When an advertiser tells you that a conversion is quick it’s customary to take it with a pinch of salt. But this time take it as fact. Trying is believing, and you can try it for yourself at your local Ransomes dealer! You simply pull the connecting pin and quick-couple cable, remove the existing unit, and slip the selected unit into place. It takes less than a minute!

Honest!

Tournament Triplex
Greens Unit
A full 67” of cutting width with the exclusive features of variable speed cylinder drive, giving you a cylinder speed completely independent of ground speed. Units may be operated one-down, two-down or all-down.

Tournament Triplex
Utility/Tee Units
Triplex utility units use same seven-blade design as greens reels, but have heavier fairway blades to withstand approach and tee mowing. These units are ideal for approach maintenance and the precision cutting of tailored tees, and can be adjusted down to ¾” for greens-mowing after top-dressing.

Tournament Triplex
Verti-Cut Units
Verti-Cut units use durable, yet thin offset blades to remove thatch and grain as they begin to form. With 67” of cut (the Verti-Cut units are the same width, work at the same speed, and use the same grass catchers as the greens and utility units) and a riding vehicle, these attachments are ideal for preventing the development of thatch etc., lessening the need to take greens out of play for renovation.
Variable-speed cylinder drives provide high tip-velocity even at low forward speeds.

Tournament Triplex
Vibra-Spiker
Vibra-Spiker reels use gentle high-frequency vibration to achieve deep penetration, without excessive weight, even when ground is hard and dry. Spiking (summer aerification) provides root pruning and moisture absorption, relieves surface compaction, and conserves fertilizers and fungicides by getting them immediately to the root zone. Full 67” swathe and Triplex speed make spiking a task that now takes even less time than greensmowing. Spiker penetrates to depth of 1⅓”.

Ransomes-Hahn
Tournament Triplex
- the world’s first Greens Management System.
Drainage - The controlled release of water

by

W. A. Adams, Soil Science Unit, University College of Wales, Aberystwyth

It is not by accident that the majority of British golf courses of high repute are on natural deposits of sand. There are a number of reasons, but one major one is a priority requirement for good drainage. All sands drain well, although natural deposits vary in their coarseness, angularity and degree to which the sand has been sorted into particles of similar size. It is the dune sand upon which most of our foremost seaside golf courses are constructed which shows a high degree of uniformity in particle size and degree of sorting.

Dune sand is a fine sand blown a short distance inland off the beach by strong sea breezes and thus separated from the coarser particles which cannot be transported. It is also cleaned of particles of very fine sand and silt which are carried further inland by the wind. Dune sand is therefore a clean, wind-sorted sand which contains particles within a quite narrow size range. For example a typical dune sand would contain around 90 per cent of its particles in the size range 0·15 — 0·45 mms. There are various sand deposits sorted to a greater or lesser degree by wind or water, however, I have drawn particular attention to dune sand because both theoretically and in practice it is a suitable material for golf green construction.

Pure sand does, however, have its drawbacks. It may be subject to drought depending on the depth of sand and nature of the sub-stratum as well as weather conditions. It is also nutritionally a poor medium for grass growth. With modern irrigation facilities drought need not be a problem on a golf green; nevertheless leaching losses of plant nutrients are high and fertilizer use inefficient. The limitations inherent in sand deposits can be overcome to a substantial degree if golf green drainage is approached as a matter, not simply of getting rid of water, but of controlling its release.

To achieve satisfactory water control it is necessary to have an impermeable base to the green and to have stringent control over the depths and combinations of materials in the construction. Water flow from the construction can be controlled to maintain a fixed water-table height and, should irrigation be necessary, this can be achieved by backflow of water from the drain outlet, i.e. sub-irrigation. Whereas golf green construction by this technique has been developing steadily over the last five years or so in the U.S.A., little, if any, progress has been made in Britain. In fact, the only pure sand construction of which I am aware, having the facility for water-table control and sub-irrigation, is an experimental five-a-side soccer pitch built to our specifications at the Cardiff College of Education.

Surprisingly enough this prototype construction was formulated as a natural development of our detailed analysis of drainage problems on top-class soccer and rugby grounds in Britain. We have met problems, as might be expected, nevertheless we are confident that this experimental pitch will be a key factor in providing sound data for future sand-based constructions in golf and bowls as well as soccer and rugby. It would be interesting if a major future development in golf green construction in Britain were to stem from a resolve to overcome drainage problems on intensively used soccer and rugby pitches. Particularly since the construction referred to incorporates the very common golf course material, dune sand, as a key constituent.

Andrews- Power and Performance for Professionals

BLUEBIRD- THE MOST POWERFUL SCARIFIER ON TURF!

Driven by a robust and test-proven 5hp engine, this scarifier will flail out grass cuttings, stray twigs and all forms of debris to leave you with a perfect sward. Wherever professional standards count, just remember the name BLUEBIRD . . . we defy you to find better value for only £175.00.

CYCLONE SPREADING PERFORMANCE

These heavy-duty spreaders are built to full professional specifications. Their 10ft spreading arc covers an unbeatable 2 acres an hour. Push by hand or pull by tractor - "CYCLONE" will give you an even spread everytime. Unrivalled performance for only £59.50.

INSTANT PORTABLE POWER

A range of 7 generators to give you immediate power anywhere, anytime. Portable generators give you a fully automated labour force . . . those awkward, out-of-the-way jobs, that would normally take days, can now be finished in hours. And that spells better manpower planning and smaller, more economical labour forces. Yes, portable generators save on time, labour and needless expense - what's more, they start from as little as £75!

February 1973
THE UNEXPECTED SIGHT of a constructed water hazard on the Downfield course, over which the Sunbeam Electric Scottish Open was played during the summer, made one old geezer pensive. No doubt others of the same vintage rubbed their eyes in wonderment.

It was in front of a green. We have all been tested by burns, an occasional lake and rivers. I seem to recollect that before the war, at Stoke Podges, at a short hole (the 17th?) there was a lake. At Worplesdon there is a similar hole in that a lake has to be carried. The Burn, at the first, on the Old Course at St. Andrews is near the green, but it is narrow. At Carnoustie the Barrie Burn has the effect as Frank Pennink put it; ‘which gives even the best players “water on the brain”.’ Unlike that on the Old Course, it is twenty-five feet wide and a real menace at the final holes.

A memory, the bitterness of which has diluted with the passage of years, is of a hole on the Bulawayo course in (then) Southern Rhodesia. I can pronounce the name of the river that crossed and re-crossed it, the spelling is now beyond me. It was in the Rhodesian Championship (medal) and, for me going well, that water cost 16 strokes.

All those hazards were natural and the best tactical use had been made of them. So it would appear, from watching on television, was that created ‘water bunker’ on Downfield. It posed a question which I dare suggest is the hallmark of a good hole. While the ordinary player could not reach it in two, the good one had to make a choice of going for it or playing safe. The handicap player, from his teeing-grounds, could probably pitch over it easily with his third, save for magnet in front of him. Each of us has suffered that.

Despite all that, to the rheumy eyes of an ancient, it did not somehow look right. There was a sense of some chromium article of furniture placed among antiques.

The idea of water bunkers started in the United States. As has been the custom for many years, it looks as if we shall copy them again. While in full agreement that hazards are there to be avoided, I prefer them natural — something the course has been built round. Except on links, it has to be accepted that bunkers are not natural; they were handed down through history, the sand of the old links brought inland. There are, doubtless, round the country, holes that have streams encircling the green. The short Island Hole at Royal Ashdown Forest is an example. These are little more than ditches, shallow in water content, and usually too narrow in which to swing a club. Consequence, a lift and drop with penalty.

I am confounded in my mind as to the purpose of water bunkers guarding a green. It is one thing for an errant stroke to cost half a stroke, as it was deemed to do in days gone by. It is puzzling why water has to be brought in as a ‘No Go’ area. One of the notable coaches in golf was questioned as to the correct stroke from water. He admitted he had not tried.

Has this innovation been introduced to counteract the expertise of the ‘name’ players putting the ball from sand to six or four feet from the flag?

At this stage, I think it only fair to make it clear that at no time is there any consultation with the Editor as to what I write about. Thus my opinions, amateur versus professional architect, are probably ageing him before his time.

The niblick as the recovery club in the long ago. We have had the sandblaster, and now the sandwedge. Do we look forward to the waterwedge? I have always thought moats to be connected with castles, granges, and monasteries, inhabited by carp.

If we are to create artificial moats, is some day-dreaming fisherman with rod and line to be startled by an umbrageous bellow of ‘Fore’?
SITUATIONS
VACANT

HEAD GREENKEEPER
To supervise the detailed finishing and maintenance of a 7,000 yard championship golf course at present under construction.

Situated at Doulglasston, Milngavie, the course will form part of a £4 million leisure and business centre which includes a sports complex and international hotel.

The man appointed will require to have wide experience in all aspects of golf course maintenance, and should be accustomed to the supervision of greenkeeping staff.

Salary and conditions will be commensurate with the importance of the position. Housing accommodation will be available.

Applications giving full details of experience, etc, should be addressed to:

The Managing Director,
Ravenstone Securities Limited,
21 Woodside Terrace,
Glasgow G3 7XH

HEAD GREENKEEPER
required for
Scunthorpe Golf Club, Ashby Decoy
Full course responsibility; must be experienced to handle staff of three. Assistance with housing if required. Present membership – 500.

Applications, stating salary expected and previous employment with two references to:

The Secretary
Scunthorpe Golf Club
Ashby Decoy
Scunthorpe, Lincs.
All applications will be treated in strictest confidence

ASHFORD (Kent) GOLF CLUB
Head Greenkeeper
Applications are invited from qualified persons for the above position.

No Club accommodation.
Salary by negotiation.

Apply:
The Secretary
Ashford (Kent) Golf Club
Sandyhurst Lane
Ashford, Kent

NEW CURE FOR TURF DISEASES

Since its introduction, only three years ago, the systemic fungicide Benlate has revolutionised disease control in many U.K. horticultural crops. There will be few experimental workers engaged in crop disease research who have not made an assessment of Benlate's potential.

At the Sports Turf Research Institute, J. R. Escritt and A. R. Woodhouse have been evaluating Benlate for turf diseases over the past three years. The results have been outstanding.

The manufacturers of Benlate, Du Pont, have just brought out a leaflet on turf diseases recommending Benlate for Fusarium Patch, Red Thread and Dollar Spot. Benlate at 6 oz. in 2 gallons of water per 1,000 sq. feet is recommended for Fusarium Patch Control and at 4 oz. in 2 gallons of water per 1,000 sq. ft. against Red Thread and Dollar Spot. It is probable that after further work a recommendation will also be made for the control of Ophiobolus patch.

Benlate (under the name Tersan 1991) is already being successfully used on a wide scale in the U.S.A. for the control of turf diseases. There is no doubt that it is destined to

February 1973
meet with an equally enthusiastic reception from groundsmen and greenkeepers throughout the U.K.

Benlate is completely safe to man and domestic animals and can be used with complete confidence on turf in public areas. It is distributed in the U.K. on behalf of Du Pont by:

Farm Protection Ltd,  
Glaston Park,  
Glaston,  
Uppingham, Rutland  
Tel: Uppingham 2561

Pan Britannica Industries Ltd,  
Britannica House,  
Waltham Cross,  
Herts.  
Tel: Waltham Cross 23691

Either of these Companies will be pleased to supply further details.

Benlate is a Registered Trademark of E. I. Du Pont de Nemours & Co (Inc.).

Letters to the Editor

Dear Sir,

It was with great dismay that I read in the British Golf Greenkeeper that it was proposed that our title should be changed from Head Greenkeeper to Golf Course Superintendent.

Is the reason for the proposed change that after all this time we are ashamed of our title as were the dustbinmen, sorry Refuse Disposal Operatives? Or is it that our counterparts in the U.S., which we inevitably copy sooner or later, have such a title?

Maybe it is that we are trying to gain some recognition. Surely such recognition comes from protracting our skills and the way we conduct ourselves.

I myself am proud of my title – HEAD (A chief person, the first, top) GREENKEEPER (Keeper of the greens) and do not wish to malign the men who were proud to bear it before me.

Personally the changing of our title would not amount to a change in our status, but would be regarded as a load of bull’s nitrogenous waste.

Yours faithfully

R. BARNES  
(Head Greenkeeper, Sand Moor G.C.)

Dear Editor,

I have read the article by G. P. Simpson entitled ‘Aeration on the Golf Course’ and congratulate him on drawing attention to this vital process.

There is, however, one aspect he omitted. This is the use of vibrating blades which destroy any sub-surface pan but leaves the turf unimpaired. Operating on golf greens at a full 7 ins. depth, this is probably the most valuable of any single operation, although it should supplement other work rather than replace it.

Yours faithfully,

G. W. DAVIDSON  
Cambridge Soil Services Ltd.

SHEFFIELD SECTION

By H. Gillespie
G. HERRINGTON
(Lindrick)

Retirement
We all wish a long and happy retirement to Harold Tanfield, Head Greenkeeper at Renishaw Park Golf Club, who retired at Christmas.

Harold started his greenkeeping career at Lees Hall Golf Club and joined Renishaw Park after the war and so completed 26 years on retiring. He joined the committee of this section in 1947 and has been no mean performer in competitive golf, playing off a single figure handicap for many years.

Good luck and best wishes to you Harold!

Lecture
The lecture on 1st February, 1973, will be given by Mr. J. B. Ball of Vitaseamin Ltd and the subject ‘Calcified Seaweed’. With the increasing use of soil conditioners, this should be a very interesting lecture; the venue as usual is Abbeydale Golf Club, 2 pm.

The March lecture at Abbeydale, on the 1st, is on ‘Course Architecture’ by Mr. F. W. Hawtree, this should provide a full house.

5th April will bring a visit from our old friend Mr. Glyn Vaughan of Ransomes with a demonstration of their ‘Course Management Equipment’.

A Happy New Year to everyone.

NORTHERN

By Walter Heeles
Chairman: J. Scott
Wetherby Golf Club

October
The first of the Winter Lectures took place at the Horsforth Golf Club on Thursday, 26th October, 1972. The subject of the Lecture was ‘Turf Diseases’, which was put over very aptly by Mr. A. R. Woolhouse of the Sport Turf Research Institute.

November
What could be described as one of the highlights of the Northern Section Calendar for 1972/73, took the form of a visit to the Nacton Works of Ransomes Simms & Jefferies, Ipswich. In spite of the general lack of support for the occasion, 28 Members mustered for the visit.

Following the arrival at our overnight stop at Felixstowe, a dinner was provided by our hosts and, later, to make the evening pleasant, a plentiful supply of liquid refreshments, etc., was provided once again by courtesy of our hosts, Ransomes. The next day our party travelled to Ipswich to witness the behind the scenes story of the birth of an Auto-Certe’s, or a 5-7 Gang Mowing unit, not forgetting the many other kinds of machines manufactured at Ransomes.

Lunch was as a parting gesture, once again furnished by our hosts, after which our Chairman, John Scott, thanked Mr. Wilson, representing the firm, for his close attention and for his firm’s generosity.

Our thanks are also due to our President, Mr. W. Mountain (Bill), for his generosity towards the cost of the coach.

The second highlight of the Northern Section took place on Monday, 27th November in the form of a Buffet Dance which was held at the Knaresborough Town Hall. 108 members and friends took part and a most enjoyable evening was had by all. A general discussion was held at the Horsforth Golf
variety trials (2) seed mixtures trials (3) other miscellaneous trials (4) machinery.

Bed, breakfast and evening meal charge at the local Midland and Fleece, at this moment of time, is £2.50. They will be booked by me at a later date when I know how many are going. The Coach will be free.

Will those who intend going, let me know in plenty of time to complete final arrangements with the Research Station, hotel and coach booking.

This is an educational trip and it is in the interests of the Golf Clubs, so bring it to the notice of your Greens’ Chairman and collect the expenses!!!

February Lecture
The Speaker for Wednesday 7th February 1973 at the ‘George’, will be Frank Smith of Maxwell Hart. His subject will be ‘Grass Seeds’.

New Members
A warm welcome to the following new members:

V. Edmonds (Addington Court)
R. G. Thyeson (Muswell Hill)
R. P. Denning (Woodcote Park)
D. Green (Shirley Park)
J. T. Dunn (Welwyn Garden City G.C.)

Annual Dinner
This will be on Friday 23rd March 1973 at the Walton Heath Golf Club, Tadworth, Surrey. As in the past, there will be a Stableford Competition in the afternoon in which Members and their Guests may take part.

There will be a sweepstake of 50p per person and tickets for the Dinner will cost £2.00. Dinner places will be reserved only on receipt of appropriate amount. Nice and early please!!

SOUTH COAST
Chairman: I. GREENFIELD
Hon. Secretary: Fail-Toe
2 Whickers Close
Rowlands Castle
Hants.
SEASONAL GREETINGS
May I send best wishes to our President, Vice-President, to all our members and never forgetting the various friends who have helped us throughout the year.

Future Lecture
We are commencing the New Year with a lecture arranged for 7 p.m. on 23rd January, when we hope to have speakers from Flymo Limited. The venue is to be Ampfield Golf and Country Club, Winchester.

NORTH EAST
Chairman: Mr. J. SIMPSON
Hon. Secretary: G. Jeffries
55 Brackenfield Road, Framwell Gate Moor
Durham

Appointments
Colin Moseby who has been First Assistant at the Bedlington Golf Club, has now taken on the post as Head Greenkeeper at Blyth Golf Club. As most members will know Colin was Head Greenkeeper at Blyth before moving to Bedlington, I am sure that all members will join me in wishing him every success in his new appointment.

This is a letter written to me by Sam Farrington who was Head Greenkeeper of Warkworth Golf Club, we wish him well in his new appointment also.

Flat 1,
Prior Hall Golf Club,
Corby,
Northants
8th December 1972

Dear George,
By the time you receive this letter I will be on my way to the above golf club to take up my new appointment as Head Greenkeeper.

I would like to thank you and the chairman for running a first class NE section, for the lectures and tournaments you have run, and for the comradeship I have enjoyed with all the lads in the section; may I wish all the section seasons greetings and a successful future.

Retiring Secretary
Let me express on behalf of all our members in the section our sincere thanks to Tom Graham for what he has done for the section. Many people, I feel, failed to realise the hard work put in by him, especially as he is one of the founder members of the section.

However, though stepping out of the chair, his familiar face will be around as much as ever and I dare say his hands on our golf prizes as well, as he now has more time to play.
