BOUND FOR THE USA

Barry Neville scoops top student prize

Journal of the British and International Golf Greenkeepers Association
OPEN YOUR EYES
TO SEE
...WHO'S OPENING
BTME '93

HARROGATE, JANUARY 20-22

The British and International Golf Greenkeepers Association is proud to announce that the Duke of York will officially open the 1993 BIGGA Turf Management Exhibition.

The presence of Prince Andrew at the BTME, together with Viscount Whitelaw, BIGGA President, underlines the event’s importance and confirms its status as the premier exhibition for the fine turf industries.

New equipment, the latest products, service updates, familiar faces and some new ones made Viscount Whitelaw, who opened the 1992 exhibition, proclaim that “greenkeeping has come of age”.

For 1993, as well as the Royal visitor, there’s even more to watch out for. With all the names you’d expect plus a few surprises, you’ll certainly be wide-eyed at the choice and variety of what’s on offer.

Space bookings are already up on this time last year for the record-breaking 1992 exhibition and bookings for stands from all sectors of the industry will continue to be accepted right up until the last minute, depending on space limitations. But to make sure of the best positions, you need to act quickly. Why wait until January to squeeze in your stand when this week you can plump for a prime site?

Debbie Savage has all the details of how BTME can provide you with a window of opportunity. Call Debbie on 03473 581.

The 1993 BTME will be an event you won’t want to miss – make a note of the dates in your diary! A world class exhibition... the highest calibre education seminars... all at BTME, January 20-22, Harrogate.

For more details or a copy of the comprehensive BTME Information Pack, contact Debbie Savage on 03473 581 or request one by fax on 03473 8864.

The BTME is organised by the British and International Golf Greenkeepers Association, Aldwark Manor, Aldwark, Aine, York Y06 2NF.
Complete and return this card to pre-register for BTME. This helps cut the queues and means you can quickly collect your catalogue and identification badge which will be waiting for you at the entrance.

**FREE PRIZE DRAW**

On receipt of your completed card, you will be entered in a free prize draw. You could win top quality BIGGA merchandise of your choice!

1st prize: £100-worth; 2nd prize £60-worth; 3rd prize: £40-worth.

Draw will be made on the Wednesday; prizes must be collected during the Exhibition.

COVER PICTURE:

Barry Neville with the shield awarded as Toro/PGA European Tour Student Greenkeeper of 1992

The BIGGA Turf Management Exhibition and Seminar Programme is now recognised as the industry’s most significant indoor event.

Contact Debbie Savage on 03473 581 for a BTME 1993 Information Pack and find out how your company can take part.
A win by a whisker

The Kubota records will show no more than the bare bones of our latest success, gained at the tenth anniversary match for the Kubota Golf Challenge: it will be simply written - The Greenkeepers defeated The Golf Club Secretaries in 1992 - period.

What will not be recorded is that for the seventh time in ten years the greenkeepers have succeeded - this time in a final which ended at four games all, decided in our favour by the margin of holes won, nineteen to fifteen, with the match result resting on the performance of Bernard Emberley, a stout performer with the courage of a lion. Let me explain...

Since 1983 the Kubota Challenge has been the very epitome of match play golf - head to head singles - and the greenkeepers have had it pretty well sewn up year upon year - certainly for the past seven years and irritated only by a single hiccup in 1990, when a team of secretaries sneaked in a blow for their side. We've had grand victories, none finer than the eight-nil whitewash of 1991, and in truth we've come to expect to win! This heavy burden, the massive margin of holes won, nineteen to fifteen, with the match result resting on the performance of Bernard Emberley, a stout performer with the courage of a lion. Let me explain...

Richard Barker, captain and number one, is noted for his golfing excellence, a more solid four handicap player doesn't exist... yet he met his Waterloo at the hands of Martin Yates, four and two - without putting a foot wrong! Barry Holt, the Mighty Atom who seems to romp along the fairways, his legs trying to catch up, couldn't wait to get on with his game as our number two, loving the hard battle. He positively thrives on match play and his was a crucia victory, a splendidly contrived five and three whilst declaring throughout the round that he was 'not at his best'!

Holt's game over, there came a pause while a handful of spectators settled down to gossip in the chill, sunny air and wait for the Handyside/Peak match to reach a conclusion. Both are excellent players, but in Handyside's case it was all nip and tuck, up then down, the game finally swinging in Peak's favour by two and one. No disgrace for Craig Handyside and one that could have gone either way.

Meanwhile news was filtering through of a battle royal between ex-pro turned secretary, Bob Lanyon and our Bernard Emberley. It looked likely to go the full distance... and it did, as you will soon learn.

Of Graeme Patrick, our number five, there can be nothing to add save a drum roll and trumpet fanfare for his annihilation of Dewi Davies by seven and five. Add a second fanfare for Jim Byrne's similar thrashing of Bill Short by six and five... things were looking positively rosy!

If Alistair Tough will forgive the obvious pun, his day couldn't have been tougher. Each tiny slip was punished beyond reason: his ball would nestle between tree roots, lodge in unplayable lies, spin three times round the cup and lip out - the Gods were against him. His five and four defeat against Len Harpum was something even he came to expect in the end, for when the bitch that is Old Mother Fate takes a hand it's best to greet her with a grin, hoping for her blessing the next time round.

It was a similar story for Ian Holoran, our number eight. His was a game which never quite reached his own high expectations and he went down battling to Trevor Davey by four and three.

From these known results you will see the rose had withered, we were in deficit by one, we needed a win from Bernard Emberley! Our man Bernard has nerve galore, though I doubt he has been called upon to exhibit such nail-biting stuff at such a crucial time before - and at such an illustrious arena as the eighteenth on the Brabazon. For those who may have been in a time warp, The Belfry's prima-donna hole, scene of so many triumphs and tragedies in Ryder Cup history, is 474 yards from the back tees, two lakes in play at both tee shot and approach, the final shot a most daunting carry to a sloping and well protected green.

Coming to the final hole all square both players hit fine tee shots, Emberley's some 15/20 yards longer. What followed, especially at such a crucial point, was somewhat uncharacteristic for an ex-pro, for he played short of the lake rather than risk a carry of some 190-200 yards. Emberley was made of sterner stuff and conjured the most exquisite spoon shot imaginable, the ball finishing near pin high and just rolling into the right hand bunker. Lanyon faltered with his third, leaving it on the very edge of the green, uphill and sloping - three-putt country! Calling on every ounce of those priceless qualities called grit and inspiration, Emberley feathered his wedge and we saw the ball floating, landing above pin and some ten feet from the cup. The inevitable happened, Lanyon three-putted, Emberley lagged to within 'gimmee' distance and deserves repeating: The Kubota Challenge is a very important event indeed. We are assured that it is in very safe hands!
Duke of York to open BTME ’93

Pride is something one hears a great deal about in greenkeeping circles of late: pride in the profession, pride in the importance of our place in caring for Britain’s great golf courses and pride in our achievements in the field of education.

Now our cup runneth over, for pride is bursting from every seam as we learn that Prince Andrew, the Duke of York, a recent convert to the game of golf and its most visible devotee, has honoured us by accepting our invitation to open the BIGGA Turf Management Exhibition in Harrogate next January.

Not only will Prince Andrew open our exhibition, he will also present awards to the recipients of BIGGA’s highest honour, The Master Greenkeeper Certificate, and to those companies who honour us by supporting our Greenkeeper Education and Development Fund, making greenkeeper education a reality.

Let us share equally in this honour – proud to be royally recognised!

Ian Tomlinson, head greenkeeper at Lausanne Golf Club has written with news regarding Jim Richards, who started his greenkeeping career at Knaresborough GC and has been at Lausanne some five years, four as Ian’s first assistant. The surprise for Ian came when Jim announced that he is to leave Lausanne in January for Brownsville, Texas, where he is to become a pilot. As Ian joked, ‘having seen Jim on a triplex, God help him!’

‘Should you happen to be on a commercial aircraft flown by Captain Richards in the future,’ added Ian, ‘why not drop into the cockpit and say hello’ – Roger, over and out!

Continuing with the flying theme, it is with particular pleasure that Greenkeeper International announces the granting of a Private Pilots Licence to Sunningdale’s Robert Brewer (pictured left) – is he, wonder, Britain’s first official airborne greenkeeper?

Toro, world leaders in professional grass cutting and maintenance equipment have awarded their coveted ‘Mr Commercial International’ award to UK Toro distributors Lely (UK) Ltd.

Senior Toro International managers throughout the world vote on the distribution network that they feel has given the most distinguished achievements in the field of: Coverage of commercial dealers and direct accounts; Aggressiveness in seeking new turf product outlets; Excellence of demonstration and field days; Service to commercial dealers and Toro customers.

Graham Dale reported that he is fully committed to improving the already high standards of service support to all Toro dealers and customers alike. A fact which is endorsed with Lely’s introduction of a ‘Guaranteed on time parts delivery service to its comprehensive dealer network anywhere in the UK.

Warmest greetings are extended to Eric Palmer on his well-earned retirement after 50 years of greenkeeping, a career which began at Sitwell Park GC in 1942 – aged 14! After a two year spell in the RAF from 1946-48, Eric returned to Sitwell Park and remained there until 1966, holding the post of head greenkeeper for some fifteen years. He moved to Abbeydale GC in 1966 and remained until 1982, when he joined Hickleton GC until his retirement – a proud record which deserves recognition.

The winner of the SISIS Diamond Jubilee competition was Cliff Parry, head greenkeeper of Woolton GC, near Liverpool. The picture shows him receiving a diamond pendant from the directors of SISIS at their Macclesfield office.

Eric Hunter wrote telling of an enquiry received from a Mr Oliver Hackett of Rathcormac, Co. Sligo in the Republic of Ireland. Oliver, green chairman of a Co. Sligo golf club, informed of ‘not enjoying good service for our mowing machines – they are away too long and when returned they are not that good anyway’.

Leaflets despatched, Eric waited some three months to be given some good news and some bad. The bad news was the club had decided – on cost- not to progress with an order for a Hunter grinder. The good news? Mr Hackett was so impressed with the Jupiter machine that he bought one and started up a new business – North West Lawnmowers – specifically to serve fellow clubs bugged with the aforementioned problems. It seems the spirit of enterprise is not yet dead!

Oliver Hackett can be contacted on 010 353971 43669.

De Vere Hotels, owners of The Belfry, home of the 1993 Ryder Cup, has acquired Belton Woods Hotel and Country Club, a 96 bedroom hotel with two eighteen and one nine hole golf courses at Grantham, near Nottingham, for £10.3 million, from administrativé receivers KPMG Peat Marwick.

Belton Woods is a purpose-built four star hotel with conference facilities for 300 people, set in 485 acres. In addition to the two 18-hole golf courses, there is a further 9-hole course and driving range. Indoor leisure facilities include heated swimming pool, gymnasium, two squash courts, a spa bath, saunas and steam rooms.

Following a misprint in our October issue, Verde Sports Ltd have been flooded with enquiries for ‘winter trees’. Much as they love the idea, and may consider it as a new line for the future, Verde Sports have asked us to point out that the company are actually in the business of providing cutting machines – they are away too long and when returned they are not that good anyway’.

Let us share equally in this honour – proud to be royally recognised!
RANSOMES - no one offers you a wider range of turf care machinery. We manufacture machinery to match a precise application. That's why it does a better job, more efficiently and more cost effectively. For mowing a fine lawn or cutting a large park there's a RANSOMES machine to fit the task. If you're maintaining fine greens there are aerators, spikers and top dressers too. There's even a range of cylinder grinders to maintain a fine edge. Check out RANSOMES first - you will be amazed how we can meet your needs exactly.
Despite ten years of commercial use, the benefits of CDA – controlled droplet application – for the application of pesticides may not yet be fully understood. There could still be some confusion over the differences between CDA and the more traditional type of spray application. Like many other advances in technology, the principles of CDA are very simple. A steady flow of undiluted liquid drops on to a battery-powered disc running at a constant speed, which throws out a controlled stream of uniform-sized droplets. The herbicide, fungicide or insecticide being applied can come pre-diluted, eliminating the need for mixing, and the system operates at low pressure.

Perhaps most important of all, CDA does not use erratic and often unreliable air currents to ensure distribution; the CDA system really scores, where the CDA system really scores, lessening hazards during spraying in fact, that they are up to ten times lighter than conventional knapsack sprayers. CDA sprayers, on the other hand, mostly use a small quantity of water. This involves mixing in the concentrated ingredient – one obviou...
'Safety for operators is enhanced by a fan-shaped spray pattern projected forward of the operator — reducing the 'wet welly' effect'

7 was explained to them. Any local government supervisor who has had to negotiate damage claims through over-zealous pathway spraying creeping into gardens will know the problem. On the other hand, we know that the public will be the first to complain about weedy, untidy pavements and verges.

The safety of the CDA system comes first, from directing a relatively small amount of pesticide on to the target area — with little wasted into the surroundings; second, through being a low pressure system; third, and probably most important of all, the uniform droplet size which the sprayers produce. Conventional sprayers produce a wide range of droplet sizes. Many of the larger ones will bounce off the plants being sprayed to give uneven results. The smallest droplets, on the other hand, are easily carried away on air currents. This can also cause uneven results, certainly with total herbicides, plus considerable damage to adjacent areas.

CDA equipment is designed to produce a very narrow range of droplet sizes. The Lancelot sprayer, for example, uses only droplets in the 200-300 micron band, no matter what width of swath is being sprayed. This size is not only the best for 'stickability' on plants, but gives the lowest risk of inhalation by spray operators. The rates of application with CDA are also low, ranging from 5-30 litres per hectare, which in itself reduces the amount of unwanted pesticides entering the environment. This is especially important for insecticides and fungicides, where excessive and uncontrolled application can lead to a loss of beneficial predators and an increase in pesticide resistance. Safety for operators is enhanced by a fan-shaped spray pattern projected forward of the operator — reducing the 'wet welly' effect.

To eliminate the risks still further, ready-to-spray formulations of pesticides are now available for using straight from the bottle, and where even the bottle itself is screwed directly on to the CDA application equipment.

One innovative company has introduced this system with a range of their chemicals, all of which can be used through a variety of CDA sprayers. Their own sprayer incorporates a bleed valve and allows air to replace the liquid as it leaks through the screw-on container. This ensures a steady flow through the feed tube without 'guggling'. It results in a totally closed system which avoids any manual emptying of containers — again reducing any risk to operators and the environment. Designed for ease of operation, it comes as a complete kit including a holster to support the bottle is held inverted and the liquid fed to-the spray lance by gravity. A second built-in container holds a set of six different sized nozzles for different spray band widths.

The heart of any CDA sprayer is the spinning disc which produces the spray droplets. Typically this is powered by an electric motor run by three U2 batteries carried in a special compartment at the top of the lance, handy for the operator. A set of long-life batteries should last for one day's spraying, but a rechargeable battery and charger is also available.

There are therefore only three controls: an on/off switch for the liquid through the feed pipe, a switch for the motor and a width controller on the spraying head to adjust the band being covered. The correct dose is also partly dependant on the walking speed of the operator. Although simple to use, CDA sprayers are not idiot-proof. Like all precision machinery, they rely on using the right pesticide for the job, correct calibration and proper use to get the right results. Most sprayers are robust in construction, though light in weight, and they should stand up to the rough-and-tumble of practical handling conditions.

For both recreational and industrial use CDA spraying is undoubtedly here to stay and one can expect further advances in the technique in the future.

The author, Geoffrey Ellis, is an independent consultant and writer with some 30 years experience of the agrochemical industry. He runs a small nursery specialising in the production of wild flowers.
BY PRO-AM GOLF SERVICES LTD
YOUR WINTER AND PRACTICE TEE SPECIALISTS

Do YOU require the ultimate in winter tees?

- Similar “Contact” to grass
- Allows you to “Shape” shots
- Shock absorbing tee area
- Minimum resistance between club and mat
- Durable polyurethane tee area
- Tee inserted easily at any height
- Firm and generous standing area (for left or right handed)
- Ball can be played directly off the mat without tee
- Eliminates club damage and marking
- Prevents shock to wrists etc.
- Easily moved by greenkeepers
- Lasts years

The shock absorbing tee area is made of exceptionally hard wearing polyurethane and beneath it is sandwiched. A closed cell foam layer which does not absorb moisture and has the ability to return to its original dimension when depressed.

IF YOU REQUIRE FURTHER INFORMATION PLEASE RING 0446 700130 or write to:

BIGGA PENSIONS, MORTGAGES and SAVINGS
FREE advice to greenkeepers on pensions, mortgages, savings and investments from HOWARD EVANS FINANCIAL SERVICES – on call to BIGGA members since 1987

1. I am not in a Golf Club Pension Scheme. Please send me details of BIGGA Pension Plans for Greenkeepers

2. I am in a Golf Club/Employers’ Pension Scheme. Please send me details of how a BIGGA Pension will boost my final pension benefits at retirement

3. I will soon be/am in the process of buying a house. Please send me details of the BIGGA Mortgage Service

4. I already pay for a mortgage on my house, but I wish to know if better mortgage arrangements are available to me

5. I have ‘frozen’ pension benefits relating to previous employment and I wish to know whether this money can be invested elsewhere for a better return

6. I am interested in finding out more about BIGGA Short-Term Endowment Savings Plans

7. I have a number of existing financial arrangements (pensions, endowments, savings plans, life assurances) but I wish to know if they still remain in my best interest or whether alternatives would now be more suitable

The result of twenty years experience, the new Trilo SG 700 provides a combination of high power vacuum, brush, scarifier and wanderhose, giving the power and versatility to cope with leaves, thatch, cuttings, hollow cores and litter.
When you first think of Sweden, you may not necessarily think of it as a leading golfing country. It might therefore surprise you to learn that Sweden boasts the biggest golfing nation in Europe outside of the British Isles when compared to its total population.

Sweden has a population of approximately 8 million people and right now there are about 325,000 golfers. There are around 320 courses, representing around 1000+ members per course, which is a very high number when compared with Great Britain. The first Swedish golf club was founded in 1902 and not surprising it was the British who first brought the idea of golf to our attention. The Swedish Golf Federation was founded in 1904.

The golfing season in Sweden

It will probably also surprise you to learn that several courses can be played year round on regular greens. Of course this is only possible in the southern part of Sweden and also on the western coastline up through Gothenburg. The latitude of the southern part of our country is about the same as that of Edinburgh and

Conversely, the northern most golf course is about 2000 km north of that (approx. 1200 miles), the course being a 9-hole layout that sometimes does not open until the last week in June and closes during the first part of September. There is a bonus, however, in that on three such courses golfers can play 24 hours a day under the midnight sun.

In the north we find several problems in maintaining golf courses, educating greenkeepers and so on. The circumstances are so very different. However, most of Sweden's courses are situated in the southernmost third of the country, where the golf season and maintenance programmes are most similar to northern Britain, rather than extremes found in north of Sweden.

Grass species

All the familiar species known to flourish in cool season countries may be found in Sweden. Looking specifically at our greens, we have a major problem with Poa annua, which we try to fight; live with, and fight again - but we shall have it! We look toward traditional British greenkeeping practices in introducing more fescue and bent species on our greens, with the most popular mixture for seeding being approx. 90-95% red fescue and 5-10% bent grass. Creeping bent is not used very much, but this is not as dominant as the mixture. We have also witnessed some courses being seeded with pure bent grass, and I guess in these cases they are convinced that they have used the right thing!

The use generally seeded with fescue-bent and fairways either with fescue-bent or Kentucky bluegrass(Poa pratensis). Rye-grass is not used very much, unless somebody wants to effect a very quick repair on some areas.

Machinery trends

Ransome, Jacobsen and Toro are the biggest brands, though of course we have many other machines, mainly imported from GB or the USA. Greens are usually mown with triplex ride-ons, though some greenkeepers use walk-behind mowers for big tournaments. Tees and aprons are also mown with triplex greens mowers or other fine cutting machines. Fairway are cut with Ransomes 350's or similar, though we now see quite a few courses changing over from 7-gang tractor-pulled fairway mowers to 6-gang self-propelled machines. The new generation of light mowers for fairways have also found their way into our country and these will no doubt soon find great popularity.

Machinery used on Swedish golf courses is generally quite new and modern. We are also fortunate in having pretty good storage buildings and workshops for maintenance. I think that Swedish greenkeepers would rather ride than walk, so we have many transportation vehicles!

Crews, wages and the cost of living

Generally a 18-hole course will have between two and five full-time staff, supplemented in the season with temporary workers as an average 5-7000 working hours for a 18-hole course is quite right.

Working time in Sweden is typically 8 hours a day, 5 days a week. All other work is overtime and it is not unusual for several hundred hours of overtime to be logged annually in order to mow greens seven days a week, change the holes and all those other jobs that have to be done, not least on Saturdays and Sundays.

Working titles in Sweden are similar to those in Britain: We are using the English title for the head greenkeeper and use a Swedish translation for course manager. In addition, those persons known in the English tongue as greenkeepers are known similarly, though this also is translated into Swedish.

Wages in Sweden are, I think, more uniform than in Great Britain, though it is always difficult to relate wages and other differentials from one country to another, especially as tax programmes, insurance and many other things are different. One thing is very common though, everybody thinks they pay too much in taxes! Living expenses are high in Sweden, especially for the basics of life like food and beverages.

How is golf organised in Sweden?

Sweden has always shown a great interest in being properly organised, of that there is no doubt when one looks at how our golfers, golf courses and golf clubs are organised. Every golfer is registered as a member of the Swedish Golf Federation through their club; and we have no regional golf courses. The first pay-and-play course has opened close to Gothenburg and in the Federation there is a programme for expanding and/or creating alternative golf course constructions. These can be Par 3 courses, or driving ranges with possibilities for changing practising direction; length, and so on. The tables show how we are organised.

The Swedish Greenkeepers Association

In 1978 the Swedish Greenkeepers Association was formed, and everybody who works on a golf course can be a member. Today the SGA has more than 700 members and is second only to BIGGA as the biggest greenkeepers association in Europe. Our SGA works very closely with the Green Section of the Swedish Golf Federation in all programmes concerning the education of greenkeepers, chairmen of green committees, constructors and so on. The Green Section has eight advisers/agronomists in different regions and every golf course in Sweden is entitled to at least one free visit from their agronomist each year. This is paid for through a subscription made to the Federation by every club member, a fee of about £10 per year. Our Swedish agronomists are also involved as teachers at those colleges which have greenkeeper education programmes, as well as giving lectures and presentations at conferences and seminars promoted by both the Swedish Greenkeepers Association and the Swedish Golf Federation.

Our own greenkeeping magazine

Greenbladet is a magazine for Swedish greenkeepers that is issued four times a year and has 56-60 pages, mostly 4-colour. The magazine was founded by me and I am the editor. The aim is for the Swedish Greenkeepers Association to head the magazine from 1993. It is, of course, written in Swedish and thus its only readership interest outside Sweden is in the Scandinavian countries. Each issue has a circulation of 3000 copies.

The international connection

We have found over the years that we have much to learn from British greenkeepers (maybe something to bring back), so we have tried to participate in your programmes at conferences and meetings. Not surprisingly, we enjoy a very close and positive relationship with BIGGA. We also try to get international speakers to our conferences and thus far we have enlisted the skills of Jimmy Kidd, Jack McMillan, Eric Shiel and Neil Thomas, all of whom have visited Sweden as speakers. We have also been represented several times at BIGGA conferences and we think this is a good way of transferring experience from one country to another.

In many ways we can see that golf course maintenance is very much the same – with the same joys and sorrows – all over the world. We all belong to the wonderful greenkeeping world!

* The author, Stig Persson, is the editor of Greenbladet, the magazine for Swedish and Scandinavian greenkeepers.
There are now 2 ways to join the British & International Golf Greenkeepers Association, or to renew your membership*

You can now join BIGGA either through the usual subscription route or via the Education and Development Fund, as a member of the Golden or Silver Key Circle. Full details are outlined overleaf.

Membership benefits for either route include:

- Monthly copies of 'Greenkeeper International' - the Association's own high quality colour magazine and essential reading.
- Full Legal Advisory Service - including legal helpline card.
- Full employment cover, full personal injury cover, pursuit of civil claims by the insured for damages, specific performance or injunction arising from or out of: a) a contract of employment; b) death or personal injury of the insured from any claim.
- Personal accident cover - will provide the following capital sums: Death - £5,000. Permanent total disablement - £5,000. Permanent total loss of sight of one or both eyes - £5,000. Permanent total loss of hearing of both ears - £2,500. Permanent total loss of hearing of one ear - £500. Permanent total loss of hearing of one or more limbs - £5,000. There is also cover for permanent loss by physical separation of thumb, finger or toe.
- Members suffering temporary total disablement in excess of seven days will receive a weekly income of £35 for a maximum of 104 weeks - options to increase benefits are available.
- Use the Association's Placement Referral Scheme, to keep up to date with the employment scene.
- Utilise BIGGA's services for expert advice on financial management - our consultants will advise on mortgages, investments, life, household, private medical and motor insurance. Don't forget the BIGGA Personal Pension plan.
- Take advantage of reduced delegate fees at the BIGGA Turf Management Exhibition and National Education Conference as well as regional seminars.
- BIGGA is international - all items in the membership package are available to members both in the Republic of Ireland and internationally. (International users of the legal helpline card should note that advice will relate to either English or Scottish law. The card can be used when the member is visiting Great Britain, both for advice and in respect of any claims arising during or from such visits.)
- For all members - A BIGGA pen, car sticker and tax disc holder.
- All new Greenkeeper members joining in 1993 will receive an Association tie.
- BIGGA welcomes the ladies - lady members joining in the Associate category will receive a headscarf, a BIGGA pen, car sticker and tax disc holder to signify their membership in addition to the Associate membership card.
- The legal and insurance benefits are only effective following payment of subscriptions. Any delay in payment after 1 January could cause a problem - don't take the risk!

*EXISTING MEMBERS: Do nothing yet - stand by your letterboxes for renewal information sent directly to you
The key to progress is through the Education and Development Fund — and now YOUR membership to BIGGA can be linked to this vital resource for the future.

Before renewing your membership for 1993 or joining the Association, consider the option of linking membership to the Education and Development Fund. Remember, contributing to the Fund automatically provides you with the full benefits of Association membership. Whether as an individual or as a company, by becoming a Key Circle member you will be ensuring a great future for greenkeepers and the golf courses they manage and maintain.

Since its formation in 1987 the British & International Golf Greenkeepers Association has demonstrated its commitment to enhancing the recognition of the greenkeeper as a professional and to advancing golf course management and maintenance techniques to ever higher standards.

The key to the progress which has been made lies in education and training where the establishing of new college-based courses and improvements in existing courses has had a significant impact. Allied to this has been the introduction of "in-house" training courses at BIGGA's headquarters at Aldwark Manor. The development of Aldwark Manor as a training base will prove a major educational resource for the profession in the future.

Many within the game of golf and those working within the fine turf industries now recognise the value of these educational programmes and the need to ensure first class training for those entering the greenkeeping profession if the desired standards of golf course management and maintenance are to be achieved, maintained and improved upon in the future. To sustain those educational programmes and improve training opportunities will necessitate on-going financial commitment and the new Education and Development Fund has been established to enable the promotion and financing of educational programmes, scholarship awards and training aids for the benefit of the greenkeeping profession. The enhancement of knowledge and technical expertise which will result will surely in turn lead to higher standards of course management and better playing conditions for golf club members.

Financial contributions will channel the resources of the game and the industry into one central Fund from which specific spending programmes can be determined. Those supporting the fund will be welcome to make suggestions in relation to appropriate spending programmes.

The Education and Development Fund represents the ideal opportunity for companies, groups and individuals to make donations, gifts and bequests which will advance both the status of the greenkeeping profession and standards of golf course management.

Education — the key to a great future for greenkeeper, golf club and the game. Your contribution will help secure this future — unlock the doors to progress through BIGGA's Education and Development Fund.

Greenkeeper Education and Development Fund
The needs are many

- Provision of Scholarship Awards
- National Education Conference
- BIGGA Turf Management Exhibition Workshop and Seminar Programme
- Development of Management Courses
- Provision of Training Resources at BIGGA Headquarters
- Master Greenkeeper Certificate
- Training Videos
- Translation and Linguistic Facilities
- Career Information
- Training Aids
- Courses and Training Programmes Headquarters and Regions
- Educational Text-books
- Establishment of Association Library
- Regional and Section Seminar Programmes
- Greenkeeper Training Manual
- Research Projects
- Educational Leaflets/Advice Notes
- Tape Transcript Service
- Computer Programmes
- Career Video

In contributing, your suggestions for spending programmes will be welcomed. Education indeed holds the key to professionalism and the further advance of golf course management.

- New Members — if you wish to become a Key Circle member, complete the Membership Request Card in this magazine facing Page 50.
- Current Members — will have the opportunity to become Key Circle members when they receive their normal renewal subscription invoices prior to 1 January 1993. If you have not received your renewal notice by the end of December, please contact Headquarters.
- Current Key Circle Members — both individuals and companies will be contacted by Headquarters prior to 1 January 1993 with a view to renewing their memberships for 1993.
BIGGA greatly values and appreciates contributions to the Education and Development Fund and accordingly wishes to give recognition to those contributing. Those supporting the Fund will become members of a ‘circle’ which will bring certain ongoing benefits:

### Membership benefits of Golden Key Circle

**Important** - all greenkeeper members will be required to obtain a passport size photograph to validate their 1993 membership cards. The design of the card allows for the photograph to be sealed, thereby giving proof of identity and preventing any possible misuse of membership cards, particularly in relation to seeking courtesy of the golf course. Photographs are to be affixed by members personally on receipt of their card and should not be sent to Headquarters.

**NB:** The First Assistant is a post designed to recognise a third-in-charge where appropriate to the size of the Club. In cases where the First Assistant is the recognised Deputy, the Deputy Course Manager/Deputy Head Greenkeeper subscription rate should apply.

9192 members will be invoiced for subscriptions due prior to 1st January 1993. If you have not received your renewal notice by the end of December, please contact Headquarters.

Those enrolling in the Associate/Company membership category will be encouraged to play a full part in the Association’s affairs. Associate members will be those having a close interest in greenkeeping without being specifically employed as greenkeepers. As such this category of membership will be of interest to Chairmen of Green Committees, Club Secretaries, Golf Course Architects and Constructors and many others with a close affinity to greenkeeping. Company membership is available on an individual or corporate basis and will be of interest to those employed within the fine turf industries.

Individual membership cards will be issued and will entitle the member to participate in all national, regional and section events authorised by the Association.

Holders of Associate and Company membership cards are not entitled to use their cards to seek courtesy of the golf course.

Delegate fees at both the BIGGA Turf Management Exhibition and National Education Conference, as well as at Regional seminars, will be offered to Associate and Company members at a discounted rate. Whilst many members may wish to identify with a particular local section or region, members are able to register their affiliation with the Association.

They will be allocated to the section covering the geographical area in which they reside.

All Associate/Company members (with the exception of those Associate members in the £23 category) will receive each month a copy of ‘Greenkeeper International’, the Association’s official publication and essential reading for those involved with or interested in greenkeeping.

A special Corporate rate is available for those companies wishing to enrol an unlimited number of their staff as members of the Association and individual membership cards will be issued.

---

**The Next Step**

is to complete and post the pre-paid Membership Request Card in this issue.

Existing Members: Do nothing yet – we’ll contact you direct.
**Christmas Gift Ideas**

Be on the ball this Christmas - settle all your present-buying problems with exclusive, top quality BIGGA merchandise! Fill Santa's sack with a whole range of goodies shown on this page. Choose a smart BIGGA blazer or perhaps a stylish rainsuit. You can buy with confidence because each item has the BIGGA seal of approval - and a BIGGA logo too!

**GLENMUIR SWEATERS**

Here's a favourite garment that makes an ideal Christmas gift - for a man or a woman! These quality sweaters come in a variety of sizes and colours:

- Sizes: 36" - 50"

Order No. BO1 £27.95

YOUR CHEQUE WILL NOT BE CASHED UNTIL YOUR ORDER IS DESPATCHED

How about this for a great deal - a BIGGA Cap at the special festive season offer price of just £5.95 - that's a huge 35% off the normal price! But you'll need to hurry - only limited stocks available at this price! Colours: Navy, Beige, Black, Maroon.

**BOOKS — catch up on vital reading**

- Manual on Golf Course Construction, Turf Establishment and Cultural Practices (James Beard) £22.00
- Code of Practice for the use of Approved Pesticides in Amenity and Industrial Areas £12.00
- Specifications for a Method of Putting Green Construction, written by members of the USGA Green Section and edited by William H Bengaffield £2.50

**RAINSUITS £65**

The ideal Christmas gift for greenkeepers! At a knockdown price of just £65, we have limited supplies of Men's style Large (44/46") and Extra Large (46/48") Rainsuits made by top manufacturers ProQuip. For women, size 16 and 18 rainsuits are available. Both styles of rainsuits come in snazzy silver and navy and they're guaranteed to keep you dry when it's wet! A revolutionary new fabric keeps you snug and comfortable in all weathers. Complete with BIGGA logo, the rainsuits are soft to handle and lightweight.

Order by December 4 and we'll rush through your order to ensure delivery before Christmas.
Valuable

DAVID WHITE pays homage to the 'Greenkeeper's Mecca' -
BIGGA supporter and an Education and Development Fund
Golden Key Circle member, Ransomes Sims and Jefferies

When I first entered what was, for me, the new and
uncharted field of greenkeeping, a field about which I
thought I could write dispassionately and about which I fancied
I knew something, there came a time, soon after the
honeymoon was over, when the penny finally dropped: this
editor was dead without the help, support and understand-
ing of 'the trade'!

Fortunately, help was not far away and came - almost by
telepathy - by way of an invitation for me to spend a day at
the Ransomes Sims and Jefferies plant at Ipswich, a place
which I now think of as 'The Greenkeeper's Mecca'. My invi-
tation, the very first I ever received in my new editorial
capacity, was to witness at first hand the design,
planning and construction of modern grass machinery - a slab of raw
steel entering one end of the factory, a beautifully crafted
machine rolling off the line some half mile distant.

Following my detailed tour I came away in awe, liking
what I had seen so much that, like Victor Kiam of Reming-
ton fame, I would have loved to buy the company. Pipe
dreams apart, I did buy into the company as a preferential
shareholder - the first and only time I've ever dabbled in the
stock market.

If all this seems just a little OTT, my opinion hasn't altered
and I still think Ransomes are somewhat special - their staff
training is second to none, their sales force the most techni-
cally expert I've ever come across (and the most cheerful),
whilst the support I've received from the delightful Karen
Smith, Ransomes PR specialist, has been unparalleled. Last
but not least, Ransomes machinery is quality epitomised and
they are and always have been innovators par excellence.
From top to bottom the company reeks of class!

Greenkeepers will identify with Ransomes through their
own favourite salesman (and, I'll be bound, with at least one
piece of Ransomes, Cushman or Ryan machinery in just
about every inventory), whilst for the purpose of this Gold
Key tribute, I shall identify with two stalwarts of the com-
pany, John Wilson, the general sales and marketing man-
ger for Ransomes grass machinery, and Richard Bishop, the
company's sales manager.

Though Ransomes employ some 3000 people world-wide
(including Kimber and Supreme Mowing in the UK, Ran-
somes SA in France, Ransomes GMBH in Germany and
Steiner, Cushman, Ryan, Ransomes Inc. and Brouwer in the
USA) the force at Ipswich has become somewhat stream-
lined compared with earlier times. This may be accounted
for in part by massive infusions of high-tech equipment and
certainly by high-tech management and high-tech thinking.
Such modernistic planning serves to explain why Ransomes
people are never stumped for an answer - they're all so well
versed, so clued-up. That stated, the road to the top is
almost always via the factory floor, a route followed with
great success by John Wilson.

John joined Ransomes direct from school in 1949 and fol-
lowed the time honoured route of apprentice training in
every works department, whilst nurturing from the very
beginning a desire to move into sales and marketing. "How
did you get the break", I queried, "simple enough", he
replied, "I asked for it"! By asking, John was given his first
taste of sales, a spell of some three years in north London as
a demonstrator and service engineer. "In those days, we
used to undertake quite major repair jobs on site", he told
me, "and business was slanted more on the farm machinery
side, it was valuable experience and has stood me in good
stead ever since".

Moving on, John became a 'salesman' proper in 1958, working
in both home and export sales and concentrating
on mainland Europe and Scandinavia - an example of the
workload undertaken may be seen in a typical overseas
tour: eight countries visited in three months, calling on
prospects, visits prearranged through distributors, demon-
strating the capabilities of Ransomes unique machinery.
Again indicative of thorough training, it impresses me that
any Ransomes man is capable of leaping on any Ransomes
machine and making it perform miracles!

Pioneering is part of a salesman's make-up, and following
his success in Europe John was away on the pioneering trail
in Canada. Upon arrival he bought a truck, loaded it with
Ransomes grasscutting machinery and began a countrywide
tour, right across that great country. Those heady days in
the fifties were certainly trail blazing, and John likes to
think that his early invasions were in some way instrumen-
tal in forging the basis for what now is a flourishing N.
American business for the company.

A further step up came in the early sixties when Guy
Catchpole, Ransomes then sales manager (now retired)
invited John to become his second in command, a very
important upward move. For some twenty or more years,
John worked alongside Guy, promoting world-wide sales
and formulating marketing strategy in the grasscutting machinery sector, the high flyer in the company's range and successor to farm machinery as the anchorstone. When Guy was promoted to sales and marketing director, John was promoted to general sales and marketing manager. This was followed in due course by yet further promotion and the rest, as they say, is history.

Listening to John I soon realised that this man had wrapped his life around Ransomes, that it had become his life. To the stock question "what about your personal life, your hobbies?", he was quick to reply, "a little golf, an interest in photography, but if you really want to know what makes me tick, it's my work. Because our business is so fascinating, so absorbing, work doesn't seem arduous at all – Ransomes becomes your life" This sentiment was endorsed by Richard Bishop, and though I am jumping ahead in writing this, Richard's comments fit neatly into what I'm saying. Richard leapt at the chance. Following a highly successful motor lawnmower around 1900, the first with a mains/electric mower in the thirties, the first with a power driven gang mower – the Powerquint – in the sixties, the first hydraulically driven gang mower – the Hydraulic 57 – in 1967, the first all hydraulic ride-on in the late sixties, and the first with powered electronics – the GT – in the mid eighties.

As a twosome, John and Richard tossed lovely quotable snippets at me – "we may be the oldest established company in grasscutting, but we are up to the minute with our ideas", said Richard. "Consider the following", said John, "we were the first company, in 1832, to introduce the lawnmower, the first with a motor lawnmower around 1900, the first with a mains/electric mower in the thirties, the first with a power driven gang mower – the Powerquint – in the sixties, the first hydraulically driven gang mower – the Hydraulic 57 – in 1967, the first all hydraulic ride-on in the late sixties, and the first with powered electronics – the GT – in the mid eighties". A babble of cross talk now – "we are into evolution rather than revolution", ventures John, "we give the customer what he wants", chips in Richard, "and what the customer needs" adds John. I almost take these things for granted, seeing Ransomes as leaders in the business of making machinery that is both cost effective and commercially viable. I need no further convincing.

Of the BIGGA connection there is massive empathy, both with the cause and with the greenkeeper. Ransomes have been loyal supporters since the early days and indeed they like to think they were amongst the pioneers in our education revolution – "we were always close, our reps were giving lectures back in the fifties", John told me, "we welcome like to think they were amongst the pioneers in our educational programme because we want to get even closer". On the question of closeness, Richard urged me to tell readers of Greenkeeper International that his company positively encourages group visits – "we are one of the few companies with the ability to show everything we make in all stages of production – the slab of steel at one end, the finished product at the other". Having witnessed this showpiece of modern technology, I can endorse Richard's sentiments.

Let John Wilson have the final say: "We have long since brushed aside the 'grandfather image' and are a force to be recognised, we can with pride look to our slogan 'Ransomes for total turfcare', for with the acquisition of Cushmans and Ryan in 1989 we doubled our size and our design capabilities. Our design centres at Ipswich and in the USA are manned by a powerful group of development engineers, clever men who know that new products are our lifeblood', I'll endorse those sentiments too.
Preparation for the shutting down of a golf course irrigation system should start from the moment the system is turned on in the spring. As with any piece of equipment that is required to work day in, day out without failure on a seasonal basis, one should be watching out for problems, wear and tear during the complete period that the irrigation system is in full operation. Indeed, faults which do not affect significantly the day to day running of the system, but which may be detrimental in the long term, are usually more easily rectified when the system has been drained down for the winter.

"The majority of problems can be picked up by good forward observation," comments Trevor Neale, technical manager with irrigation consultants, Philip York and Partners, Fordingbridge, Hants. "Our advice is to think and plan ahead so that remedial action can be taken as soon as the system is closed down for the winter months." Mr Neale says that this can be assisted by the establishment of a routine reporting procedure to enable green staff to note faults, problems and changes in system performance as and when they occur during the summer months. Then, when the pumpset is shut down and the system drained at the end of the season, the appropriate work can be carried out to ensure that the system is ready for the following year's start-up. However, ensuring that a sprinkler irrigation system is kept in good working order is more fundamental than simply rectifying problems ready for the new season.

The system must be correctly shut-down and left in a condition which will minimise risk of damage or deterioration over winter. The first action after closing the mains stopcock is to take a reading from the water meter. This reading should match that on the bill from the water authority and one should also ensure that the club is not being charged for sewage disposal based on the volume of water supplied. After all, none of the water applied to a golf course should find its way back into the main drains for treatment.

Any pipework between the main water stopcock and the holding reservoir or tank should be drained. This is particularly important on exposed riser pipes to ball valves, which are highly prone to frost damage. If the pipe is above ground and cannot be fully drained, always ensure that it is properly insulated and protected against the elements. Insulation has a habit of attracting rodents and other pests, so don't assume that because a pipe was well insulated last year it is still fully protected one year on. A check now can save a great deal of time, money and inconvenience in a few months' time.

The majority of irrigation systems have some form of holding tank located close to the pump house. Unlined steel tanks should be drained and repainted if necessary. Those with a butyl lining should be drained sufficiently to leave the float valve fully open but still contain enough water to provide tank stability and prevent the majority of the tank drying out. To minimise the risk of frost damage, place a piece of polystyrene, a large floating ball or a plastic container in the tank to absorb expansion caused by freezing.

Where the tank is left with water in, turn off the gate valve between the tank and the pump. If the tank is drained and the mains stopcock closed, this should be left open, as should all other valves in the system to assist drain-down. Maintenance work on the storage tank can usually wait until the rest of the system has been dealt with. However, it is important not to forget to keep the tank clear of leaves and other debris that can enter and on start up.

All too often, the storage reservoir for the system is hidden away out of sight and out of mind. One important item that should be checked regularly during the winter months is the level of the water in the tank. If it rises significantly, water is probably getting in past the mains stop valve and this should be dealt with promptly. Alternatively, if the level falls significantly, check for a leaking valve, or worse still, a perished or holed liner. Pumps should be housed in a purpose-designed building complete with suitable insulation and thermostatically-controlled heaters to protect against freezing. In addition to checking that the over-winter protection is in place and functioning correctly, Mr Neale advises greenkeepers to keep the pump house securely locked against pilfering or vandalism — regrettably becoming increasingly
Clear the debris and grease

17 common in places which are not under 24 hour observation. "Preventing human entry is one thing, but it is also advisable to protect the building against animals and the cold," he points out. "In summer, ventilation is needed to help keep the pumps cool. In winter, I recommend sealing air bricks and fan housings, not forgetting to remove the seals in the spring." The condition of the pump house also needs to be checked for deterioration to walls, floor, roof and windows which can let in cold, damp or rain, cancelling out the effect of any heaters or insulation.

Preparation for winter storage of the pump or pumps should start with the removal of the drain plugs at the base of each pump and the breather or pressure gauge on the top. This action will encourage the free movement of water out of the casing. If possible, position a container to collect the water or connect a hose to the drain point to prevent the pump house floor becoming flooded. All other drain valves should be opened to ensure that no water remains in the pipework between the gate valve and the pump, or on the delivery side of the pump. The majority of pump systems will incorporate one or more non-return valves. Maintenance staff must ensure that the pipework is drained on both sides of these valves and not trapped upstream.

Winter maintenance for pumps commences with the clearing away of any dirt or debris and lightly greasing of all exposed metal parts. Worn or flaking paint should be sanded down and retouched. Grease should be applied through any nipples fitted until the old grease is pushed from the gland seal. If gate valves are fitted on manifolds or between pump sets, they should not be left fully opened. A half-turn back will normally prevent sticking.

Filters also require attention. Removal, stripping and cleaning or renewal are advised in line with the pump maker's recommendations. Finally, once the pump or pumps have been prepared for over-winter storage, do not lock the door and forget them. A once-a-month check of the pump house is an essential part of the maintenance programme as is the turning of the pumps by hand or by a momentary spin of their electric motors to prevent partial seizure in one position.

Submersible pumps installed in a reservoir should be removed from the water where practicable, drained and lubricated prior to winter storage. Because these are expected to work

IRRI-SERVE IRRIGATION SYSTEMS
metal parts

continuously during the summer in a hostile environment, it will be worthwhile having them checked over and serviced while they are away from their normal location. The result will provide greater peace of mind following year.

Because many modern motors and control panels contain anti-condensation heaters, it is often necessary to leave the mains electric power switched on over winter. Mr Neale recommends that pumps are isolated by removal of their fuses if they cannot be immobilised without turning off the mains switch. The fuse can then be replaced if the pump needs to be turned over during the winter months.

A pressure vessel is often located in the pump to provide a 'buffer' in the system and prevent the switching on when just a small quantity of water is drawn from the pipework, for example, when hand watering a green. The vessel should have its drain opened and this should remain open over winter. Similarly, any pressure relief valve or pressure regulating valve should be drained. Mr Neale points out that staff should be especially careful of pressure regulator valves which usually contain a diaphragm and control pipework in which water can become trapped. "Most regulators have a drain plug to let water out but it may also be necessary to disconnect the pipework to allow water and air to escape," he comments. "At this time, the diaphragm can be checked for cracks, perishing or dirt. After dismantling, it is most important that the assembly is reset to the correct pressure before start-up in the spring.

The majority of underground pressure mains feeding sprinkler irrigation systems are installed below 600mm depth, which will normally be adequate to prevent freezing in all but the most Arctic of winters. Nevertheless, pipes do rise to the surface throughout the system so draining is vital if frost damage is to be avoided. Drain cocks should be positioned at the lowest points of the underground pipe system and these should be located (using the architect's installation plan if necessary) and opened to allow the water to escape. This can take quite a time and will produce a great deal of water when one considers that a typical irrigation system covering the greens, tees and approaches on an 18 hole course can consist of 7,000 metres of 80mm or 100mm diameter pipe. The total outflow could be more than 20,000 litres. As a result, Trevor Neale says it is important to check that the water can get away freely without causing a flood.

To clear the underground mains completely of water, compressed air can be blown through the pipework, although this will need to be done with care at various points around the system. Hand watering point valves - normally located in the control boxes - must also be opened to drain local water. Lever valves should not be left fully open to prevent water lodging in the valve mechanism and freezing. Similarly, solenoid valve boxes are extremely vulnerable to frost but can normally be drained completely, because they are installed at a shallower depth than the underground pipework.

One area which concerns Mr Neale is the construction and condition of the valve box chamber. "It is vital that the area be kept clean and free from water," he comments. "All too often we find installations with inadequate drainage below the solenoid valve. As a result, the solenoid and cable joints may be sitting in water for much of the year." He says that the winter months are a good time to dismantle the chamber and install a drainage pipe and suitable drainage medium, such as gravel, beneath valve assemblies susceptible to flooding. Unless suspect or showing signs of wear and tear, the wiring to the...
Reliable Irrigation
A Pipe Dream?

If your irrigation system is working well, that's fine. If it isn't or if you are considering a system for the first time, perhaps you should be talking to Ocmis. We have a decade of experience in designing and installing automatic sprinkler systems that might just be the answer to your dreams.

GREENKEEPER INTERNATIONAL November 1992 21
Keep controller unit warm

Use the winter months to remove and service system components which have shown signs of wear and tear or reduced performance. Pipework left exposed should be sealed against dirt and moisture.

19 solenoid valves should remain untouched. Sprinkler heads normally require little maintenance. If problems do occur, they usually happen during the watering season and will need to be attended to immediately. One point which is often overlooked is the fact that the sprinkler head usually includes a non-return valve to retain water and prevent lateral pipework draining down when the pressure drops.

"This retained water will not drain out when the system drain cocks are opened," Neale points out. "There may be a risk that it will freeze and damage the sprinkler head." There are two possible courses of action. One is to unscrew the sprinkler head to allow the water to escape. This will require a great deal of time and labour. The other is to feed low pressure compressed air into the system. Connection points can be fitted to a smaller system later, usually within the pump house, but a large system split into two or more separate circuits may require several inlet points around the course. The consequence is that most greenkeepers keep their fingers crossed and hope that if it does freeze, no damage results.

One part of the irrigation system which must be left for the attention of the supplier or installer is the controller. The unit must be kept dry and warm, ensuring that heaters are functioning properly. Apart from occasionally running the controller through its cycle during the winter months, check with the supplier as to any specific shut-down advice for the unit. The same applies to the rest of the system. All reputable suppliers and installers should provide a plan of the installation together with suitable information for its winter close-down and start-up in the spring. Most will also offer a contract to carry out these operations each year. It is in the greenkeeper's interests not only to become familiar with his system and its components and capabilities, but to ensure also that the supplier and installer provides full guidance on its operation and maintenance.

For maximum over-winter protection, it is recommended that the top of electrical solenoid valves be removed complete with soil assembly, diaphragm and spring, wrapping the parts in polythene.

Illustration: Wright Rain Ltd

Open all drain valves in the underground pipework, not forgetting those crossing streams or ditches which are highly susceptible to freezing.

NORTH STAFFS IRRIGATION
An Independent Company

At North Staffs Irrigation we can offer a range of equipment suitable for your irrigation project. A full design and installation service is provided ensuring an effective and efficient system tailored to your individual needs. We offer:

* Fully automatic Irrigation Systems (including greens, tees, approaches, etc.)
* Manual Control Irrigation Systems
* Phased Installations (allowing a basic water supply to be built upon to achieve full automatic irrigation over a period to suit your available finance)

Recent contracts include: Bangor, Chirk Golf & Country Club, Sherwood Forest, Fairhaven, Beau Desert, Prestatyn, Barrow-in-Furness, etc, etc.

Contact us on 0785 812706, Fax 0782 395734 or at Ivy Mill, Longton Road, Stone, Staffordshire ST15 8TB.

We are founder members of the BTLIA.

FLANDERBLADE LTD
A family firm with over twenty years experience (twelve as our own company)

We design, supply and install irrigation systems

FULL MEMBER OF BTLIA
MICHAEL BIRD
tracks down some of
the latest workshop
equipment ideas and
innovations
designed to make
the service
engineer's task that
little bit easier

Every workshop needs at least
one clean, firm, level surface
where hand tools, small machines
and assemblies can be inspected,
serviced and made ready for
another day. Although a spotless
and uncluttered surface might be
the ideal situation, it is not unusual
to find the workbench used also as a
table for coffee mugs, and as a place
where discarded service compo-
nents accumulate because they
might come in useful one day, and
where spanners and sockets lurk
beneath a pile of cleaning rags and
other items.
If you recognise the scene, then
the answer might be to let your
work bench (with a little tidying)
remain as a storage area and invest
in one of the new free-standing
benches which can lift equipment
from ground level to a suitable
working height at the touch of a
button. Operated by air, hydraulics
or electric motor, these benches are
expected to become an essential
part of workshop equipment in the
coming months for, as workshop
equipment specialists, R+R (UK)
Ltd point out, employers will have
to satisfy important requirements
under new Health and Safety legis-
lation coming into force at the
beginning of 1993. They include the
avoidance of hazardous manual
handling operations and the need
for employees to bend or kneel or
have their working position dictated
by the job being carried out.

From the employee's point of
view, he or she will have the right to
insist on mechanical assistance
when lifting and to be equipped
with a work station that can be var-
ied to suit one's personal require-
ments. In basic terms, employers
will have no defence against any
claim made by an employee injured
at work due to inadequate or insuf-
cient lifting or handling equip-
ment. Having specialised in work
benches since the mid-eighties, R+R
believes that the incoming legisla-
tion should not be the sole dictating
factor for investment in a new pow-
ered-lift work bench. The company
points out that the equipment has
proved it can improve both the ef-
iciency and the quality of work,
improving staff morale and the
speed at which a job is completed.

To further improve the ease of
working on pedestrian mowers and
other walk-behind machines, R+R
has extended its range with the
Unilift 380 workbench from the
USA. Capable of lifting 200kg to
more than 1m high, the unit can be
tilted to any angle enabling conve-
nient access to virtually any exposed
part of a machine strapped to the
work table. The Unilift's platform is
raised and lowered on a threaded
shaft driven by vee-belt from a
0.5hp electric motor. A control
switch automatically stops move-
ment of the work table at the top
and bottom of its travel or it can be
stopped manually at any convenient

Left: The Retracta
auto-rewind hose
reel can be supplied
with hose suitable
for delivering water,
air, gas, steam, oil or
grease.

Above: Vertical
compressor design
from SIP saves
space and improves
pump cooling in
confined or cluttered
areas.
The reliability and accuracy of an Atterton Grinder is unrivalled, even under the most arduous conditions. Simple to use, an Atterton Grinder allows the operator to precision grind every time.

Models include the proven *Express Dual* – an innovation from Atterton & Ellis. The first and highly successful "in situ" grinder that will accurately sharpen cylinders still fitted to the mowing machine or, alternatively, cylinders may be removed for a full strip down during the less busy periods and sharpened just as accurately.

Bottom blade grinders include the *Anglemaster* – a precision grinder that complements the *Express Dual*.

**Professional Grinders for Professional People** — from the people who have been grinding for over 100 years

**ATTERTON & ELLIS LTD**
Manufacturers of Fine Grinders for over 100 years
Iron Works, Haverhill, Suffolk CB9 8QH
Tel: (0440) 702312 Fax: (0440) 712138
The filter in the Speedglas welding helmet darkens the instant that light reaches it from the welding arc, leaving both hands free while giving full protection to the eyes.

For optimum ease of use, the intended purpose and a maximum safety in the work area. The minimum safety in the work area. The ability to break the bead and push the bead holding the tube can be removed, enough to break the bead and push the bead into the rim well, from repaired and replaced. Cost of the Tyre repair usually means calling in a specialist unless one is prepared to expend time and effort using a sledge hammer, wedges and tyre levers to 'break' the bead holding the tube to the rim. Now, with the aid of Bead Buster, one person can repair punctures in the workshop, without even having to take the wheel off the tractor. The device, which weighs just 4.5kg, is inserted between the tyre and its rim. A few turns on the ratchet handle produces 10 tonnes of pressure - enough to break the bead and push the tyre into the rim well, from where the tube can be removed, repaired and replaced. Cost of the Bead Buster is £125 plus VAT, delivered.

Welding is an area which has seen some considerable advances in equipment and techniques over the past 20 years. With safety a prime concern in the majority of service and repair workshops, it is appropriate that BOC, a leading supplier of gas for welding purposes, should have produced a video on the subject. Costing £11+VAT, the video provides a concise guide to safe operating procedures for welding and cutting using oxygen and gas. Copies are available through BOC suppliers.
The efficiency of today's highly engineered lawn mowers and quality of cut can only be maintained with correct and accurate grinding of their cylinders and blades.

The 'Leader' range of grinders not only achieves this but offers many features unequalled on any other machine, making them the ultimate in lawn mower grinders.

At the heart of a 'Leader' is a solid free standing frame with a cast iron bed and 2" precision ground guide rails that ensures an accuracy of less than 0.005" in 30 inch in straightness, whether grinding insitu or out of frame.

Coupled with this, great emphasis has been placed upon operator safety with a self contained coolant system, fully enclosed canopy that reduces noise and dust levels to a minimum and safety cut out devises that allow the operator to leave the machine whilst on automatic operation with absolute confidence.

For a demonstration and further details contact:— Linda Adams

**Streaks Ahead of the Competition**

SUPREME MOWING

Wet Moor Lane, Wath-Upon-Dearne, Rotherham, S63 7LR. Tel: (0709) 873436 Fax: (0709) 878005

A Ransomes PLC Company
25... can bring to work rate and the finished job. These benefits arise from the fact that MIG welding uses continuously-fed wire from a reel, eliminating both the stopping and readjustment necessary with a hand-held welding rod. Another major difference between MIG and Arc welding is that instead of using a coated rod, gas is used to protect the weld from the atmosphere, leaving no residue. Although it is easier and cleaner than Arc welding, MIG is more expensive. However, it is well-suited to welding thin sheet and, with different wires and gases, can be employed for mild steel, aluminium and stainless steel using the same equipment. Because gas is used to 'shroud' the weld, MIG welding is not ideal for use outside where wind can upset the process.

Gasless welding, as the system is known, employs a continuously-fed wire which is cored with a solid flux, similar to an Arc welding rod, which prevents the metal reacting with air. Simple, relatively inexpensive and ideal for use outside, the technique is suitable for bonding all mild steels without the need for a separate gas supply. Gasless MIG welding equipment is available from Clarke International and SIP. The latter also produces a combination MIG-Gasless machine for the ultimate in versatility.

Many engineers who do not weld regularly — and many who do — will appreciate the new Speedglas welding helmet from Spaldings, allowing completely hands-free welding. In simple terms, this £150 helmet enables users to see the work and welding rod clearly until the arc is struck. The moment light reaches the helmet filter it darkens, protecting eyes against harmful radiation and the damaging consequences of intense light from the welding arc. Invented in Sweden, the filter in the Speedglas helmet uses polarisers and liquid crystal cells working in conjunction with photosensors which react immediately to changes in light intensity.

The welding filter is powered by a standard 12 volt battery with a lifetime of about 1,000 hours. It turns off automatically after 20 minutes. As a fail-safe measure, the welding filter reverts to a dark condition if the battery fails while in use. Because the helmet can remain permanently in the 'down' position, the manufacturer recommends the addition of a respirator unit for those carrying out extensive welding tasks. A belt-mounted motorised air filter unit provides a supply of clean air to the helmet, preventing condensation and expelling excess carbon dioxide.

For those who need a supply of cleansed air to the complete work area, a fully-portable filter extractor from Electac will be the answer. Available in a range of sizes, the unit extracts welding and other fumes through a flexible pipe and nozzle, returning clean, electrostatically-filtered air in its place. Quiet running, the extractor can be supplied with standard, high efficiency or charcoal filters and includes 3.75m of 45mm or 65mm extraction hose, depending on the model chosen.

The ability to cut metal cleanly and accurately, without gas or reciprocating blade, will appeal to all involved infabrication or repair work on mild or stainless steel, aluminium, brass or copper. Air plasma cutters combine the heat of an electric arc with the force of compressed air to cut through most metals of up to 30mm thick, and greater. Machines from Welding Star and SIP feature pilot arcs for easy starting on painted surfaces, with no pre-preparation necessary. The use of air to force the arc (‘plasma’) through the metal
and to cool the work means that the cut is extremely clean, with virtually no distortion, even on very thin metal. Murex has introduced a highly portable unit suitable for single phase electricity and with an air pressure demand from 5-10bar (70-150psi). Weighing 20.5kg, the Sabre-arc 40i has a cutting capability of 15mm at 40amps, said to be almost double that of most 40amp plasma cutters. The result is safer working with reduced power consumption and an extended working life.

The handling and storage of diesel and petrol is causing increasing concern to Health and Safety officers, particularly when draining equipment tanks prior to major overhauls or repair work. Mobile fuel retrieval equipment from Bacliz, a division of James H Vickery, is designed to facilitate the draining of fuel tanks in accordance with latest H & S E and COSH& H legislation. Available in three sizes – 50 litres, 135 litres and 2 x 135 litres – the retrievers enable petrol and diesel to be withdrawn, stored and replaced with maximum safety and convenience. All retrievers feature an anti-flash device, earthing straps, braked non-spark wheels, shut-off valve, anti-theft device and contents gauge.

No article on workshop equipment would be complete without some mention of cylinder grinding. Describing back lapping of cylinders in many areas of the UK as 'a hit and miss affair using a variety of home-made concoctions', Derek Cooper of Garfitts International points out that the practice is a must for most greenkeepers in the USA seeking high performance from their machinery. Hoping to redress the situation on this side of the Atlantic, the company has now introduced to Britain an American-made back lapping compound. Described, rather medially, as Garfitts reel sharpening compound, it is available in ready-mixed 2kg tubs in fine, medium and coarse grits. A booklet produced by its American makers describes in excellent detail the reasons for and methods of back lapping cutting cylinders. It is hoped that a copy of this booklet or its contents will be provided to each purchaser of Garfitts' compound.

Relief grinding of cylinders is advocated both within this booklet and by Eric Hunter, managing director of the machine company which bears his name. His single blade grinding technique produces a relief angle of between three and ten degrees on the cutting edge. This is achieved by approaching each blade from slightly below centre with the grinding wheel. The benefits of accurate relief grinding are many fold, according to Mr Hunter: "It is often quicker than the conventional spinning grinding technique in Britain", he says.

"However, from the engineers' viewpoint, creating a relief angle on each blade has many advantages. These include reduction of drag created by excessive metal contact with the bottom blade, thereby minimising friction and increasing working life, fuel economy and the time between adjustments".

Other advantages, point out Mr Hunter, include the ability to mow in very wet conditions and, because the cutting action is cleaner, cause less damage to the grass than with rounded edge or badly ground cylinder blades. For single blade grinding, the cylinder is removed from the mower and mounted in tailstocks on the grinder, where it is held within bearings while the grinding work.

Of real interest to greenkeepers is Supreme Mowing's introduction of a 4° relief grinding attachment for their range of grinders, which enables the user to impart a healthy relief angle on small diameter multi-bladed cutting cylinders like the Ransomes GT or the Jacobsen Greens King.

Those wishing to grind cylinders 'in situ', still mounted in a pedestrian mower or within the cutting head in the case of a ride-on machine or gang mower, should consider the Supreme Mowing 'Leader', a free standing frame with a cast iron bed and 2° precision ground guide rails that ensures an accuracy of less than 0.005" in 30" in straightness, whether grinding in situ or out of frame.

Alternatively, they can choose from the Atterton and Ellis Express Dual standard or Professional models. Using the spin grinding technique, these machines can also be used as a separate cylinder grinder.

Up to 10 tonnes of pressure is produced by the Bead Buster to help remove tyres from rims without the use of hydraulics, pneumatics or very large sledge hammers.

Laying turf is not exactly child's play, but it is a lot easier with Rolawn.

Because our turf is precision cut, mature, purpose grown and available when you want it.

Because you can choose standard, convenient square yard rolls or the extra big, (25 square yard) rolls. We'll even lend you laying equipment for the big rolls so turfing large areas is quicker and more cost-effective than ever.

Because our chain of national depots mean a truly local service for collection or delivery.

Talk to our turf specialists on 0904 608661 and find out why more people use Rolawn than any other cultivated turf.

Rolawn
Elvington, York YO4 5AR.

AD REF 34
A lot to live up to

We face a daily barrage of statistics. For example, earlier this year the English Golf Union reported that there were almost as many planning applications for new golf courses (1,890) as there are existing courses. Nearer to home, the greenkeeping market in the UK was recently estimated to be a massive £187m per year.

Not wishing to be left out, I too have some statistics for the readers of Greenkeeper International. Think of the M25... that's if you can bear it! It runs round Greater London and its suburbs, an area of land which roughly equals the total area covered by golf courses in Great Britain. It is a substantial area indeed and is one which is managed by greenkeepers.

Returning to other people's figures: a few years ago the then Nature Conservancy Council (NCC) the nation's advisor on conservation matters, published findings concerning the loss of wildlife habitats. These made disturbing reading. In the years since the Second World War Britain had lost 95% of its flower-rich meadows, 60% of its lowland heathland and around half of its ancient woodland. The losses were the result of agricultural intensification, industry, housing and road development. Although these losses have slowed down in recent times, due to a combination of agricultural recession and government policies designed to reduce over-production whilst lessening the impact of agriculture on the environment, they still continue. Needless to say, Britain's wildlife needs all the help it can get in the face of such an onslaught and that is where golf courses come in.

Before we continue, consider the following tale. Among the wildlife frequenting the golf course is the greater-spotted-golfer (Homo golfer) of which there are over 2 million in Britain. This species depends almost entirely on golf courses for its existence, where it can be seen foraging on small, spherical objects either singly or in groups of up to four individuals. Greater-spotted-golfers are, by and large, harmless creatures, though greenkeepers are advised to approach them with care as they have been known to become aggressive under certain conditions (eg. in inclement weather). The species is breeding well in Britain and its numbers are growing steadily, in fact golf courses have a Site of Special Scientific Interest (SSSI) or some other recognised conservation status.

But it needn't be so. The environment works according to a few basic easily understood concepts. Nature has its own economy and budgets accordingly. All living things operate through a series of checks and balances, cycles and networks. The skill of an environmental manager... and here I include the greenkeeper, involves understanding something of how the environment functions so that one can work with it rather than against it.

In the course of researching, writing and helping to promote the NCC/EN publication 'On Course Conservation' and its follow up document on environmental management planning I have seen some many instances where golf courses are managed for wildlife to the benefit of golf and the environment.

Still more can be done to improve nature's handicap. Your course needn't be a story, but it is said that truth is stranger than fiction. There once lived in Britain a creature known as the large blue butterfly (Maculinea arion). It was a beautiful butterfly and could be seen on bright summer days flying among the meadows where it lived. However, as the meadows started to disappear, so did the large blue. It became extinct in 1979.

Extinction is forever... and that is why conservation is so important. Golf courses can be a valuable resource when it comes to nature conservation and already make a significant contributions to our natural heritage. This fact was acknowledged by Ian Dair the communications director of English Nature (EN) (England's successor body to the former NCC) who highlighted the environmental responsibilities of greenkeepers in a recent August edition of Greenkeeper International.

He also stressed that the public perception of the impact of golf on the environment was an important issue that needs addressing. Like many of my colleagues, I am frequently asked the question "What's ecology all about?" When faced with such a question I am often tempted to reply "Oh, just life, the universe and almost everything". It is precisely because the environment is so big that we, all of us, tend to be somewhat overwhelmed by it.

There's a great deal of conservation potential within the average course. Take water features, for example, lakes and streams are not only of landscape and strategic benefit, they are also a focus of attention for wildlife in the absence of the scores of village and farm ponds which have been drained. Hedges within and around the course are also good places for wildlife many of which do a good job on the course in keeping down pests including worms and leatherjackets. Conservation requires planning and forethought-just like any other management project. With this in mind, does your course have a conservation management plan? Does it have a tree planting or agrochemicals policy? Do the members know about the wildlife on their course? Likewise, do they know of the work you are doing to protect and enhance the environmental value of their course?

Greenkeepers have a great deal to be proud of as custodians of golf's living heritage and a lot to live up to. So keep up the good work... and keep golf green!

* The author, Dr Anne-Marie Brennan, is a biologist with research interests in the environmental aspects of golf. If you have any questions, comments or examples of the greening of golf we would like to hear from you... just write care of the editor.

Through the columns of Greenkeeper International I wish to raise a subject which I hope will merit a reply from some of our chemical manufacturers and suppliers. I refer to the apparent discrepancy in the way in which some chemicals are registered.

One such chemical regularly used is Vinclolazine, used as a treatment for Fusarium Patch. In a one litre bottle marked ‘For Agricultural and Horticultural Use Only’ – but with no grass or turf recommendations – it costs just £25. The same chemical from the same manufacturer – in a ‘Golf Course Supplies’ bottle costs £44.95. The same appears to be true of selective weedkillers most commonly used on golf courses.

Are the suppliers making a killing by manipulating registration and labelling of chemicals, or are there good reasons for these anomalies?

SANDY BROWN
Crieff Golf Club, Crieff, Scotland

It was with considerable interest that I read in your September issue of the appointment of Tracy Ruane to the position of head greenkeeper at the Leeds Municipal golf course of Oulton Hall, Rothwell.

In the second issue of Golf Greenkeeping that I published back in November 1982, Tracy was featured as a 19 year old apprentice greenkeeper working on the 36 hole Temple Newsam course under the then head greenkeeper, John Rushton. Even then her enthusiasm for the outdoor life was unbounded and it was reflected those ten years ago when she was utterly convinced her promotion path was headed towards becoming a head greenkeeper.

The fact that Tracy has achieved her ambition gives me a great deal of pleasure. I wrote then – Tracy is a big girl, with big ideas, who is certain to go far in the world of greenkeeping. Her sparkling personality, enthusiasm and love of life, coupled with a determination to make a success in a career she feels absolutely right for, will carry her a long way.

To hold down a greenkeeper’s job in a traditional man’s world will be no easy task. To excel in the skills of agronomy will be that much harder, but there is no doubt: Tracy Ruane, The Leeds Outdoor Girl, can do it.

Anyone who sings whilst riding a motorbike to work, must make a success of their chosen career. 

John LELEAN
Former editor, Golf Greenkeeping

To David Golding,
Education Officer, BIGGA

I write to express my gratitude for the two day ‘Public Speaking’ course you organised, which I attended recently. Having had limited experience in presenting one or more talks at various conferences it was enlightening to discover various methods to make the task easier, by correct structuring etc. Frank Newberry should be congratulated on the way in which he instilled such confidence in the group that attended. I would wish for you to convey my appreciation.

Frank Newberry has enlightened me in the way he presented talks at future conferences. If they do, I can assure you it is not a reflection of his teaching technique.

I would reiterate my comments that I felt the course should be extended to two and one half days, if only to give Frank time to sleep!

Despite this, an excellent educational event, and one that should be continued, and supported.

DAVID JONES
Area Course Manager, Country Club Hotels

Another marvellous course at Aldwark Manor. Five of us on a public speaking course given by Frank Newberry.

The three day course gave us an insight into many things, from telling a simple story to presenting a paper at a National Conference. Frank taught us how to structure talks properly and gave us confidence to deliver them. I came away with much more confidence about public speaking.

The content of the course was excellent, including the building of a US specification green, annual meadow grass control and even a ‘walk on the wild side’, covering conservation.

What struck me about the course was the camaraderie between greenkeepers, with nobody wanting to see a colleague fail.

In conclusion, I would like to thank Frank Newberry for a most informative experience, my fellow students for an interesting three days, and last but not least the people at HQ for making these courses available.

PHILIP TAYLOR
Course Manager,
Alwoodley Golf Club

• Similar letters of appreciation were received from other attendees, but space limitations prevent publication of them all.

I would like to thank Howard Evans, BIGGA’s ‘financial man’, for his time and help in arranging my re-mortgage. Though we were hundreds of miles apart – he in South Wales and me in North Scotland – he talked to me over the telephone, assisting me and keeping me fully informed throughout every stage.

The wide and varied services that BIGGA offer make it very professional indeed and a must for all greenkeepers.

Any member requiring assistance need only pick up the phone or drop a line to Howard Evans. I am sure he will help in the same way.

Once again, Howard, thank you very much for a splendid service.

Iain MACLEOD
Head Greenkeeper,
Tain GC, Scotland

I write to thank everyone for the really good time I had at the BIGGA/ICI National Championships at Littlestone. This was my first BIGGA event and, as you know, I was lucky enough to play well and win some very worthwhile prizes.

My family and I thoroughly enjoyed ourselves, met some very fine people and now look forward to the next event, subject to my being in the ‘Old Countries’.

I would add a big thank you to all of the sponsors, especially ICI Professional Products, for making the event such an obvious success.

PAUL CONFIELD
Golf de Rimaison, Britanny, France

I write to express my thanks to everyone involved in organising an excellent two day stay at Coventry for the Iseki finals.

Iseki staged this event at considerable expense, providing accommodation, meals and event team sweaters for all competitors, and must be thanked for their generous hospitality throughout our stay. I am confident that my sentiments will be echoed by everyone who took part.

Events like this provide an opportunity to converse with fellow members of the profession on a social basis whilst, I believe, being of educational value. Iseki are to be congratulated for providing such an platform for both sporting and educational purposes.

My thanks also to John Bayliss and his staff for presenting the course in such excellent condition, despite heavy rainfall before and during the competition.

JAMES HUNTER
Course Manager,
Goal Farm GC, Pirbright, Surrey

• Similar letters of appreciation were received from competitors at both the National and Iseki events – for which many thanks.

GREENKEEPER INTERNATIONAL November 1992
One step away from GREENKEEPER OF THE YEAR

IAIN McLEOD

Iain is currently head greenkeeper at Tain Golf Club on the southern shores of the Dornoch Firth in North Scotland, a post he has held since 1978. He is also the North Scotland section secretary and is married with three children. He started his greenkeeping career at Nairn in 1973 and after a two year spell in Coventry at the Grange Golf Club, where at Tile Hill College of Further Education he sat his Grass and Greenkeeping UEI examination and achieved a first class pass, he returned to the North of Scotland to a job at Tain. He is a firm believer in education, attending seminars and workshops whenever possible and is currently trying to find the time to work through the Accreditation of Prior Learning Modules at Elwood College, Fife.

A keen golfer playing off a three handicap, he has represented the Association in the Kuba, Jacobsen and Ransomes finals, with proof of his golfing prowess indicated by his winning the Head Greenkeeper’s Trophy at the Scottish Championship three times since 1983. He works very closely with his committee at Tain, serving on both the green committee and the finance and general purpose sub-committee.

Iain has been an active member of the BIGGA, SIGGA and now BIGGGA since 1974. He has also been a member of the BIGGA support team at The Open since 1984.

KEVIN GREEN

Kevin became interested in turf management whilst working with the turf department at the Royal Horticultural Society, Wisley, studying for the Wisley Diploma. On completion he secured Best Overall Student for the course and also gained City & Guilds, including Turf Management stages I & II.

Having spent some time at Royal Mid Surrey Golf Club, this before being offered a position at Wentworth Golf Club, he spent six years working mostly on the West Course and being involved in the course preparation for major tournaments, including the PGA Whyte & Mackay and Sunbury World Matchplay Championship.

He has held the working head greenkeeper’s position at Milton Golf Club for nearly five years. This north Bristol parkland course is situated on heavy clay, hence the need for the constant preparation of the water table and aeration to counteract the effects of over 55,000 rounds annually. In the last year he has been involved in overseeing an interesting project to obtain a private water supply for both irrigation and aesthetic purposes. This involved drilling a bore hole, which now feeds two excavated lakes.

He is an active member of BIGGGA in the South West region and as a long term aim would like to hold the position of course manager on a course hosting a major PGA event.

IAN McMILLAN

There are few greenkeepers who are unaware of the illustrious name of McMillan in the field of greenkeeping, for Ian’s father, Jack, latterly course manager of SUNNINGDALE and now a highly respected turfgrass consultant, has earned and enjoyed a reputation that is second to none. Like father, like son is a term that can certainly be applied to Ian, for he has been in greenkeeping since leaving school some 15 years ago, 11 of those years as assistant greenkeeper and latterly as course manager at Hankley Common, one of Surrey’s most prestigious courses. Prior to Hankley Common, Ian was head greenkeeper at Finchley Golf Club for two years and before moving to Finchley he was head greenkeeper at Datchet, having served his apprenticeship under his father’s watchful eye at Bush Hill Park in North London.

A strong supporter of BIGGGA and its objectives, Ian has spent six years serving on greenkeeping committees, finishing as chairman of the Surrey section.

In his leisure time he enjoys being with his family, Calium aged three and Hannah aged one, and playing golf when time allows.

IAN HARRISON

Ask Ian Harrison for his views on golf course architecture and he will wax poetic on the delights of Darlington, a parkland course designed by that doyen of all architects, Dr Alistair Mackenzie, who he regards as some sort of hero. Pride springs to mind as the overriding aspect of his maintenance of Mackenzie’s finest course, which enjoys distant views east to the Cleveland Hills and views west to the Pennines, and he nurtures the 90 acre course and nine acre practice facility as though both were precious antique gems.

Ian began his greenkeeping career as an apprentice in 1978 and in 1980 became the first assistant at Darlington, working at different times under two course managers with very different approaches to perfection. One, an old Scottish traditionalist, taught Ian how to respect nature and the tried and tested methods of generations past, whilst the second brought modern greenkeeping philosophies to the fore and provided Ian with an excellent contrast upon which to base his own style and management techniques. He was rewarded by being made Darlington’s course manager in 1984.

Educated at Durham Agricultural College, Ian earned his City & Guilds Greenkeeping Management Certificate with a Distinction, following this with regular attendance at BIGGA management courses during 1989-1991. Married, with two children, Ian enjoys spending his leisure time with his family, but still finds time to play golf.

DEAN CLEAVER

Thirty four year old Dean Cleaver couldn’t have chosen a better place to start his career in greenkeeping than The Leicestershire Golf Club, for in 1974 he came immediately under the care of manager Peter McCarron, latterly chairman of BIGGA and a hugely talented exponent of the art of greenkeeping.

Well taught and primed for further exploration into the management field, he joined Rugby Golf Club in 1978, still only 21, as a head greenkeeper and enjoyed caring for this course and his members needs for some nine years.

In 1987 he moved to Stratford Golf Club for a further five years before joining his present club, Gay Hill Golf Club, as their course manager. In his own words, ‘a challenging period lies ahead’.

During his time in greenkeeping Dean has always been a firm supporter of the Association and he has in turn been both treasurer and chairman of the East Midland section, and is presently secretary of the Midland section, which boasts some 240 members.

That he also believes in the value of education for greenkeepers is indicated by his being regional education chairman, and it is in this important sector that he gains most satisfaction.

Married and with two children, Dean lives in the small town of Alcester on the edge of the Cotswolds and his interests are playing and watching golf, the former to a handicap of fifteen.

Television viewers who witnessed Nick Faldo win the European Open last September were privileged to watch an excellent display of golf played in an idyllic woodland setting. Despite weather that was not always conducive to exhibiting the course at its best, Sunningdale did not disappoint traditionalists who prefer to see golf played in a landscape with natural aesthetic appeal. Established championship courses such as Sunningdale were designed and built in an era when optimum heathland locations were still available. Time is also on their side; their many years of existence has enabled them to develop an established tree cover and to blend in with their environments. Despite these advantages the positive image they portray of golf as a rural land user should not be ignored by those wishing to develop new courses.

Similarly other established courses on heath, forest and park landscapes should, like Sunningdale, be aware of the responsibility of caring for and the problems involved in maintaining such treescapes.

The building of new golf courses poses a potentially greater challenge for modern golf course developers and architects, with a whole range of political economic and environmental problems to consider. Golf has become a political issue as a result of the pressure on rural land for the development of new courses. This pressure has developed through lower land prices, lower economic returns for farming and a demand for golf that has been quantified as a need for 700 new courses by the year 2000.

The response to these market conditions has been a subject of public debate covered extensively by the media as the rush by developers, farmers and land owners to cash in on the golf boom has led to many ill conceived projects, some of which were little more than money making speculations. Many such schemes never gained planning permission, but the damage may have already been done in terms of bad publicity for the golf industry. The opposition view of golf as an artificially imposed and selfish land use began to take credence in the public mind.

There is no doubt that although some excellent courses have been built in recent years, mistakes have been made both economically and environmentally. The recession of the 1990s has not left the golf industry unscathed and it has become evident that many of the more extravagant and ostentatious developments judged the market incorrectly. Smaller, lower cost and lower impact schemes, not aimed at Britain's limited market of millionaires, have proved considerably more resistant to recession. The damage done by some of these over ambitious schemes is not just a loss of financial confidence. Many of the projects had little thought for the environment as they imposed their grandiose schemes upon the landscape.

These developments, often American in design, ripped through the countryside like green motorways, often shifting motorway quantities of soil in the process. Their construction involved radically altering the relief: lakes and ponds were excavated and trees were felled, isolated or bullied into the new design, which on completion bore little resemblance to what had existed before and indeed exists around the course.

Most new golf courses are set in rural landscapes that contain a large number of trees. These trees are crucial to the character and form of that landscape and should therefore be used to help define the character of the new course. On a landscape of bland topography, existing trees with new plantings can be used to provide depth, direction and interest. Trees can separate tees, greens and fairways, whilst individual trees can break up the monotony of a particular fairway. The treescape can therefore give the hole and course its identity without resorting to man made hills and lakes: as golf course consultant Jim Arthur argued recently, golf is not a watersport.
35 - By carefully implementing a landscape of trees into the design, rather than destroying them, the course can develop and benefit the local environment. Obviously ideal heathland locations are now in short supply and some alteration of sites that exist may well be necessary, however a sympathetic approach to the surrounding landscape is still possible. This can be best achieved by recognising the value of the existing tree cover and commissioning expert advice on tree care and maintenance.

An arboricultural consultant should therefore be brought in at the beginning of a golf development process to work with the team designing a new course and should remain with the project through to its completion and beyond. All too often the existing trees on site are left entirely in the care of the landscape architect. Few are qualified arborists and they rarely have the budget commitment or knowledge needed to formulate a proper long term management plan for existing trees. Without the advice of an arboricultural consultant, large scale earth moving may well change soil and water levels around trees, damage roots or cause compaction and alter drainage, all of which can condemn trees to death.

Such tree damage is still widespread in the construction industry, whether it be the building of new houses or office, commercial and infrastructure development. Despite the efforts of arborists it is well known that trees may still be a long way down the list of priorities of certain developers, it is inexcusable however that this could also sometimes be the case in the golf course development industry.

The typical scenario during the course of development is one in which the landscape architect surveys the trees themselves and draws up their own specification for maintenance and management. This will involve a single schedule of minimal works - removing dead and hazardous limbs and possibly raising the lower crowns without any further thought to future management. The specification will then go out to tender, the winning contractor being the one that submits the lowest and possibly most unrealistic quote. The Contractor may well assume some flexibility in the interpretation of the specification and may be tempted to carry out the works to the minimum requirement; with the knowledge that there is no on-site arboricultural consultant to monitor performance. The trees are then ignored throughout the remainder of the development process, with no effort being made to ensure that they are undamaged. No management plan will then exist to monitor the trees reaction to construction works, or to respond to their future health and safety.

It may be sometime after completion that the managers of the operational course are faced with the quite considerable costs of removing large dead and dying trees without damaging greens and fairways; a greenkeeper’s nightmare. The removal of such trees may well be a large scale process which totally destroys the character of the course and much of the local ecology. The sight of a considerable number of dead and dying trees on a new course could also be extremely damaging politically.

The new Wisley golf course in Surrey is an American designed course that cost £5.4 million to construct. The course was located on farmland containing large hedgerow, woodland and individual trees, many of them mature Oaks. Over a million cubic metres of soil was shifted and nine lakes were created. A high priority was attached to integrating the landscape with the surrounding countryside. Planting was extensive and most of the existing trees on site were retained, the aim being to enhance the wildlife and ecological value of the area. The course has now been open for nearly a year and already there are conspicuous groups of dead and dying trees, whilst carefully thinning and other large individual specimens which are clearly in a state of terminal decline. The general ecological and environmental motives of the developers cannot be doubted, but what must be questioned is the actual level of expertise and financial commitment devoted to the most valuable assets of the landscape. Such tree failures highlight the difficulty of integrating existing tree cover with large scale changes in relief and drainage without an enormous amount of effort, money and expertise.

An arboricultural consultant would assist in implementing any golf course development scheme whilst minimising damage to the valuable tree cover or causing long term tree problems. Just as important, however, will be the consultants recommendations concerning the long term management of the tree population. Such recommendations can save money and avoid expensive crisis management: neglected trees that are damaged by storms may require costly removal or expensive remedial works.

The same principle applies to established courses, where storm damaged neglected trees may require expensive restorative works. Such neglected trees may also require dramatic remedial surgery because they have gradually become hazardous or totally unsuitable for their location.

Trees are not static entities, but dynamic living growing organisms and as such can constantly change the golfing characteristics of each hole. The sudden realisation that a tree or trees is blocking the fairway or severely encroaching upon the green may necessitate drastic pruning or even tree removal. Any such drastic remedial action imposes a severe and sudden strain on administration budgets, but will also be a strain for the tree—possibly sending it into a state to decline. An arboricultural consultant will formulate an on-going management plan that would keep each pruning operation to the minimum and this will be achieved by schedules over a number of years, allowing the tree to adjust gradually. This is healthier for the tree and allows the golf course manager to budget for tree works more carefully, spending a smaller amount of money over a defined period of time.

Trees around greens may cause shade related problems to the greens themselves. Diseases such as Fusarium Patch will often thrive in a shaded moist environment with poor air flow. Moisture control to avoid humid surface conditions will help prevent disease attacks such as Fusarium patch. Rather than trying to cure the problem by chemical means, which will invariably produce a resistance to the treatment from the disease within the green, better long term results may be obtained by altering the surface environment. On a well wooded course with heavy tree cover around diseased greens an arboricultural consultant can best advise how to increase aeration and reduce shade and moisture. This may involve removing less valuable and suppressed trees, whilst carefully thinning and reducing the remaining specimens.

With the estimated loss of over forty million trees in recent years through storms and disease, leaving a severely reduced national tree cover, many arborists believe that we are facing a tree crisis in Britain. This has led to a move towards closer involvement with the golf leisure industry as custodians of a large percentage of national tree cover. Trees are both valuable assets to the nation and an essential part of the form and characteristic of most golf courses. The golf industry could therefore become an integral part of the national tree policy, enhancing the industry’s image as a legitimate user of rural land. This, however, requires the commitment to work closely with arborists in the design and development stage of course construction. Such involvement should lead to courses being designed to integrate with the landscape and its trees rather than impose design upon them. The involvement would also lead to a proper long term management approach to the care of golf course trees.

The author, Michael Honey, is a tree surgeon and arboricultural consultant.

The many advantages of Rootrainer planting stock are now widely appreciated. Excellent root growth, uniform quality, an extended planting season allied to the fact that beating up can be eliminated, all contribute to the high success rate and increased cost effectiveness.

As the largest producer of Rootrainer planting stock in the UK—native British trees and shrubs of British provenance—Alba Trees offer an exceptionally wide selection of hardy, Scottish grown hardwoods, conifers and shrubs backed by a service which aims to set new standards for customer satisfaction.

Please call us if you would like a copy of our Catalogue and Price List.

DAVID WHITE reports from an awards ceremony where the prize came as a total surprise to the winner.

In the typical tradition of show-business, an Oscar winner always feigns surprise when his or her name is announced as 'the winner'. We know it's all an act when they step on the stage and that secretly they have come well prepared – with a speech rehearsed and a long list of people to thank..."without whom I would not be here today'.

The sponsors of the Toro/PGA European Tour Student Greenkeeper of the Year have their own devilish method of staging a 'cliff-hanger', with a span of some eight hours covering interviews from first to last – in themselves somewhat daunting experiences and not for the faint-hearted. Still on tenterhooks and still sizing up the opposition, the thirteen candidates then are kept dangling until the witching hour, when cocktails are served at 7pm followed by a dinner of some magnitude. Sometimes one senses that candidate appetites are less than hearty – after all, in every student's mind there lurks the wish, the possibility even, that tonight I will be proclaimed 'the winner'. Such a thought can turn a healthy man-sized appetite to one the size of a canary!

Come the final crunch, results are dramatically announced in reverse order and – unlike those hardened Oscar nominees – the winner is always genuinely taken by surprise. So it was with Barry Neville, representing Oaklands College, who having learned that Tony Gooch (Cannington) and Paul Brannan (Langside) were to share the second place PGA European Tour events – all these to put the icing on their particular cake. Both are keen golfers and both will find the opportunity to work at the sharp end – where players of international repute will be battling for supremacy – an exhilarating experience that will greatly enhance their careers.

For the first time ever the sponsors made an additional award, to André Woodings (Reaseheath), an all expenses paid trip to the BIGGA Turf Management Exhibition at Harrogate in January. It was the panel's opinion that André had achieved quite remarkable results at his golf club – Rothley Park.

Though there were but three winners, the thinking behind this unique award system is that education counts – we can look now at the career progress of previous winners and see just how important the winning has been in furthering their professional status; and we can give three rousing cheers for our generous sponsors, the foresighted trio: Toro Irrigation Europe for the unique award system is that education counts – we can look now at the career progress of previous winners and see just how important the winning has been in furthering their professional status; and we can give three rousing cheers for our generous sponsors, the foresighted trio: Toro Irrigation Europe and Middle East.

Netlon Advanced Turf is a rootzone system bringing unrivalled resilience, stability, durability and health to natural grass.

The unique reinforced rootzone allows the natural turf areas to withstand far greater use than ordinary turf.

Already in use in many golf courses, Netlon Advanced Turf gives a better wearing, more attractive surface. All forms of deep aeration techniques can be virtually eliminated as Netlon Advanced Turf’s self-cultivating action ensures that the rootzone resists soil compaction and remains healthy.

Suitable for tees, greens and walkways, Netlon Advanced Turf means lower maintenance costs and greater course usage — saving money whilst generating additional revenue.

Netlon Advanced Turf — happier golfers, contented greenskeepers.

Netlon is the registered trade mark of Netlon Limited in the USA, the UK & other countries.
Netlon Advanced Turf is patented in the USA, the UK & other countries.
A ROUND THE GREEN

Keeping in touch with news and comment from the regions

SOUTH COAST
I am pleased to inform members of our December Competition. Details as follows:
Date: Wednesday 2 December 1992, Venue: Royal Winchester Golf Club. Format: 18 Holes Stableford. Timing: 9am to 12 noon. Prize: £125.00. Date: 23 November 1992. All applications and correct fee to: Mr J Burdett, 40 Church Street, Fontmell Magna, Shaftesbury, Dorset, SP7 0NY Telephone 0747 811430. My thanks to Righty Taylor and New Forest Farm Machinery Limited who are sponsoring this competition.

Following the above the section AGM will be held at 4pm. I am hoping that our national chairman will be in attendance to answer questions and outline the work of the Board. Each and every delegate must be elected each year at our AGM and I would welcome nominations. Please ensure that each nomination has the consent of the nominee and has a proposer and seconder. Resolutions and agenda items are also invited, please submit before 23 November.

If you are unable to take part in the competition you can still attend the section's Christmas Dinner which will be served at about 5:30pm. The cost will be £12.50 and your cheque should be sent to Joe at the above address.

An afternoon talk has been arranged for Wednesdays, 2 December 1993 at Came Down Golf Club, Dorchester, starting at 2pm. Mr D P Haley of Lloyds of Letchworth will be talking on Grass Care Equipment. Refreshments are being kindly provided by the company at 3:30pm. Please support this meeting with your attendance.

In the annual match against the South West Section at Wells GC in September our team managed to halve the match - yet again! Ours was a 'mixed' team of section members, one trade representative and a SW member. This was the result of members promising to play but not showing up. However, Paul Drobe, captain of our team, managed to ring around and eventually produced a team who had a very enjoyable day. Our thanks to officials at Wells GC for their help and support.

BOB DENNIS

EAST SCOTLAND
Monsoon conditions greeted us on our arrival for the Annual Autumn Tournament at Newbattle GC. A steady downpour throughout the night and day made conditions tough to say the least, but thanks to Steven Dixon and his staff we somehow managed to continue with the competition, although it is fair to say that many of us chose the warmth of the club-house instead.

Our grateful thanks - as always - go to the captain and council of Newbattle for the courtesy of the course, to the catering and bar staff for excellent service, and to Steven and his merry men for getting the course playable in the first place.

In the absence of our chairman, who was on holiday, the speeches were made by our vice chairman, Peter Orrington. May I say what a fine job he made of thanking everyone associated with making the great day it was - despite the weather. The prizes were presented by the Newbattle green chairman to the best of the field;

Many thanks to Bognor Regis GC, to Jeremy and his staff, and to the caterers for a superb meal. Roland Hughes has to deserve a mention for his sterling waiter service!

Best wishes to Mike Burrymowr on his retirement from the Newbattle GC – we hope he will continue to attend our future meetings.

MARK WILTON

SOUTH WALES
Our Autumn Meeting for the President’s Shield was held on 9 September at St Mary’s Bay GC, Bridgend. This was a new venue for the section, with the course only having been open for a few years. The course was a bit soft in some places but I’m sure we can all relate to this problem, especially with all the rain that has fallen over the month of August and beyond.

We were lucky with the weather, the rain holding off, and the results were: Presidents Shield – Ian Ellis (Rhondda GC) 69 nett (winning a carriage clock, donned by our sponsors, Frank Sutton’s, John Deere Tractors, and Raglan. Low gross- Mike Jones 81 (Carriage clock/ Frank Sutton’s). 2nd nett – Phil Swan, in countdown, 71 (rechargeable torch/ Frank Sutton’s).

A raffle was held to help swell section funds, the winners being Leslie Hallet and Dougie Donne, with prizes donated by Avoncrog Amenity Products. Congratulations to Malcolm Davies and wife Roberta on the birth of a daughter – Laura Jane, also to Michael Stokes (Dennis Archer’s deputy) and Jane, who will now have their hands full following the birth of twin boys.

Colin Reilly of Pennard has returned north-west to the Pleasanton GC near Blackburn, taking up his appointment on 6 October. I’m sure I speak for all in thanking him for his help over the past three years in assisting with seminars and lectures – even staging one at his own club. Colin’s deputy at Pennard, Peter Lacey, is now in charge and we wish them both all the best for the future.

Tony King has also moved recently, from Mountain Lakes to Virginia Park Golf and Bowls Club at Caerphilly, whilst a new member to our section, transferring from Scotland, is Robert Johnston, who has taken over at Newport GC., - Rogerstone – we wish them success.

The next competition is the Christmas meeting, followed by the AGM, at Pyle and Kenfig GC on 16 December. Please try to attend and if you cannot make the golf at least make an effort to attend the AGM – there are changes planned for 1993 and you will have only yourself to blame if you don’t know anything about them.

PHIL SWAIN

EAST ANGLIA
Our happy band of wails and strays turned up for golf at any time on a dark and dingy morning in September, including one stranger in the camp – David White – who came to sample the rustic air, which he then proceeded to pollute with his pipe. We are not complaining, however, for it made a change from certain well know fertilisers...

It seems that it is further from Essex to Norfolk than from Norfolk to Essex - perhaps it’s uphill! The Essex men were noticeable by their absence, but it was quiet without ‘HG Wills’ only kiding Dave’ and come to think of it, it was a long way for him to travel.

Well, I hope those who attended had a good day. Certainly we old ‘Eatonians’ had great fun getting the course ready - only to prove to our members what can be done when management allow us get on with it!

The Cromer Crabes came inland and cleaned up yet again - well (spit, spit) done. The prize winners were: 0-18 Roger Plumber (Cromer) 37 pts, 2nd Steve Freestore (Eaton) 34 pts 19-28 1st Piggot (Cromer) 33 pts, 2nd Steve Daivilson 31 pts. Trade – K Taylor. Prizes were donated by Pattinson, Rigby Taylor, Colliers, ICI and Haynes.

In writing of ‘the trade’, our deepest sympathies go to the family of Ken Sterns, who died recently after a long battle with cancer. Ken was a good friend and a cornerstone within our section – he will be sorely missed.

On the matter of BIGGA golf at Eaton, I do hope the aforementioned event will not be the last on our present site and that money doesn’t have the last word – to be a greenkeeper one has to be the best. Well done.

MICK LATHROPE

DEVON & CORNWALL
Our section wishes Tony King (South Wales section) a speedy recovery following his recent illness during the Iseki Final, and congratulates all members of the Regional team who battled away to finish second in the team event once again. Our best wishes also to Mike Pike for a speedy recovery following his recent operation - one which Mike had rather too long to wait.

We all look forward to seeing Mike in the near future.

Many of you have read over the last few months
articles by Jon Allbutt informing us on the legislation covering COSHH and FEPA and warning us that our local Environmental Health Officer will be armed with powers to enter premises and search for golf clubs. How many of you think that because your club hasn't been visited by an inspector over the last decade you're in the clear? We will inform you that a club in Cornwall has already been visited and has undergone a full inspection. Make sure you have made the necessary assessments and if you haven't done so yet, I believe it is too late to do so now. If you feel that the section should run a course covering assessments etc., please let me know and I will pass on your remarks.

RICHARD WHYMAN

NORTH SCOTLAND

Our Autumn Outing was held at Kingsgill GC by kind permission of their management committee. The course was in fine condition, reflecting all the hard work of the Greenkeepers. From the start of the day, Mike's first year in charge. Thanks also must go to the bar and catering staff who don't usually cater for such large parties but did so admirably.

A total of 200 golfers and spectators have present on the day with 75 golfing. The prize list was as follows. 1st Scratch – A Williamson, 74; 2nd – G Tough, 75. Class 1 (0-6) 1st-P Murphy 74-5 = 69, 2nd-M MacDonald, 76-9 = 75. Class 2 (7-12) 1st-D Sinclair 79-10 = 69, 2nd-T Harris, 79-9 = 78. Class 3 (13-18) 1st-K Wood, 97-28 = 69, 2nd-M Clark 86-16 = 72. Class 4 (19-24) 1st – A Young 106-15 = 75. 2nd-G Hammond, 79-36 = 75. Apprentice-J Stewart 82-11 = 73. Trade-R Atkinson, 91-18 = 73. Guest-N Donaldson, 76-4 = 72. The Macleather Trophy was won by A Williamson, who also won the M&M cup for veteran aggregate score. Meldrum Memorial – P Murphy, Toro Trophy – A Walker, Committee Trophy – A Murray. Best Gross drive was won by G Robbins and nearest the pin at the 15th was A MacLeod (even though he missed the two foot putt for a birdie!)

The winners of our 200 Club were as follows: May (£30) no 115 – John Muir, 34 MacDonald Road, Dornoch, June (£30) no 188 – Arthur Williamson, 38 Kingswell Terrace, Perth. July (£40) no 52 – George Geddes, 14 Meadowbank Place, Tur- riff; and August (£100) no 164 – Gordon Moir, 9 Carron Place, St Andrews. The winner of the BIGGA blazer was Abbey Walker from Stonehaven.

We welcome new members to the section – Ian Gunn, "Fairways", Inverness. John Sturrock, Dundee District Council. Derek Chisholm, Kingsgill and James Paterson, Aberdeen County Council. We certainly breed our greenkeepers tough up here, witness a story filtering through of one such stalwart in the Aberdeen area who suffered two heart attacks on a Sunday but was back at his work by Wednesday!

Finally, it was nice to see so many of our patrons at the Autumn Outing, most of them actually playing on the day. See you again next year. Thank you for your support, and hope to see you all again next outing.

North Scotland Seminar News: This month sees the second One Day Conference staged by the North Scotland section. This year it has been put together in conjunction with Dundee College of Further Education, where it will be held on Friday 20 November, 9am - 3pm. A programme has been made up of three North section members and college tutor Mr G Carr, started work on the project back in September last year and put together a programme of talks and discussions to speak on the golf and greeningkeeping world.

The morning begins with a talk by one of our sponsors, Mr S Gough from COSHH Advisory, titled "Let us Sneeze". It is a guide to operator and environmental- ly safe golf course spraying. We then have Mr N Baldwin from STRI talking on "Turfgrass Pests and Diseases - Scotland". After a coffee break Mr J Souter of Scottish Forestry Centre will give a talk on "Golf Course Construction in the North". We then have the secretary of the R&A, Mr M Bonallack with "The Bonnie and the Sophisticated Greenkeeper". Rounding off the morning will be Mr D Golding, BIGGA Education Officer, with a talk on "Education and the Master Greenkeeper Certificate". There fol- lows a question and answer session and lunch. First up after lunch is Mr P Lloyd from the Scottish PGA to give us a light hearted look into "Life on the Profes- sional Side". Mr A Murray from the IGC is next up with a talk on "Golf Course Maintenance from a Local Authority Point of View". There follows a break for coffee, and we then have Mr E Shiel, the executive consultant of the Joint Golf Course Committee, who will discuss "The Way Forward for Scotland". The day will be a very interesting. To round off the day we will have another ques- tion and answer session.

We feel this will be a very interesting day for any- one on course, or interested in the golfing/greenskeeping world. The cost for the day is £10 for BIGGA members and £12 for others. This does not include lunch which is available in the college for around £2 for three courses. Seats are limited to 170 delegates, so anyone interested in going has to have booked a place. Please contact Mr A Mclaren on 0479 3365 immediately to see if there are any spaces left.

ION MACLEOD

NORTH WALES

A note in your diaries for sections nearest neighbors a semi- nal will be held at the Welsh College of Horticulture on Wednesday 18 November when guest speakers will be D. Jones of St. Pierre, D. Green of Royal Liverpool, D. Golding BIGGA Educational Office- cer, and N. Park of Lindrick. A fee of £1 will be charged and the meeting is at 1000 sharp. If you can make the time and come and support us, I'm sure it will be an excellent and informative afternoon, the start of which is approximately 12 noon.

Many congratulations to Mr. E. Owen of Dolgellau Golf Club, who has qualified to play in Lamanga Spain in the Rover Golf Challenge. (Must keep an eye on the golf course as we still have a meeting going on).

On the education front, congratulations to ex- greener, now trade member Phil Davies of Mom- mersteege on passing the National Intermediate Diploma. He also received two I.O.G. Awards, the Frank Goddard Memorial Award for the best examination performance and the W. Bill Bowles Memorial Award for the most promising stu- dent (rather mature type). It must be possible to teach an old dog new tricks!

Anybody interested in going to the BIGGA show at Harrogate next year please contact us as soon as possible, we will organise transport from here, and have 10 places waiting.

DAVID PROCTOR

EAST MIDLANDS

The Autumn Tournament this year was held on 7 September at Willistles Park where we were pleased to have the editor of Greenkeeper International, David White, as our guest for the day.

Of the 47 competitors, few managed to overcome the blustery conditions, as was reflected by the scoring and the bluster in the clubhouse afterwards. The overall winner was Matthew Buckley, whose 74-47 was the only round to trouble the par sides. Winner were Dave Leatherland (81-9=72), Jamie Dorrell and his team. The course proved to be diffi- cult on the day, with scores well grouped, that is apart from Mark Cutler who finally won by some 8.5 shots with a final score of 103.5 for 27 holes. Second was R Pullen with 112 and third was T Dorrell with 121. The Gross Prize was won by I Toon with 121 and the Trade Prize was won by I Toon with 120. Many thanks are due for the excellent way in which we were looked after and to the many people who helped make this event a success.

On 9 December we hold our Christmas Tournament at Beau Desert GC with the closing date being 15 November. The event will combine our AGM and Christmas lunch. We hope that many more members will be able to attend. The AGM will take place late in the after- noon, following the golf, and members not playing are invited and indeed encouraged to attend.

On 1 December the BIGGA Educational Office will be holding an Annual Seminar, again to be staged at the Warwickshire Col- lege at Moretonhill. Members should have received details, complete with an accompanying letter, and may have been missed and would like to attend are urged to contact me on 0789 762912.

DEAN CLEAVER

GKNGREENKEPER INTERNATIONAL November 1992 41

Neale Venter, currently training at Gedney Hill, Lincs. Our next meeting will be the AGM Tourna- ment, to be held at Kirby Muxloe GC on Wednesday 18 November. Any member who has qualified for the golf or the meal is cordially invited to the AGM itself, which should commence around 6.30 pm.

Finally, as another year in the life of the section draws to a close, I wish to thank all of you for your support at various functions, and particularly our retiring chair- man, Colin Robinson, and his team for preparing a first class course for the tournament; and the committee of Scarborough GC for making us warmly welcome and giving us the courtesy of their course.

Don't forget to get names and deposits in for the Christmas Tournament at South Leeds GC on 9 December.

PAT MURPHY

NORTHERN

By now you all should have received a copy of our winter lecture programme for 1992/93. If you do not have a copy, or require extra copies, please give me a call.

The first aid course scheduled for 13 January seems to be attracting a lot of interest, so if plan on attending, get your name down as soon as possible. This will help me get an idea of how many are actually attending and to plan arrangements accordingly.

The Autumn Tournament took place at Scarborough South Bay GC. Unlike our Invitation Day at Northcliffe GC, when the sun shone, it was the exact opposite with rain falling until the late afternoon – just as the prizes were being presented the sun dared to show itself! David was delighted to hand out most enjoyable day, sponsored by our friends Chap- lins. Many thanks to Michael Chaplin and Bob Mitchell for their continued support to the section. I must also thank our colleague Colin Robinson and his team for preparing a first class course for the tournament; and the committee of Scarborough GC for making us warmly welcome and giving us the courtesy of their course.

Don't forget to get names and deposits in for the Christmas Tournament at South Leeds GC on 9 December.

LEARN HOW TO BECOME A PROFESSIONAL GREENKEEPER
The new GTC Training Manual is designed to support students embarking on a career in greenkeeping. It comes in personal organiser format, with a gold blocked cover and contains 120 pages.

With the backing of the golf industry, the Manual includes all the craft level skills necessary to achieve the Certificate in Golf Greenkeeping. It fully complements National Vocational Qualification/Scottish Vocational Qualification.

This comprehensive Manual is endorsed by:
- British and International Golf Greenkeepers Association
- English Golf Union
- Scottish Golf Union
- Welsh Golfing Union
- Irish Golf Greenkeepers Association
- National Association of Golf Club Secretaries
- PGA European Tour
- The Royal and Ancient Golf Club
- Sports Turf Research Institute.

For more information on Greenkeeper Training, call David Golding on 03473 640

Contact the Greenkeepers Training Committee, c/o BIGGA, Aldwark Manor, Aldwark, Aine, York YO6 2NF for an Application Form, or telephone 03473 640
Applications are invited for the position of

**HEAD GREENKEEPER**

The challenging position on this new course which has been in play for 2 years requires appropriate qualifications and experience in all aspects of modern course management.

The successful applicant must demonstrate the ability to be able to control and motivate staff and have a thorough knowledge of machinery maintenance and course budgeting.

An excellent salary will be offered to reflect the qualities required and the importance of the position.

A 3-bedroom house is also available at the Course.

Written applications including a full CV should be sent to:

The Secretary
Northampton Golf Club
Harlestone
Northampton NN7 4EF

MORE RECRUITMENT ADVERTISEMENTS ON PAGE 50
The annual match between the North West section which played twice works out at just over 6,000 winter lectures. As soon as I have completed the programme I will ensure that members receive a full fixture list covering the winter period. To start the ball rolling an interesting talk by Clive Heginbotham of ICI on 'Nutrition of Fine Turf' will take place at Runcorn GC on 25 November commencing at 7.00pm, followed by our AGM. Please make every effort to attend and support your section.

One piece of news I am very happy to report is that Anthony Davies and his family are all making a good recovery following their motoring accident. Any news, views or comment — please contact me on 051 724 5412.

SUCCUR

On 24 September the Surbiton GC hosted the Parker's Salver and despite several days of monsoon-like rainfall, Tony Witt and his crew managed to present the golf course in top class condition. The results were: 1st D Box 39 pts; 2nd W George 38 pts; 3rd R Christie 34 pts, with Brian Wilmott (32pts) completing a hat-trick of trade prize victories. Thanks to Surbiton GC for allowing us courtesy of their course, to the catering staff for their hospitality and, obviously, to the green staff for a job well done. Special thanks are also due to Ron Johnson for his continued help at golf days with scoring, score cards and the like. Don't forget to contact a committee member if you are interested in the free travel to Harrogate for the BTME coming January. The Turkey Trot and AGM will be held at Elinsham GC, 19 December. ROGER TYDEMAN

LONDON

The section's third and final summer competition was held at Waltham Abbey GC on 11 August. A field of 32 players enjoyed the golf - but not the odd cloud-burst that threatened to ruin a good afternoon. However, the rain held off and most players completed a dry round. Thanks to Peter and everyone connected with London & Hatfield for looking after us so well. The competition was well supported by our trade friends: CMW; Parkers; Staue and S&G Landscapes - our thanks to them. Results: 1st Tony Dunster (Mill Hill GC) 45 pts; 2nd Ted Dickinson (Hatfield & London) 41 pts; 3rd John Jackson (Wianstead) 38 pts.

On to 17 September and our Autumn Competition, held at Uppingham GC. A disappointing turn-out but not surprising considering how busy everyone is at this time of the year. Only 16 players enjoyed what was a good day and a clear winner emerged in the form of JimmyJoy of Aldwark Manor GC with 80 pts over 36 holes, a long way ahead of second place man Douglas Smith of Thorpe hall GC on 69 pts. Steve Paterson of Abridge GC came third with 66 pts. Our thanks to Pattissons; Sierra; Fisons; Vix; Rhone Poulence; Agrimaster and to Dennis Smith of T Parker and Sons for organising all the prizes and presenting the winning shield. Our thanks also to Pat and all at Uppingham for allowing us to play.

Our London and SE representatives at the Iseki finals were John Jackson and Norman Exley and though neither brought home any silverware they were both proud to be part of the SE team — and London, naturally.

Please contact me with any news on 081 4413216. Finally, a couple of movements around the section. Brian Moggridge leaves Mill Hill GC to take his first head greenkeeper post at Royston GC; whilst Darren Burdis takes over as deputy head at Brookmans Park GC, moving from Harlow Wood.

ANDREW PHILLIPS

north

Stockfield GC was the venue for our Autumn Tournament held on 10 September. Richard Greame, our chairman, thanked the captain and committee of Stockfield for giving us courtesy of the course and for the hospitality extended to us all, also to head greenkeeper, Tommy Harrison, and his staff for preparing the excellent conditioned course so well. Our thanks go out again to the usual donating companies: Byron Gravel Co; Shorts; Maxel construction; Fisons; Stewarts; Rigby Taylor; Thompsons and Rickerby's, with a special thanks to Abcon (Top Dressing) for their very substantial donation. The following golf clubs also provided donations: Tyneside; Alnemouth; Newcastle United; Whitley Bay; Whibburn; Beamish; Arcot Hall; Parklands; Prudhoe; Warkworth and Northumberland.

Results: Best gross A McLure 71. Best nett (Ran somes Cup) N Parkin (Hexham GC) 74-4=70. Handicap 0-11 Best nett (Greenley Cup) B Wilson (Stockfield) 77-5=72 (on countback); Handicap 12-20 Best nett (Foresters Shield) R Bell Slayley G&CC 95-19=77. Other leading scores — I Johnson (Stock field) 83-11=72. I Hutton (Conset) 77-3=74. J Richardson (Whickham) 80-5=75. I Cairns (Closehouse) 86-9+77.

Congratulations to Michael Gunn of Tyneside GC on finishing third in his category in the Iseki finals.

‘Mini-Gold’, the latest addition to the ‘Longlife’ range from ICI Professional Products, is a high nitrogen (31:0:0) mini-prill fertilizer. It can be used on all types of turf, particularly golf greens and bowling greens.

‘Mini-Gold’ is a sulphur coated urea fertilizer giving a slow release of nitrogen lasting up to 14 weeks. ‘Mini-Gold’ has the added benefits of eliminating the risk of scorch as well as reducing nitrate leaching.

The choice of application rates provides the turf manager with flexibility, making ‘Mini-Gold’ an ideal component of any turf fertilizer programme.
