feel that the more simplified the control and upkeep of the systems, the better it is for greenkeepers. There are less chances to make mistakes. I have yet to see a trouble-free irrigation system, so the art and skill of fault finding is important to deal with breakdowns.

"No equipment, however good, can succeed unless there is an availability of spares. There is nothing more frustrating than to have a vital machine sitting in the sheds due to lack of spares when it is badly needed on the course. We always have a good stock of spare parts here—we could carry more, but there is always the problem of storage. We keep all the necessary things, such as bottom blades, spark plugs, drive belts, hydraulic hoses. Spare chain links are also essential."

Finally, I wondered if the Open Championship and other major events at St Andrews created much more work for George. "I am kept quite busy," he said. "The most critical time for us is during pre-tournament preparations. Contractors want to plough in new cables and water pipes. We have to accompany them to make sure that permanent lines don't get damaged. Last year's Open went smoothly and we had few problems."

"In closing, I would mention my assistant, who is proving invaluable in the workshop—Walter Woods Junior. He has proved to be an intelligent, skillful engineer, who has made the most of his training."
The 18th hole of an international tournament course is the least appropriate place on earth for a weed. Any kind of weed.

Which is why so many international tournament course groundsmen use a cunning cocktail of weed-killers known as Super Verdone: it kills all common turf weeds.

**What would Sevvy say if he found a dandelion on the 18th?**

It does this by combining two systemic hormone weedkillers that see off most of the weeds you're ever likely to find on an English green with a third contact weedkiller that deals with the odd ones the first two miss.

Even the toughest weeds like Speedwell and Yellow Suckling Clover are on the way out a couple of weeks after a dose of Super Verdone.

And of course, it does all this without harming established turf in any way whatsoever.

If you don't happen to be overrun by quite such a wide and tenacious range of weeds, then ordinary Verdone will probably do the trick. (It's cheaper as well.)

To find out more about how you can prepare yourself and your course for the day Sevvy turns up to play a round get in touch with ICI to find out your nearest Super Verdone distributor.
EIGGA CONFERENCE REPORT—CONTINUED...

for East Anglia, had received a clear indication from his branch members that they would not be prepared to pay the increased sum. The board of management also felt it could not justify charging this amount.

The figure of £50 had been submitted with a view to increasing the association's holdings, thus enabling it to employ a full-time administrator. It had become clear that, if the subscription was raised to this level, EIGGA would lose a high proportion of its membership.

David Jones felt that the original idea of a full-time administrator seemed to be of a person who, as well as dealing with the day-to-day administration of the association, would travel around the country visiting golf clubs and promoting EIGGA. He made the point that this would mean providing a car to the person concerned and a salary of approximately £10,000 plus expenses. He questioned the wisdom of using the members' subscriptions to pay a person to travel up and down motorways and stay in hotels as he felt this was not value for money.

The chairman then reported that the figures proposed by the board of management for subscriptions in 1986 were: the full subscription to be raised to £20, the apprentice subscription to remain at £12, the trade subscription to be raised to £25 and national and regional company membership subscriptions to be £125 and £75 respectively. He added that the idea of employing a full-time administrator had been postponed, as the real cost of employing someone could be in excess of £40,000.

A.Low proposed that figures suggested by the board be adopted. T.Low seconded the proposal and the motion was carried on a show of hands. The chairman informed the meeting that EIGGA’s first president Jack McMillan was retiring from the post after two years in office and that a new trustee was to be elected to replace David Jones, who was also retiring from this post.

Sussex had proposed that Dennis Ayling should be EIGGA’s new president. This suggestion was endorsed by the chairman. The North-West branch had proposed David Jones as vice-president and the board of management had proposed Kevin Munt as trustee. No other proposals had been received. All three proposals were approved and the motion carried on a show of hands.

The chairman said that Jack McMillan had done an excellent job as president and was pleased to inform the meeting that the board had invited Jack to become an honorary member of EIGGA.

Peter Wisbey indicated that there was a need for a clarification to the wording of the EIGGA constitution, concerning the gold diploma. At present, the item reads: ‘Any head greenkeeper with City & Guilds Management or Turf Culture certificate or any other appropriate certificate as determined by the management board, and over five years practical experience as a head greenkeeper; or any head greenkeeper with fifteen years practical experience...’ It had come to the board’s notice that the wording had been interpreted to mean ‘Any head greenkeeper who had fifteen years as a greenkeeper.’ It was intended to apply to any head greenkeeper who had fifteen years as a head greenkeeper, but with no certificate. The board, therefore, submitted that the item should now read: ‘...Or any head greenkeeper with fifteen years practical experience as such,’ the two last words to be added to the constitution.

D.Archer asked approximately how many diplomas had been issued to date. The figures are: five bronze, 18 silver and 17 gold, making a total of 40 since the inception of the association.

Speaking as EIGGA’s new president, Dennis Ayling said it gave him great pleasure to thank Jack McMillan for being a splendid ambassador of the association. Dennis felt honoured to be asked to carry on where Jack had left off. He also thanked the administrator for her efforts. The president felt that the conference had been a huge success, especially the papers given by EIGGA members.

At a meeting of the board of management, following the AGM, Bill Lawson was elected to take over from Peter Wisbey as chairman of EIGGA. Bill is chairman of the North-West branch and a highly respected member of the board of management.

I can assure all members that, in Bill Lawson, the association has a fine successor to the retiring chairman Peter Wisbey who, throughout his term of office, has worked tirelessly on behalf of EIGGA and to whom a debt of gratitude is owed.

Finally, I am pleased to report that the dates for the 1986 conference have been set at April 4-6 1986, with the venue once again, the University of Warwick.

Danielle Jones,
General Administrator.

EIGGA At Open

EIGGA will have a tent—
sponsored by Greenkeeper—
in the Open Championship
tented village at Royal
St George’s. Further details
in next month’s magazine.
London
By now, the season will be getting into full swing and the greenkeepers’ golf league, organised by Michael Peters, will be well under way, so make sure you phone your results through as soon as possible. The final will be played on the afternoon of our autumn meeting, which is set for Muswell Hill GC on Thursday October 3.
We have been welcomed back to Northwood again and will have an evening’s golf on Monday August 19.
The annual EIGGA conference was an outstanding success, but it was disappointing that no other members of the London branch managed to attend. Hopefully, this situation will be rectified next year.
Reinforcements did arrive, however, on Sunday morning. Alan Moffat of Parkers organised a mini-

**Members Please Note...**
*If you have not paid your subscription yet—please do so now!*

bus a couple of days before the event and a dozen members arrived to see me during a nerve-racking experience when I chaired the conference’s final session. It was also an honour. As Steve Noye and Bill Lawson will testify from the previous day, it was almost as frightening as presenting a paper, but something we would not have wanted to miss.

Any branch members who would be prepared to stand up and give their views or theories on any aspect of greenkeeping would be welcomed. What about junior and apprentice members? Could you fill a short spot of, say, 15 minutes on how you see the profession? You have until April next year when we again return to Warwick.
The AGM on Sunday afternoon gave rise to some interesting discussion but, as usual, people who are vociferous at branch AGMs throughout the country were not in attendance. As has been said many times before, members should be saying: ‘What can I do for EIGGA?’ Not: ‘What can EIGGA do for me?’
Constructive criticism and suggestions are always welcome. If necessary, put them down on paper and send them to me and they can be discussed at branch committee meetings. As your representative on the EIGGA board of management, I will be pleased to take them to board meetings, too.

David Low.

East Anglia
With just a couple of exceptions, there hasn’t been much going on in this neck of the woods. I did attend an excellent demonstration by Anglian Land Drainage at Woodbridge GC. Ben Bunting, the manager of ALD, took a few of us down for the day to see the Verti-Drain doing a marvellous job.
The second event was at an hotel in Norwich where a seminar was arranged by Collier Turf Care Distributors. It was a very interesting day, which was well attended by sports and amenity people. Firms represented included May & Baker, SISIS, Anglian Land Drainage, Mommersteeg, Rolawn and several others. All in all, a good day.

M.Lathorpe.

**The root of the problem**—
you want a perfect lawn with the minimum time and effort.
Seeding is too slow, meadow turf is too rough.
The solution — Rolawn turf, purpose grown in a variety of grades, densely rooted and supplied in easy to handle square yard rolls from nurseries countrywide.
With a little care and attention you’ll create a fine playable sward in only a few weeks.
For full details contact . . .

Rolawn
Are you still green with envy? 
or are your greens under the control of the 
TW1 COMPUTER CONTROLLER from Watermation

1" high, easy to read display
Large control buttons
3 alternative watering programmes
Battery back up in case of power
failure
Simple rotary switch for easy selection
of function
Diagnostic switch allows
greenkeeper to check system is
working without applying water

REQUIRES TWO WIRES ONLY
Greens, tees, approaches and fairways can all be
controlled by one TW1 and one pair of wires feeding
up to 99 solenoid valves. In most cases, existing
cabling can be used.

FUTURE FLEXIBILITY
TW1 enables you to ADD areas of irrigation at any
time, such as tees or approaches, without additional
controllers or cables.

INSTALLATION STRAIGHTFORWARD
Installation can be carried out by your local irrigation
contractor (who can also supply the unit) or by
Watermation

COMPLETELY ACCURATE TIMING
Modern computer technology gives accurate timing
in 1 minute steps and allows Greenkeeper to set
up to three alternative watering programmes.

News & Views

West

The section has held a committee meeting and new sub-committees have been formed.

The SISIS Pairs Trophy for greenkeepers and convenors was held at West Kilbride GC. The golf was played in cold, but dry, conditions which seemed to help the general low scoring, but this must be put down mostly to the excellent condition of the course. The West section thanks Jim Paton and his staff and congratulates him on having the course so good so early in the year.

Prize-winners were: A.Hastie and A.Meechan (Bellshill GC)—65; D.Fleming and I.Ferguson (Hilton Park GC)—67 and J.Paton and B.Gosman (West Kilbride GC)—69.

Fifteen teams took part in the competition which, along with the excellent attendance at the section's AGM, has given the section a great start to the year's activities.

Ayrshire

The first of the season's events was held at Largs, when Greenkeepers from the West section came to play five-a-side football. Later in the evening, everyone adjourned to the Picketlaw Hotel for the annual stag-night.

The section AGM was held at Prestwick. Chairman Harry Diamond thanked everyone for their participation in the past year's events and, in particular, the Open Championship Draw, which was a great success, and will be run again this year.

The secretary stated that the section's funds were healthy and there was an influx of new members this year. He looked forward to meeting them at the Spring outing.

The draw for the four-ball knockout competition has been made. Harry Diamond is organising this competition and will be in touch with the competitors. Harry can be contacted on Ayr 241258 during working hours if anyone has a problem arranging matches.

Cutting the pressure

Keep on top of your job with the cost-cutting Cushman 3- and 4-Wheel Turf-Trucksters. A rugged 18hp engine provides the power for all those transport and course maintenance duties while low weight and wide turf tyres take the pressure off work on greens, tees and fairways. A wide range of British-built attachments can be quickly and easily fitted for everyday, all-round versatility from mowing to spraying and spiking to load carrying. Take a look at our new Multi-Depth Aerator, able to work to a depth of 9¼in without surface damage, or our all-hydraulic Reel-mower for a superb finish on wet and dry grass. Put a Turf-Truckster to the test on your course now.

Demonstrations readily available from specialist dealers nationwide. Call us today for full details on the Cushman Turf-Care System.

This Talented TORO

The new TORO Greenmaster 300 is designed with its cutting heads isolated from the traction unit and the grass baskets—a feature that allows it to cut greens more evenly, from 3/32in to 11/16in.

Using a carrier frame with low connecting points that pulls rather than pushes the cutting unit, balanced, fully floating cutting heads allow the reels to float freely as they cut, unaffected by dips or bumps encountered by other parts of the machine or by the weight of clippings in the baskets.

The Greenmaster, with a three-wheel design, means that it can turn within its length. The tight-turning design, coupled with two independent, hydraulically driven, front traction wheels, allows this rear-steering triplex to cut up to and around the edges of greens, collars and traps.

A single forward reverse pedal gives the operator additional control in tight turns, together with the variable speed kit which provides speed control from 0-3.5mph and allows the operator to select the constant ground speed that ensures a constant clip as the cutting units mow. For a finer clip at low heights of cut, or for easy manoeuvring in tight spots, the speed is simply adjusted downward.

The 300 is designed with hydraulically-driven traction wheels, reels and reel lifts. These enclosed, self-lubricating power systems give longer service and require less maintenance because there are no gears to change, belts to adjust or clutches to repair.

The operator station features centralised controls with a reach of easy reach, plus a steering arm that can be adjusted in height to allow for more leg room, as well as an adjustable, cushioned, high-back seat.

Maintaining a quality cut in low ranges demands frequent and precise adjustment. TORO’s quick-disconnect cutting units allow fast and easy removal of the reels for servicing.

The balanced eight-blade cutting units are interchangeable, as are all the baskets and reel motors. And these quick-disconnect cutting units allow fast, easy conversion to thatching or spiking reels.

Holdfast's effectiveness.

Just two applications can give season-long control and consistent results can be achieved year after year. Application is quick and easy—there is no need for huge quantities of water to be sprayed—and it can be applied through a knapsack or vehicle-mounted spray. The standard rate of application is five litres in 200 litres of water to treat one hectare.

Packs of Holdfast contain four x five litres and cost £280.

Full details from ICI Professional Products, Keith Cleverly, Woolmead House East, Woolmead Walk, Farnham, Surrey GU9 7UB. Or John Clowes, 10 Ivybridge, Broxbourne, Herts EN10 7LH. © Hoddesdon (0992) 461895.

Change Of Name

Much has been written about trials using paclobutrazol to retard grass growth. This soil-active chemical has, until now, been known as PP333, but ICI has now announced that its brand name will be Holdfast.

Limited clearance has been obtained for the year so that up to 1,000 hectares can be treated and ICI is looking for sites to prove the product’s advantages.

Holdfast is recommended for use in permanent grass areas where mowing may be difficult, inconvenient or dangerous. Applied in the spring, some two or three weeks before the onset of rapid grass growth, this retardant will significantly reduce the bulk of grass growth for months.

The introduction of Holdfast into a grass-maintenance programme means that a more flexible use can be made of available manpower time and machinery. The spring flush of grass growth occurs during May and June—just when resources are stretched.

The use of Holdfast will retard growth for up to three months. This long-term effect thus releases resources for other jobs.

The application’s timing is not critical. Because it is a soil-acting chemical, which is taken up primarily by the roots, there is no loss of activity if rain should fall during or after application. Even after treatment, the grass can be cut without reducing

The spiral blade pattern of TORO’s thatching reels means less wear on the drive motors through more efficient thatching and throwing of thatch into baskets. The spacing between blades over the three reels 59in thatching width is adjustable from 1/4in to 1/4in.

TORO’s special power slitter blades spike cleanly without ruffling turf, so greens are playable immediately after spiking. An adjustable transfer spring brings weight from the traction unit to bear on the reels 57in spiking width to achieve the maximum penetration of 1/4in.
