,
Gullane,
East Lothian.
Situations
Vacant

HEAD GREENKEEPER

The Woburn Golf Club has a vacancy for a Head Greenkeeper. The club is in the course of construction and it is intended that the Head Greenkeeper should join the staff as soon as possible.

Applicants should have held an appointment as a Head Greenkeeper with a reputable golf club.

Salary and conditions will be subjected to negotiation. Accommodation provided.

Applicants should send full details of career, together with copies of any references, to:

The Managing Director
Woburn Golf Club,
Crowholt, Woburn, Beds.
MK17 9PX.

HEAD GREENKEEPER/ASSISTANT HEAD GREENKEEPER

A leading Bucks club needs a Head Greenkeeper and an Assistant Head Greenkeeper to lead a team of four. We pay generously and provide a modern house and the latest Greens equipment. Removal expenses will be paid and time off for golf will be given by arrangement.

We want a couple of men who will fit in with us and the best way to find out is to write giving your name, telephone number, present earnings and details of your experience. We’ll call and talk about the jobs. Box No. 122.

DYRHAM PARK COUNTRY CLUB
First Assistant Greenkeeper

First Assistant Greenkeeper required.

Salary from £2000.

Accommodation available.

Experience of modern machinery essential.

Apply:
The Secretary,
Dyrham Park Country Club,
Galley Lane,
Barnet, Herts.
Telephone: 01-400 3361

HEAD GREENKEEPER

Arts and Recreation Group.

Commencing salary will be within the Grade Technical 6 (£2,235—£2,535 p.a.)

Thamesdown is a large and progressive Authority situated on the outskirts of the Thames Valley and the Wiltshire Downs and within easy reach of the Cotswolds, the South and West Country.

The present population is 145,500 but this is expected to increase through planned, but vigorous development, to 200,000 within the next ten years.

The successful applicant will be responsible for 18 hole Municipal Golf Course at present under construction. Modern equipment will be available, together with an automatic pop-up sprinkler system.

This advertisement is authorised by the Local Government Staff Commission on an unrestricted basis.

Housing accommodation is available for the successful candidate. Up to 100% removal expenses are paid.

Full details and application forms are available from: The Personnel Officer, Civic Offices, Euclid Street, Swindon, SN1 2JH. (Telephone 0793 26161 ext. 274) to whom completed applications should be submitted by 15th July 1974.

HARTSBOURNE GOLF & COUNTRY CLUB

require Head Greenkeeper (permanent position) 27 hole Golf Course modern pop up system—Toro Greenmaster equipment etc.

Salary in region of £3,000 per annum. Negotiable subject to age and experience.

New accommodation rent & rate free.

Full central heating.

Apply in writing, or telephone Secretary, Bushey Heath, Herts. 950 1133.
THE LOOK OF A HOLE

Patrick Smart

There are several ways of surveying a hole from the teeing ground, depending on the skill of the player. It should be a matter of thinking, and there can be bad thinking even among the shorter handicaps.

One thing is certain. The designer has not set out to make it simple for the golfer. It occurs to me, having written that, some of the most difficult holes I have known were simple. Flat, featureless, dull. There is no incentive to try, and that induces sloppy stroke making.

Standing to his ball, the long handicap will look down the fairway, ignoring the geography of the hole, and hope he can knock one down the middle. It is a waste of time to decide on which side of the fairway he should place the ball. He knows that to be beyond his compass.

Perhaps he misses something here. There is fun in examining the problem before us, and in a sense reading the architect's mind. We shall come to that later, and the aesthetic pleasure of gazing upon a really good lay out. That can only be done in a carefree round.

It is a principle that there should be two routes to the hole. The one enforcing accuracy, combined with an element of risk. The other, for the higher handicaps, leaving them—providing the drive is in play—with two comparatively easy strokes to the green. No large carry to overcome. I say two more strokes, because if they try to get up with the second (and try they will), it may lead to an 8, or more, when a 6 was possible.

It is one of golf's facts that the handicap player will not accept that he has spare strokes from his allowance. By all means let the youngster have a go. It is fatal to instil into him a defensive attitude. He will learn the hard way. Which is the only way. The elderly, good golfers when younger, have the experience to fiddle their way round.

We come to the better average club members, giving a fairly wide margin, say 11 down to 6. Here, I believe, the handicaps could be reduced by several strokes if they would take a good intelligent look at the hole they are about to play.

On their home course, they consider they know all about each hole. It can be that they have been adopting the wrong strategy on certain holes. Hence the stationary handicap. On a strange course, there should be a pause to study the design, reasoning: "Now, what devilry is the designer trying to entice me into." Just a little care can make a lot of difference.

On many courses the greens are either angled away from the centre of the fairway, or guarded by bunkers that call for placing the drive. Hence the need for correct tactics. The fall of the ground comes into this. It will govern the roll of the ball, and the middle can be ignored. The fader, or the puller can use that slope to his advantage. To clarify that. A right to left slope will help the fader. If the prospect is the other way, then he who puts draw on the ball will benefit. The ball will not run into trouble. The 6 handicap should be capable of putting the ball approximately where he intends.

I once wrote of the drive being the most important stroke, a good start

Continued on Page 19
Moss invasion is one of the greatest problems with which greenkeepers are faced on turf areas under their control. Moss is often an embarrassment to them as its presence offends their professionalism, rightly so as neglect of essential cultural work is one of the root causes. Since these primitive plants have the ability to survive under a wide range of conditions, it is important to understand the factors that account for their presence in turf so that the correct control measures can be taken.

Retention of moisture at the surface is the key factor and may be due to shade, soil conditions or management, and often to a combination of all three.

Very little can be done about shade on established turf, but should be taken into account when siting a new area. Soil conditions are usually the greatest contributors to water retention. The soil type has an obvious bearing, for even on light soils settlement and compaction over the years tends to seal the surface, resulting in water retention in the sward.

Fibre build up in the upper profile caused by accumulation of debris gives a spongy layer that is very water retentive. This is perhaps the most frequent cause of moss development in the winter following a dry summer—such conditions have prevailed in the last two seasons. The fibre dries out badly and is difficult to wet up again. As a consequence sufficient water remains at the surface for development, but penetration into the
grass root zone is limited, and thus over a period of several years the overall strength of the sward declines. September to December is the period when most active root development takes place, and it is logical that restriction of water supply at this time will cause roots to become weaker, and seeking surface water, more shallow. This leads to a lack of competitive ability on the part of the grasses and unless remedial steps are taken, moss rapidly gets the upper hand.

There are two main groups of moss. The acrocarpous mosses, which are mostly cushion forming and generally have a fairly high light requirement, so that they are not normally found in a dense sward. This group is symptomatic of neglect (where the grass is starved out and thin) and over-close mowing (which places the grass under severe stress and reduces its strength—very noticeable where high spots are scalped) and the pleurocarpous or feathery mosses, which are far more general and may exist in quite pronounced patches where the grass is not competing satisfactorily, and often uniformly over the whole area in which moss can invade and take over if it is not checked.

From what has been said so far, it is clear that mosses are very adaptable and whilst chemical control is possible, their elimination will depend on the removal of the conditions conducive to their growth.

Good cultural practices involving year-round aeration using tines appropriate to the season are essential adjuncts of chemical control. These will open up the surface, enabling air and water to penetrate satisfactorily and, by improving air/water relationships in the soil, enable root strength to increase and the grass plant as a whole to become stronger—thereby enabling it to compete on better terms.

To be concluded

---

So why not use an ATCO VARI-GANG MK. II and have two professionals on the job?

When you have cast your professional eye over it we believe you will agree with us that the latest Atco Vari-Gang Mk. II is professionally made for professional users like yourself. And here are a few reasons why —

Outstanding flexibility
Whether a single unit or a towed triple is required, higher multiples or even a mounted gang mower, the Atco Vari-Gang Mk. II can fulfill the need perfectly.

Simplicity —
Is the keynote — both of ganging and maintenance. Cutter change for example is but a moment’s work with a choice of 5 or 8 bladed heavy duty cutting cylinders.

Close mowing without scalping
A 15” wheel base ensures that turf undulations can be closely followed with the minimum risk of scalping, however severe they may be.

Finally — Wise Investment
The new Atco Van-Gang has a lot to offer, so why not ask your nearest Atco distributor for a demonstration by ringing or writing to the address below. One can be arranged without obligation.

...as famous as the turf we cut!

Charles H. Pugh Limited, Atco Works, Tilton Road
Birmingham B9 4PR. Phone 021-772-2524, 2551, 3892

July
With pleasure announce that they hold the greatest concentration of lawn mower spares and lawn mower engine spares in the country.

in any game or sport is helpful. The second shot to a hole, to a narrower target, requires careful consideration. A cool assessment of the possible (let us leave percentages to the Stock Exchange) may ward off disaster. The question of attempting to carry, or play short of a lateral stream is one. The pin placement may make attack dangerous. Once again, he has his handicap.

The most tricky courses are those where, incorrectly, trouble lies behind the greens. These even for me, are old fashioned. I know one well.

A test of a good, interesting lay out, is that after one visit the holes remain in the mind. A dull course leaves no memories.

And now for the pleasure of looking at a fine hole. The famous have been described before; the public without seeing them have come to know them. Come with me to a links that deserves to be better known. It is Pennard, on the Gower peninsular, west of Swansea. I told the late Bernard Darwin I was going there. He replied: “I have it on the best authority, James Braid, that it is one the finest natural links in the country.”

Like Muirfield it lies above the sea, the Bristol channel. There are mountainous, terrifying dunes. One hole stands out, though after twenty five years I can remember them all.

You stand on a high teeing ground. Below, all the way to the green is sand. On either side buttressess of great dunes elbow their way in. The green, 200 yards away, is perched high, cut out of the side of a dune. It is green, or purgatory. According to the wind, it can be anything from a No. 4 iron through to a driver. It brings to mind the famous Calamity Corner on Royal Portrush.

It strikes terror into the hearts of some, a tingle of excitement at the challenge in others. A short hole, it has majesty. You cannot ask for more than that.
Golf course watering problems solved!

CAMERON IRRIGATION

No-one knows more about golf course irrigation than Cameron. Look at these two great sprinkler systems you can choose from.

CAMERON - FIRST IN POP-UP SPRINKLERS
With Cameron Automatic Pop-Up Sprinklers plus the Cameron Electronic Control Panel, you can water your course any time you like, even apply fertiliser and disperse dew - automatically! Save labour, cut costs!

CAMERON - FIRST IN PORTABLE SPRINKLERS
The next best thing to Cameron automatic watering. Use only the minimum labour. Cover the average golf green from one position. Adjustable water jet.

GEKA QUICK RELEASE HOSE COUPLINGS. Made in Brass. Save time, money, labour.
PLASTIC PIPE & FITTINGS. Complete range available.
Ideal for the small jobs you do yourself.
TRICOFLEX HOSE. The bright yellow lightweight, reinforced plastic hose built to last. Always supple; non-kinking.
FREE ADVICE. Contact us when you have an irrigation problem. Any time.
Write or telephone NOW for details. 24 hour answering service.

it's easier
& cheaper with a
SCOOP TRENCHER

Scoop Trenchers dig trenches 4, 6, and 8 inches wide, and up to 39 inches deep automatically in any soil condition at speeds of up to 100 yards per hour.
A built in winch ensure positive traction even in bad conditions. Transportation and work in confined areas is easy because Scoop Trenchers are small.
The digging chains have a breaking strain of 21 tons so Scoop Trenchers are robust too.
Their initial cost can be saved in only 2,000 yards of work.

The Annual Spring Meeting was held on Wednesday, 1st May, 1974, at the Basingstoke Golf Club, by kind permission of their Captain and Committee. The weather was good and Mrs. Janjua and her Assistant provided us with excellent refreshments. Mr. P. Huxley presented the prizes.

Lowest gross over 36—157 E. West (Broadstone) Tregunna Trophy and table lighter given by Huxleys.

Best Nett over 36—136 T. Patchin (Ampfield) Roffey Cup and gold watch given by Ransomes.

2nd Best nett over 36—144 E. James (Parkstone) Denyer Cup given by Bill Denyer.

Best nett Morning—74 J. Payne (Lee on Solent) Tankard.

Best nett Afternoon—73 E. Belcher (Waterlooville) Tankard.

Best 1st Year Handicap Player—151 A. Brant (Basingstoke) Tankard.

Mr. D. Hall was the winner of the Ball Sweep.

Mr. E. R. James, Acting Chairman, thanked the Captain and Committee for the courtesy of the course and clubhouse, and also expressed our thanks to the Green staff and indoor staff. Mr. James mentioned the contribution which Mrs. Stimson, Mr. E. Fox and Mr. A. Jeffery had made to the smooth running of the Tournament, and also acknowledged the prize

Our congratulations to Mr. and Mrs. P. Huxley on the safe arrival of a son. Best Wishes to Dave Green in his new job.

It was with much regret that members learned that Mr. I. Greenfield had felt it necessary to resign his Chairmanship due to ill health, and we all hope he will be restored to better health quite soon. Our grateful thanks to Mr. Greenfield for the excellent way he has performed his duties as Vice-Chairman and then Chairman of the South Coast Section since its inception in April 1970.

The Section Annual General Meeting was held at Ampfield Par Three Golf and Country Club on Thursday, 16th May, 1974, at 7 p.m. A Report of the 1973 A.G.M. was read and accepted. A report of the past year's working was given by the Acting Secretary and she also presented the Financial Statement for the year ending 30th April, 1974; both reports were considered satisfactory and adopted.

The following officers were elected:—

Chairman: E. R. James; Vice-Chairman: E. Brown; Committee: E. Fox, P. Marsh, J. Payne, T. Smith, E. West and W. Young.

President: In the absence of Mr. J. H. Fry it was proposed by the Chairman that Mr. Fry be approached and asked whether he wishes to continue office for the ensuing year. This was unanimously agreed.

The appointment of Mr. J. Stimson as Secretary was confirmed.

Attention was drawn to a drop in Membership, and it was agreed that a recruitment campaign should be instigated, and that Honorary Members should also be encouraged to join the Section.

The Secretary submitted a report on the 1974 B.G.G.A. Annual Tournament to be held at the Isle of Purbeck Golf Club on 30th September, 1st and 2nd October, 1974. The Chairman proudly displayed the splendid Section Flag which had been supplied by Roffey Bros. of Bournemouth and Elvin, the Flag Specialists. Peter Wilson, Brewers of Salisbury, has agreed to provide the tee markers, Phil Marshall, Ransomes, to supply flags for the greens and J. Hamilton Stutt to donate a special prize. In response to the letter circulated to the Trade, Landscape Maintenance Ltd., T. Parker & Sons (Turf Management) Ltd., Chipman Chemical Co. Ltd. and Huxley's Garden Machinery have expressed their willingness to "sponsor" a hole.

It was agreed that a Parker Pen be sent to Ian Greenfield as a token of appreciation for his services to the Section since its inception in April, 1970, and the Chairman presented six golf balls to Eddie Fox, Tournament Organiser.

Our special thanks to the Secretary, Captain, Steward and Stewardess of Ampfield Golf Club for giving us once again the courtesy of the clubhouse for our meetings, and looking after us so well.

The Chairman felt that, before declaring the meeting closed, a special vote of thanks should be given to the Secretary, and Members expressed their appreciation in the usual way.

We welcome to the Section the following new members and hope their association with us will be a long and happy one.

Mr. J. Hamilton Stutt (Hon. Member).

Mr. J. Heyworth (Hon. Member).

ANDREWS POWER FORCE

Professionals, like you, need fast reliable power. The sort of performance that Andrews guarantee with every machine they sell. If you want the best—here they are.

PORTABLE POWER
Take your power with you. An Andrews generator gives you instant, economical power at the pull of a cord. These portable generators come in no less than 7 different sizes to answer your power needs. Every unit is built to the same sturdy specification for trouble-free performance anywhere, anytime.

'CYCLONE' SPREADING POWER
The most powerful spreader on turf now comes in three sizes. The 'Standard' covers 120 sq yards in one minute. The 'Compact' is ideal for larger lawns. Designed for easy towing behind any ride-on mower. The 'Major' is the really big one; its giant 10 ft. swath gives you a two acre per hour performance!

FLAIL-SAFE WITH BLUEBIRD
'Bluebird' is the most powerful scarifier on turf. Its strong, almost maintenance-free, 5 h.p. engine flails out grass cuttings, twigs, leaves and lawn-stifling thatch. The result—an immaculate sward. It's certain to be our 'Best Buy' in '74.

BILLY GOAT EATS RUBBISH PROBLEMS
'Billy Goat' has an insatiable appetite for rubbish. No special diet, this machine picks up leaves and grass cuttings, plastic cups, newspapers, cans and even bottles . . . then reduces all to a mere fraction of its original size and holds it in a huge dust-free bag ready for disposal!

Get the facts NOW. Pin this page to your letterhead and post to:

Annual Spring Golf Tournament

The Annual Spring Golf Tournament was held at Rushcliffe Golf Club, East Leake on Wednesday 15th May 1974. There was an excellent turn out of Greenkeepers, Vice Presidents and Visitors. The weather was also excellent, and to make the day, the course was also in excellent condition. Our thanks for making this day perfect goes to the Captain and Committee of Rushcliffe, to the Steward and Stewardess, the inside staff for the excellent meal, and the outside staff. Our thanks also to Mr. & Mrs. I. Toone for buying the prizes. To Mrs. Mott, Mrs. Darby, Mrs. Toone, Mrs. Fretter for helping with the starting and Raffle also the Putting competition. Thanks also to Mr. Emm of H. Pattinson for checking the cards.

I would also like to thank Ransome Simms & Jefferies. H. Pattinson & Co. Ltd., Leicester Horticultural Engineering Co., Rigby Taylor Ltd., Leicestershire and Rutland Golf Alliance. John Player & Sons Ltd. Mr. Austin Webb. Mr. James Mr. A. Thornton. Mr. Spencer, Machin and Hartwell for the lovely prizes. Also thanks to Mr. P. Malin for the Raffle prize.

The Visitors Prize was won by R. Fry.
Mr. T. M. Butler, Captain of the Robin Hood Club, presented the prizes. He extended a warm welcome to all Greenkeepers and hoped that everyone had enjoyed their day at Robin Hood.

On behalf of the Greenkeepers, our Chairman George Hart thanked Mr. Butler and the Robin Hood members for allowing us the courtesy of the course and Club house throughout the day.
He then paid tribute to David Brazier and the Green staff for the very fine condition of the Course, and to the indoor staff for the excellent meals and service during the day. He also thanked Peter Wyatt and Frank Cashmore for coming along to do the paper work.

Prize Donors
We are indebted to the following for their contributions to the Prize Fund:—
Ransomes—Robin Hood Golf Club—Toro U.K. Sutton & Sons—Sparbrook Golf Ball Co. Ltd.—F. W. Lees—Kings Heath Mower Services—Fisons—Cambridge Soils—Stewart & Sons Ltd.—Twyford Seeds—Golf Ball Manufacturers—E. T. Breakwell—Mr. F. Miller—Mr. R. James—Mr. L. E. Swain—and Mr. S. Wildman.

Autumn Tournament
The Autumn Tournament will take place at the Handsworth G.C. on Wednesday 18th September. Please let me have your entry by 4th September at the latest.

New Members
We welcome to the Section, Mr. N. Jones, Head Greenkeeper at North Warwickshire Golf Club and his Junior Assistant, N. Robinson.

The British Golf Greenkeeper
FYLKING

TURF GRASS

mightiest blade growing

FYLKING SMOOTH STALK MEADOW GRASS

'FROM QUALITY CONSCIOUS SEED DISTRIBUTORS'

The Champion, a hardy Viking blade, originating in Svalof, Sweden, Fylking Smooth Stalked Meadow Grass excels on every count.

✓ DISEASE RESISTANCE ✓ LOW CUTTING HEIGHT TOLERANCE
✓ WEAR TOLERANCE ✓ RAPID ESTABLISHMENT
✓ CERTIFIED SEED QUALITY ✓ BRITISH TESTED
The Ransomes-Hahn Tournament Triplex is a remarkable machine—so remarkable that we call it the world's first Greens Management System. The Tournament Triplex is a 12hp vehicle with hydrostatic drive, which powers four separate turf maintaining operations. Each conversion, from superb greensmowing to utility mowing, to Verti-Cutting, to spiking takes less than a minute—and no spanner! **Greens Units** A full 67" cut. Each 23", nine-bladed cylinder can be lifted individually. **Utility Units** Heavy-duty cutting cylinders and bottom blades for approach and tee mowing. Grass catchers provided with all units. **Verti-cut Units** Patented twin offset blades remove 'thatch', keep greens in play even in difficult conditions. **Vibra-Spiker** Now spiking takes even less time than greensmowing. High-frequency vibration penetrates to a depth of 1½" with a minimum of compaction. The combination of this unique quick-change unit feature, full 67" swath for every operation, variable-speed units and individual unit lifts make the Tournament Triplex an investment which no club can ignore. Your local Distributor is keen to impress you with a demonstration. Give him a call.

Ransomes Sims & Jeffries Ltd., Ipswich.
