Tree Surgery is a job for professionals

Honey Brothers are the professionals

25 YEARS EXPERIENCE is at your disposal. A properly trained and equipped team is essential if surgery is to be confined to trees! Honey Bros. know how to minimize the risk of injury and possible claims. And in so doing create a work force that operates smoothly because it has the confidence that training brings.

Honey Bros. organize regular arboricultural Safety Training Courses on site in Guildford or with owners on their own land. Our latest Catalogue of equipment for sale includes over a thousand items. Remember equipment is only sold after we have proved its worth for ourselves in use! The picture shows only some equipment. To illustrate the complete range would occupy many pages! It's Still Not Too Late...

Bookings for the 1985 EIGGA conference at Warwick University from March 22-24 are coming into national headquarters fast and it is anticipated that there will be the largest-ever attendance of greenkeeper members. However, there are still places available so, if you have not already done so, book now!

There have been some amendments to the original programme. Hugh MacGillivray is unable to give his paper — Irrigation On the Golf Course From The Greenkeepers' View — and his place has been taken by EIGGA member and course manager John Mullen, who will be talking on Power and Communications.

On the Friday afternoon, there will be a paper, starting at 2.45pm, by a representative of the government's pesticide safety scheme. John Philp, second in command to Walter Woods at St Andrews, will speak on behalf of SIGGA. John's subject will be The Open Championship From The Greenkeepers' View.

A team quiz, sponsored by Rigby Taylor, will be held on Friday night. Teams of three will answer as many general knowledge and greenkeeping questions in a given time. If you would like to take part, register your team or yourself as an interested individual on arrival at the conference reception.

Saturday evening's after-dinner speaker is John Wells, star of the West End revue Anyone For Dennis? Mr Wells will no doubt enlighten delegates on greenkeeping at No 10!

EIGGA's annual general meeting takes place on Sunday March 24, commencing at 2pm. In accordance with the association's constitution, a copy of EIGGA's accounts for 1984 are enclosed with this issue of Greenkeeper.

London

This is my last chance to recap the two successful events that climaxed the branch's 1984 activities. First, the annual dinner-dance, which returned to the Post House Hotel, Heathrow. Tom and Anne McDonald are to be congratulated once again on their organisation and for providing a most enjoyable evening. The fare was excellent and the disco had even the least energetic of us grooving around the dance floor!

London ended 1984 with a seminar at Moor Park Golf Club. Dr Peter Hayes brought a distinguished team of speakers from the STRI at Bingley to lecture on golf course construction and maintenance. They enlightened not only the 90 greenkeepers who attended but, more significantly, 20 members of golf club committees, who went away realising that there is far more to our profession than just cutting grass.

Seating in the magnificent foyer of the Moor Park mansion was an added bonus and we are grateful to the club and secretary John Linaker for their co-operation. It is hoped a similar project will be possible in future.

Details of golf outings arranged for this year should be ready for next month's Greenkeeper.

David Low.
There's very little we can't cope with
...either on or off the grass!

Clubs and numerous sporting complexes throughout the country have nothing but praise for these truly exceptional tractors and all British Built attachments. LELY ISEKI is the name you can depend on for reliability, versatility and above all economy. Sales and Service Distributors with fully trained personnel in your locality. Give Colin Gregory a call and arrange to see any one of the 16 to 72 hp 4 WD models working under your conditions. Also ask to see the new TX 2160 'HST' 4 WD but don't leave it too late!

In the past, your advertising has caused considerable comment among greenkeepers and agronomists. Do you believe there should be two grades of golf course, tournament and other?

Our position is one of reacting to the requirements of a market. If courses of varying grades are required by the playing public, then that is what they must be given. In golf, it is the course itself that is the player's opponent. How taxing that opponent should be is a question for the club authorities and the result should meet the needs and desires of their customers — the club players. Obviously, this can only be ascertained through discussion and comment and if our advertising has stimulated this, then all to the good.

Are Fisons aware of all the research here, in Europe, the US and other areas of the world since the early 1900s, which confirms beyond any doubt that phosphates encourage annual meadow grass and potash discourages fine fescues? Do they accept that annual meadow grass is not only not inevitable, but the source of 90% of all greenkeeping problems? If they knew, was it commercially impossible to formulate (largely organic) nitrogenous mixes now used by the majority — going back to the standard practices of 40 and more years ago?

Our technical staff at the Levington Research Station keep fully abreast of the latest technical and experimental data from the UK and abroad. From that knowledge and their considerable experience, they do not believe that annual meadow grass is the source of 90% of all greenkeeping problems. Other factors contribute much more than 10% of a greenkeeper's troubles.

We agree annual meadow grass is not inevitable, but the influence of phosphate is only one factor in the balance of a grass sward. The species profile can also be influenced by, for example, poor drainage, inappropriate soil conditions, overwatering, misapplication of products, degree of use and so on.

Fisons' policy on fine turf fertiliser formulation is to offer the greenkeeper a reliable and effective choice. Used as recommended, the Greenkeeper 1 and 2 formulations (which contain phosphate and potash) are aimed at replacing the P and K nutrients removed in clippings. Over a year, the average phosphate and potash levels in the soil should not vary significantly.

Should phosphate and potash levels be considered adequate or even excessive, then the nitrogen-only formulation Greenkeeper Super-N is available.

We recently commissioned the Taylor Nelson Group — an independent market research company — to undertake a major investigation into fine and outfieldd turf care. Their report showed that those golf greenkeepers who used organic nitrogenous mixes did so principally because of the prolonged release characteristics. Using this information, we formulated Greenkeeper Super-N as a consistent and reliable slow-release nitrogenous fertiliser.

What would Fisons' defence be to the statement that the two worst causative factors so adversely affecting greenkeeping over the past two decades were agricultural fertiliser companies selling inorganic NPK fertilisers and inexperienced irrigation companies installing badly designed pop-up systems with the wrong equipment? The irrigation companies, starting later, were so much quicker to spot this error, setting up the BTIA and a generally agreed code of practice. Yet, only last year, Fisons were still plugging NPK formulations be used on fine turf. These products are totally inappropriate. We cannot comment on the activities of the irrigation industry, except to agree that poorly conceived and installed irrigation systems may have caused problems on golf courses.

A code of practice is only required where there is a substantial risk of the consumer being misled. With fine turf fertilisers, this is not the case. There is a large selection of formulations on the market and government legislation that demands a complete and accurate description of the contents of a fertiliser. This is clearly more binding than a voluntary code of practice.

Our recommendations regarding NPK fertilisers are covered in the answer to the last question.

Fisons sell autumn fertilisers. Virtually no greenkeeper would apply even low nitrogen fertilisers in autumn, partly because they are not needed and partly because they induce not only disease but, of high phosphates, annual meadow grass as well. Would they contest the statement that autumn 'greenkeeping' fertilisers benefit only the sellers of those fertilisers?

Another significant point brought out by the Taylor Nelson Group survey is that 25% of all golf green fertiliser applications are made between September and March. This is corroborated by our sales figures, which show that a considerable number of golf greenkeepers do apply autumn fertilisers.

Published experimental evidence indicates that a low autumn nitrogen application encourages grass recovery from both summer stress and wear and autumn cultural operations, such as scarification. The implication is obviously that autumn treatments are considered by many greenkeepers to benefit the turf more than the fertiliser company.

As a specialist horticultural company, Fisons Horticulture has never recommended, and would never recommend, that agricultural fertiliser formulations be used on fine turf. These products are totally inappropriate. We cannot comment on the activities of the irrigation industry, except to agree that poorly conceived and installed irrigation systems may have caused problems on golf courses.

Do Fisons think urea-nitrogen is equivalent to hoof and horn and dried blood? Do they know of the research that says urea is little better than sulphate of ammonia and a lot more expensive?

No, we do not believe urea is equivalent to hoof and horn. Urea can, however, be seen as a rapid-release...
nitrogen source with a broadly similar effect to dried blood. One of our main aims is to supply a product that is safe, consistent, easy to apply and reasonably priced. We incorporate urea into the granular Greenkeeper nitrogen source because it is cheaper than dried blood and considerably less phytotoxic to turf than sulphate of ammonia.

Hoof and horn is a slow-release nitrogen source — quite an effective one, providing the particle size is right. We have formulated our slow-release nitrogenous fertiliser, Greenkeeper Super-N using IBDU, an organic compound reported by the STRI to be particularly effective on fine turf.

Why do Fisons advocate fertiliser treatment for fairways where there is no loss of plant nutrients, as the susceptible grasses and, worse still, produce leafy pastures from which it is impossible to impart backspin and, consequently, stop on a ball?

It is this area where the use of agricultural fertilisers rather than specialist formulations has had its most detrimental impact on golf.

However, fairways are like any other artificially maintained plant community — nutrients are lost through leaching, but there is an imperfect nutrient return. We recommend a modest fertiliser application to maintain nutrient levels and to support a healthy sward. This is certainly not designed to produce a leafy pasture.

Why do Fisons set so much store on soil analysis when all the results usually prove that P and K levels are too high?

In the past, we offered free soil analyses as a service to customers, many of whom were used to having greens analysed on an annual basis by previous advisors. We thought this was unnecessary and the company policy was to try and limit, where possible, the amount done. We now carry out virtually no turf soil analyses for customers.

Why did Fisons advisors (and perhaps they still do) invariably recommend liming fairways and greens? Do they think there is an ideal pH? If so, why do our best courses show such a wide range of pH values on fairways and greens—from just over 4.0 to well over 8.5 — yet the same grasses grow equally well at all points of the pH range if phosphates and potash are kept low?

We have never recommended liming in that way — only where turf has suffered because the soil has been proved to be excessively acidic, leading to poor sward density, which cannot compete with weeds and moss. Indeed, we do not believe that there is an ideal pH for the soil of a golf course.

Is it not true Fisons were basically phosphate producers and had to buy their nitrogen from a competitor. So they had a vested interest in plugging the 'virtues' of phosphate.

Fisons Horticulture Division has, for over 20 years, been totally independent of any agricultural fertiliser concern and formulates its own fine turf fertilisers. Considering the operational scale of major agricultural fertiliser companies, it is inconceivable that they would attempt to influence a market as small as the fine turf industry.

What is Fisons' view of rival companies selling organically based nitrogen, which most greenkeepers want and has been used for 60 years and more?

We believe in free and fair competition and also recognise that there are some sectors of the market for which we do not cater. However, our products are obviously filling a significant demand, otherwise they would not be commercially viable and would be dropped from the range.

Again, we do sell a product based on an organic nitrogen compound — Greenkeeper Super-N.

How would Fisons answer the charge that commercial interests have caused the deterioration of our golf courses and view the influence of the poorer club golfer, who cannot stop on firm greens and screams for more water and fertiliser? Would you agree it is up to the 'average' club golfer to improve his game rather than the greenkeeper produce a course that flatters it?

The 'average' golfer is the backbone of most golf clubs — they are the reason for the club's existence. The majority of clubs should, and must, cater for his needs. This does not mean bunkers should be filled in and the course levelled to make it easier. Clearly, there should be an appropriate level of challenge in the game. It is the greenkeeper's task to match that challenge, with his course, to the requirements of the club's customers.
Quality costs money. So Morrison gives you more bold designs, more features, more value in a mower. Take the new improved 11 hp Honda engine Triplex Mark III (35 acres in eight hours) with electric lift control.

Or the Morrison Olympic 600 Cylinder Mower with its unbeatable finish and clip rate of 85 cuts per metre (78 cuts per yard). Then there's the new rugged Rapier 710-28" cut 11 hp Honda engine, three forward, one reverse gear with non-slip drive and separate disengagement.

And the Morrison 3'N'1 Rotary It's a rear discharge mower, a catcher mower and a mulcher.

Just some of the new mowers in the outstanding range of Morrison products. Built to a standard of quality with a promise of value at highly competitive prices every time.

MORRISON PUTS MORE INTO A MOWER

- All designed and built with precision gearing for superior cutting quality
- Excellent clip rate per yard
- Economy of power to operate cutters and independent rollers
- Many optional attachments and accessories
- Full technical back-up and spares always available. Delivery Ex-Stock

MORRISON GIVES YOU MORE QUALITY FOR YOUR MONEY
The greenkeeper's lot is not an easy one. Keeping a course in condition all year round requires dedication, experience and skill.

But now the greenkeeper can turn to Kubota for all his on-course needs.

These four tractors and the range of Kubota attachments add up to a total greenkeeping package, meeting not just the needs of the moment (mowing, draining, hauling and so on); but also the long term requirements for high quality, reliability and economy.

When you get Kubota on course on your course, you get the benefit of minimum interest finance.

**L4150** provides more power when you want it and where you want it. Available in 2WD or 4WD, the smooth 5 cylinder 45hp (DIN) engine, together with fingertip hydraulic shuttle shift, makes this the perfect machine for five gang mowing.

**G3HST** is the versatile ride-on, that makes short work of light rough. Highly manoeuvrable (thanks to hydrostatic transmission), 44" cutting width mid-mounted mower can cut almost anywhere, but always with miserly fuel consumption and minimal maintenance.

**B7100HST** has a powerful 16hp diesel engine, controlled by hydrostatic transmission, which includes creep speeds as standard. It will earn its keep all over the course.

**B8200** With a 3 cylinder, 19hp engine, it's ideal for the heavy work on course. Also available with hydrostatic transmission.

You can confidently turf out any other fertiliser.

Stick to ‘Long Life’ and ‘Green Gold’ and you can’t grow wrong.

For fine turf, playing fields and other amenity areas, these two fertilisers are the finest words of encouragement you can give to growing grass.

All the necessary nutrients for green and healthy growth are in the bag. And all the hard work you’d expect is left out.

It’s the special formulation that makes the difference. Readily available, yet long-lasting.

With fewer applications, ‘Long Life’ (fine turf) and ‘Green Gold’ (for nitrogen only) will develop and maintain the most attractive and hard wearing sward possible.

And take away the need for countless outings with your mower to cut down the initial flush of growth. Because your grass won’t come up all-of-a-rush.

There’s even a noticeable reduction in nitrogen losses from leaching. Especially under irrigation.

Long Life and Green Gold—from the wide and proven SAI range of turf foods.

“FENDRESS” TOP DRESSING

High Quality Golf Green Top Dressing (FENDRESS) available in bulk loads of 15—18—20 tonnes, delivered anywhere U.K. mainland.
A specifically designed mix of Fenland Peat/Soils and Lime free sand carefully blended, shredded and sieved. Ready for immediate application to golf/bowling greens.
Save purchasing expensive equipment which stands idle for much of the year, also high labour costs, and problems of finding suitable ingredients of constant quality.

Pre-packed supplies now available.

SPECIAL MIXES TO YOUR SPECIFICATION ALSO PREPARED.

ALSO sedge peat “FENPEAT” in bulk.

Lime-free sands, screened loam, top soils etc.

The finest range of turf care products on earth

As nationwide manufacturers and distributors of a wide range of turf care products, we at Supaturf offer you a complete caring service for all sports or amenity turf. Free professional on-site advice, follow up technical reports by our laboratory, free informative catalogues and fast nationwide delivery service from our depots throughout the UK all add up to the very best turf care on earth.

- Fertilisers
- Grass Seed Mixture
- Soil Amendment
- Top Dressings
- Wetting Agents
- Moss Control & Weed Killers
- Pest Control

Plus all sports and maintenance equipment too!
