AT the recent Board meeting, there was a general discussion on both the location and format of our national events and it was agreed that I outline the overall situation to members.

The initial programme has been drawn up over two years, 1988 and 1989 with the intention of reviewing the situation from 1990 onwards. National events need long-term planning and it was decided, given the timespan available, that the first national event should be held during September 1988. It was agreed that this would take the form of a National Tournament/International Conference to be held during the period 26th - 30th September in Scotland. For 1989 the Tournament and Conference will be held separately and the situation will be reviewed in terms of plans for 1990 and thereafter. The other national event will be the European Turf Management Exhibition to be held in Harrogate during the period 18th - 20th January, 1989 during the same period in subsequent years with a view to continuity and expansion as well as having regard to the facilities available.

Given that the Exhibition will remain in Harrogate, it is the intention of the Board that the other events be distributed on an equitable basis around the Regions. With this in mind, the National Conference in 1989 will be held in Cambridge. It is intended that the National Tournament be held at BIGGA Headquarters in August 1989, following which a decision will need to be taken on whether it remains there for future years or moves around the Regions.

Although the South West and South Wales region will host the final of the Iseki Regional Tournament in August this year at St.Pierre, Chepstow, the Board appreciates the need for 1990 events to be allocated to the southern part of the country and thereafter it is envisaged that there will be a rotation of events on a Regional basis. I trust that this clarifies the overall situation for members.

National Tournament International Conference
I have held a further meeting with the Scottish Regional Sub-Committee and the folder for the week will be available in the near future with all relevant information.

A recent inspection of the facilities in Ayrshire confirms the view that this really is an excellent location for the event and the article by John Campbell in this issue sets out the attractions of the course at Ayr Bellisle and the area in general. One point to emphasise is the range of facilities...

RESEARCH UPDATE - by Neil Baldwin of the STRI 38

Front cover: 12th green Ayr Bellisle golf course with the Bellisle Hotel in the background, venue for the BIGGA National Tournament in September.
The original FARMURA. For use from initial pre-seeding through to maintenance. FARMURA TURF improves germination, encourages quicker establishment of grass seed, root development, tillering and a dense sward without undesirable flushes of growth. FARMURA TURF encourages fine grasses and can be used in ecologically sensitive areas. As a soil conditioner FARMURA TURF will increase soil bacteria count enabling locked up nutrients to become available to the plant. Other benefits include improved drought and disease resistance.

Uses: Reseeding, golf courses, sports pitches, racecourses, bowling greens, cricket pitches, land reclamation and ecologically sensitive areas.

FARMURA GREEN is specially formulated FARMURA TURF with the addition of iron and wetting agent. Designed particularly for areas needing a high standard of presentation and a deep green colour without excessive growth. Applications of FARMURA GREEN will encourage the development of finer grasses, improve drought and disease resistance and increase soil bacteria count.

Uses: Golf greens, bowling greens, tennis courts, lawns, golf fairways and racecourses.

A tailor made product manufactured to your specific requirements. FARMURA-N can be formulated with other major nutrients to produce a specially balanced semi-organic fertiliser to suit your planned nutritional programme. Available to your requirement by discussion and quotation FARMURA-N offers major savings in time and equipment by only making one application.

Uses: Land reclamation, low input management programmes.

FERROSOL

A major development in liquid iron application. FERROSOL, a unique iron-nitrogen bonded complex provides a quick green-up of the turf without over stimulation of growth and without wheelmarks or blackening. FERROSOL in liquid form can be mixed easily in water and is immediately available for spray or drench application. Ideal for use at any time when turf is in need of green-up boost throughout the year.

Uses: Turf, fine turf, golf greens, bowling greens, tennis courts, lawns, shrubs, etc.

FARMGRAN

An easily spreadable natural seaweed soil conditioner and improver. Applications of FARMGRAN will improve soil structure stimulating micro organisms and aiding moisture retention. FARMGRAN supplies all known trace elements in an organic chelated form for rapid assimilation by plants and fills the "fertility gap" so often present under today's high input management practices. Can also be incorporated into top dressing.

Uses: Golf courses, sports fields, landscaping, seeding, planting and land reclamation.

ENVIRONMENTAL PRODUCTS

For further information on any Farmura products, complete the coupon or write to FARMURA Ltd, Stone Hill, Egerton, Nr. Ashford, Kent TN27 9DU. Telephone: 0233 76241

All Farmura products are readily available from our nationwide network of regional distributors.
HAVE you a greenkeeping husband who is dedicated to his job? Comes and goes at odd hours? Worries himself sick if a blade of grass is out of place, and more often than not comes home soaked to the skin? Well, I have!

If you have arranged a day out together - forget it. There are sheep on the course; or seagulls are having an "I'm a pneumatic drill" competition in the middle of the pond that has suddenly appeared on the 8th and that is the wrong kind of birdie.

Well girls, over the years I have discovered that - weather permitting, of course - if you can't beat 'em, join 'em! There was one occasion when, having a lad on holiday and a man in hospital, that inevitable urgent job cropped up. The weather is just right for it and there is a staff shortage. Having offered my services, I was recruited as a greenkeeper for the day. I sallied forth armed with wellies and a hat, and an eye on that nice green machine which seems to do everything. Of course, as I am so green myself, I couldn't at this early stage in my career be trusted with the tractor and trailer. However, I did get the Cushman (plenty of room for my flask of coffee) and I thoroughly enjoyed driving it. I never realised how cold it can be riding around on those machines, and I was very glad to have some gloves in my pocket. I followed the tractor around, loading top soil, shovelling it out again and generally supervising a most successful day. Which reminds me, I don't think I ever got paid!

I do not play golf myself, and in any case one in the family is enough. My husband has been known to say that courses for ladies should be built in the desert. If all golf professionals were like Omar Shariff, I would be inclined to agree with him!

I think we wives must have quite a few tales to tell between us. In fact, it might be a good idea to have a 'Ladies Page' in this magazine, just to keep us in the swing of things.

Mind you, now that my other half has become a Regional Administrator, I suppose the demands for my services, especially my two-fingered typing prowess, will be on the increase. The mind boggles!

by
Marion Child
"DURING my first six weeks at St. Pierre in early 1986 I recall the courses being frozen so hard it was impossible to change any of the holes on the greens. It wasn't long before I came to realise that the job in hand was much more challenging than any of my previous appointments. Managing two full-size golf courses - the Old and the New - to the standard capable of withstanding the normal pounding from some 800 members and the thousands of visitors attracted to the picturesque St. Pierre complex is very much a full time job. My job is made far easier thanks to the support, and hard work, of my greenstaff. Without the support of a dedicated crew, no course manager would survive.

Following an absence of three years, 1986 saw St. Pierre's famous Old Course once again chosen to stage a major European professional tournament - the new and exciting Epson Grand Prix of Europe matchplay event. The sponsors, of course, expected the Old Course to be in top condition in time for the tournament. Not a tall order normally, but there were a couple of serious problems to contend with during my first winter at St. Pierre. The greens were predominantly annual meadow grass (Poa Annua), and had apparently been fertilized quite late in the year. They were riddled with large fusarium scars.

Poa Annua is very prone to fusarium. That's not to say that the more desirable Bent grasses (Agrostis), which are the indigenous grasses of this area, are not affected by fusarium, but Poa is far more readily attacked. So, when you have the situation where meadow grass is fertilized late in the year, you will always get Fusarium. The second problem was that there was more of a thatch layer in the greens than I would have liked. If you have a putting surface that is soft under foot and imprints, then a smooth putting surface cannot be easily maintained - a point worth thinking about when members request extra irrigation to help stop balls on greens.

TEMPTED

If I had been the sort of course manager to press the panic button then, perhaps I might have been tempted to 'tart up' the greens for the Epson with heavy applications of fertilizer. But my belief is that consistently good putting surfaces are only achieved by sound, long term management. I could not apply long term management from February to May so I decided to aim to achieve the smoothest putting surfaces possible in the time that was available with the application of as many light top dressings as we could get on to the greens prior to the tournament.

St. Pierre was typical of many courses in the UK that had been over fed and over watered. Since the early 70's when automatic irrigation was installed in many courses, it has become too easy for greenkeepers to apply water and fertilizer. As soon as greens started looking a little pale, on went the NPK and water to soak it in. Then the greenkeeper could sit back and take the praise from the members. Many greens up and down the country were fed like this four or five times a year, and so it went on, until greens got in the sorry state that many are still in.

I had spent some difficult years at my last course implementing a management policy I believed in. I was not about to take any shortcuts at St. Pierre just...
because I had a big tournament on my hands. There are twelve months in the year and it is my job to ensure that the courses in my charge are in tip-top condition for as many of those months as possible - not for merely one or two special weeks.

I think it is fair to say that some greenkeepers over fed greens in the firm belief that no harm was being done, not taking into consideration the fact that if more leaf is being produced than nature can break down, "thatch" build-up is inevitable.

**CAREFUL**

Nowadays, greenkeepers are much more careful with the use of water and fertilizers. This situation can be attributed to the endeavours of J H Arthur who, through his straight talking to both greenkeepers and greens committees alike, has made people stop and think about what they are doing. Jim Arthur is a man I have a great respect for, not only as a friend but as the country's leading agronomist.

Having got my first Epson Grand Prix over without any severe criticism about course condition, we embarked upon the uphill struggle to improve the all year round playability of the two courses. I knew this would take years rather than months to achieve, and that brickbats and not bouquets would be heading my way for quite a while. I have the pleasure of working with Jim Arthur at St. Pierre. I had studied previous reports written by Jim, who is our agronomist, to determine which of his recommendations were in need of being more closely followed.

I decided to increase aeration on the fairways in the autumn, and on both tees and greens throughout the year. We aim for a target of 60 passes per year on the greens, and as often as weather permits on the fairways. Aeration definitely does the trick, and the puddles and ponding which previously resulted after heavy rainfall do not now occur. You can't aerate too often on fairways or greens. As long as the aeration slits do not open up during dry weather, the more aeration the better. Obviously, deep aeration gives the benefit of getting water through the soil. It is also necessary to allow air into any thatch you may have, because if you don't get air into it, it's not going to break down.

**CONTROLLED**

Controlled feeding of the greens with a mixture of sulphate of ammonia, hoof and horn and sulphate of iron, twice a year is part of the programme; coupled with light top dressings of a mixture comprising of four parts sand and one part Fen soil applied every six weeks in the growing season. A spray mix of sulphate of iron in water is used to maintain a reasonable colour without creating a lush growth of grass. This also helps with resistance to fungal disease.

In following this policy we do find that the Poa Annua contracts the disease Anthracnose quite badly in the early autumn. This often looks very worrying, and one does suffer a certain amount of "stick", but areas of Poa that are removed by Anthracnose are soon re-colonized with Agrostis, and so the process goes on. It is important to continue top dressing during this time to try and maintain putting surfaces, and keep your head down! I can assure you, it is well worth bringing about the change in grass species.

Some time ago I was asked if I was trying to introduce a new grass species. Was it perhaps the hard wearing American Pencross grass, I was asked. No, I said, I am not introducing pencross, or any other new grass. What will happen is that gradually, very gradually, the indigenous Agrostis grass will re-colonize itself because the Poa Annua...
now accepted methods to rid the greens of Poa will slowly take effect. As for Pencross, my personal opinion is that it looks quite nice from a distance, but I am not yet convinced that it likes our climate. I have not had any experience of managing Pencross greens, but from those I have seen at courses such as The Belfry, I am not convinced that they have managed to retain such a high percentage of Pencross in their sward. In fact, the last time I played at The Belfry, it was evident that the greens were becoming predominantly Poa, with only small colonies of Pencross remaining. The only greens that I have seen which looked as if they had taken well with Pencross, are the ones at St. Mellion in Cornwall. They were pleasant colour, with an even surface cover, but I found them slower to put on in comparison with St. Pierre.

Whether Pencross will stand the closeness of mowing and verticutting required to give it some pace, coupled with our climate, I have yet to be convinced.

GRAND PRIX

The first week of May 1988 sees the Epson Grand Prix being staged here at St. Pierre for the third successive year. Last year we had comments about greens being slow. This year, with less Poa in the greens, we expect them to be quicker, in fact, as quick as they can be for the time of year.

"As for Pencross... it looks quite nice from a distance, but I am not quite convinced it likes our climate."

Obviously the sponsors are well satisfied with the present state of the Old Course. However, it is planned to make the course more difficult by introducing a few new tees to lengthen the course. Alterations to three greens are also planned, which will no doubt make certain of St. Pierre's place as a major tournament venue. I do feel, however, that early May is sometimes pushing nature somewhat for such a major tournament in this country; but all you can do is your best!

ATMOSPHERE

Since being employed by Country Club Hotels, who own a number of other similar complexes in Britain, I have no desire to return to a club run solely by its members. I enjoy the atmosphere of working for, and being made to feel part of, the team of a large, and successful, golf/hotel leisure company.

Although I am responsible to Mr. Geoffrey Glynn-Jones, the director of golf for Country Club Hotels, I am left to manage my own courses, as long as I do not exceed the agreed budget. As we look on our courses as the main reason that people visit St. Pierre, we have the sense to ensure that, whatever monies are required to maintain our high standards are made available. Having now worked in a strictly commercial area, I would find it most difficult to go back to a working atmosphere where one has to follow the instructions of a committee, who know little or nothing about golf course management.

I have played golf since I was six years of age, and still enjoy the game. I am always keen to extend my knowledge of course management by attending seminars and conferences.

RESPONSIBLE

I was partly responsible for the setting up of the EIGGA - English and International Golf Greenkeepers Association, which has since opted to amalgamate with two other associations to become BIGGA - British and International Golf Greenkeepers Association. I am no longer involved, or play an active part in Association matters, as two golf courses and a major tournament take up all my time.

Below:

SEVE BALLESTEROS, A SEVERE CRITIC OF THE GREENS IN 1987

A follow-up article by David Jones on his experiences with the Epson Grand Prix in 1988 will appear in a future issue.
The control of vegetation and its associated problems calls for professional management and cost effective solutions. Environmental Products supply a wide range of herbicides, fungicides and insecticides, as well as products to control moss and to restrict grass growth. In addition to the range of pesticides, ancilliary products including “Dyon” spray colourant, “Lurmark” filters and nozzles, knapsack sprayers, granule applicators and dispensing pumps are available.

The key is the provision of a service and range that is second to none. To assist in training and education, Environmental Products have also produced a wealth of information for the professional.

Information Service

Videos and Literature

A comprehensive range of information incorporates six professional guides and three training videos. Details of videos, booklets and further information on any of the products may be obtained from your usual supplier.

SUPERTOX 30 contains 2, 4-D/mecoprop
SERITOX TURF contains dichlorprop/MCPA
MILDOTHANE TURF LIQUID contains thianphonate-methyl
ROVRAL GREEN contains iprodione
ROVRAL GRANULES contains iprodione
SUPER MOSSTOX contains dichloethene
CASTAWAY PLUS contains thianophonate-methyl/lindane
CROSSFIRE contains chlorpyrifos
MOWCHEM contains mefluidide
CLEARWAY contains simazine/aminotriazole/ammonium thiocyanate
SPASOR contains glyphosate
All other brand names are trade marks. CROSSFIRE is a product of The Dow Chemical Company, sold under licence. SPASOR is a product of Monsanto PLC., sold under licence. MOWCHEM contains mefluidide which is a product of Gordon International sold under licence. Dyon is a product of The Regal Chemical Co., sold under licence. LURMARK is a product of Lurmark Ltd, sold under licence.

Ransomes.
Keeping the course up to scratch and costs under par.

Ransomes Motor 180, a versatile and highly manoeuvrable compact ride-on triple is ideal for mowing tees, approaches and even fairways. There's a choice of 7-knife floating head cutting units or optional 5-knife fixed head units. It's exceptionally manoeuvrable with instant forward and reverse hydrostatic drive and single rear wheel steering. Wide front drive wheels and low centre of gravity give excellent traction and stability on slopes, with minimum turf compaction. Large capacity grasscatchers are also available.

Ransomes Verticut 214 controls lateral surface growth of turf on fairways, preventing thatch build-up and encouraging new growth so that the surfaces are maintained in peak condition. The floating head action of the hydraulically driven verticut units follow undulations preventing damage to the turf. Quick tractor attachment and narrow transport width make it a most cost-effective machine.

Ransomes TMV20, is the most versatile turf maintenance vehicle around. Hydraulically driven, it's fast, simple to operate and has remarkably low running and maintenance costs. In addition to the big-capacity, tipping dumpbox, there's a host of attachments available from other manufacturers, from seeders to rollers, sweepers and aerators. There are few maintenance jobs the TMV20 can't handle.

Find out more about the cost-effective range of Ransomes grass machinery from your local dealer, or write to us.

COMPACITION?
AYR is playing host to the BIGGA National Tournament/Annual Conference in September. This part of the Scottish West Coast enjoys the relaxing influence of warm air from the Gulf Stream and has much to offer delegates, wives and girl friends in the way of entertainment, sport and other tourist attractions. The Ayrshire Valleys have a Prestwick Old Course. The Belleisle golf course is considered by many to be one of the finest public courses in Scotland, and the volume of play there is around 60,000 rounds a year. There is also an abundance of fine municipal courses, among which are Dalmulling and Seafield at Ayr. Visiting greenkeepers will be able to sample the testing qualities of the holes on the Ayrshire Valleys to suit all the family. A wide choice of accommodation is available. Hotels, guest houses, bed and breakfast, self catering properties, caravans to let, caravan and camping parks. Detailed information is available from the Ayrshire Valleys Tourist Board, 62 Bank Street, Kilmarnock, KA1 1ER, Scotland (Tel) 0563 39090. The town of Ayr has a rich variety of shops. Places to visit must include The Burns Cottage and Museum, Alloway. Belleisle House Hotel (see front cover) was originally the country seat of the Glentanan family - the immediate surrounds include two excellent parkland golf courses, an aviary and deer park. Those who prefer can take one of the many walks in the grounds and enjoy the celebrated garden. BIGGA members should not miss the opportunity to visit this lovely part of Scotland, which is steeped in golfing tradition surrounding the game. Scottish greenkeepers are knowledgeable and proud of their profession and heritage, and visitors to the conference can be assured of many interesting discussions and exchanges of views in addition to a real Ayrshire welcome!

3rd green Belleisle golf course

rich tapestry of history and heritage. Over the centuries many people have come and gone; stone age hunters, bronze and iron age farmers, Roman soldiers and Viking invaders. Cairns, battle sites and prehistoric villages are a reminder of the many armies that have passed through the undulating Ayrshire terrain in years gone by.

Many famous names are associated with Ayrshire, the most notable being Robert Burns, a popular hero and great literary figure known throughout the world. You can still visit the small cottage, built by his father, where Burns was born on 25th January 1795. Ayrshire is renowned for its famous golf courses and among the championship links are Turnberry, Royal Troon and

Belleisle golf course, which is always in fine condition. This popular venue has staged many professional and amateur events in the past. There is plenty to do and see in

RELIEVES
COMPACITION
TRAINING -

THE WAY FORWARD

"DO I really need to wear a collar and tie to be a successful head greenkeeper?"
Yes, young man, you do.

Metaphorically at least, as you need to portray the image of a supervisor and have the communication skills of a manager to attain your goal.

"But what ARE my prospects? Do I aspire to the ivory towers of golf course management, and can I really expect to emulate the paths of those who manage Gleneagles, Wentworth or St. Pierre?"
I am constantly asked these questions by greenkeeping assistants attending day and block release courses at Reaseheath, as I am sure are my colleagues in other establishments.

My answer lies in the rhetorical question: "Do you want to be successful?"

In his own words, let Mark Lewis present his own 'student profile'. Mark Lewis is just 22 years of age.

"I attended Pensby Secondary School for boys in the Wirral and when I left school I started a YTS scheme at Neston Cricket Club where I gained experience in hockey, cricket and tennis. I attended Cheshire College of Agriculture, Reaseheath, for my City and Guilds in Golf Greenkeeping and Sportsturf Management, first Phase I followed by Phase II.

"When my YTS finished, I went to Tranmere Rovers Football Club as assistant groundsman and remained there for 18 months. In the latter half of 1984 I joined Heswall Golf Club as an assistant greenkeeper.

"During my three and a half years there, I have been involved with all aspects of greenkeeping, from tee and green construction to everyday maintenance of a golf course, all with the expert guidance of one of the country's most respected head greenkeepers, Mr Bill Lawson.

"Mr Lawson has helped me tremendously during my time as an assistant, sharing his knowledge with not only myself but with all greenstaff at Heswall. This has proved invaluable to me and has shown through as I have just been appointed assistant course manager at Goodwood Park and Country Club near Chichester in West Sussex. This is a new course designed by Donald Steel and built by Brian Pearson, which will be opened in 1989.

"I have also been involved with BIGGA, the new greenkeepers association, in the north-west section as a committee member, and recently as section secretary. The association is a growing professional force which is becoming recognised within the golfing world, which can only be beneficial to all greenkeepers - from course managers of large golfing complexes to trainee greenkeepers of small courses.

"The sooner people realise that greenkeeping is not just a question of cutting grass, the better, and that it is a professional occupation that requires a great deal of knowledge and expertise in turf culture.

"My future as a greenkeeper is very promising, with my ambitions set on becoming a course manager in the not too distant future. This has been possible due to three things: Mr Bill Lawson, City and Guilds qualifications and BIGGA."

This is by no means just an isolated profile amongst Reaseheath students, but it does require dedication on the part of the young greenkeeper, dedication on behalf of his supervisor and a commitment to training on behalf of the golf club management.

Opportunities are available in a fast expanding industry. Old and traditional skills are necessary, but so are new skills in management, budgeting and communication.

Perhaps the case of Mark Lewis may prove that by lots of hard work, study and commitment, attending college and, by no means least, being a member of BIGGA, you can climb the ladder to success.

Make no mistake, the ladder is there to be climbed if you have the willpower, the dedication and the commitment.

National Turfgrass Council

IS YOUR CLUB BREAKING THE LAW?

When it comes to using chemicals on your golf course did you know that these operations now come under the new Pesticides Legislation. DON’T BE CAUGHT OUT - it is your responsibility to ensure that you comply with the law.

The NATIONAL TURFGRASS COUNCIL have produced a Code of Practice to enable you to understand the law and how it affects your use of pesticides. This code has been endorsed by the MINISTRY OF AGRICULTURE FISHERIES & FOOD, and is the authoritative document for AMENITY TURF.

- THIS CODE IS ESSENTIAL - EVERY CLUB SHOULD HAVE ONE

"Code of Practice for the use of approved pesticides in amenity areas"

J.P. Shildrick,
Secretary, NTC,
3 Ferrands Park Way,
Harden, Bingley,
W. Yorks.

Cirencester Golf Club

GOLF has been played at Cirencester for almost a century, and the present course at Baunton commands truly magnificent views of this lovely part of rural England. The course was designed by James Braid on a rolling plateau where the eastern slopes of the Cotswolds descend to meet the plain.

The holes at the southern end of the plateau overlook an expanse of pleasant wooded countryside stretching as far as the great plain of Wessex. The course has occupied its present site since 1909, and so rapidly did the construction work progress that the club was able to hold its first competition in July of that same year.

David Parker, head greenkeeper at the club, is a greenkeeping enthusiast who likes to keep his course well groomed for members and visitors alike. David said, "I have always liked an outdoor life, having had a spell in farming and forestry before taking up golf course maintenance, and I've never regretted my decision to make greenkeeping my career.

"The Cirencester course, like many others around here, has its own particular character and qualities that make it attractive. We are in good playing condition all the year round, irrespective of the weather, but being on an exposed Cotswold plateau there are days when the elements can test the playing abilities of all golfers. The weather is normally mild in the spring and bracing in the summer. The course is at its best in the autumn and tough going in the winter."

David went on: "The preservation of wild life habitat and flora is an important concession we make to the environment of the course. Using selective weedkillers puts a special responsibility on us to treat particular areas with caution and protect certain flora and fauna to preserve the delicate balance of nature.

"The activities of rooks can be a bit of a problem, and I expect this is something that quite a few greenkeepers have to contend with. In our case the birds come from the woods nearby and pull out newly replaced divots on the fairways in search of food. It makes the place look untidy as well as leaving nasty lies for fairway shots, and gives us extra work. It would be interesting to hear how other greenkeepers deal with the bird menace - apart from shooting them!"

"Having many sloping fairways calls for machinery with good traction and power to negotiate steep banks to get the maintenance work done with a minimum of effort.

"Drainage is good, even under the wettest conditions and it is always possible to use our equipment without the worry of getting bogged down or 'tracking up' the turf."

David Parker with his enthusiastic greenkeeping team
Desmond Jones, Cirencester's club secretary, discusses course alterations with David Parker, head greenkeeper, while the club professional looks on.

"Use of a Verti-drain machine has done a good job for us at Cirencester. Deep penetration with the tines has helped to relieve sub-surface compaction. This has been of great benefit to greens during the winter and early spring - colour, resilience and putting quality is really good.

"We also use the Sisis Hydromain for slit-tining on a regular basis. This has proved to be a good investment and we are pleased with its performance and results. Aeration is an essential operation if you want to maintain the kind of putting surface that will keep golfers happy".

Said David: "The club has built excellent facilities for the upkeep of the course. There is ample space in the main shed for staff quarters and all the equipment. A huge purpose-built compost and material storage building is also part of the complex and everything is centrally situated for easy access to all parts of the course. We are well equipped with all the latest machinery to keep the course in first class condition. We have carried out quite a bit of construction work in the past to improve the course by doing major alterations to surface levels on the 7th green and have enlarged the size of the 2nd green, making it a double-tiered putting surface in the process. At this moment in time we are laying out a new fairway for the 18th which will make it quite a spectacular finishing hole. This is all good construction experience to have under your belt and all the staff have enjoyed it."

The club directors and members treat us exceedingly well, which makes for a happy relationship. I have an enthusiastic and hard working staff who are dedicated to serving the club and take pride in doing a good job. When I first started work here I had two men - now there are three and I also hope to have a young YTS lad join the team soon".

David continued, "I am interested in greenkeeper training. When I first started out in golf course work I decided to attend college and get some qualifications, and I passed City and Guilds Stage 1 and II in greenkeeping.

"All our staff are members of BIGGA, and although they have not as yet been to any events, we hope to organise ourselves in this direction. The Association is quite strong in the south west, but attendance tends to vary at meetings. Training and education is an important part of our profession and it is pleasing to see how BIGGA is gradually getting into its stride in this respect".

Hole Cups
Superior Design made from engineering grade plastic. More rigid than nylon for a true putting hole.

£2.99 each
Available in cartons of 10.

Tee Markers
High visibility. 6" dia. 3" high. Half Golf Ball designs. cast in heavy aluminium, ribbed for added strength. Designed for maximum abuse.

£8.95 each

Traffic Control Stakes
Aluminium shaft 1½" dia. 2' 6" high, black or white top complete with hook. A multi-purpose stake when used with chain or rope make instant fencing. No ground sockets are required they are easily removed and replaced to other areas of G.U.R. etc.

£2.99 each
Available in packs of 10. 10% discount on 5 packs or more.

Information & Etiquette Signs
Exclusive design in heavy duty cast aluminium, so strong they can be driven over by a tractor without breaking.

£8.95 each

Swivel Flagpoles
Municipal 8½" x 1½" White Fibreglass

£3.50 each

Links 7½" x 1½" Yellow Fibreglass

For Less
Seminars for turf managers

A series of seminars for professional turf manager will be held at the following venues.

June 22, Leeds - Leeds United AFC
June 27, Wentworth - Wentworth Golf Club
June 30, Edinburgh - Inglisston
July 12, Manchester - Old Trafford Cricket Club
July 19, Birmingham - Aston Villa AFC

Lunch will be provided.
Participating companies will include: B.T.R. Landscaper, Ritefeed and Watmores, Turfland.
These companies together with other guest speakers will give delegates an up to date insight into a comprehensive range of products and services able to assist today's professional turf manager.
For an invitation or further details phone 0524 824141.

Iseki 'out front' with Turfblazer

THE Turfblazer range of out front mowers manufactured in America by Howard Price Turf Equipment is now available in Great Britain from Iseki UK, giving a wide variety of cutting widths in both rotary and cylinder forms from 1.5 to 4.5 metres wide.

Three models are initially being imported by Iseki with power outputs from 22 to 78 horsepower, all hydrostatically driven and with three or four cylinder water cooled diesel engines.

The smallest of the models is the 22 horsepower Turfblazer 422 with a choice of 60" or 72" wide rotary cutting decks with options of snow blowers or front mounted brushes. The decks themselves are offset for close trimming and feature quick change height adjustment from 1 1/2 to 4 1/2 inches. All Turfblazer decks have front mounted flotation wheels for perfect contour following.

Moving up the scale is the Turfblazer 727 with its 27 horsepower engine. Hydrostatic drive means the operator can vary ground speed independent of engine rpm, whilst the simple two pedal control gives instant forward or reverse. On the 727 is the option of an 84" cylinder mower in three gang configuration or a five gang set up or mowing up to 130" wide on the 40hp power unit. All the cylinders are available in either 6 or 8 blade form for cutting heights from 3/8" to 2 3/8". Vertical cut blades are also available as an option.

Further details are available from Iseki UK on 0480 218100.

Mike Canaway appointed to Board

FOLLOWING the retirement of Mr John Shildrick, assistant director of the Sports Turf Research Institute, the Board of Management have appointed, as their new assistant director (research) Mr P.M. Canaway.
Mike Canaway joined the STRI in 1974 on a contract financed by the Department of the Environment to study wear and durability of sports turf. One of his first achievements was to develop a 'wear machine' for simulating the effects of play in turfgrass experiments. The machine is capable of simulating different types of wear, including football, golf and abrasion as occurs on training, kickabout areas and parkland. The development of the wear machine had a major impact on the Institute's research programme. Also in the early period, Mike Canaway developed equipment for measuring the "grip" or "traction" available to players on turf and this is now incorporated in a draft British Standard for testing of friction on synthetic turf. Both the wear machine and traction apparatus have been used in studies on wear tolerance of grasses, soils, and nutrition during subsequent years. In 1981 Mike Canaway started a major programme of research on sand constructions for sport, the object being to provide a free draining playing surface and good playing conditions. In 1985 he was honoured to be asked to present the Keynote Address on soils and plant nutrition at the International Turfgrass Research Conference in Avignon, France. The work on sand rootzones has flourished, with research finance being obtained from the Royal and Ancient Golf Club, the Football Trust and the Football Association.

Eds Note: An article by Mike Canaway on sand construction of the golf greens will appear in the next issue of the Golf Course.
**Notebook...**

**Marriage of convenience for the ladies**

THE Women Professional Golfers' European Tour will soon be on the move to its new headquarters at the Tytherington club, Cheshire. The decision was made following talks with various golf clubs throughout the country, which have all been vying to become the European Tour's head office, and it is hoped that the move will have taken place by the time we go to press.

Mr. Joe Flanagan, the Tour's Executive Director, said: "We are grateful to the PGA for allowing us to continue to work from The Belfry but the pressure of space is such that we had to look for new accommodation immediately. "The Tytherington club will provide excellent facilities, with easy access to a large airport and main road network."

The Tytherington club lies in 140 acres of rolling parkland near Macclesfield. It boasts an 18-hole championship golf course together with excellent country club facilities - including four restaurants, a sauna, steam room, tennis courts and swimming pool.

Mr. Christopher Seddon, director of the Seddon Group, owners of the club, said: "We are delighted the Tour have chosen us as their headquarters. It is very much a marriage of convenience for both of us. We are a 5-star complex and the Tour is a prestigious organisation looking for a new office. We are looking forward to having them here."

**In the early 1970's British Seed Houses Ltd started a research and development programme to try and obtain some short growing high-quality grasses, and as a result they are now able to offer two of the shortest growing grass varieties available within their respective species. Logro Slender Creeping Red Fescue has been specially bred by the Northern Ireland plant breeding station attached to Queens University Belfast. Trials have shown that Logro only grows to a height of approximately 100mm (4") when left uncut. Lorina Turf Type Perennial Ryegrass has been developed from the well known Loretta Ryegrass and this variety has been classified by the Sports Turf Research Institute as a very low growing cultivar producing an attractive sward in summer.**

For leaflets giving greater details of these and other grasses, telephone BSH on 0925 544411.

Ransomes welcome visitors from Japan

As part of a sales push for a greater share of the Japanese grass cutting machinery market, in particular machines for use on golf courses, six representatives from Kubota, and their dealers, who sell and service Ransomes mowers in Japan, visited to Ipswich to undergo intensive sales and technical training with the company.

After a tour of Ransomes' factory complex, the Japanese visitors were given instruction in both the user benefits and technical aspects of Ransomes grass machinery suitable for the Japanese market.

Because of their fanatical interest in golf, over dinner one evening the Japanese visitors expressed a wish to visit the 'Mecca' of golf, as they might never have the opportunity again.

Arrangements were soon made to delay their return to Japan and fly them to Scotland for the day to visit St. Andrews. They also took the opportunity to see Gleneagles and no doubt partake of a genuine 'dram' or two.

Golf mats a hit with golfers

NEOLAST golf mats, manufactured by PN Structures Ltd, have been very well received by golf clubs and members alike.

Clubs report that the Neolast mats are very popular with the better golfers, who are impressed with the fact that they are able to use their woods directly from the mat without damage to their clubs, and more importantly their wrists and ankles.

The Neolast golf mat is washable and portable, and in unaffected by mould or decay. It is approximately 5ft square, weighs 48lbs and is suitable for indoor and outdoor use.

For full information and more details please telephone PN Structures on 01-734-2578.

Stirling appointments

Edward Connaughton, B.Sc. has been appointed to the Souter of Stirling Board of Directors.

Eddie has worked in greenkeeping since 1978 and received his B.Sc. degree in Turfgrass Management at Purdue University, Indiana, USA in 1985. He joined the company in 1985 from Bedford Golf and Tennis Club, New York, USA where he was assistant course superintendent.

Eddie is in charge of the sales and technical services dept at Souter's and will continue in this position as director.

Graham Downs has also been appointed to their Board. Graham originally trained in the early 1970's in civil and marine engineering and progressed in the late 1970's into sportsground construction.

He joined the Souter's in 1984 to take charge of the contracts dept. and will continue with that responsibility.
Departure...

IN a departure from its traditional activity, Vitax are using their sales and marketing skills to introduce bird and animal repellents to commercial users.

Hoppit is a systematic bird and animal repellent which is safe, non-toxic, and non-tainting, designed to protect growing plants, shrubs and trees against predator attacks. Its systemic chemical formulation is based on Quassia, a naturally-occurring plant extract, with wetters and synergists which, together, induce a strong revulsion in birds and animals. Nobble is a slug and snail controller which is crop-safe and has a wettable powder formulation which is sprayed onto the soil and remains active within the soil for up to six months. The development controls all three species of slug by destroying the mucus-producing cells and the osmotic mantle membrane, without which the slug becomes desiccated, immobile and vulnerable to parasitic and predator attack. Dog Off is a harmless dog repellent, which may be sprayed or brushed on to all the usual "sniffing points" - walls, gateposts, paths and fences - which dogs pass to enter, and which will thus create a barrier to them. However, old habits die hard and it may be necessary to spray several times where dogs have been long-term visitors.

All three products have been developed and manufactured by Fieldspray Limited of Suffolk.

New man

FOLLOWING the recent promotion of Martin Muir to sales liaison manager at Vitax's Burscough headquarters, Ken Tombes has joined the company from SAI to take over sales responsibility for south-east England.

HERON FIELD HIRE who have been in the sports field hire machinery market for 25 years, are now hiring out the TORO green aerator.

The decision to change from their existing supplier was taken, according to Mr Doug Johnson of Heron Field, for a number of reasons. Firstly the TORO greens aerator has less wearing parts, which results in much less down-time and increased profit margins. Also the new aerator is 2.5 times the speed of the previous aerator stocked, giving coverage of up to a staggering 1,209 sq metres per hour. The fact that the TORO aerator is very economical with fuel was another reason for the change. Heron Field Hire may be contacted on 05645-2597.
New literature from Grundfos

NEW literature ranges have been launched by Grundfos Pumps Ltd, including sales brochures, a concise product range leaflet, and installation instructions. The literature follows a new international style designed to project a standard image for all Grundfos companies.

New sales brochures have been introduced for the following pumps and circulators; CR Multistage In-Line, CH Booster, NM/NP Single Stage End-Suction, LM/LP Single Stage In-Line, UP/UPS Light Commercial, UMC/UPC Commercial Multispeed, KP Sump Pump and JP5 Jet Pump.

THE Sports Council have recently commissioned Nottinghamshire County Council to carry out a research project into the costs of using outdoor winter games pitches, with an emphasis on artificial sports surfaces.

The project involves the monitoring of a selected number of surfaces in excess of 6,000 square metres for use, maintenance and administrative costs, plus any provision costs involved. Furthermore, it is intended, wherever possible, to carry out similar exercises on natural turf pitches with a view to making comparisons determining which provides the best value for money.

The project will provide the basis for better informed decisions by providers of sports facilities on the type and extent of sports surfaces provision to be made and maintained. Data generated by the project will assist The Sports Council in ongoing grant aid and advisory work, and will complement the management information systems developed for the sports and leisure industry.

Included in the brochures is information concerning hydraulic performance, electrical data, material specifications and individual equipment features. The product range leaflet, in single page format, gives handy information and key technical facts for the entire Grundfos range, accompanied by colour photographs.

The installation instructions now available in the new format are for UP/UPS circulators, CH/JP5 Boosters Set, CH Booster pump and UMT/UPT circulators.

A NEW facility for the production of a range of high quality cylinder lawn mowers to be marketed by Honda UK Power Equipment has been established in time for the 1988 season.

The three models available offer cutting widths of 16", 20" and 26" and the six high-precision cutting blades on each cylinder give an average 87 cuts per yard for a close cut and fine finish.

Assembled in Britain by Sporcan Limited of Birmingham, and specially designed by Honda UK specifications, these high performance machines have trouble-free chain drive transmission and are proved by Honda G100, GX110 and GX140 engines giving 2.0hp, 3.5hp and 5.0hp respectively.

A light, strong and durable grass box complements these machines. Moulded from a high density polythene the box benefits from its fitting in a cradle which enables it to be lifted clear of the cylinder reducing the possibility of grass falling back onto the blades.

New mowers marketed by Honda UK

The Honda HC26 Cylinder mower
FOLLOWING the successful launch of the Traffic Control Stake and Swivel Flagpole, Tacit have introduced a hole cup to complement their swivel flagpole, made from a rigid engineering grade plastic to give a truer hole shape than the conventional flexible nylon. Maintaining their policy of "The Best for Less", Tacit have a special launch offer of only £2.99 per cup, available in packs of ten. Only from Tacit, 3 Mills Lane, Monks Kirby, Rugby. Tel: 0788 832166.

LEADING independent timber company Henry Venables Ltd of Stafford is offering top prices for quality timber despite the increase in supply created by windblown from last autumn's severe storms. Venables believe that rather than forcing prices down, the availability of windblown timber will actually cause a shortage of quality timber. The company suggest two reasons for this. Firstly, there has been less available capacity to process quality timber, and secondly, landowners outside the south east are holding back quality timber, believing it will not attract a good price. Venables are most interested in buying oak, ash and chestnut, and the company say they will pay top prices. For further information telephone: Geoffrey Venables on 0785 59131.

TESTING task for Verti-Drain

A SURREY football club, beset by problems of poor pitch drainage, has been selected as the test ground for a totally new method of turf treatment. Redhill Football Club's Kill Brow pitch suffers waterlogging from the lightest rain, due to a high clay-soil content. Laporte Earths of Redhill and Charterhouse Turf Machinery of Milford, Surrey are joining forces to eradicate RFS's pitch problem.

Laporte, which is a major sponsor of the club, is to insert its Fullasorb product into the pitch. Based on Fuller's Earth, Fullasorb has the ability to improve drainage dramatically and has been formulated specifically for the professional groundsman and greenkeeper.

The test treatment is expected to produce immediate improvement to the pitch, with long-lasting effects. The Verti-drain hollow core tining machine, distributed by Charterhouse Turf Machinery, is to be used for the first time introducing Fullasorb to the soil. Other Charterhouse equipment to be used during the renovation includes slotters, spreaders and overseeders.

KILLS WEEDS NO TROUBLE

The Effective Selective

Super Verdone' contains dicamba, 2,4-D and ioxynil. READ THE LABEL BEFORE YOU BUY; USE PESTICIDES SAFELY. Verdone is a registered trade mark of Imperial Chemical Industries PLC.
JOHN DEERE, the world's largest producers of lawn and grounds care equipment, have made several additions to their range of products available in the UK for the professional user. To complement their 755 and 855 compact tractors, John Deere have launched a new loader, the model 70. What makes this loader special is not the lift height of 78in nor the lift capacity of 700lbs. The most impressive feature is that it can be attached or detached in less than a minute with the operator only leaving the seat to connect/disconnect the hydraulic couplers. This gives the new 70 loader tremendous flexibility, especially when working in confined spaces. Having the quick facility has not compromised other features of the loader. On the model 70 the breakout force is rated at 6.9KN or 1570lbs and the reach with bucket fully raised is 25.5ins. The loader is available with a comprehensive range of attachments including 48, 54 and 60in buckets, a level indicator, a hood guard and a new larger ballast box. Following the success of the 935 front mower with professional users, John Deere have now introduced the smaller engined 17hp 915 model fitted with a 3 cylinder Diesel engine. This machine has all the features of the 935 but offers more economy to those who don't need quite as much power. For ease of operation two pedals by the foot give variable speed forward and reverse and a wide pedal provides instant braking when obstructions are encountered. In wet or slippery conditions the differential lock fitted as standard is operated with the left foot. Where large areas and long working are involved, the cruise control can be pre-set allowing greater operating ease and higher output. The 915 is fitted with a 50in rotary deck as standard with cutting height adjustable from 1 1/2 to 2 1/2ins. The AMT600 materials transporter has proved to be a popular workhorse since its introduction last year and John Deere have built on this by offering two useful options. There is now an Electro-Hydraulic lift for powered tipping of the load bed. Simply operated by a switch on the seat panel, the dump kit, as it is known, can be field installed to any AMT600. Where users find that theload bed, this trailer carries a payload of 800lbs or 21 cubic feet. Compaction is avoided by again using low ground pressure tyres. This versatile trailer combined with the AMT600's four wheel drive and differential lock, means that it is now possible to move a total of 1400lbs of cargo almost anywhere. John Deere have only been selling into the UK grounds care market for a little over eighteen months, although they have been in Germany and France for over fifteen years. They have already appointed 28 out of an envisaged 35 main dealers and have three territory managers covering the country. John Deere believe that with products well proven world-wide, a high reputation for quality and an unrivalled parts and back up service their share of the market will increase. All their main dealers are able, via a direct link computer system to the USA, to locate a spare part or order within seven seconds, and parts, if not in stock in Nottingham, can be delivered from Germany within a matter of hours. Another innovation is John Deere's "Turfequip" financial package. Backed by Barclays Bank Turfequip offers contract hire from two-five years, including, if required, a full maintenance package, as well as short term rental. The advantages are obvious, especially when budgeting for costs can be calculated precisely and capital need not be tied up in rarely used specialist machinery. The plan also covers the full range of John Deere's tractors, which are already being seen on golf courses throughout the UK, little as £21 per week. For further information on the John Deere range, contact Alec Mcke on 0949 60491 and for Turfequip Kevin Chivers on 0734 326651.

Ransomes announce Contract Hire Plan

IN conjunction with FAF, a member of the National Westminster Bank Group, Ransomes have announced the introduction of their 'Contract Hire Plan'. Developed to comply with current Local Government expenditure regulations, Ransomes 'Contract Hire Plan' will also appeal to organisations, such as contractors and golf clubs, who want to benefit from the use of Ransomes high output grass cutting machinery without tying up their capital. A fixed cost 3 year contract, with the choice of playing either quarterly, half yearly or annually, includes an inflation-proofed maintenance element for easy budgeting. Commenting on Ransomes 'Contract Hire Plan' general sales manager John Wilson said, "With the help of FAF I'm confident we have produced a plan that is flexible, easy to operate and very helpful to our customers". Further information should be obtained from an officially appointed Ransomes UK sales and service dealer, or Richard Bishop or Trevor Knight at Ransomes sales and marketing office in Ipswich. Tel: 0473 270000

600lbs capacity of the AMT600 is not enough, they can now buy the AMT11 trailer, specially designed for the AMT600. Almost identical to the 600's load bed, this trailer carries a payload of 800lbs or 21 cubic feet.

Triple success for Iseki

THREE Iseki Tractors were recently delivered to the world famous Wentworth Club by Iseki Dealers, T. Parker & Sons of Worcester Park, Surrey.

These three new units, the first Iseki tractors bought by the club, are now hard at work at Wentworth’s course maintenance programme, under the direction of estates and golf course manager, Kevin Munt.

It has been a hard winter for the staff at Wentworth, dealing with the results of the hurricane in the middle of the prestigious World Matchplay Championship last October.

Left: Kevin Munt of Wentworth Golf Club taking delivery of three Iseki tractors.

This alone meant cutting up and removal of some sixty trees before play could even begin!

For 1988, Wentworth are hosting the PGA Championship in May and the traditional World Matchplay Championship in October, as well as building the new South Course which will hopefully be opened in 1990.

The three new Iseki Tractors, all 18 horsepower TX2160 Hydro machines, all have tasks allotted to them. The Loader Backhoe unit will be hard at work in their new soil and mixing shed along with other jobs of bunker and tee construction, and more general ditching work around the three courses, whilst the other two units will undertake mowing, spraying, aeration and top dressing programmes.

Coremaster now in UK

ISEKI UK are now distributing the Coremaster turf aeration system in Great Britain. This well established machine is already a favourite with greenkeepers and groundstaff in America and the Antipodes, and now comes to Britain with its reputation for both productivity and all round versatility.

Regular aeration encourages a rigorous root system for turf, eradicates the problems of compaction in areas of heavy traffic, improves drainage and in the process controls thatch and moss and improves oxygen diffusion.

Coremaster in itself is a revolution in turf aeration because it not only improves coring productivity, but also has the ability to work with several different core patterns, therefore allowing the groundsman or greenkeeper to choose the pattern required for each individual area - from a close pattern for renovating problem areas with the cores two inches apart to spread patterns for large areas like tees and fairways, six inches apart.

Depth control on Coremaster is also easy, with a simple crank-handle at the rear of the machine giving variable depths between zero and four inches. Coremaster also offers a full range of tine sizes, saving water, chemical and fertilizer costs and allowing turf aeration to be much more effective.

Trials undertaken by Iseki in Great Britain indicate that all 18 greens can now be aerated in under a day, reducing player inconvenience.

Optional attachments available for Coremaster include Core Sweepers, Turf Guards, Slicing Blades and even a seeding facility.

For further details on the Coremaster range contact Colin Gregory on 0480 218100.

The Coremaster hollow tining machine brings new workrates and productivity to coring greens, tees and parkland.
... and to guarantee that your club members have a course in 'tip-top' condition, you can do no better than get behind the wheel of a TORO! There are models to suit the needs of all Greenkeepers and the odd peculiarities of undulating ground contours. The GREENSMASTER 3000 together with the new 'groomer reels' can produce the finest greens on any course. Take a trial run at anytime and you will immediately see the value of TORO's unequalled technology in manufacturing the right machine for the right task. Fairways and Aprons are efficiently cut whatever the weather, complimented by the GREENS AERATOR which assists with that previously slow task of turf aeration. The popular SAND-PRO is also No. 1 choice for those important bunkers.
Let's get down to Grass Roots

Hydrowet® Wetting Agent improves the quality of your turf even after only a few applications.

Hydrowet® is an advanced product which modifies the surface tension of water and enhances its ability to penetrate hard soil and dense thatch. It allows water to percolate down to grass roots. It also disperses rainfall more evenly through the soil and helps to avoid problems of standing water.

Hydrowet® is available from Rigby Taylor in 9.5 litre containers to cover 3,800 sq.m.

New game "Par Excellence" for golfers

NEW from Pro-Line Sports (UK) Ltd is the innovative golf board game, Par Excellence. Beautifully produced and packaged, this game is the ultimate indoor entertainment for golfers who for any reason are prevented from getting out on the course to play a round of the real thing.

Ideal as a personal or business gift, Par Excellence is also finding favour with golf clubs around the country as wet weather entertainment at the 19th hole. Par Excellence allows up to four golfers to play 18 of the greatest holes in the world without leaving their armchairs. The game consists of nine laminated sheets, printed on both sides in full colour. Each side features an aerial view of an internationally famous golf hole.

With the aid of fourteen dice, each one representing a club, a directional dice, a hazard dice to add a little excitement, and a transparent overlay to meter the 'shots', players use their skill and golfing judgement to attempt to beat the par at each hole.

For further information please contact Norman Walters, Pro-Line Sports (UK) Ltd on 0342-25851.

JACOBSEN

GREENS KING® IV AND TRI-KING™ TRIPLEX MOWERS

Meet the top professionals on the course—the Jacobsen Greens King IV and Tri-King 1471 triplex mowers.

Tri-King 1471 Trimming Mower
- 3-wheel drive for superior hill climbing ability
- Hydraulic reel lift for better productivity with less effort
- Hydraulic traction drive—no belts to slip or adjust
- Easy maintenance—easy access to engine, quick belt replacement
- Auto-type drum brakes for hill holding ability
- Choice of 5- or 10-blade reels, floating or non-floating for quality cut
- Isolation mounted engine for less vibration and noise

Greens King IV Greens Mower
- Smooth running, rugged 16.5 hp diesel engines, or choose gas
- Superb quality of cut even on undulating greens
- Optional Turf Groomer™ attachment for faster healthier greens without lowering cut
- Power backlapping (standard equipment) keep reels sharp longer
- Full line of attachments and accessories for complete greens care

Jacobsen triplex mowers—part of a full line of Jacobsen equipment for parks, council and golf course maintenance: small and medium walk-behind mowers, grooming tools, greens and fairway equipment, gang mowers, large turf tractors and special purpose vehicles. See them all. Call: King's Lynn (0553)763333.

MAY & BAKER, one of Britain's foremost chemical companies is changing its identity to that of its parent, the chemical multinational Rhone-Poulenc. May & Baker has been part of Rhone-Poulenc since 1927. The move is designed to enable the company to take full advantage of being a visible part of one of the world's premier chemical groups. However, the May & Baker name will continue to be used where its particular strengths and associations have a distinctive marketing role to play, most notably in the company's health care activities. Dr. Keith Humphreys, chairman and managing director of May & Baker, emphasises the international dimension of the move. "In the increasingly competitive world in which we operate, it is vital for us to be seen as part of a fully integrated international group in which we can make our size and strengths pay", he said. "The group is investing in the creation of a strong international identity and our own move enables us to capitalise fully on that investment". During its 60-year association with Rhone-Poulenc, May & Baker has already become a significant force within the group. It is a major research and production entity and makes a substantial contribution to group activities worldwide, particularly in the health care and agrochemicals areas. Rhone-Poulenc itself is the world's ninth largest chemical group. It has a turnover of almost six billion pounds per annum. The group spends £340 million each year on research and development - a greater percentage of its turnover than some of its larger rivals - and spends a further £150 million on environmental protection. "At present, Rhone-Poulenc trades under at least 40 different names in 140 countries worldwide, which puts the group at a disadvantage as far as other multinationals go," says Keith Humphreys. "Rhone-Poulenc is looking to move from being perceived as a French company to one with a true international dimension. Already more than 70 per cent of its sales turnover is outside France. Likewise, May & Baker has been seen in its turn as a UK company with overseas affiliates. This new move enables us to be seen for what we in effect already are - part of a truly international operation". From May 31, May & Baker Limited will trade as Rhone-Poulenc Limited, with three divisions: Agriculture, Health Care and Chemicals. Within the divisions, those operations where the name May & Baker is currently significant to their performance and market reputation, will retain this name as part of their trading identity - eg, May & Baker Pharmaceuticals, May & Baker Garden Care and May & Baker Laboratory Products. Overseas, the May & Baker subsidiary companies operating in the Commonwealth will change their name to Rhone-Poulenc. The agrochemical interests of Rhone-Poulenc in the UK have been re-structured to enable the business to provide products and services that are linked more closely to the needs of its customers. Previously known as May & Baker agrochemicals, the division has been re-named Rhone-Poulenc Agriculture: this reflects the growing involvement of Rhone-Poulenc in plant breeding, seed treatments and application machinery, as well as traditional agrochemicals. Dear Sir,
I see in the greenkeeping press that the R & A has pledged £250,000 support to the STRI at Bingley to investigate the fertilizer and irrigation needs of British golf greens.
Does this mean that the R & A have decided that this is the problem? Does this mean that the advice to date from the STRI on these matters has been wrong or/and unfounded, or not even researched? Who advises the R & A on these matters?
Will this news make golf clubs paying for this advice, in good faith and coin, reconsider their position? How many greenkeepers have lost their jobs, and in some cases their health, on the 'say so' of these so called advisers?
Who is going to take the final responsibility for the condition of the British golf green?
SL Farrington,
Course Manager,
Frilford Heath G.C.

*Reply from Peter Hayes
Director of the STRI

"Mr Sam Farrington raises a number of points in his recent letter to the Golf Course concerning the R & A's research grant of £250,000, over five years, to the STRI at Bingley.
"The two projects financed by the R & A will consist of a major project looking at the effects of irrigation, construction and fertilizer nutrition of golf green turf and a second looking at the nutrient requirements of fine-leaved fescues and bentgrass for golf greens. This research programme should be of great benefit to all European golf courses and will, hopefully, result in a return to faster, firmer and truer putting surfaces.
"The R & A have decided that these are the major problems worthy of a research contract at the present time. However if head greenkeeper wish to submit research proposals to the Institute, we will consider them for a future research programme. That the Institute is carrying out research into these matters does not necessarily mean that the advice given now is wrong, but every industry has to look forward and no industry can survive without a research base. For example, the advice given to people 10-20 years ago concerning the treatment of cancer or heart conditions is completely different today due to research which has been carried out over the years, but that does not mean previous medical advice was wrong. For the future demands on golf courses we need to know more about the growth of grasses and how they can stand up to excessive wear under different fertilizer and irrigation regimes.
"To answer Mr Farrington's other points, I do not know the number (if any) of greenkeepers who have lost their jobs on the 'say so' of advisers, and the answer to this question is not easy as many other factors would have been involved.
"The final responsibility for the condition of British golf greens rests jointly between golf clubs in providing enough finance to undertake the necessary maintenance and greenkeepers with their skill to carry out such maintenance, in conjunction with the advice from agronomists from the Sports Turf Research Institute, backed by a sound research programme."

Dear Sir,
In England & Wales the average rainfall in the course of a year is between 22.5 inches and 68 inches depending on where you live. If you take the bottom figure and multiply this for the average area of a golf course (say 150 acres) you can see that in the year 76,308,750 gallons of water will have to be dealt with by surface run-off, drainage systems and general porosity of the soil. This figure also increases if we have a year like the last. Also bearing in mind that two thirds of the rain falls between September and May, the winter months in golf can be very hazardous. Controlling the greenkeeping aspects of a particularly wet course in the winter, where the greens have a high sod content, the problem of closing the course is dependent on the condition of the fairways, and not the fact that the greens are well under water.
Whilst all clubs around are closed (and we should be really) it really amazes me at the amount of golfers who turn up to play golf. After a week's deluge, they come into the clubhouse or ring up and say, "has it been raining there then" as if we were an island that the rain had missed. Most golfers will tend to stay away if it is wet, but some I am positive will play even, as I have seen, wearing their black or green Wellingtons. What possible pleasure can they get from paddling around a wet, waterlogged golf course? As it is usually only a few people who play when the conditions are atrocious, the actual damage caused by walking through sodden areas is minimal, the only problem that arises is where, wear or mud occurs on well used areas. These areas make the whole of the golf course look untidy for quite a few weeks.
So if we have the wettest winter on record, first look forward to the spring, when all your water problems are over... or just beginning!
R. R. Kates

**BROWN PATCH**
*Rhizoctonia Solani*

BROWN patch is widespread in the USA but, until recently, it has caused relatively few problems on British golf courses. However, the disease has been seen more frequently over the last two or three years and during the summer of 1987 several severe outbreaks were seen by STRI advisory agronomists. Brown patch, regarded previously as causing few problems, is now recognised as a serious disease of turf during the summer months. The symptoms of brown patch are largely dependent on the weather and consequently vary greatly. Watch out for light brown, circular or irregularly shaped patches of blighted grass, up to 15 cm in diameter which may develop quite rapidly (Figure 1). At first sight brown patch may be confused with fusarium patch disease. The diseases can be distinguished as, in the case of fusarium patch, an orange-brown colouration to the patches may be seen together with white or pink mycelium around the patch periphery. In general brown patch seems to affect all species of turfgrass equally, although sometimes the bentgrasses (*Agrostis* spp) can appear more susceptible. Following a change in the weather, or after fungicide application, surviving plant crowns, stolons and rhizomes in affected areas produce new leaves and the bare patches gradually fill in. Extensive observations of brown patch in the USA have indicated that the disease most often occurs during warm (above 22 degrees), humid weather. Also, it is known that extensive damage can only occur during prolonged periods of leaf wetness caused by poor drainage, cloudy weather and a heavy dew. Furthermore, dense lightly fertilized turf is most susceptible to infection. The persistent showery but warm weather during the summer of 1987 (in which the disease was seen extensively) would have provided ideal conditions for the disease to occur. Extensive observations of brown patch in the USA have

**REGULAR readers will have seen, in previous issues of the Golf Course, articles describing the major turf diseases - fusarium patch, fairy rings, take-all and dry patch. To conclude this series, attention is focused on some of the less common disease problems of golf courses. Although these diseases at present rarely cause significant damage, they are recognised in other parts of the world as major problems and may, in time, become serious here. Consequently, the potential threat posed by these diseases must be recognised so that control measures can be speedily implemented.**

*Figure 1: Brown Patch disease (courtesy of May & Baker Environmental Products)*

*Figure 2: Anthracnose*
*Note the black rotted base.*
conditions for brown patch development. Any management practice that promotes a dry turf surface, e.g. a good drainage system and regular scarification to remove water holding thatch, will discourage brown patch. It is particularly important to switch greens every morning to remove dew as prolonged leaf wetness favours the disease. Summer applications of nitrogenous fertilizers should be light and frequent rather than single heavy applications being made, particularly when weather conditions favour the disease. Fortunately, brown patch can be easily controlled with fungicides. Both iprodione (Rovral Green) and chlorothalonil (Daconil Turf) have a manufacturer's recommendation for control of brown patch. These fungicides will give best disease control when applied at the first signs of the disease.

Fortunately, brown patch can be easily controlled with fungicides. Both iprodione (Rovral Green) and chlorothalonil (Daconil Turf) have a manufacturer's recommendation for control of brown patch. These fungicides will give best disease control when applied at the first signs of the disease.

ANTHRACNOSE
Colletotrichum graminicola

BACK in 1953, diseased annual meadow-grass plants from a cricket square in Birmingham were examined at the STRI and the first case of anthracnose was recorded in the UK. At the time it was described as a rare and unimportant disease. Now, it may be found in many golf greens and, in swards consisting largely of annual meadow-grass, may cause significant damage. The first symptoms of attack by anthracnose to watch out for are leaves of infected plants turning yellow or even red. Similar symptoms can also be seen in annual meadow-grass when it is under stress. However, diseased plants, which can occur individually or in patches, are blackened and matted at the base and are consequently easily removed from the turf surface (Figure 2).

If the outer leaf sheaths of infected plants are peeled back then the black reproductive structures (acervuli) of C. graminicola can be seen - a diagnostic character used to positively identify the disease. Anthracnose is considered to be a 'biological indicator', i.e. its presence actually indicates that turf conditions, in certain respects, are poor. The disease usually only appears where turf fertility is inadequate and where compaction restricts the supply of air to the grass roots. Long lasting control of anthracnose can be achieved only by rectifying these predisposing conditions. If the disease is present, the turf fertility, particularly in regard to nitrogen, should be increased during the summer months. Compaction, a problem at many golf clubs due to the ever increasing rounds of golf being played, can be alleviated by Verti-draining and slitting operations. If these control measures are deployed, the anthracnose will be contained. In situations where anthracnose is causing serious problems, fungicides may be considered and, if used correctly, will give some control. However, the disease will soon return if the predisposing conditions are not rectified.

ALTHOUGH not strictly speaking diseases, as they do not harm plant tissues directly, the activities of certain fungi and algae (tiny one-celled plants with no true stems or leaves in turf) may cause problems by rendering the surface very slippery which, especially on sloping ground, can present a dangerous hazard to golfers. Despite slime moulds and squidge having a very similar end result, they differ in the way they actually cause the problem. Slime mould fungi, e.g. Mucilago spongiosa, colonise grass leaves and produce masses of spore capsules surrounded by slime. In contrast, algae, e.g. Nostoc spp prefer to colonise bare areas in the turf that may have been originally caused by disease or excessive wear, such as on approaches to greens. These algae can multiply rapidly, resulting in a dense algal slime within the turf (Figure 3). If these areas are walked on then the algae rise to the surface, stick to one's shoes and are exceedingly 'squelchy' - hence the common name for this problem - squidge.

Both slime moulds and squidge develop in shaded, damp, poorly drained turf. Where infection is heavy the slime produced can be brushed into heaps and taken away. Areas can then be treated with calcined sulphate of iron, dichlorophen (Super Mosstox) or cresylic acid (Brays Emulsion) which will suppress the slime moulds or algae for a time. The problem can only be prevented in the long term by attention to drainage and sand top dressings to keep the turf »

RESEARCH UPDATE

YELLOW TUFT
Sclerophthora macrospora

surface as dry as possible. YELLOW tuft is widespread in the USA and New Zealand, but is as yet very rare here, and consequently not familiar even to experienced greenkeepers. The term yellow tuft has been used for more than 50 years to describe certain symptoms in bentgrasses (Figure 4) for which many possible causes, such as parasite nematodes, a viral infection or a physiological disorder have been suggested. However, research in the 1970's confirmed it to be a disease caused by Sclerophthora macrospora, a member of the downy mildew group of fungi.

The symptoms of yellow tuft to watch out for are small yellow patches, approximately 3 cm in diameter, consisting of a dense cluster of excessively tillered bentgrass shoots with few roots, which are consequently easily pulled from the turf. These symptoms are most prominent during late spring or autumn and as the spores produced by Sclerophthora macrospora can actively swim in water and infect new plants, the disease is usually found in poorly drained areas.

At present, yellow tuft is considered a novelty and not serious enough to warrant any specific control measures. If you see this disease on your greens we would be most interested to hear from you.

GARDENER
Up to £181.59 including London Weighting and bonus

Can you help us to make Wandsworth the ‘Brighter Borough’? We are looking for an experienced gardener to maintain our parks and to carry out the day to day maintenance on one of our bowling greens. Hours are 7.30 am to 4.30 pm Mon - Thurs, and 7.30 am to 2.30 pm Fri. A full driving licence would be preferred but is not essential.

The Leisure and Amenity Services Department is committed to making the Council’s equal opportunity policy effective. Job applicants will be considered strictly on merit irrespective of race or colour.

Application forms from Leisure & Amenity Services Personnel Section, Town Hall, London, SW18 2PU. Telephone: 01 871 6361. Please quote ref. GC/1675. Closes 17th June.

Wandsworth an equal opportunity employer

handle

Swath width of 7 to 13 feet,
depending upon product density

Durable 11’ non-marking pneumatic
tyres

The EVEN - SPRED
built by professionals for
professionals • Designed to
witstand the rigours of tough
commercial turf care applications using
the most modern materials and up to the
minute technology • EVEN - SPRED's
broadcast system is totally self cleaning
and rustproof to ensure years of
dependable service •

EVEN - SPRED's huge enclosed
gears seal out damaging dirt and
grit to help eliminate premature
gear wear • All EVEN - SPRED
models are manufactured with rust-
proof heavy duty tubular frames and
large capacity hoppers. The EVEN - SPRED is light and
perfectly balanced to give a smooth efficient operation and a
perfect feathered edge for even broadcast every time.

Performance unmatched by the competition

Compare the spread
pattern of a typical rotary spreader
to the spread pattern of the new
Supaturf EVEN - SPRED spreader.
Note the smoothly feathered edges of
the EVEN - SPRED broadcast pattern,
which helps to minimize streaking
and eliminates 'burning' from overlap.
