Toro
the name you can trust

... and to guarantee that your club members have a course in 'tip-top' condition, you can do no better than get behind the wheel of a TORO! There are models to suit the needs of all Greenkeepers and the odd peculiarities of undulating ground contours. The GREENSMASTER 3000 together with the new 'groomer reels' can produce the finest greens on any course. Take a trial run at anytime and you will immediately see the value of TORO's unequalled technology in manufacturing the right machine for the right task. Fairways and Aprons are efficiently cut whatever the weather, complimented by the GREENS AERATOR which assists with that previously slow task of turf aeration. The popular SAND-PRO is also No. 1 choice for those important bunkers.

TORO Groomer Reels can be fitted to most GREENSMASTERS
NOT IN MY BACK YARD!

The NTC Conference at Stoneleigh last month, was not only one of the most informative gatherings held in this country on the development of amenity turf grass, but was marked by a forthright introduction by the Minister of State for Agriculture, the Rt. Hon. John Selwyn Gummer.

From the facts given in an unusually frank address to the delegates, followed by searching questions from the floor, there is little doubt the Government are facing the question of surplus rural land head on and their policy is likely to lead to considerable controversy, not only with the district planning authorities, but those who live in the countryside.

Over production of food in Britain can be attributed to three principal factors. The increased use of fertilisers, the more efficient mechanisation of larger farming units and by no means least a greatly improved management structure by our Agriculture Industry.

Greenkeeping is a combined subscription and controlled circulation publication for the golf course management industry. Current distribution 2,500 copies per month. Published ten times per year. Copies are available on subscription, postage paid, £14.00 per year. Overseas surface, £16.00 per year. Air mail rates on application to the publishers.

Golf Greenkeeping is a combined subscription and controlled circulation publication for the golf course management industry. Current distribution 2,500 copies per month. Published ten times per year. HAVE YOUR SPRINKLERS LOST THEIR IMPACT?

REPLACE THEM WITH TORO, THE TOP PEOPLE'S CHOICE!

Ask your Head Greenkeeper if he's totally happy with the performance and reliability of the sprinklers around your course. If there are doubts, call your nearest Toro Distributor for helpful professional advice. He will show you the range of Toro gear-driven sprinklers designed especially for golf course watering. He will tell you just how technically superior they are - how they can improve watering efficiency and just how simple it is to improve your existing system.

Top people's choice? You'll find Toro Sprinklers watering the sacred turf of St. Andrews, Centre and No. 1 Courts, at Wimbledon and the pitch at Wembley Stadium...

P.S. Toro make sprinklers to water greens, approaches, fairways and tees - putting areas too!

TERRALIFT THE TROUBLESHOOTER

The Terralift contracting service started by Colin Pryce Terralift at the beginning of 1987 is well into its second year of operation. The Terralift drives a 30" long hollow probe into the soil and releases a charge of compressed air at a pressure of 150-300 psi via three holes at the base of the probe. This release of air causes the soil to heave and fracture while leaving the surface relatively unaffected. Powdery to granular materials may be distributed into the soil with each charge. Designed originally for tree root treatment its benefits in relieving compaction of the soil can be applied to other areas such as landscapes and sports turf. There now appears to be a definite trend in its use and troubleshooting is the best way to describe it.

Edenbridge Golf and Country Club was experiencing very poor drainage on two of their greens. The Terralift was called in to "open up" the clay subsoil with very good results.

"I consider the Terralift to be the most beneficial sub-soil drainage machine to be introduced into this country" stated the head greenkeeper.

Bedfordshire County Council had a problem on a landfill site near Shillington. A quarry filled with highway waste and capped using heavy machinery was planted with various tree species which subsequently suffered a near 100% death rate. The advice sought concluded that the failure was due to soil compaction. To rectify this a new problem arose; conventional subsoiling required heavy machinery which tends to be introduced into this country being monitored by different organisations including the Forestry Commission. Some treatments are already showing encouraging signs. There have been no adverse signs of root damage or, as the October hurricane proved, destabilisation of the trees.

The Terralift has been used to incorporate various products into the soil such as the water storing Polymer Broadleaf P4, slow release fertilizers including Floranid Tree, seaweed meal and Alginure. The Terralift is at present being evaluated in trials by a leading independent research establishment to control fairy rings by fungicide soil injections.

British Seed Houses Grass Seed at St. Mellion Golf & Country Club

All the grass seed used on the new Jack Nicklaus Golf Course which has been constructed over the past 3 years at the St. Mellion Golf & Country Club, Saltash, Cornwall was supplied by B.S.H. Ltd.

This superb course has been sown down with Penncooss Creeping Bent on the greens and Penn-agle Creeping Bent on the tees. The greens are in perfect condition for the official opening by Jack Nicklaus on Sunday, 10th July.

The fairways were all sown down with the British Seed Houses A12 Fairway Grass seed mixture which is based on their top rated Frida Chewings Fescue, which has been used on a number of major golf course projects in recent years.
NTC’s Stirring Seminar

Seventy delegates representing both the farming community and the leading manufacturers in amenity turf grass equipment attended a one day seminar at the National Agriculture Centre last month entitled “The Recreational Diversification of Farmland.”

The NTC has recognised that the way forward towards an increase in the acreage of amenity turf can only come from the release of surplus agricultural land and this aim coincides with the present policy of central government. Thousands of acres of poor quality grazing and land producing a low yield of crops will have to be given a change of use if the thousands of smaller farms in Britain are to survive. One way, according to the Minister of State for Agriculture, the Rt. Hon. John Gummer, is for farmers to diversify into alternative business to supplement their income.

He told the NTC, “Farmers who have an unused barn or surplus land should think about setting up a sports complex. By providing space for pitches, indoor courts and swimming pools a farmer can not only increase his own income but also improve the quality of life for those living around him.”

“Diversification is not just about establishing new types of businesses which are good for the farmer and his family. It can also be of direct benefit to those who live and work in the rural areas.”

“I know that the Sports Council is concerned about the lack of suitable facilities in the countryside. We in MAFF have been working closely with them over the last year to explore ways in which we can co-operate in this area and have jointly commissioned research into the economies of setting up and running sports enterprises on farms.”

Mr Gummer went on to say how pleased he was by the enthusiastic response to the Farm Diversification Grant Scheme. “We have now received well over 500 applications in England and some £500,000 has already been allocated to help farmers develop new businesses. Of course, diversification is not for everyone but for those farmers who are well placed to seize the opportunity it can mean making fuller use of land and buildings on farms and getting a better return for them.”

In answer to a question from the floor, Mr Gummer said it had been decided to exclude grant aid for golf course developments, though when pressed conceded that the policy would be kept under review.

Other speakers at the Conference, ably and professionally chaired by Howard Swan, included Mike Collins, Planning Officer for the Sports Council, Sue Morris-Eyton from the NFU, Dr Peter Hayes, Director of the STRI, Jack McMillan, Course Manager at Sunningdale and golf course architect Simon Gidman, of Hawtree & Son.

Simon Gidman, costing the building of a new golf course, told the Conference anyone contemplating such a development would need to start with a minimum of 120 acres of suitable land, which if correctly planned would produce an eighteen hole course of around 6,000 yards.

By using local contractors and direct labour, greens, tees and fairways could be constructed for between £300,000 and £500,000. To that figure a further £50,000 can be added for an irrigation system, more if extensive drainage is necessary.

All this money has to be paid out before a penny can be recouped in green fees so there are the interest charges on the loans to take into account.

Dr Peter Hayes covering the subject of construction and maintenance confirmed these figures from his own research, but in addition drew the delegates’ attention to the equipment needed to keep the course in top condition.

Jack McMillan gave the Conference the practical problems of maintaining his two courses at Sunningdale. Controlling and maximising staff, keeping to a budget, fighting the elements and to some extent the golfers.

“There is nothing more offensive to a golfer than a piece of aeration equipment, yet nothing more essential”, he added with feeling.

Editor’s Note....
See Greenside Comment on page 3
May & Baker, one of Britain’s foremost chemical companies, has changed its identity to that of its parent, the chemical multi-national Rhone-Poulenc.

May & Baker has been part of Rhone-Poulenc since 1927. The move is designed to enable the company to take full advantage of being a visible part of one of the world’s premier chemical groups. However, the May & Baker name will continue to be used where its particular strengths and associations have a distinctive marketing role to play, most notably in the company’s health care activities.

Dr Keith Humphreys, chairman and managing director of May & Baker emphasises the international dimension of the move.

“In the increasingly competitive world in which we operate, it is vital for us to be seen as part of a fully integrated international group in which we can make our size and strengths pay,” he said.

“The group is investing in the creation of a strong international identity and our own move enables us to capitalise fully on that investment.”

During its 60-year association with Rhone-Poulenc, May & Baker has already become a significant force within the group. It is a major research and production entity and makes a substantial contribution to group activities world-wide, particularly in the health care and agrochemicals areas.

Rhone-Poulenc itself is the world’s ninth largest chemical group. It is a world leader in pharmaceuticals, rare earths, phosphates and many other chemicals, and is the world’s third largest agrochemicals producer. It has a turnover of almost six billion pounds per annum. The group spends £340 million each year on research and development – a greater percentage of its turnover than some of its larger rivals – and spends a further £150 million on environmental protection.

“At present, Rhone-Poulenc trades under at least 40 different names in 140 countries worldwide, which puts the group at a disadvantage as far as other multinationals go,” says Keith Humphreys. “Rhone-Poulenc is looking to move from being perceived as a French focused company to one with a true international dimension. Already more than 70 per cent of its sales turnover is outside France. Likewise, May & Baker has been seen in its turn as a UK company with overseas affiliates. This new move enables us to be seen for what we in effect already are – part of a truly international operation.”

**Divisions**

From May 31, May & Baker Limited will trade as Rhone-Poulenc Limited, with three divisions: Agriculture, Health Care and Chemicals. Within the divisions, those operations where the name of May & Baker is currently significant to their performance and market reputation, will retain this name as part of their trading identity – e.g. May & Baker Pharmaceuticals, May & Baker Garden Care and May & Baker Laboratory Products.

Overseas, the May & Baker subsidiary companies operating in the Commonwealth will change their name to Rhone-Poulenc.

READ THE LABEL BEFORE YOU BUY: USE PESTICIDES SAFELY
We believe that our experience based on over 100 years of research and development has produced probably the finest lawn mower grinding machines available today. Our customers tell us the "EXPRESS DUAL" is a really 'honest' machine that's built to do the job and do it well! It will successfully grind cylinders 'in-situ' or 'separately', just as efficiently and just as accurately and it will keep you going when repair work builds up.

THE MASTER is a heavy duty lawn mower grinding machine particularly suitable for gang mowers and rebladed cylinders. THE ANGLEMASTER has been specially designed and developed for bottom blade grinding.

... there's no substitute for experience!

ATTERTON & ELLIS LTD
Iron Works, Haverhill, Suffolk CB9 8QH.

Manufacturers of fine lawn mower grinding machines for over 100 years.

Trent-Jones designs Shanghai Golf Course

In what is believed to be the first three-way joint China-U.S.-Japan business venture, a championship 18-hole golf course and resort facility will be built in Shanghai. The deal is expected to enhance the friendly relations of these three leading nations in the Pan-Pacific area. A joint agreement was signed May 12 in Shanghai by the representatives of Shanghai Sports Service Corporation, the Chinese construction company, Aoki Corp. of Japan and Prescott Bush Resources Ltd. of the USA.

The golf course, the first to be built in Shanghai in modern times, will be designed by international golf course architect Robert Trent Jones Jr.

The investment for the resort and golf course is estimated to be $18m US dollars. Project construction starts in September and the opening date is scheduled for summer 1990.

Slow Release Nitrogen

The continuing controversy over slow release nitrogen fertilisers continues with a statement from Keith Mckee, Fisons Horticulture's Turf and Amenity Adviser.

Some suppliers are offering large discounts for IBDU based fertilisers which may not match up to the expected requirements.

Greenkeepers should ensure that the product offered, does what it claims to do and the contents of the bag completely meet the formula stated.

In the interests of fair commercial practice we published the Fisons statement in full.

In considering the use of an IBDU based, slow release N, fine turf fertilizer, there are two factors which must be borne in mind. Firstly, the proportion of slow release to rapid release N source and, secondly, the actual quantity of the product the application rate will provide.

IBDU releases nitrogen slowly, over an extended period of time. If it is not present in sufficient volume when spread, its N release will be at too low a level to derive any visible, sustained response. In other words, your time and money will have been wasted.

Golf Greenkeeping's Publishing Changes

Due to production difficulties, this issue of Golf Greenkeeping is a combined issue for the months of May and June.

Next month we will be issuing our usual combined July/August edition, followed by the September, IOG-Windsor Show Review.

Golf Greenkeeping will be maintaining its regular format of ten issues a year with a separate magazine for the month of December instead of combining with January 1989.

For those readers whose subscription falls due at the end of this year an adjustment will be made to the renewal date.

To ensure you receive a regular copy of Golf Greenkeeping, the subscription is only £14.00 a year, postage paid to any address in the UK. Overseas rates on application.

Send cheque or postal order for £14.00, made out to Wharfedale Publications Ltd and send to Subscriptions Dept. Golf Greenkeeping, PO Box 12, Wetherby, West Yorks.
Real turf for QPR's high-tech pitch

In a first time operation, the turf that has been grown in Yorkshire for First Division Football Club, Queens Park Rangers' new pitch, was harvested early in the morning, given a unique washing treatment and transported overnight in a refrigerated lorry for immediate laying in London. The natural turf has been grown and intensively maintained for fifteen months by Rolawn Turf Growers. Over 9,000 square yards was washed to remove soil so that it can be laid direct on an all-sand construction. Eve Leisure's Cellsystem incorporates an underground watering and drainage system that will ensure optimum playing conditions all the year round.

Fulford Golf Club gets the professionals' vote

The greens at Fulford Golf Club, near York, are the best of all the courses on the European circuit, according to a poll of the tournament players. The club itself gives much of the credit for the award to the continuous programme of drainage maintenance and renovation which it carries out.

Since 1971, Fulford has been the venue for the Benson and Hedges Championship, the longest running tournament at the same venue in Europe. Last year, asked to assess the courses on which the official European Tour events were held, the professionals gave Fulford's greens top marks in company which included such names as Muirfield, Wentworth and Royal Birkdale.

Fulford opened in 1935, was reclaimed from heathland and scrub. Clay tiles were mainly used for drainage, with ash as backfill, although in some places ash was used on its own. In both cases, the drains were often only one foot deep. This system is constantly being renovated by the club, to maintain optimum playing conditions.

Like any golf club, Fulford has to have a drainage system which removes surface water as quickly as possible. To meet this need, the club now uses clay pipes from Henry Oakland of Escrick, at a depth of at least 2ft., back-filled with a minimum of 12in. of hard stone, and with falls wherever possible of around 1:20. Trenches are hand-dug by the greenkeeping staff. For laterals, 3in. pipes are used, feeding into 4in. or 6in. mains.

"We need a very free-draining system to get rid of surface water", explained John Gledhill. "Clay is a natural material - there is nothing like it for absorbing the water and drawing it out of the ground. Clay pipes do a good job for us".

In April, even after one of the wettest winters on record, members of Fulford Golf Club were able to enjoy excellent playing conditions. Meanwhile, more drainage work is under way to keep the course in the best possible condition.

WASHED ROLAWN

Britain's first automatic turf washer uses water from the river to direct high pressure, high volume jets to remove soil from beneath the Rolawn turves.

Rolawn's own specially built 'washing machine' washed individual square yard rolls, handling over 1,000 square yards a day.

QPR's new pitch, costing £250,000, has been spot-levelled by laser and replaces the previous synthetic surface, condemned by other football league clubs.

Mowers for weight-watchers.
Not weight-lifters.

Huxley Hydraulics Reelmowers for compact tractors prove that you don't have to be a heavyweight to be strong.

So, if your turf could benefit from a reduction in pressure, without a reduction in performance, please ask us to demonstrate.

We could save you pounds.
Take it easy with Floranid. You need a lot

With the Floranid range of slow release fertilisers, anyone can afford a pitch as good as Wembley's or greens as good as Wentworth's. Whatever your budget, you can treat your turf with Floranid at about the same cost per square metre as apparently cheaper fertilisers.

This may surprise you if you haven't had the chance to take a closer look at Floranid, its high performance advantages, and its comparative cost in actual use.

The key is Floranid's slow release action. This ensures that your grass consistently gets the nitrogen it needs, when it needs it. It also means you use less Floranid for any given turf area.

Floranid's high quality granules spread more easily and settle well in the turf. They don't lie lumpily around on the surface waiting to be picked up with the mower. You need less mowing anyway. Floranid produces even growth without the flushes that follow ordinary fertiliser applications.

Usually, you only need to use Floranid twice a year, but you still get all-year-round performance. That's a real saving in time and labour. And you don't have to worry about the
weather when you use it. Floranid is resistant to leaching, reduces scorch risk, keeps grass growing for longer even in a drought, and helps bare patches recover beautifully.

Independent trials have proved Floranid is more efficient to use. The results are more satisfying. And it’s more cost-effective than you think, whether it’s on the village green or in the national stadium. That’s why Floranid is Europe’s most successful amenity turf fertiliser.

If you want a tough, well-rooted sward — packed with strong, even growth, attractive to look at, hard-wearing to use, easy to look after — look into the Floranid range. The facts make other fertilisers look expensive.

Floranid
Europe’s top-selling amenity turf fertiliser.

Floranid is a BASF trademark.
NEW ASSISTANT DIRECTOR AT BINGLEY

Following the retirement of Mr John Shildrick, Assistant Director of the Sports Turf Research Institute, the Board of Management have appointed, as their new Assistant Director (Research), Mr P. M. Canaway.

Mike Canaway joined the STRI in 1974 on a contract financed by the Department of the Environment to study wear and durability of sports turf. One of his first achievements was to develop a ‘wear machine’ for simulating the effects of play in turfgrass experiments. The machine is capable of simulating different types of wear, including football, golf and abrasion as occurs on training, kickabout areas and parkland. The development of the wear machine had a major impact on the Institute’s research programme. Also in the early period, Mike Canaway developed equipment for measuring the ‘grip’ or ‘traction’ available to players on turf and this is now incorporated in a draft British Standard for testing traction or friction on synthetic turf. Both the wear machine and traction apparatus were used in studies on wear tolerance of grasses, soils and nutrition during subsequent years. In 1981 Mike Canaway started a major programme of research on sand constructions for sport, the object being to provide a free-draining playing surface and good playing conditions. In 1985 he was honoured to be asked to present the Keynote Address on soils and plant nutrition at the International Turfgrass Research Conference in Avignon, France. The work on sand rootzones has flourished, with research finance being obtained from the Royal and Ancient Golf Club, the Football Trust and the Football Association. Mike Canaway has been asked to lecture at various venues throughout the United Kingdom and he has published some 35 scientific papers on various aspects of his work at the Sports Turf Research Institute.

New Reps for Ransomes

Mike Canaway is married with three sons and lives near Skipton in North Yorkshire where he is Secretary of Craven Speakers Club. His other interests include cross country running, gardening and hill walking.

QUALCAST SERPAR STRENGTHEN TECHNICAL SUPPORT

Qualcast Serpar have strengthened their technical support to the professional market by appointing a professional technical service representative. Serpar are the specialist group company handling service and parts for Qualcast Garden Products and Atco Ltd.

Barry Goodchild will be responsible for providing a full machinery after-sales service for the Atco professional range of products including the Gangmaster, Royale and Tractor ranges.

Before joining Serpar Barry was a marine engineer for ten years.

Royal opening at Leeds Castle Golf Course

Her Royal Highness Princess Alexandra, patron of the Leeds Castle Foundation, joined Ryder Cup Captain and former Open Champion Tony Jacklin, when she formally opened Leeds Castle’s re-designed golf course, last month.

Tony Jacklin was the star guest of a foursome to play the first round on Leeds Castle’s 9-hole golf course, which has been re-designed by Neil Coles, with the creation of four new holes and new water hazards.

After lunch, Princess Alexandra walked through the Castle grounds and gardens.

During the afternoon Tony Jacklin held a golf clinic for a group of local players, who regularly use Leeds Castle golf course.
NEW MARK 200 CONTROLLERS FROM WEATHER-MATIC.

Weather-matic has announced the addition of a new commercial series of micro-processor controllers. The Mark 200 Series will offer designers a choice of 12, 18, 24 or 30 stations in a heavy duty housing. As on all Mark controllers, the 200 Series will feature a Day-Bright™ high intensity LED display for superior outdoor daytime visibility.

Programming the Mark 200 Series Controller is fast and easy with the function selector switch and four large, clearly labelled programming buttons. User training is minimal.

The LED display further aids programming by showing current time or programme values. A choice of six or seven-day calendar programming allows for every-day, odd-day, or third-day watering. The dual watering feature provides two independent programmes with four daily start times each.

A start-up/back-up programme automatically provides two daily 5 minute watering starts on all stations in the absence of a specific programme. The back-up programme can be switched 'off' at the user's option.

A separate test programme permits the operator to run all P1 or P2 stations for 2 minutes each without disturbing previously programmed duration times. Additionally, the test programme will skip stations that do not have programmed watering times.

All Mark 200 Commercial Series Controllers feature a heavy duty transformer, industrial terminal blocks, built-in pump start and pump protection circuit in a heavy-gauge steel housing. The hinged cover has two side toggle latches and a cylinder lock. An optional pedestal mount is available.

Weather-matic manufacture a complete range of irrigation controllers, valves and sprinklers which are distributed and installed in the UK by Prime Waterman Limited, Wangford, Beccles, Suffolk NR34 8AX.

HF-5 AND TRI-KING™ MOWERS

Here’s the right combination for high quality cutting and trimming in parks and other council applications.

HF-5 Hydraulic Tractor/Mower

- 5 gangs with free floating 6- or 10-blade reels to follow ground contours
- 33 hp liquid-cooled diesel engine
- Lightweight (8 PSI ground pressure) but high capacity—mow up to 50 acres per day

Tri-King 1471

- 3-wheel drive for superior hill climbing ability
- Hydraulic reel lift for better productivity with less effort
- Hydraulic traction drive—no belts to slip or adjust
- Easy maintenance—easy access to engine, quick belt replacement
- Auto-type drum brakes for hill holding ability
- Choice of 5- or 10-blade reels, floating or non-floating for quality cut
- Isolation mounted engine for less vibration and noise

Jacobsen compact hydraulic mowers—part of a full line of Jacobsen equipment for parks, council and golf course maintenance: small and medium walk-behind mowers, riding rotary mowers, grooming tools, greens and fairway equipment, gang mowers, large turf tractors and special purpose vehicles. See them all. Call: King’s Lynn (0553)763333.

JACOBSEN

© Jacobsen Division of Textron Inc. 1988
When George Brown arrived at Turnberry two years ago from Broom Park in Kent, he was faced with the situation of taking over a championship course which needed an equipment update.

The new owners — NITTO KOGYO of Tokyo were positive in their forward planning. Turnberry had to be, and remain, a major course and a continuing venue for the Open Championship.

Budget plans were agreed and a schedule of investment drawn up to meet the new owners commitment to the future of golf in Scotland.

Included in the schedule of investment was a requirement for two new tractors.

After looking at all available tractors and many years of practical experience, George was convinced that the ideal golf course tractor was in the 30-35hp mark, four-wheel drive, power steering and low PSI.

At SCOTSTURF '87 at Ingliston, George took the opportunity to take a close look at various tractors on the market. Attracted to the overall package Kubota had to offer, an appraisal was made of the Company, its product range, and Dealer back-up. Subsequently, a demonstration was arranged at Turnberry of Kubota products suitable for the course requirements.

These demonstrations led to the purchase of two Kubota L2850 tractors, one fitted with a backhoe and loader.

**AGRIMASTER® & AGRICROP®**

Liquid Growth Stimulants

**TIP THE SCALES IN YOUR FAVOUR**

Two invaluable ingredients in one container!

Farmyard manure PLUS seaweed make the perfect foliar spray for fairways, greens, sports & recreation grounds and all amenity purposes.

- ENCOURAGES ROBUST, EVEN TOP GROWTH
- TAKES UP LESS STORAGE SPACE
- LOWER OUTLAY
- IMPROVES ROOT STRUCTURE
- HIGHER NUTRIENT VALUES
- LABOUR SAVING

2 GALLONS PER ACRE

6 PINTS (3.4 LITRES) TREATS 1800 SQUARE YARDS
Paradoxically the 43rd annual IoG Sports & Leisure World Trade Exhibition – which takes place at the Royal Windsor Racecourse, Maidenhead Road, Windsor, Berkshire from 20th-22nd September 1988 – is celebrating its Golden Jubilee!

The Exhibition was first held in 1938 (the war and its aftermath account for the seven lost years).

With demand for space up by a massive 25 per cent, this year's exhibition is now all set to be the industry's biggest ever event.

- 386 exhibitors
- 46,000 square metres of stand space
- 16,000 square metres of working demonstration areas
- two covered pavilions
- exhibitors from 27 overseas countries.

To this must be added a record number of colleges which will be featured in the extended Educational and Training section. They include:

Also joining them in that section, will be such bodies as the Agricultural Training Board, BALI South Thames Training, the City & Guilds of London Institute, Garden Machinery Association, National Playing Fields Association, National Turfgrass Council and the Sports Turf Research Institute.

The education displays will be supported by a programme of 18 mini-lectures covering such topics as Winter Games, Bowling Greens and Cricket Squares maintenance, which will be held in the Lecture Theatre.

Although the recent J.S. Open Day did not enjoy the best of weather this did nothing to dampen the numbers nor indeed the enthusiasm of everyone concerned. In fact around 80 invited guests including Local Authorities, Greenkeepers and Groundsmen seemed to treat the weather with the contempt it deserved. No doubt because there was plenty of machinery on view to raise the spirits, not to mention the lunch which, once again, was splendid.

Several products were demonstrated including the Groundmaster 220D a recent addition to the TORO stable. This 3 cylinder diesel engine machine is highly manoeuvrable and is fast gaining praise. The 52 in. or 62 in. rear discharge cutter decks which may be fitted, are an addition to the range and a unique flotation system ensures improved ground following.

The Flagship of the TORO range the Reelmaster 450D was also on show. This high output all-hydraulic mower powered by a 50hp Mitsubishi engine with power steering travels up to 15mph and will mow up to 10.5 acres per hour, 5 or 7 bladed cutting cylinders are available and the heads can be either fixed or floating.

Within the TORO section of Lely the New Reform-Metrac 4-wheel drive tractor unit has been added to the range as it will enhance and complement the existing TORO products.

The Metrac is a 38hp 4-wheel steer unit which is ideally suited for banks and difficult terrain work which can be fitted with flails or rotaries or any other front or rear mounted attachment.

Mr Andrew Darlow (TORO) demonstrating the 220D to Mr Seymour of Hastings Borough Council who is awaiting delivery of his 220D.

Over the last few months, Kawasaki have been embarrassed by their lack of stock. For this well-proven work-horse has proved such excellent value for money that they had completely sold out, while still waiting for the replacement model.

The good news is that the new model (pictured) not only still provides superb value for money that it had completely sold out, while still waiting for the replacement model.

The new styling is practical as well as attractive: twin headlamps mounted below the front carrying rack, the Kawasaki KLF220 is a very sophisticated machine available at the value for money price of £1,899 plus VAT.
HYDRAULIC LIFT VERSION OF ATCO GANGMASTER

Hydraulic lift is now available on all four versions of Gangmaster, the PTO belt driven gangmower made by Atco.

For ease of operation the user will now be able to lift the cutting heads automatically without having to leave the cab, particularly useful when moving from one cutting site to another.

There are four versions of the Atco Gangmaster. It is available with either 5 or 3 cutting heads and overall cutting widths of 138 inch and 83 inch respectively, and with either fixed or floating heads.

Special features on the Gangmaster include a belt driven system, operated from the tractor’s power take off, designed to provide constant cylinder speed in all conditions with the added advantage of avoiding expensive damage if a hidden object is hit – the V belt will simply ‘slip’.

For further information contact: David Woolridge, Marketing Manager, Atco Limited, Suffolk Works, Stowmarket, Suffolk IP14 1EY. Tel. (0448) 612183, or Peter Evers/Karen Green, Edson Evers & Associates, Public Relations Consultants, Priory House, Priars Terrace, Stafford ST17 4AG. Tel. (0785) 55146.

BROUWER 5 GANG MOWER

The Brouwer range of turf-care machinery has a first-rate reputation for quality and reliability and the latest tractor mount reel mower is loaded with exciting new features and options. Golf Course models are available, delivering a fine cut.

The Golf Course model is fitted with floating heads to cope with .5 inch fine cut to 2 inch rough cut. No lengthy adjustments are needed, just a flick of a lever. Optional brushes are also available which virtually eliminate tractor tracks from fairways.

The most outstanding features of the new lightweight mower include simple one man 5 minute operation to detach the rear mowing units and release the tractor for other duties, full 5-gang operation with 4-gang and 3-gang modes for tight spots, simple bedknife to reel setting via one adjustment bolt, four-wheel drive traction, hydrostatic transmission and finger-tip controls for easy raising and lowering of cutting units or for transportation.

The result is a quality mower that is economical, versatile and dependable. Turfland Professional, sole UK distributors of the Brouwer range of machinery, provide a first-class spares facility and back-up service through their nationwide team of representatives. This expertise, added to the reliability and dependability for which the Brouwer range has become renowned, means that the customer has at his disposal a complete package that is second to none.

For further information contact: Howard Price Turf Machines Ltd, Langford Road, Bulwell, Nottingham NG6 8HE. Tel. (0602) 522231.

TURFBLAZER OUT FRONT MOWERS LAUNCH IN GREAT BRITAIN – NEW RANGE NOW AVAILABLE FROM ISEKI U.K.

The Turfblazer range of out-front professional mowers is now available in Britain with cutting widths from 1.5 to 4.5 metres wide.

The Turfblazer range of out front mowers manufactured in America by Howard Price Turf Equipment is now available in Great Britain from Iseki U.K., giving a wide variety of cutting widths in both rotary and cylinder forms from 1.5 to 4.5 metres wide.

Three models are initially being imported by Iseki with power outputs from 22 to 78 horsepower, all hydrostatically driven and with 3 or 4 cylinder water cooled diesel engines.

The smallest of the models is the 22 horsepower Turfblazer 422 with a choice of 60” or 72” wide rotary cutting decks with options of snow blowers or front mounted brushes. The decks themselves are offset for close trimming and feature quick change height adjustment from 1.5 to 4.5 inches. All Turfblazer decks have front mounted flotation wheels for perfect contour following.

The result is a quality mower that is economical, versatile and dependable. Turfland Professional, sole UK distributors of the Brouwer range of machinery, provide a first-class spares facility and back-up service through their nationwide team of representatives. This expertise, added to the reliability and dependability for which the Brouwer range has become renowned, means that the customer has at his disposal a complete package that is second to none.

For further information contact: Howard Price Turf Machines Ltd, Langford Road, Bulwell, Nottingham NG6 8HE. Tel. (0602) 522231.

Moving up the scale is the Turfblazer 727 with its 27 horsepower engine, hydrostatic drive means the operator can vary ground speed independent of engine rpm, whilst the simple two pedal control gives instant forward or reverse. On the 727 is the option of an 84” cylinder mower in three gang configuration or a five gang set up for mowing up to 130” wide on the 40hp power unit. All the cylinders are available in either 6 or 8 blade form for cutting heights from 3/8” to 2 3/8”. Vertical blades are also available as an option.

Finally, Iseki will be doing selective trials and demonstrations this year with the mighty Turfblazer 180, a 78 horsepower 4 cylinder diesel engined machine allowing rotary cutting up to 14 feet wide in one pass. The hydrostatically driven machine with hydraulically folding wings is capable of cutting up to 50 acres per day in either rotary or cylinder form.

Commenting on the introduction of the new Turfblazer range, Colin Gregory, Iseki’s Sales Director, said “We took a long time deciding on a range of out front mowers. Turfblazer is well respected in America and we feel this range offers the professional operator a choice of cutting widths, plus excellent economy and durability. We’ll be only too pleased to show the Turfblazer range to you and demonstrate why we believe it offers so much”.

Further details are available from Iseki U.K. on 0480 218100.
A new greens mower has been announced by Huxleys Grass Machinery, the Hampshire based family company at Alresford, known best in this country as the main Cushman dealers.

The independent British firm, headed by Ted Huxley and his two sons, have had the machine under wraps for some time to ensure that the principal requirements demanded by greenkeepers were met.

It is a no frills machine, easy to use, quieter than other diesels, economic in running costs, there is a first class service and parts back-up, and the machine has front wheel drive and rear steering.

The white painted triplex, designed by a team of engineers under the direction of Ed Fox, will be priced at around £10,000 when it goes into full production prior to being launched at the IOG Windsor Show in September.

In a market dominated by Jacobsen, Toro and Ransomes, the Huxley Three 58, so called because of the three cutting cylinders and the 58 inch cutting width, is powered by a Kubota diesel engine.

From tests carried out on a number of golf courses in the south of England it is said to use only 1.6 litres an hour in fuel, which, compared to the petrol engines of other machines can save a golf club around £500 a year in running costs.

The Three 58 has hydrostatic drive with separate pedals for forward and reverse, stopping by easing off the drive pedal. Cutting speed is around 3 mph at 180 cuts per yard, with a top travelling speed between greens of 8.5 mph.

The Huxley Three 58 Greensmower
A full report on the Huxley Three/58 will appear in the July/August issue.
