WIN C50 CASH IN OUR BUYER’S GUIDE COMPETITION: TURN TO PAGE 44
WE SAY

Spring time – or stress time?

It's early April and spring is in the air. The nights are drawing out and the days of winter are but a fading memory. A time of optimism when greenkeepers sally forth with a new spring in their heels. Or is it? For many greenkeepers it's stress time once again. No sooner is the month under way than greenkeepers are confronted with their first major problem best summarised as the 'Augusta Syndrome'. As the last images of the Augusta Masters tournament fade from our TV screens the knocking brigade come into action. Suddenly the golf course which was in fine condition for the time of year only a few weeks ago is now perceived as far from that with the idyllic conditions prevailing at the Masters. Little heed of course is paid to such mundane matters as climatic conditions, maintenance budgets or greenstaff numbers. Winter is over and the course should be in mint condition.

The Chairman of the Green Committee is called into action. Surely it is time the greenkeeping staff were sorted out. It is cold, it is wet and the grass is not growing – but the Course Manager protests to much and in vain. Conditions must improve and they must improve rapidly. Yes, it's stress time. Less the reader thinks that the writer exaggerates then yet again this year reports have reached the office of greenkeepers throwing in the towel. This article is not about protecting the lazy, incompetent greenkeeper but it is a plea for a greater understanding and for a move away from the traditional 'spring madness'.

No doubt many of the problems revolve around communication and consultation and lack of knowledge on the part of members. The regular changing of golf club management does not help. Are all these problems insurmountable? I think not. Much can be achieved if the golf club adopts a positive attitude to greenkeeper training. The Course Manager's technical skills will be complemented by managerial and communication skills and he should be encouraged to keep members informed on course maintenance matters. I heard recently that one Course Manager, who for some years has been running an annual seminar for members, is now setting up workshops for 20-25 members at a time on a rolling programme basis. Certainly more and more Course Managers are benefiting from a regular dialogue with members and this is a move in the right direction and to be very much encouraged.

Where a negative situation exists in a golf club and there is a lack of communication, it is all too easy for the Course Manager to become isolated and inward-looking – both within the club and indeed from his local BIGGA section where, if approached, caring fellow greenkeepers would be available to advise and help in instances where an individual is facing particular problems. Within the club this would seem to be the time when a sympathetic employer should seek to help the Course Manager whether the problem be an agronomic or personal one. Before acting precipitately wouldn't it be better for the employer to consult and perhaps, if necessary, seek advice or guidance from BIGGA as the professional body representing their Course Manager's interests. Greenkeepers do not generally seek confrontation. They ask quite simply for consultation, consideration and understanding in carrying out a difficult job to the best of their ability and under increasingly complex rules and regulations, let alone bad weather, inadequate capital and maintenance budgets and too few staff. They do not seek to stand above criticism or deny their own foibles. However, they surely have a right to expect the employer to protect them from the distracts of those small groups of ill-informed members whose knowledge of golf course management is at best scanty and at worst non-existent. Yet how easily can such members produce a career-threatening situation for the greenkeeper.

As we move through May and June as peak playing months the pressure is really on and perhaps these two months more than any others will determine whether the Course Manager's services are terminated or indeed whether he decides that he has had enough. I would venture to suggest that such pressure and the resultant stress is in no-one's best interests. As a result Course Managers who are highly competent are lost to golf clubs and maybe to greenkeeping. The golf club then has to seek a replacement and there are no guarantees that the new Course Manager will perform better than the departing one within the resources made available to him by the greenkeepers within the club. Indeed it may not be too long before the scenario repeats itself. So it could well be that the club will reflect on the loss of a good man in the course ofquietening a few overexcited members who really needed no other antedote that a few low-scoring rounds of golf before declaring the golf course to be in the best condition they could remember.

So now it is July and hopefully for the survivors 'spring madness' is over for another year. For those who haven't made it one can only hope that there are better days ahead. Before we go full circle once again is it too much to hope that a new spirit will prevail? Is it too much to ask that clubs provide the wherewithal for greenkeepers to receive training in areas of identified weakness? Is it too much to ask that green committees show greater understanding and put their faith in their most important employee, the golf course manager, rather than interfere in matters where their knowledge is at best limited? Finally, is it too much to ask that meetings and workshops for golf club members are established to enable the Course Manager to disseminate information on the golf course – its maintenance and management? In some instances the answer may be yes on all counts but hope springs eternal and I am optimistic that a wind of change is beginning to blow. The grounds for such optimism emanate from the tremendous upsurge in the education and training programmes made available to greenkeepers in recent years and the increasing recognition within the game for the well-qualified, experienced and technically competent individual. Such individuals will be consulted and find that their advice is heeded and their maintenance programmes are sanctioned and implemented. The golfer, much to his delight, will come to appreciate the well-maintained golf course on which he can aspire to perform great deeds. All then is not lost and there must be a concerted effort on the part of golf club and greenkeeper to ensure that, in the course of time, the bad old days of 'spring madness' will become but a fading memory.

Golfing triumph for Emma, ex-BIGGA girl with ambition

There was great excitement recently in the office with the news of Emma Duggleby's triumph in the Ladies' British Amateur Championship. Many of you will recall that it is only just over a year ago that 22 year old Emma relinquished her position with BIGGA in order to pursue her golfing ambitions. Talking with her at the time, Emma was in a real quandary whether to chance her arm in the quest for golfing glory or to pursue a career with BIGGA. In deciding on the former, she must surely have exceeded her wildest ambitions when, just over a year later, she has succeeded in winning golf's most coveted ladies' amateur title. Emma was a popular, unassuming member of staff whom we were very sorry to lose. However, we keep in touch and will follow her career with interest in a future which we hope will bring Curtis Cup honours and who knows in the years ahead perhaps she will treat us to the Sightings of Nancy Lopez and Laura Davies. We all join in sending our congratulations and best wishes for the future.
BTME ’95 set to reach capacity with 81% of space already sold

With seven months to go, 81% of the stand space at next year’s BIGGA Turf Management Exhibition in Harrogate has been sold. Many of this year’s exhibitors were so impressed with the event that they have taken much larger sites in ’95. These companies include Lely UK, Ransomes, Hardi Sprayers, Sharpes International, Kings Horticulture and Sisis. New exhibitors include the Golf Course Superintendents Association of America, which will help give the seventh BTME a more international flavour.

Bill Lynch, BIGGA’s marketing manager, said: “The response has been overwhelming. More space had been taken and paid for by the end of May than we had sold by September last year. This, combined with the fact that we are restricting BTME to halls A, B and C to preserve the show’s intimacy and the fact that we’ve lost a bit of space due to new fire regulations, means some manufacturers and distributors could be disappointed unless they book their space soon.”

Britain’s premier indoor turf management show will take place on January 25-27 in Harrogate’s International Centre. For the first time, it will be preceded by BIGGA’s National Education Conference rather than workshops. The highly successful seminar programme will run as normal throughout the exhibition.

Next issue, you could win an all-expenses paid trip to BTME - watch this space.

Exhibition plan to date: Pages 42-43.

FLYING DIVOTS

- The Isles of Scilly’s one and only greenkeeper, Peter Stringer, is off work at the moment thanking his lucky stars that he was wearing steel toe-capped boots. If he wasn’t he could have lost his foot, according to doctors.

- The Sports Turf Research Institute has promoted Stuart Ormondroyd to senior turfgrass agronomist. Stuart joined the STRI in 1980 and has been specialising in golf since 1986, advising many courses in the north of England, Midlands and Ireland. He will continue with his existing duties (including lecturing) as well as assisting in the development and extension of the STRI’s advisory service.

- RPK Turfcare Supplies have appointed three new area reps. Former greenkeeper Peter Jordas will cover Surrey/Sussex, Harry Norman will handle Berkshire, Buckinghamshire and Hampshire, and Jenny Waterfield will cover East Sussex and Kent. Tel: 0734 510251.

- The British women’s amateur champion is a former BIGGA employee. Emma Duggleby, 22, worked for the Association from September 1992 to March 1993 before quitting to try to ‘make it’ in the world of golf. Nobody, probably not even Emma, expected success to come quite so soon.

Just over a year after switching from greenkeeping to golfing matters, she beat 47-year-old Cecilia Mourgue D’Algue 3&1 in the final of the British Women’s Championships at Newport.

Lucy of the draw brings prize boost

A postcard from the edge of Effingham has saved the local golf course £1,000. Head greenkeeper Peter Broadbent was one of 2,000 UK and Irish greenkeepers sent a postcard from the USA to promote an improved formulation of ICI’s Turf Mark. Greenkeepers were able to swap the card for a free sachet of the spray dye indicator, and the cards were entered into a draw for £1,000 worth of ICI Professional Products goodies. The draw was made at BIGGA’s head-quarters by executive director Neil Thomas, watched by ICI’s Roger Mossop. The winner was Peter Broadbent of Effingham Golf Course.

Luck of the draw brings prize boost

David gets six of the best

David Eager, head greenkeeper at Northern Ireland’s Blackwood Golf Course near Bangor has taken charge of six new Hayter machines — five Triple Greens Mowers (three complete with groomers and two with treaded front tyres and tees cutting heads) and a T44 five-gang ride-on mower. “Being cut off from the mainstream of the UK trade has in the past restricted Northern Ireland greenkeepers to a limited choice of mowers,” said David, “but I met Hayter at a number of trade shows and talked to their sales representative, Robin Boyes. He arranged a demonstration of their Greens Triple and T44. I liked what I saw…”

- David is pictured with greens assistant Jonathon Eager and David Johnston of Hayter dealer Cyril Johnston in Belfast.

• David gets six of the best
At OCMIS we aim to provide the best possible service to the golfing industry and to help us in this objective we are conducting a survey to determine what your irrigation maintenance and service needs are likely to be. As an incentive we are putting all completed surveys in a prize draw, first prize being a golfing holiday for two to Portugal plus a second prize of two tickets to a major golf tournament plus a further twenty runner-up prizes of Somerset Royal Brandy.

To be included in the draw please be sure to return your survey by the 1st of August.

All head greenkeepers should have recently received a survey form. If you are a head greenkeeper and have not received yours please telephone OCMIS as soon as possible.

Good luck

Picking a winner for The Open

"I wish we could play The Open here tomorrow," said Turnberry's course manager, George Brown, when we phoned him just before we went to press.

Three weeks before the big day, he was very happy with the way the course was looking. After a very dry May, Ailsa had been blessed with enough rain during the early part of June to put a smile back on 55-year-old George's face. Although he has a fully-computerised irrigation system, he says: "You can't beat the real thing."

Are your greens going to be as fast as Aoncaint, we teased him?

"Bloody hope not," was his typically honest response. He says he'll be aiming for a speed of 9.5-10. "If there's a strong wind you don't want it more than ten, otherwise they'll be there all day."

George, who backed Jose Maria Olazabal to win the US Masters this year and Ian Baker-Finch to win at Royal Birkdale in '91, reckons the conditions will suit US Open winner Ernie Els.

The rough isn't as dense as it was when The Open last visited Turnberry in 1986, and the fairways and semi roughs are more generous. "You don't have to be deadly accurate, so it will suit someone who hits it a long way but sprays it about a bit."

Greg Norman might also receive a flutter from four-handicapper George.

BIGGA's president, Viscount Whitelaw, favours Seve Ballesteros. "He has an eye for the conditions. He says he'll be aiming for a speed of 9.5-10. "If there's a strong wind you don't want it more than ten, otherwise they'll be there all day."

Picking a winner

Lockwood Grass Machinery. Thirty-five greenkeepers and golf-playing superintendents, the organisers have told BIGGA, are considering entries from Ceres Communications, 421 W Travelers Trail, Brunsville, MN55337, USA. Tel: 0101 612 8942414. Fax: 0101 612 8942423.

Parker Hart acquired by Printsphere

Parker Hart has been acquired by the investment group Printsphere which also owns Rigby Taylor Ltd. But Printsphere's group chairman, Bernard Hedley, says: "We intend that Rigby Taylor and Parkers will continue to operate independently."

The new managing director of T Parker & Sons (Turf Management), which recently bought the business of Maxwell Hart, is Jon Ryan. Mr Ryan, who worked for Parkers for 15 years during the early stages of his career, told G: "I am delighted to be working again with so many old friends and look forward to building on Parker's traditional strengths in the trade."

INTERNATIONAL OUTLOOK

Icelandic greenkeepers look towards Scotland

That well-known land of golf, Iceland, is making progress on the greenkeeping front. They are setting up the Icelandic Golf Greenkeeping Association and a second Icelandic greenkeeper, Marggeir Vilhjalmsson, has finished his year's course at Elmwood College, Cupar, Fife. The first Icelandic greenkeeping student, Olafur Agustsson, is now working at Louray Golf Club in the south-west of the country. It is one of 45 clubs affiliated to the Icelandic Golf Union, six of which have 18 holes.

A driving force behind greenkeeper improvements in the country is Hannes Porsteinsson, who played golf for Iceland as a junior and for the last seven years has been on the board of the IGU. His role during this period was to look after the junior section of the Union and he captained the junior golf team, which included Agustsson until he went to Elmwood.

Hannes became more interested in the greenkeeping aspects of the sport when he spent some time working in England. It was then that his interest in importing grass seed to Iceland first emerged. Greens there have traditionally been allowed to develop from natural grasses, but about four years ago Hannes set up seedling experiments with imported mixes and during his trip to Elmwood he learned from Carol Borthwick, greenkeeping section head, explanations of the different grass mixes being tried out on the training ground.

During the visit Hannes pointed out that people imagine Iceland to be bare and rocky, but in fact it is a very green island and he is hopeful that some of the new mixes will mean that the Icelandic courses of the future are nearer to the quality of Scottish greens.

While he was visiting Elmwood, he finalised details of Carol's forthcoming trip to Iceland, where she will be guest of honour at the inauguration ceremony of the Icelandic Golf Greenkeeping Association.

America honours 'Masters'

During last January's BTME those members who had the opportunity of meeting Terry Buchen following his Master Greenkeeper award, will recall the pride he took in joining the august company of those now titled 'Master Greenkeeper'. Terry is based at the exclusive Double Eagle club in Greater Ohio - a 7,100 yard design by Tom Weiskopf and Jay Morrish, which has only 102 members with just 35 of those being local members. Amongst the national members are Ray Floyd and Chi-Chi Rodriguez.

Writing from America, Terry has enclosed photocopies from eight magazine articles concerning his receiving the Master Greenkeeper Certificate in Harrogate. Amongst the magazines are such well-known titles as 'Golf Digest' and 'Golf World' as well as the GCSAA's own 'Golf Course Management'. High-lighted is the fact that only eight Master Greenkeeper awards have been earned worldwide.

Terry says that he has received at least 50 telephone calls from his peers and some 75 cards and letters from other people within golf. He was recently honoured with a dinner and presentation.

I have been saying for some time that the award of Master Greenkeeper status is the ultimate pinnacle for a greenkeeper and accords the recipient the highest respect from his peer group and increasingly the public. The publicity given to the award in America is another major step forward in the worldwide recognition of BIGGA and we are indeed lucky to have three outstanding ambassadors in America in Terry, Bill Montague and Bob Maibusch - Master Greenkeepers all.
He may be the mayor of Chippenham but the greenkeeper at Monkton Park still can’t insure his machinery for theft.

He’s the head greenkeeper of a nine-hole par 3 course. He’s the club pro. He’s a gliding instructor. And now he’s the town mayor.

Mel Dawson has more hats than Gertrude Shilling. One minute he’s changing the oil in his one and only ride-on mower, the next he’s off to Windsor Castle to see his local Berkshire Wiltshire Regiment amalgamate with the Gloucesters and pick up new colours from the Duke of Edinburgh.

Wearing so many hats is not a problem for this 40-year-old father of two. He and wife Barbie have been at the course for 20 years and are used to working all hours to get the job done.

“It just means getting up a bit earlier,” explained BIGGA member Mel. “If you were working 9-5, five days a week you couldn’t do it, but we have a farmer’s mentality. So far today we’ve only got half the fairways and greens cut because it’s raining. If it dries up later we’ll be out at 7pm or so finishing off. If there’s work to be done, whether it’s a Sunday, bank holiday or nine o’clock in the evening, we go out and do it. Because we’re used to working like this we can fit in other things.”

As mayor he is also chairman of the council and has to attend at least one council meeting a week. As mayor he is also the first citizen of Chippenham so he has to open everything from a hockey club to a job centre to a school’s fete. “It’s good because you meet people who work hard in Chippenham who you’d never met before,” he says. As a gliding instructor he spends most Sundays at the local club, where he has been flying for 20 years. His father was also a glider pilot and all four of his brothers are involved with aviation in some way.

As a greenkeeper, he has been looking after Monkton Park – which he promotes as ‘The South West’s Best Par 3 Course’ – for 20 years and has been a member of BIGGA for four years. Last November he took on a YTS lad, 17-year-old Robert Jenkins (also a BIGGA member), to help him maintain the course and repair clubs. Barbie also does her fair share on the course. “I had a council meeting at 3 o’clock yesterday, so she was out there shovelling sand out of the trailer because we’ve got nowhere to store it,” Mel told us.

But Barbie is mainly responsible for the snack bar and golf shop, and employs some casual labour to help her during the hectic, long summer days. Their 15 and 17-year-old daughters also lend a hand.

Satisfaction

Of all his duties, jobs and functions, it’s greenkeeping that gives Mel the most satisfaction.

“It’s the thing I take the most pride in. Any greenkeeper likes his golfers to come up to him and say, ‘The greens are looking nice today,’ or ‘The fairways are looking nice today,’ or ‘The greens are looking nice today’, or ‘The fairways are looking nice today’. It might only be 10 acres and a small golf course, but it’s still nice when members come up and pay us a compliment.

“We do take a lot of pride in it, and because we take a lot of pride in it it’s easier for me to get behind the counter and take £3 per round off people. If it’s rained for four days and I haven’t been able to do anything with it, I feel guilty when people come to the shop to pay me money.”

As you will have gathered by now, Mel is not a normal greenkeeper and Monkton Park is not a typical par 3 course. Set in 10 acres leased from the local council, it is kept to a very high standard considering the wear and tear it receives (including divots in the greens). There are 16 (a 17th is on its way) bunkers and holes which range in length from the 90-yard 9th to the 178-yard 5th. So experienced players – there are 50 club members – will have to use most irons in their bags. And it’s not easy because most of the greens are small. The largest one is the 500sq yd double 8th/9th green. The total size of all the greens is about 2,500 sq yds – easily covered with four bags of fertiliser.

The fertiliser and the topdressing has to be brought onto the course by a Land Rover and two-ton trailer because it’s in the middle of a public park and access is limited. Mel says he would like to topdress more often but because he has to have it bagged, it is too expensive. There is also the problem of how to apply it as most of the modern topdressing machinery is big and expensive.

The course, which is open 364 days of the year, 9am til dusk, used to be 14 holes all about 100 yards. Now the most obvious tees are still about 100 yards from the greens but there are also back mats on four holes for more experienced golfers, many of whom are also members of local 18-hole courses.

Mel and Barbie bought the business from Mel’s boss, Frank Hill, a former touring pro, and say, ‘The greens are looking nice today,’ or ‘The fairways are looking nice today’. It might only be 10 acres and a small golf course, but it’s still nice when members come up and pay us a compliment. just like any other normal greenkeeper.

MONKTON PARK EQUIPMENT

1 Sabo Kontinent 1200-3D, 1 Kubota G1700 ride-on mower, which doubles up as a utility vehicle, 1 Ransomes Super-certes greens mower, 1 Sisis Autoturfmann spiker, which they use about once a month, 1 Echo sprayer, 1 Echo chainsaw, 1 Optech Sprayer, 1 Cyclone fertiliser spreader, 1 old Amzone leaf sweeper, 1 Massey-Ferguson 135 tractor with gang mowers, 1 Land Rover with 2.5 tonne trailer. Irrigation is via two standpipes and 100m of hose.
The Bell's Scottish Open is only a four-day event, but the staff at Gleneagles have been preparing for it for 13 years.

Preparations began as soon as Gleneagles became a private company in 1981. Six years later it staged its first championship; now the greenkeepers at the five-star resort - all 34 of them - are set for their eighth event, with many top pros treating it as a warm-up to the Open Championship.

The Bell's Scottish Open at Gleneagles' 80-year-old King's Course has become part of the annual routine for the greenkeepers there, but it has taken a great deal of effort to get to the stage where everything appears to run smoothly.

When Gleneagles became a private company the first thing they did was refurbish the hotel and invest in a new country club facility. Current owners Guinness have added other sports facilities (such as the Jackie Stewart Shooting School and an equestrian centre), and new maintenance facilities.

As well as transforming the workshops, they also transformed the greenkeeping management structure "to ensure a top quality golf product year round".

Each of the courses (four then but the new Jack Nicklaus-designed Monarch's replaced two of them) was given a head greenkeeper, deputy head greenkeeper, other greenkeepers and apprentices. The King's Course has eight full-time and three seasonal staff.

there are eight greenkeepers on the Queen's and 15 on the Monarch's. Each course has its own machinery and maintenance facility with mess room.

"This new structure immediately created a sense of responsibility and identity amongst the estates staff plus some very healthy competition between the staff and their charges," says Jimmy Kidd, the director of turfgrass management at Glenegles Golf Developments.

While the new clubhouse, offices, golf shop and computerised golf reservations facilities
were being built, the King's Course was undergoing some fairly critical assessment to review strategy, playability, crowd movement, television cabling, tented village services, car parking etc.

An estates survey was commissioned and a grand plan with proposals and costings was presented to the managing director for approval. What they were looking for was: crowd comfort, good first and lasting impressions of the event, services such as TV and Septic tanks to be hidden, first-class car parking etc.

A conscious decision was taken at this stage also to restore the King's Course bunkers to the original Braid concept: no large waste areas designated as the tented village facility is the provision of services: water, electrics, telephone and sewers. A set of services to suit all types of village layouts was installed, and these would allow simple connections during assembly of the temporary and hospitality units. Two 36,000 ltr underground tanks were also installed.

All car park gateways were widened to accommodate the PGA's recommended principle of two cars in, one out. Boundary fences were renewed and repaired for security and to maximise gate receipts.

The Gleneagles Hotel's own gardens department, which grows 40,000 plants in a 36,000 sq ft glasshouse, was instructed to prepare the floral decor of the tented village.

Before the first competition had come and gone successfully, all the departments settled into a routine, with the greenkeepers keeping their fingers crossed each winter and spring. With Gleneagles situated in a Scottish glen, there is a risk of prolonged snow falls with relatively high air and ground temperatures increasing the risk of snow moulds. "Preventative treatments of fungicide December to March are our only defence," says Jimmy Kidd, "But do not guarantee no incidence, resulting in poor spring conditions and little recovery prior to July at this altitude."

If there has been a favourable winter and comforting spring, preparations for the tournament commence with insecticide sprays for leatherjackets and a light dressing of organic nitrogen, applied to the greens during the "false spring" in late March, to bring the grasses out of dormancy and protect what they have until next season.
real growth occurs, generally mid to late May.

No greens topdressing will take place until ground temperatures rise and there are some indications of natural growth. Once the ground temperature reaches approximately 42 degrees and occurs naturally, a consistent and regular topdressing programme is initiated to within three weeks or less of the actual event, coupled with a light verti-cutting programme every 7-10 days. Scott Fenwick, the course's head greenkeeper, says the greens receive about eight topdressings — “fortnightly depending on the weather” — starting in April and using five parts sand, one part peat. All greens approaches receive similar treatment to the greens. Generally, the greens are hollow-cored in September, verti-drained in November and spiked from February onwards.

Fairways will be verti-cut and topdressed regularly, too. Peat is added to the high ridges.

One application of a slow release granular fertiliser at the start of the season is backed up with an early summer dressing of organic nitrogen applied six to eight weeks prior to the event and, thereafter, they use an organic nitrogen liquid feed coupled with a wetting agent and trace elements.

The height of cut on all areas will be gradually reduced. The greens, for example, will come down from 5/16th over the winter to 1/4in, to 3/16 to 5/32 then down to 1/8in. The greens are cut as required over the winter, maybe once a month. Once growth starts they are cut twice a week. From about the end of April it is stepped up to three or four times a week, and during the summer it is daily. During the event they will be cut two or three times a day, depending on the speed. Greens like the 1st with severe slopes will miss a cut if they are too fast. “The idea is to get them all the same speed,” says Scott. Speeds are monitored weekly from May onwards, and daily with a fortnight to go.

The tees come down from 5/16th to 1/4in, with the cutting stepped up during the growing season from three times a week to daily the week before and during the tournament. Fairways come down from 1/2in in winter to 3/8in in the summer. In the winter they’re cut every 4-6 weeks. Once there is some growth they are cut weekly, then 2-3 times a week and from ten days out they are cut daily with a Jacobsen LF100. Divots are filled all season but the programme is increased from weekly to daily as the tournament nears. The green approaches are slightly shorter than the fairways at 3/16ths.

The rough is never cut and the semi rough varies from 1 1/4 to 2ins.

Seed head suppression of the Poa annua percentage within the sward is the greensstaffs' main concern prior to the event. They achieve this by limiting the pressure applied to the plant — as the height of cut is lowered, droughting is effected and nitrogen levels drop. A pre-tournament 'cocktail' liquid feed comprising 20 ltrs liquid Alginure, 10 ltrs Farmura Green and 5 ltrs Aqua-Gro mixed in 250 ltrs of water per acre is prepared and sprayed, both to reduce seed head production and discouraging dew on greens, tees and fairways.

The minimum amount of water is used, with the irrigation carefully monitored and any dry spots on the severely undulating greens hand-watered. Wetting agents are used monthly during the growing season.

As the competition approaches, the whole course is put under a microscope for prospective 'ground under repair' areas — the aim being not to use any white paint.

The bunkers are not only trimmed and re-sanded as required, but also 'pro-tested' which, in 1987, resulted in 22 greenskeepers working around the clock to take sand out of 110 bunkers. Now they aim for depths of 4ins of sand in the base and 2in up the faces.

The spectator crossing points and paths, which are regularly verti-drained, deweeded, sprayed and edged during the season, are given a freshen up.

A month prior to the championship, play on the King's Course is cut back to about 60 per cent and totally banned between the hours of 3 and 6pm. In the evenings it is restricted to members and hotel residents only. The course closes completely for two days only prior to the first practice round.

During the competition the King's Course greenskeepers are backed up by the staff from the Queen's and Monarch's courses. The staff arrive on site at 4.15 for a 4.30am start and work until about 8am. After play they come back at 5 or 6pm and work till 10 or 10.30pm. Greens are prepared by pedestrian mowers — Ransomes Auto-cetrs with brush attachments — each evening following play and each morning.

Green approaches are done every morning, tees and fairways each evening using lightweight ride-on units and Triplex tee mowers.

All tee and fairway divots are filled with seed and sand mix each evening after cutting, to avoid smear.

"It can be a lot of hassle leading up to it but when it's all done it's all worth it. When you see what you've produced on the TV, it's quite satisfying," says Scott, who is preparing for his fourth Bell's Scottish Open.

If you want to know, look in the Bell's Bible

All the information relating to the competition and its aftermath is kept in a 'Bell's Bible', formed by Jimmy Kidd given to all the key personnel at Gleneagles, including golf course superintendent Ross Monaghan and Scott Fenwick. The folder is divided into 31 sections, with separate sections for all the information relating to, for example, King's Course preparations, practice area preparation, wet weather systems and contacts, key contacts, floral decor, and tented village/build schedule/breakdown schedule. Everything seems to be in it, including details of tickets and pricing because golfers are just as likely to ask greensstaff how they can get a ticket and how much it will cost.

The King's Course preparation section includes a 'general tasks checklist' which includes appraising stairways, pathways, septic tanks, course furniture, spectator walkways, tees netting, bog mire, hole cups and TV compound, ordering what's necessary and putting dates down for when the work started and was completed. It also acts as a reminder to raise maintenance orders for the bridges, shelters and tee fences.

When you’re holding a major event each year, it’s easier to build up this information and these checklists. But it means nothing is overlooked or left to chance. And it means that the Bell’s doesn’t take its toll on the course or staff.
This month's article continues on the theme of National Vocational Qualifications (NVQs) and Scottish Vocational Qualifications (SVQs), looking more closely at their effects on greenkeeper training and gives more details on the autumn's supervisory and management courses.

Industry Lead Body
When the National Council for Vocational Qualifications (NCVQ) established the framework for NVQs, the number of Industry Lead Bodies was limited to those industries with more than 20,000 workers, whilst those industries with less than 20,000 workers were grouped together with related industries. Hence, the ILB for Greenkeeping is the Industry Lead Body for Amenity Horticulture.

The Greenkeepers Training Manual
The Greenkeepers Training Committee (GTC) has produced a training manual which lists all the essential skills and knowledge required by all golf greenkeepers, from apprentices to course managers, and provides a means of recording training and assessment. Hence, evidence can be collected for presentation to an approved assessor towards the award of Level 2, Level 3 and Level 4 NVQs.

Levels of NVQ
The Level 1 NVQ in Amenity Horticulture requires competence in a range of broad-based horticultural skills. This level is not thought suitable for golf greenkeepers and there is no equivalent section in the training manual.

At Level 2, successful completion of a set number of tasks will lead to the award of an NVQ in Amenity Horticulture (Greenkeeping Option). In addition, completion of a series of extra tasks will lead to the award of the GTC Certificate in Golf Greenkeeping. This level is appropriate to assistant greenkeepers.

Similarly, completion of a specified set of level 3 units leads to the award of an NVQ in Amenity Horticulture (Sportsturf Management Option) and the GTC Certificate in Golf Course Supervision. This level is appropriate to aspiring golf course managers and current head greenkeepers.

Completion of a specified set of level 4 units leads to the award of an NVQ in Amenity Horticulture (Managing Landscape Construction and Maintenance) and the GTC Certificate in Golf Course Management. This level is for aspiring estate managers.

Accredited Prior Learning
All training, including college courses, 'on the job' training, regional and section seminars, BIGGA in-house courses, National Education Conference, BTME seminars, the Master Greenkeeper Certificate and experience in prior learning, can all count towards the award of an NVQ. Approved assessors consider evidence submitted in a portfolio ie. a collection of relevant material, and decide if sufficient evidence has been presented to grant a full NVQ or a number of NVQ units. Further training, at college, at work or at any other approved centre can then provide the skills and knowledge necessary to complete a particular qualification.

Assessment
Assessment will be conducted by 'approved' assessors at 'approved' assessment centres. Initially, only colleges will be used as assessment centres. However, during 1994, the GTC will be approving a number of leading golf courses to become assessment centres. Assessment centres will have trained assessors, who may be greenkeeping tutors or leading greenkeepers. It is envisaged that Course Managers/Head Greenkeepers will be used to assist candidates to 'gather evidence' for presentation to an assessor, using the training manual as a guide.

Why NVQs?
NVQs are nationally recognised. They tell an employer what you can do not just what you know and lead to the award of a certificate by City and Guilds in England, Wales and Ireland and by SCOTVEC in Scotland. NVQs can be entered at any stage with credit being given for previous training and experience. Better trained greenkeepers means better golf courses.

Supervisory and Management Courses
Following the publication of the timetable for the 1994 Supervisory and Management Courses, concern has been shown by some members that the new courses do not take account of knowledge gained on previously attended management courses. Moreover, some members are finding it difficult to decide which week or weeks to attend. In general, the following information should help members to choose the correct week, but some members may need to contact me for individual advice.

- Year 1 of the old management courses contained little information that can be related to the new NVQ based supervisory and management courses. Therefore, those members who have completed none or only 1 week of the old style courses should attend all 4 weeks of the new courses to gain all the underpinning knowledge requirement for a level 3 NVQ. Courses can be attended over 1 to 4 years and do not have to be attended in sequence ie. delegates could attend week 1 followed by week 4, then week 2 and finally week 3 or any other sequence unless all weeks were attended in 1 year.

- Year 2 of the old management courses contained many elements that relate to the new 'Managing People' modules. Therefore, members who have completed years 1 and 2 of the old courses would be advised to complete weeks 3 and 4 of the new courses.

- Year 3 of the old courses contained many elements that relate to weeks 1 and 2 of the new courses and some limited coverage of weeks 3 and 4. Therefore, members who have completed years 1, 2 and 3 of the old courses would be advised to attend weeks 3 and/or 4 of the new. Members may need to discuss their individual needs with me.

- Members who have completed all four years of the old courses may need some training to complete the underpinning knowledge requirements of an NVQ level 3 and those members may need to discuss their individual needs with me.

Each week of the new courses will have time set aside to discuss individual needs on collecting and presenting evidence to an approved assessor.

Ken Richardson, education officer
SPECIAL INTRODUCTORY OFFER

FREE BIGGA merchandise vouchers when you buy the following Turfgrass Management books.
★ Redeem against any item in the quality BIGGA range
★ Buy a copy of each of the books below and receive £55-worth of vouchers free!

**Management of Turfgrass Diseases**
by JOSEPH M VARGAS Jr, Michigan State University.
Written by a leading international lecturer on turfgrasses and now completely revised and updated to include the latest information on maintaining a healthy turf and identifying turf diseases. Topics also include cool and warm season grasses, growing conditions and new diseases. With 72 colour photographs and over 100 illustrations in 336 information-packed pages. The essential handbook for greenkeepers. £52.50

**Golf Course Management and Construction**
An excellent introduction to the concepts of "non-point source" environmental impacts of turfgrass management. A massive 976 pages containing technical and scientific research on the environmental effects of turfgrass maintenance. In addition to golf courses, the book also discusses turfgrass systems for residential and commercial lawns and parks. £61.00

**Handbook of Integrated Pest Management for Turf and Ornamentals**
This essential reference of 576 pages provides complete coverage of integrated pest management, with special consideration to golf courses. Including siting and design considerations; design management of constructed ponds; minimising environmental impact by golf course developments; and pest management strategies for golf courses. £61.50

**Landscape Restoration Handbook**
How to develop a natural landscaping programme for turf as an alternative to intensive management. Its 640 pages discusses water quality improvement, erosion reduction, lower maintenance, chemicals reduction, plant and animal species diversity. £65.50

**ORDER FORM**
Please supply the following Turfgrass Management books from Lewis Publishers, and my free BIGGA merchandise vouchers:

- Management of Turfgrass Diseases 2nd edition (0 87371 046 9) £52.50
- Golf Course Management and Construction (0 87371 742 2) £61.00
- Handbook of Integrated Pest Management for Turf and Ornamentals (0 87371 350 8) £61.50
- Landscape Restoration Handbook (0 87371 952 2) £65.50

Post and packing: Please add £1.50 to your order.
I enclose my cheque made payable to BIGGA for £

STANDARD GOLF

WE RAISED THE STANDARD FOR GOLF

Our Professional Series Ball Washer is an improvement on the competition! Made from high grade space age plastic case and superior construction, its easy crank design and super ball cleaning action, it is able to wash up to four balls at a time. The Pro Washer can be mounted on our Tripod Ball Washer Stand, or attached to any 2-3/8" O.D. Post. Available at £120.72 each

Dimple-T Markers: plain, numbered or personalised. Rugged durability. Dimple-Ts are 5" in diameter with moulded-in, galvanised steel spikes for easy placement and removal.

- Colours available: Red, White, Blue, Yellow, Black.
- Plain: £6.22 each
- Numbered: £8.30 each
- Personalised: £8.66 each

Our Economy Rake is priced so low, you can order several for each bunker! The full-size 15" head is made from high-impact, molded plastic, and the 4' bright yellow handle is available in wood or long lasting fibreglass. NB: we no longer fit spikes as standard.

Complete rake w/ Yellow Wood Handle: £6.93 each plus VAT in packs of 12

SPECIAL OFFER
Green Ball Washer with 46" post @ £122 each

Ask for our full colour 1994 Catalogue and Price List.

Driving Mat "Divot Action" 1.5m x 1.5m guaranteed for 12 months @ £195 each (or £170 each for nine).

Ask for leasing details.

GREENKEEPER INTERNATIONAL July 1994
Having the technical expertise to produce the finest particle size in the business is one thing.

Applying that expertise particle after particle, after particle,

is an entirely unique achievement in advanced formula product production for performance consistency

The Andersons.

Uniformly the best in the business.
Enthusiasm can be measured by the queues at new golf course

Ten days after the opening of the driving range at Rudding Park, near Harrogate, North Yorkshire, golfers were queueing up to use the facilities. Managing director Mark Mackaness hopes the golf course will meet with similar enthusiasm when it opens next June.

Designed by Martin Hawtree and constructed by John Greasley Ltd, the 18-hole 6,786-yard course is set in a mature, walled parkland estate.

Rudding Estate was bought by Mark's father, John, in 1972 and the house was turned into a prestigious banqueting and conference facility. Also on the estate is a caravan and holiday cottage park.

Work began on the golf course in June 1993. By September most of the construction had been done and all the greens, tees and the six holes outside the walled estate had been seeded. The fairways and roughs inside the walls already had suitable grasses on them.

A year on, the course is shaping up nicely. John Greasley has handed over much of the maintenance and growing in to head greenkeeper Richard Hollingworth and his three assistants. Richard, 23, is the son of Graham Hollingworth, the head greenkeeper at Horsforth Golf Club, Leeds. Richard began his greenkeeping career at Moortown, Leeds, where he stayed for five years before joining Yorkshire Mowers as a rep. Six months later he was back in greenkeeping with a short stint at Outlane GC, Huddersfield, before getting his first head greenkeeper position.

When we met him on the course he was standing near an overgrown cemetery which he will also have to tend. Fortunately the chapel in Rudding House hasn't been used for anything other than weddings for 40 years.

Lovers of statistics will want to know that 120 acres of the 200-acre golf course site were seeded, 9,500 trees were planted, 400 trees were transplanted using a tree spade, 7,800 hedge plants were planted, and 20,000m of drainage pipes were laid. They have also planted thousands of aquatic plants in the three lakes and put up 100 nest boxes.

The greens are built to USGA spec and have been sown with 80% Freda, 10% Sabovil and 10% Highland.

John Greasley Ltd moved 60-70,000 cubic metres of soil during the construction, which isn't a lot by modern standards.

The most fascinating fact, we think, is that there are only seven bunkers and four of them are on the tree-lined 14th. This is because planners don't want the estate to look like a golf course - which is why they have stipulated that the rough can't be longer than 7.5cm.

This will make it a relatively easy - and enjoyable - course for the mid to high handicappers they are likely to attract to this "quality pay and play".
NEW FOR 1994

PREMIER HOLE CUTTER
- 14" blades
- Zinc plated
- Lightweight
£95.00

PEAR SHAPED TEE MARKER
- Colour impregnated solid resin tee marker, which makes it virtually indestructible
£6.90

6 D PUTTING FLAG
- Complete with an aluminium die cast base, fibreglass shaft, but now with a swivel tube flag, for numbers or club logo
£9.25

The VERSATILE Nikken
Knapsack mower/trimmer
- Mows steep banks easily & safely
- Trims bunker edges quickly & neatly
- Also performs all the duties of a normal trimmer and brushcutter
- Hedgecutting and cultivating heads also available

The unique Hover Hood gives the operator freedom and manoeuvrability to cut steep banks quickly and easily. Knapsack design gives him the freedom and balance to mow even the most difficult banks.

With the hood removed and the blade changed the machine quickly becomes an efficient edge trimmer. Knapsack design effectively removes the engine from flying sand so eliminates a major cause of wear and breakdown.

‘Golf’ and ‘the environment’ – words that are increasingly being linked.
With the Anti-Golf Group gaining worldwide publicity for its demonstrations in the Far East and now recruiting members in the UK, it’s an issue that all courses need to tackle. In this special feature we look at three courses to see what they’re doing and why.
My involvement with golf course conservation started in June 1992 when I responded on behalf of the club to an offer of a free species study to be carried out on the course. This study was part of a local initiative and the work was duly carried out by the Scottish Wildlife Trust (SWT) and paid for jointly by UK2000 and Scottish Natural Heritage (SNH).

It was during the species study that I found out that my knowledge of what was growing on the golf course was virtually non-existent. Merely walking round the course with the surveyors from the SWT I learned a great deal and I quickly became far more interested in finding out more about the local flora and fauna.

It was suggested at this point that this local initiative could be expanded into a national scheme promoting golf course conservation. This would take the form of each club in Scotland appointing a conservation officer to help the course manager draw up a wildlife management plan. The technical data necessary to produce a plan like this would come from the local Wildlife Trust or similar such body and once the plan was written it would be kept up-to-date and possibly modified by both the conservation officer and the course manager.

The honorary conservation officer at Linlithgow Golf Club at that time was George Anderson who I approached because he was already a member of the SWT. George worked very hard and collected a good proportion of the information required to draw up our management plan.

Unfortunately George retired to Southport but we were again fortunate in finding Crawford Smith who, like George, is a SWT member as well as being a member of the golf club.

So with the combined efforts of Gill Smart from the SWT, George Anderson and Karen Morrison of SNH, we have created a conservation management policy for Linlithgow Golf Club which, if carried out correctly, will serve the club for many years to come.

It is interesting to note that the SWT have gained from the experience of working closely with a golf club and some long-held preconceptions have been broken down. It was common, for example, for environmentalists to suppose that golf courses used fertilisers and chemicals in the same manner and quantity as intensive agriculture.

I have now been involved with conservation for a little over a year and this time has just been enough for me to become acquainted with the necessary expressions that are commonly used by environmental bodies. For example, a species has various forms of rarity, and although northern marsh orchids may flower in profusion in many parts of the country, this plant may be classed as locally rare if found on your golf course. If it turns out to be the case that these orchids on your golf course are the only ones in a radius of 50 miles then this can count as a source of pride for the club as a whole.

There are many other apparently simple aspects to caring for the environment that will be learned from becoming involved in conservation, but most importantly it is the fact that wildlife habitats are disappearing all over the country and golf courses are a potential haven for many apparently ‘common’ forms of wildlife.

It is my opinion that Linlithgow Golf Club is representative of many clubs in Britain and the attitude of our committee to my involvement in conservation may well be similarly representative. Initially the committee only had to grant permission for the survey to take place, but when it became apparent that the club was a potentially important wildlife site the message was one of fear of the power of environmental legislation...
Dead wood supports many species. Many of the interesting beetles, including two notable ones, were found under old beech bark at Temple Golf Club.

groups were recruited to conduct a year-long survey of the course.

The main aim of this was to provide a thorough record so that the effects of the management regime could be monitored accurately.

The volunteers from the Windsor and Maidenhead Urban Wildlife Group and the Berkshire, Buckinghamshire and Oxfordshire Naturalists Trust made more than 40 visits during 1992.

They found:

The predominant habitat, hardly surprisingly, is grassland. About 80 per cent of the 180-acre site is grassland of one type or another. Approximately 10 per cent is woodland, about 5 per cent is hedgerow and small stands of trees, and the remainder is the clubhouse, car park etc.

The grassland is over 50 per cent rough, 25 per cent semi-rough, 15 per cent fairways and about 2 per cent greens and tees. The rough is cut twice a year, in spring and late summer, with the cuttings removed to prevent the nutrient enrichment that encourages the more vigorous grasses at the expense of wildflowers. A few areas are left without any intervention. The semi-rough is cut weekly to about three cm high, but artificial watering and chemical treatment are kept to a minimum. Seaweed extract and trace minerals are used to promote growth.

They found there were three main areas of woodland: Mungden Wood is predominantly mature beech wood; Badger Wood is more varied, has a much better shrub layer with an attractive line of hazel, wayfaring trees and other shrubs; Bypass Wood is predominantly mature beechwood and litter. Clumps of trees and some large single specimens dot the course. There is also a line of trees or hedgerow round most of the course, but this has become straggly and overgrown in places. Most of the old hedge has now been coppiced and the gaps replanted with suitable native species to provide a double hedge in future years.

Few birds were spotted, reflecting the lack of suitable habitat: hedges of low conservation quality and the absence of an understorey in most of the woodland. But 22 species of butterfly were recorded, which is excellent for this part of the country. The numbers and diversity of beetles and bugs was also good.

Several rare species of fungi were found, including Coriolus hirsutus and the first recording in Berkshire of the continental form of the Hoof fungus.

Over 200 species of flowering plant, mostly perennials, were recorded. The most amazing find was the number of orchids, both the number of species and the number of actual plants. "On the basis of the orchid population alone, parts of Temple merit scheduling as a site of special scientific interest," said the report. In the long rough more than 200 green-winged orchid plants were found, including a pure white variant. More good finds were made on the edges of the woodland areas – including several species of violet, wood spurge, spurge laurel and a few primroses.

No special study was made of mammals but evidence of badgers and foxes was found, although no badgers or foxes were actually seen.

The recommendations:

Essentially more of the same. The conservationists applauded Temple's minimal use of fertiliser and irrigation because the natural vegetation is adapted to dry and quick draining conditions, so excessive irrigation would only promote unnatural species and fertiliser run-off could alter the species balance in the roughs. Weeds killer treatment should be strictly limited, and a policy of spot weeding only if necessary should be used on the fairways.

They said encouraging birds will help control turf grasses and earthworms, and that the use of persistent and highly toxic verminicides should be avoided.

When the roughs and many of the semi-roughs are cut, the cuttings should be removed to prevent nutrient enrichment that would encourage the coarser grasses and weeds. A potential problem was noticed at the edge of some fairways where cuttings were left over an area rich in orchids.

They suggested omitting the spring cutting of some roughs to avoid damaging the cowslips and green-winged orchids. They were also concerned about the damage done by machinery and buggies to the orchid rich edges of some fairways. "If the fairway along the edge of Mungden Wood could be narrowed by a metre or so and the cutting frequency decreased, the damage would be reduced. The present fairway width could be retained by extending its northern edge where the semi-rough is of less botanical interest."

A plan to leave an area of rough near the Bypass Wood uncut to allow the semi-rough to be abandoned as the lower growing grassland there is considered higher in value than the potential scrub. Twice-a-year cutting should be resumed.

They also recommended more frequent but less extensive cutting of the leg of scrubby grassland running between the edge of Bypass Wood and an established scrubby copses beneath some pylons which was cleared occasionally by the electricity company, leaving helloborines overexposed to sunlight in the first season or two after clearance. The new regime, they say, "would provide a better balance between the needs of the plants and the utility."

As for the woodland, the report warned against being "excessively tidy" as a lot of conservation value comes from the dead and dying trees and leaf litter. Grass cuttings left to rot under the trees may promote nettles rather than more varied woodland floor vegetation.

Unsuitable species in the copses, such as the turkey oak and sycamore, should be gradually eliminated and replaced with more suitable species, such as hawthorns and roses.

Some patches of nettles in full sun should be retained for butterflies. Some of each clump can be cut back in early June for tender regrowth to support second broods in July. Golfers are often more tolerant of nettles tucked away in shady places, where they will still support various invertebrates but they will not support butterflies.

Odd corners should be left unmanaged. Some rotting stumps or 'holey' trees should be left in woods near the car park and first tee for nesting marsh tits and woodpeckers.

Bird and bat boxes could be put on the buildings around the clubhouse and in Bypass Wood. But, remember, different types of boxes attract different types of birds.
GLENEAGLES

Gleneagles is cutting down nearly 200 trees - on advice from environmentalists. It's part of a plan to return the landscape to how it was when designer James Braid created the King's Course 80 years ago. Jimmy Kidd of Gleneagles Golf Developments explains what they've done and why.

At the same time as Gleneagles Golf Developments were putting together an environmental management plan for the estate and three golf courses, they were carrying out an 'historical audit' of the courses.

The objectives of the audit were:

- Identify alterations over the past 70 years, reasoning and timescale;
- Investigate possible weaknesses in the golf strategy and natural experience;
- Define current problems with regard to safety and maintenance;
- Examine the championship status and requirement;
- Propose possible improvements and alterations;
- Estimate costs;
- Indicate possible timescale for realisation of proposals.

The study of all available historical information indicated some fairly major changes in the length, par and golf strategy over the years.

It also became evident during the historical audit that vegetation had forced golf strategy alterations. Encroaching and invasive species, such as broom, whin and gorse, which is exceptionally good to look at when it's in flower, had been a serious impact upon the golf experience.

A detailed examination of each hole then took place, taking into consideration the environmental management plan for the entire 830-acre estate. As part of this plan we:

- Identified all sites of special and scientific interest - (20 sites exist);
- Set up 'control' and 'experimental' botanical monitoring quadrants to assess changes in vegetation. (There are 13 selected sites with 2 sq m control plots and 2 sq m experimental plots alongside. A botanist analyses the

When James Braid designed the King's and Queen's courses at Gleneagles, the land was covered in grass and heather. It remained that way until about 25 years ago. Then the courses were opened all year.

So what? You're probably thinking. Opening all year meant not using it for sheep and deer grazing in the winter. The sheep and deer used to nip the heads off the alien broom, whin, bracken, rowan trees and silver birches, whose seeds were probably introduced by birds.

"I look back at aerial photos from ten years ago and there's nothing there, and I look at it now and it's just an absolute mass," according to Gleneagles' Jimmy Kidd.

Research shows that as close as 1958-1968 there were no rowan trees on the golf course, very little bracken and only a little gorse and whin. But in recent years it has gone out of control, altering the strategy of many holes. The 1st hole is a prime example.

In 1921 it was a 355-yard par 5, dog-leg right to left with two bunkers on the right side of the fairway and two guarding the green on the left. It was a relatively simple opening hole with a very wide fairway. Sketches of the hole at the time show there was little or no scrub on the right side. The strategic drive, therefore, was played to the right to open up the green for the approach shot.

By 1974 there was no longer a dog-leg, the bunker count had increased from four to nine, the length had increased by just seven yards and the par had decreased from 5 to 4. Closer examination reveals much of the reasoning behind the major strategic alterations was due to the severe encroachment of invasive broom/whin, gorse, rowan and bracken on both sides of the fairway. As a direct result of the loss of the dog-leg strategy on the right side of the hole, it was deemed prudent to incorporate THREE new bunkers on the left side as most golfers now preferred that route. This in turn forced strategic changes to the right side of the green and two extra bunkers were incorporated to catch the typical shot - slightly pushed out to the right.

A comprehensive environmental plan and historical audit many years ago would have identified the problem and subsequent investment in construction and development of a new strategy would have been avoided, along with the extra daily maintenance burden of five new bunkers.

The removal of the invasive scrub, which is now being done, would have restored the original architectural concept. At Gleneagles, they now make it policy for everyone to understand James Braid's original concept. Not all of it is valid with the modern game, but only when you understand what the architect was trying to achieve on each hole can you say what is relevant today and what is outdated.

Says Mr Kidd: "You can only properly maintain a golf course if you have a perfect understanding of the architectural concept. I see too many greenkeeping errors created because the superintendent doesn't have a good understanding of a) who the architect was and b) what his concept was. Once you understand that you can make up your own mind whether you want to retain it because it's useful or discard it because it's outdated. And at least when someone asks you why you're doing something you can explain it."
variety, type, size, and quantity of plants inside the squares and compares the results with previous years. He then produces a conclusion which may indicate a slight modification of maintenance practices;

- Established future management prescriptions;
- Produced a vegetation map, identifying scrub invasion to the detriment of golf strategy and the aesthetic appeal of the courses;
- Conducted ornithological and entomological surveys to find out what we've got, what we want and what it takes to keep those species.

An essential element of our plan was the establishment of a monitoring group, comprising professionals in ecology, botany, geology, Scottish Natural Heritage, a member of the hotel staff and, most importantly, a respected member of the local community.

The monitoring group meets twice a year to assess the impact of our golf courses and estates management practices and consider future management plans and prescriptions. When these plans are formulated, it is important to communicate these to all staff, members, guests and visitors.

Awareness is probably the most important thing when it comes to golf and the environment. Firstly you have to make the greenstaff aware of what you're trying to do. In our case it was mainly why we're controlling scrub invasion (see panel). Communicating the problem to the greenstaff means they can go out and eloquently explain why we're getting rid of "those beautiful shrubs and trees" when asked by guests, members or hotel staff.

Conclusion

Awareness is the key. Awareness of what you've got on your course and how to keep it there (or not). Awareness among the greenkeeping staff of what you are trying to achieve, so they can make members and others aware of what is being done and why.

Golf courses, old and new, are becoming increasingly important as models and reminders of how beautiful and wild our countryside can be, whilst still performing a very necessary commercial leisure role.

Long established courses must make special efforts to retain their habitats and new courses have the potential to develop into beautiful and valuable wildlife areas.
BIGGA's

British greenkeepers have a friend in high places. Viscount William Whitelaw, who has been playing golf for 72 years (since he was four), knows they do a "crucial" job. Greenkeeper International's editor, Chris Boiling, went to the House of Lords to meet BIGGA's president.

I'd studied politics for five years - two at school and three at university - but the nearest I'd come to the Houses of Parliament was taking a photo of Big Ben - along with a group of Japanese tourists. Yet, after only five months with BIGGA there I was marching past the policeman at the gates to the House of Lords proclaiming: "I've got an appointment with Viscount Whitelaw".

Into the hallowed cloakroom, with pegs labelled Earl This and Lord That. "I've got an appointment with Viscount Whitelaw," I told the policewoman at the tiny reception desk. After a few minutes, the former deputy prime minister's secretary, Shirley Hoole, came to collect me and lead me through the corridors of power to the BIGGA president's small wood-panelled office, which he shares with Mrs Hoole.

After all those years of studying politics, I was now only a few feet away from a politician who was once one of the most powerful men in the country. An MP from 1955-83, he held several key offices: Leader of the House of Commons, Home Secretary, Chairman of the Conservative Party, Secretary of State for Northern Ireland, Secretary of State for Employment, and now an active and influential peer. And what did I want to talk to him about? Golf.

Other journalists who have interviewed the 76-year-old lord recently have asked about the Thatcher Years or shake-ups in the police service. Not me, I asked about his first love, golf. He welcomed the change.

Politics and the Conservative Party may have taken over his life, but golf will always be his first love.

His father, who died from his wounds in World War 1, was a good golfer and his mother was a very keen player, so it was natural that he should take up the game. Especially when you consider where he was brought up - Nairn.

Shortly after his fourth birthday he was marched off to the local pro, Jimmy Nelson, who taught him how to hit fir cones. This, claimed the old pro, was the best way to learn the swing. Viscount Whitelaw reckons it just saved the pro from having to retrieve dozens of golf balls.

Lord Whitelaw practised on the cones for
a few weeks. "If there is anything more use-
less than hitting a fir cone, I don't offer it. It
can't go anywhere. Marvellous for a tiny old
Scottish professional who sat on a stick
watching you and didn't have to go and col-
lect any balls. After three weeks I told my
mother that if I had to go on hitting cones I
would never play the game again. The next
day my mother and the pro obviously under-
stood, for he turned and said, and I can
always remember the phrase: 'I think the
boy's swing is now good enough to hit a ball.'

Therefore I was now allowed to hit a ball and
it sailed away in the air - many haven't since,
but that one did - and I never looked back.
After that I became terribly keen and have
always remembered the phrase: 'I think the
golf is now good enough to hit a ball.'

After that I became terribly keen and have
played all my life ever since."

For a short time before the World War II,
when he was at Cambridge University, he was
down to scratch. After the war he had handi-
caps of 1 and 2 "but I was never quite as good
after the war as I had been before it."

Then, when he became an MP in 1955, he
gave up playing competitively. At the moment
he plays two or three times a month at Sil-
looth-on-Solway in Cumbria. He says he would
like to play once a week but he is still busy
even though he has "retired."

"The theory is that I have retired and the
theory is that I therefore have more time for
golf, but one way or another I don't. Now
why don't I? I come to the House of Lords
quite a lot; this weekend for example I'm
going down to open a new police headquar-
ters at Bournemouth; then I have a long diary
of different meetings to do with politics and
other things near politics, other organisations
such as yours," he said as I admired the old
golfing prints and antique 4 wood hanging on
his office walls.

Do you have any plans to wind down your
activities, I wondered? "Well, yes, my wife
thinks there is," he replied with a smile. But
the evidence points the other way.

Honorary member

Recently he became president of Nairn. He is
also a member and the president of Silloth,
a member of St Andrews and an honorary
member at Penrith, Carlisle and Prestwick.
If he had a handicap now it would probably
be about 16 or 17.

"When you get old it's a very annoying
game and it's particularly annoying on
courses you used to play. I went and played
at Nairn recently. Suddenly bunkers I'd never
seen before I was taking four shots to get
over. As you get older you lose the capacity to
get the club moving fast enough. As a result
you hit it quite straight but it doesn't go any-
where. I find myself hitting a driver on a
short hole and not getting there. That's infuri-
ating, but you have to get used to it."

It's a bit different to when he played Nairn
as a teenager. Some members allege that he
has driven into the sea on the first seven
holes during different rounds. Anyone who
knows Nairn will know when it's windy it's
quite easy to do so off the first, second, fourth
and fifth. But from the third, sixth and sev-
enth it takes some doing. "Now if I turned at
the sea I wouldn't reach it," he says.

That, of course, is not the only change he
has seen during his 72 years of playing the
game.

"The standard of our greengrass and the
standard of our courses is amazingly differ-
ent," he told me. "And it is now accepted that
a greengrass is a crucial figure who has got
to be backed up."

That's why, when the Royal and Ancient
Golf Club of St Andrews asked their former
captain if he would take an interest in a new
association for greengrassers, which they were
helping to fund, back in 1987, he readily
agreed.

FAVOURITE COURSES

Viscount Whitelaw says he's
always loved St Andrews and
he's been a member there since
1937. "You can't compare it
with anything else."

His other favourite courses are
Silloth-on-Solway, Nairn,
Muirfield, Royal St Georges and
Westward Ho.

"I always believed it was very important to
improve the standing of greengrass gener-
ally, not only their knowledge and their work
but also their standing in the club and their
importance to the club. I always thought that
when you hear people say, 'The course isn't
right, we must get a new green convener',
there's absolutely no point in getting a new
green convener, what you need is a good new
greengrass if the course isn't right. The
greengrass is the man who will make it
right, and green conveners can only be there
to back their greengrass and make sure the
greengrass are getting what they want and
doing with what they've got all that has to be
done. So the standing of a greengrass has
always been something that I believed enorm-
ously important and it's a fact of recent
years that this has come out and now it's
accepted."

He credits the Association with much of the
success for elevating the status of greengrass-
ers. He states: "I believe the organisation has
been the most enormous success. All the time
I've been with them I've admired enormously
what they've done. I've admired enormously
what Neil Thomas has done and what has
been done by the greengrassers themselves
when they've become chairmen or on the
board of management. They have played a
terrific part in this. And if anyone wants a
sign of it they need look no further than the
two occasions when I have tried to see them
all. First of all, Harrogate. Harrogate's a very
remarkable advance and it is a great success -
much prized by the trade generally and good
for everybody. And then of course there is the
help that the greengrassers give at the Open
Championship, when they all come together
and are seen to help on the course. And a
marvellous job they carry out."

"Now, of course, your publication has done
a great deal of good. The more we can publi-
cise the profession, the more it will be seen
that greengrassers are vitally important peo-
ple. And if you see the jobs that are offered to
them now, much of the great difficulty in
years to come will be making sure we keep
the best of our greengrassers in this country.
A lot of them, inevitably, are being offered
jobs in Europe. And that is a real sign of how
successful this organisation has been."

Viscount Whitelaw is involved with several
charities, but BIGGA is the only professional
association to which he is attached. As presi-
dent, he is in regular contact with BIGGA's
executive director, Neil Thomas, and he tries
to meet Association members at Harrogate
and the Open.

"If you are president I believe you come
when you are asked and you don't go when
you're not asked," is his philosophy.

As far as the future of the Association goes,
he says: "I would like to see it continuing to
make sure that greengrassers are well trained
and can be really good people for our
courses. And that it will become accepted by
all courses. I would like to see all clubs using
the opportunities given by BIGGA for them to
train their staff and that all greengrass
become members of BIGGA."

After three-quarters of an hour chatting to
him about golf, greengrass and the Associ-
aton, I realised that he had a busy day of pol-
tics ahead. There were meetings with
Ministers, fellow Lords and leading figures
from industry awaiting. But there was time
for one last story which shows he certainly
did not become president of BIGGA for any politi-
cal gain.

At the last general election, while he was
canvassing in the north of Scotland, a young
man came up to him and said: "I'm very
grateful you've been so helpful to BIGGA."

Viscount Whitelaw replied: "Thank you and
I hope you will vote Conservative Party."

"Certainly not, I'm Scottish Nationalist."

GREENKEEPER INTERNATIONAL July 1994 23
THE COURSE LEADER

T93

The masterful T93 gives a superb cut with complete reliability and ease of operation. Three supreme quality cylinder heads with simple, precision height of cut adjustment, mow down to 3/32" (2.4mm) across a width of 61 1/2" (156cm).

The T93 with its 16 hp Kubota diesel is fully hydrostatic. Many parts are interchangeable and servicing and daily maintenance are simple. Features such as the adjustable seat and steering column ensure operator comfort.

CRITICISM AGAINST STRI IS UNJUSTIFIED

After reading Paul Copsey's letter in your May edition ("Advice Left Wanting"), I must take issue with many of his remarks and especially those comments based on assumption, inaccuracy and misunderstanding.

Whilst brief details were provided to produce an interesting March edition article on the reconstruction of the greens at Royal Birkdale Golf Club, I hope your readers will appreciate that as advisers/consultants, the STRI will always operate normal professional and business criteria with its clients, including that of confidentiality. I am, however, able to say that the decision to replace the old turf of Poa annua after the greens were reconstructed at Royal Birkdale was not based on economic grounds. It is, perhaps, somewhat naive to suggest that a golf club totally committed to producing the best possible standards would jeopardise the success of remedial reconstruction works for the sake of an item costing a relatively small percentage in the context of the Club's annual costs (bent).

The option to import new bent/fescue turf was fully considered but decided against in the light of previous experiences with top quality imported bent/fescue turf laid onto an improved sandy soil rootzone (such turf took several years to acclimatise during which time there was significant invasion by clumps of Poa annua). The relaid turf at Royal Birkdale (which was cut at 18mm thickness) contained no organic mineral soil — the turf comprised of some thatch layers with sand (the latter material originating from several years of past top dressings with pure sand). Mr Copsey's assumption that the relaid turf was inappropriate as it must have contained in part the "undesirable soil" is wrong. Could I also say that in making his criticism of the re-use of the predominately Poa turf, Mr Copsey appears to substantiate his position by purporting to quote from my remarks in the March edition article about Birkdale. He misquotes!

The articles in your March and April editions do not demonstrate inconsistency of agronomic advice from the STRI. Each article was quite different in its concept and purpose, viz: an article about green reconstruction in unique and specific circumstances in contrast to Mike Canaway's article on part of a short-term research project. Whilst Mike Canaway's article properly points out some of the possible dangers associated with returfing sandy rootzones (substantiated with facts and figures), potential dangers associated with turfing works had been well appreciated by STRI advisers for some considerable time, as well as many greenkeepers and other in our industry. Similarly, the possible merits of washed turf have long been understood but as yet this avenue of establishment has not been pursued in this country for maybe several reasons, including commercial ones.

I agree with Mr Copsey's comments that in all areas of performance and services out-perform Poa any day. However, I do not think that one should ignore the fact that Poa annua is a ubiquitous species which is found in most golf greens in varying degrees. Of course, if greenkeepers can apply good management to sites where architectural, constructional make-up and environmental factors are favourable towards bent and fescue development, then Poa annua content can be minimised. Nevertheless, at many clubs it is clear that without Poa annua there quite simply would not be golf greens. Yes, thatch, stagnant, disease-prone bogs of Poa annua is the nightmare scenario for any greenkeeper, but there are many courses (including Championship courses) which will have varying but often significant amounts of Poa annua (usually with some bent), and whose greenkeeping staff proudly present such greens as very good playing surfaces throughout most of the year (and where members are very happy).

I trust my response will be seen as being mainly explanatory in nature, although I suspect that in some quarters with a blinkered outlook it will be seen as a purely defensive reply.

J. Perris, assistant director (advisory services), STRI, Bingley

WHY WE MUST BUILD ON 'THE WAY FORWARD'

May I make a comment on "Looking Back to The Way Forward" (GI May '94) and congratulate Michael Bonallack for the clear description of the R&A's role in golf, probably not well understood by many.

"The Way Forward" surely exceeded the expectations of the authors and its publishers in the impact it made. Accepting that, it had a slow start, partly because of the reticence in introducing it with much publicity, and partly because the greater part of the audience to whom it was addressed, ie those in influential positions in members' golf clubs, didn't think there was anything wrong in their current methods. But those who did take it seriously and took some action found much support and enthusiasm. Some, not many, clubs and the Home Unions, especially the English Golf Union, have really moved with their seminars up and down the country.

But I sense that the momentum has slowed and this is the reason why thoughts were expressed at the BTME workshops which attended the update of "The Way Forward" would be timely. We still hear too often of large greens committees meeting frequently and the head greenkeeper taking instructions from a chairman who knows all about the technical problems - surrogate greenkeepers they call them. And then, if things go wrong, who is blamed?

The R&A is respected throughout the golfing world and any report or recommendation emanating from St Andrews is listened to and trusted. I believe "The Way Forward" was a success and I would like to see further advance on that success. Some sort of review of where we are now and what future is indicated would be relevant and very influential.

I am glad that BIGGA has stirred up this subject and hope the organisation will keep the discussion going; but we must also get Golf Club Management involved.

Arthur King, Lymington

But this took nothing away from what was a highly enjoyable day both socially and competitively, with 58 people taking part. Any club that allows that number of courseovers each afternoon is of an extremely generous nature and our thanks are extended to Bob Clarke, the new admits of the Old Course, for his kindness. Thanks also go to the greensstaff and the caterers.

The day’s results are as follows: 1, C Tozer and M Savage 38 points; 2, R and T Greaves 37 points; 3, M Haring and P Hampton 36 points (won on back 9); 4, P Baynton and G Dacombe 36 points, 5, K Green and G Patterson 35 points (bow 9); 6, J Taylor and S Mulraney 35 points.

As of May 25, there are now 249 members in the South West section. The next opportunity to meet some of them will be at the Summer Tournament, Filton GC, July 27. If your application has not already been sent, please contact me immediately to secure a tee time.

KEVIN GREEN

DEVON AND CORNWALL

Not a lot to report this month as we are all cutting grass like mad. I would like to remind you that your views on the Association’s review are now due. If you haven’t put pen to paper yet, please do so today or call me so I can forward your suggestions to HQ who need your input so we can continue our progress.

I am nearing completion of next season’s fixture card which will be winging its way to you soon. Our thanks once again to Devon Garden Machinery who have kindly sponsored the fixture card again.

RICHARD WHYMAN

NORTH SCOTLAND

It’s finally happened! A section outing with glorious weather. Eighty-four golfers played in the Spring Outing at Forres with another nine members present for the day. Shirt sleeves were the order of the day, and those that benefited most were: scratch – 1, Alan Denpster, Strathlene 75bih; 2, George Patterson, Forres 75 points; class one – 1, Kevin Peace, Inverurie 70bih; 2, George Mitchell, Royal Aberdeen 70; 3, John Taylor, Forres 73bih; class two – 1, Gordon Mickie, Tain 65; 2, Sam Morrison, Royal Aberdeen 68bih; 3, Colin Mackay, Cruden Bay 68; class three – 1, Colin Burgess, Forres 71bih; 2, Bruce Forsyth, Peterhead 71; 3, John Geddes, Ellon 72; veteran – 1, Tom Simpson, Roydon 77; 2, Archie Watson, Dornoch 77; 3, Stuart Harkness, Nairn Dunbar 77; apprentice – 1, John Milne, Elgin 71; 2, Mark Ross, Elgin 72; Trade Shield – Tom Brannan, Sutors 71bih; and guest – R Bruce, Aboyne 71.

Off the course winners were Colin Burgess, Forres, who won the free draw for a BIGGA blazer, and 200 Club winners: January £80 – John Uechtrath, Mansfield Estate, Tain; February £30 – Gordon Fraser, Sutherland; March £40 – James Whyte, St Combs, Fraserburgh; April £100 – Linda Harkiss, Craig Cress, Tain. Three winners from Tain and still I miss out! We thank everyone at Forres for a great day, especially Charlie Mackay and his staff, the course was excellent.

I have more new members to welcome: Martin Cameron, head greenskeeper Buckpool; Richard Hendry, assistant at Forres; Mark Cordell, assistant at Moray; Scott Mackenzie, apprentice Royal Aberdeen and Paul Conway, apprentice at Caird Park, Dundee.

Gordon Fraser is leaving Tain to become an assistant at Wentworth, whilst also on the move is Alan Strachan who has left Royal Dornoch to become assistant links superintendent at Carnoustie. Moving up is Michael Clark, who has taken over the head job at Kingsussie, vacated by Mike Wilson who has moved to Fraserburgh.

Despite the horrendous winter, both Nairn and Nairn Dunbar were in super condition for the recent Amateur Championships. Hopefully, more major competitions will be held in the section in the near future, we certainly have many fine courses and the travelling is much easier than before.

Work is under way on extending Invergordon GC from nine to 18 holes. The job, being done by local firm Morrisons, will take under two years with opening scheduled for summer ’96.

IAIN MACLEOD

AYRSHIRE

The Ayrshire representatives in the Scottish finals of the Hayter Challenge made a good run at the prizes, with Ian McNab and Steven Knaggs qualifying, and myself a first reserve. The team was second, despite being two men short, but made up for that by outlasting even the East section hardies in the evening. Our thanks to Hayter and to Duddingston GC for an excellent day out.

Gordon Heran at Brunston Castle tells me his greenskeeping sheds are going up now after two years of next weeks that never came. Even though the receivers are in, they have allowed Gordon to build 15 tees and go forward from the championship tees to allow for more enjoyable golf for the higher handicap. Hopefully a buyer will be found shortly to enable this project to fulfil its potential.

Further to last month’s report on the babies being waited for at the spring outing, Bob McKay, Paul Gordon and Jock McLauchlan are proud fathers of Heather, Jodie and Jenna respectively. Best wishes to them all.

DUNCAN GRAY

SURREY

A date has now been set for our Surrey section dinner dance. It will be held at Reigate Manor Hotel on Friday, November 11. We have organised our own function room and tickets will be available from committee members at a price of £18 per head, which includes a three-course meal and a disco until 1am. Accommodation is being looked into at present for those of you wishing to stay overnight.

The first winter lecture has now been organised and will be given by Bill Oliver of Hardi Sprayers on Wednesday November 9. Venue will be announced later.
coming events include the McMillan Tankard at Sunningdale on August 11 and the Parkers Salver at Purley Downs GC on September 21.

DAVID GIBBS

NORTH WEST

Trying to find a venue for the Spring Tournament each year is far more of a problem than any other tournament. The reason is, and it’s understandable, the greenkeeper wants his course at its best, and he would prefer to stage a tournament later in the year, when there is some growth.

One greenkeeper who took a chance and gave me the OK was Chris Hulme, course manager at Sale GC, and I am sure he must have been regretting his decision at times. No need to have worried, Chris, your course was a credit to you and your staff, with greens that could not be faulted and the course was presented to perfection. Many thanks go to Sale GC for allowing the courtesy of the course, to the greenkeeping staff for all their hard work, to Graham Barber, the caterer, for a lovely meal, and to the following companies for supporting this first-time event: prizewinners: Fletcher Stewarts, Richard Campney, Burrows, and Groundcare.

The winners were: best nett – James Hutchinson; best gross – Paul Pearse; over-55 – Bert Cross; guests – Ian Vernon, Sale captain. The qualifiers for the Hayter Regional Final are: cat 1 – C Leeming, P Pearse, S Moon; cat 2 – C Hulme, P Simpson, B Cross; cat 3 – J Hutchinson, A Holt, A Davies.

The Regional Final will be at Worsley GC on July 20. The next section golf is the summer meeting on Monday July 25 at Stockport GC. Soup and sandwiches between 12 and 1pm and tee off from 1.30pm. Applications to Paul Pearse, 1 Swan Close, Poynton, Stockport SK12 1HX, enclosing £10 deposit by July 18.

I still require a team for the Roses match at Mottram Hall on Wednesday August 10, and also for the stewards match at Fishwick GC on Monday September 5. Both of these matches are sponsored with no cost to the competitor. If you are available, please ring me on 051 7245412.

The Autumn Tournament is at Royal Birkdale on Monday September 12, and we have split tee times – 10.30am-12noon and 1.30-3pm. Your applications for this tournament have to be in by Monday August 15 with your preference for am or pm, and your deposit of £10 (apply to Paul Pearse). The tee-off times must be strictly adhered to.

Congratulations go to Bob Janovksis who has become a grandfather for the first time. His daughter gave birth to a son, Robert Michael, a few days before the spring tournament, and Bob kindly donated a bottle of ‘fire water’ for the prize table because, he said, it would be complicated to treat everybody to a drink.

See you at the Open!

BERT CROSS

NORTH WALES

This month our congratulations go to the Royal St Davids GC, Harlech, who are celebrating their centenary, and a distinguished 100 years it has been. Our best wishes also go to Justin Cheung, deputy head greenkeeper at Eaton GC, Waverton, and we hope he has a ‘speedy’ recovery from his recent car accident, the moral being, Justin, that if you were still at Carden, you wouldn’t have had time for any accidents.

Northop Country Park also deserve our best wishes on their opening. I am sure we all look forward to playing what looks like a delightful layout.

There is a paucity of news this month, perhaps you are all too busy or maybe we all lead boring lives. Whichever, without your views (good, bad or indifferent) journalistic artistry becomes a nightmare so please contact me with any info regardless of how small.

Lastly, are any members interested in taking part in social events, eg bowls, fishing etc? If so, contact me on any of the following numbers: 02447 676022 (home); 0829 250556 (office); 0374 685879 (mobile).

ANDY CAMPBELL

WEST SCOTLAND

Sixty-eight greenkeepers and trade members attended the ever-popular first outing of the year, at Dougalston GC. Unfortunately, the weather was not very kind and credit must go to Sandy Young and his staff for getting the course ready for play. Close inspection of the following scores may indicate that more than one ball was lost.

Scratch – R Bunting 81 (b); cat 1 – D McLoren, Cathcart Castle, 81-6=75; 2, J Steadward, Douglas Park 89-9=80 (b); 3, D Gaul, Cordross, 89-9=80; cat 2 – D Montgomery, Cawder 86-11=75 (b); 2, J Mathew, Dougalston, 91-16=75; 3, J Young, Dougalston, 95-17=78; cat 3 – 1, S Murray, Douglas Park, 101-21=80; 2, A Young, Dougalston, 106-22=84; 3, AJ Young, Cawder, 109-24=85. All the above have qualified for the Hayter Challenge.

Donald Ferguson, first assistant at Cowglen GC, has taken early retirement due to ill health after 13 years of service with the club. His daughter gave birth to a son, Robert Donald, a few days before the spring tournament, and Bob kindly donated a bottle of ‘fire water’ for the prize table because, he said, it would be complicated to treat everybody to a drink.

see you at the Open!

BERT CROSS

SOUTH WALES

Our annual Greenkeepers v Golf Club Secretaries match at the Southdown Golf Club was marred by the fact that 16 greenkeepers failed to turn up for what is normally a well-supported fixture.

After personally contacting each team member a few days before the event, I confirmed with the organiser that we, the greenkeepers, would have a team of 26 – 13 pairs. By far our largest team for a number of years.

Well, on the morning in question, 10 people turned up. Enough for only five team matches. Thank you lads! Not only did you lose to us, the greenkeepers, in a bad light, you made me as your organiser look a right fool.

However, I would like to thank those who did make the effort to turn up, especially as we were victorious by three games to two and therefore retain the shield. Winning pairs were: Steve Mills/Mike Norfolk 5+4; Chris Thomas/Gervyn Price 3+2; Idwal Morris/Daryl Jones 4+3, Both P Lacey/S Price and JB Jones/L Walter lost on the 18th.

I thank the Golf Club Secretaries, who were prepared to accept the result on the five matches that took place, especially Fred Crossman and Digby Lloyd for their splendid organisation. I’d also like to thank Keith Wilcox and all at Southerndown GC for their hospitality and Jan Williams and the catering staff for what can only be described as the largest gammon steak I have ever had the pleasure of eating.

Good luck to Philip Huw Thomas of Pontardawe GC who is representing our section in this year’s ICI Master Greenkeeper of the Year Award.

PETER LACEY

EAST MIDLANDS

This month we welcome the following members to our section: Robert Myatt of Brampton Heath Golf Centre, Ian Needham of Beedles Lake GC, Graham Gilson of Market Harborough GC and Justin Aley of Stoke Rochford GC.

Here are the results of our singles and pairs KO tournaments. In the singles round 1st D Cooper (Rothley Park) lost 4&2 to J Bedford (Birstall), and G Miller (Ulle Rushmore) lost 3&1 to D Leatherland (Kedleston Park). In the first round of the pairs KO, A Bindley and M Hopkins (Kirby Muxloe) beat G Robson and A Mcgreal (Lingdale) 6&5, whilst D James and C James (Wollaton Park) beat S Swann and M Smith (Ramsdale Park) 2&1. Second round matches must be played by July 15.

Finally, we hope to circulate a list of all section members telephone numbers to members who would like a list. If, however, any member wishes their number to be omitted, please inform me as soon as possible.

ANTONY BINDLEY

contact Bob Cully, the tournament organiser, early as entries will be on a first come first served basis. Bob will need names, handicaps and a cheque for both members and guests. Entries should be sent to Bob Cully, 63 Upper St Helens Road, Hedge End, Southampton SO30 0LS. Tel: 04497 782976.

ALAN MITCHELL
Around the Green

MID ANGLIA
This month sees the regional final of the Hayter Challenge at Birstall Golf Club, Leicester. Good luck to all the finalists and let's hope we can retain the team trophy we won last year. The reward for qualifying for the national final is a trip to Pannal Golf Club, Harrogate, on September 22.

The Lodgeway fourball competition is well under way and I would remind all participants that they have until the end of this month to complete all their league matches.

The Summer Tournament at Brampton Golf Course on July 26 will be a stableford competition. The Autumn Tournament is confirmed for October 12 at Mentmore Golf Club and this will be followed by the AGM.

The Christmas Texas Scramble will be held at the Family Golf Centre on Thursday December 8.

Good luck to two members who have recently taken up new positions: Don Pemerton, who is moving from Brocket Hall to a new course at Pavenham as course manager and Jon Moorhouse, who has been promoted to deputy course manager at Brocket Hall.

Finally, Ronan McKeeown from Arkely Golf Club will join me in representing the Mid Anglia section on the regional board.

PAUL LOCKETT

MIDLANDS

Hospitality is a feature of the Bude and North Cornwall Golf Club. With perfect weather the South West and South Wales Regional Final of the Hayter Challenge went without a hitch, and was certainly a day to remember.

Our thanks must go to Richard Whyman and his greenstaff for the excellent presentation of the course. In spite of all the ribbing, he did a grand job. Thanks also go to all the catering staff for looking after us, and the club captain, Derek Davey, who made us most welcome. Most of all the Hayter "boys" who made it all possible.

Category 1-1, Robert Barrett, nett 69; 2 Paul Godwin, 71; 3, Cary Rawlings, 72; reserve, Mike Jones, 72;
Category Mug - E West; Category 2 - 1, Robin Greaves, 69, 69; 2, J Cooper, 70; 3, C Thomas; reserve, D Gladwin, 71;
Category Mug - P Ferragut;
Category 3 – 1, P Legg, 68; 2, S Milne, 69; 3, P Saviour, 71; reserve, J Chidley, 74; Category Mug – S Sage.

The winning section for the Regional Shield is the South West section.

What makes RPK Turfcare Supplies different from other well known golf course supplies?

RPK's attention to detail enables us to look more carefully at your turfcare needs. This detail helps to get it right first time.

Richard's round of 150 holes for charity

BIGGA board member Richard Barker played 150 holes in one day and raised more than £600 for charity. The head greenkeeper from Kirby Muxloe, Leicester, took on the challenge in aid of charities supported by the captain and lady captain of Longcliffe Golf Club, where he is a four-handicap member.

Teeing off at 4.40am, Richard completed 150 holes by 9.10pm stopping only for an hour’s lunch and 30 minutes for tea. His fastest round was 1hr 32mins; later in the day he was taking 2hrs 5mins. Scores between 74 and 82 for the 6439-yard par 72 course nearly completed. Once six members at present, with the course managers.

London golfers seek help with French course

Two young London golfers have gone to France to open an 18-hole par 3 course. Nestled in the heart of Finistere in Brittany, the Golf de Pont Pierre course is a dream come true for BIGGA associate members Manley Mason and Gary Chisholm. They have long wanted to run a course “where beginners are welcome to come and learn the etiquette and basic techniques all golfers should possess, and where experienced players can perfect their shots.” They have six members at present, with the course nearly completed. Once they have purchased some adjacent land, they hope to create a 27-hole complex which will one day “provide the Ryder Cup team with a Frenchman!”

In the meantime they’re looking for a student greenkeeper to help them this summer. Write to: Golf De Pont Pierre, 29246 Poullaouen, Brittany, France.

Training Manual sets career path for greenkeepers

The Greenkeepers Training Committee working group met at St Andrews recently to put the final touches to the Greenkeepers Training Manual. The Manual has three main sections: craft, supervisory, and management (or in N/SVQ speak, levels 2, 3 and 4). There are, however, additional mandatory units in conservation management and an optional section including greenkeeper/mechanic tasks, chainsaw operations and advanced first aid.

The Training Manual acts as a trainee’s record of achievement and also evidence towards the new National/Scottish Vocational Qualifications.

The craft and supervisory sections have been available for a short while. The management manual has only just become available - thanks to the efforts of the working group which was set up three years ago. This group comprises BIGGA chairman John Millen, BIGGA education chairman Huw Parry, Elmwood College greenkeeping tutor Carol Borthwick, Reaseheath College greenkeeping tutor Dennis Mortram, Askham Bryan College greenkeeping tutor Nick Bisset and GTC education director David Golding.

“No praise is high enough for the work of this working group,” said David, “it has been determined to set out in black and white a career path for future generations of greenkeepers and course managers.”

The Manual will soon also be available in French, German and Spanish, with funding for this coming from the PGA European Tour.

The working party has also been developing an employer’s guide to greenkeeper qualifications.

Wordy winner

RPK Turfcare Supplies had a tremendous response to their recent ‘Wordsearch’ competition. Jamie Bennett, RPK’s sales manager, said: “We were looking for a novel way to let our customers know about the many products we offer and with 118 words to find it was certainly no pushover.”

The first correct entry was received within 48 hours and was sent by Alec Bradshaw, course manager of Malden GC in Surrey. For his effort, Alec collected a £500 credit to spend over the next 12 months. Alec (right) is pictured with Jamie at his club.

Flying divots

Paul Harley, formerly the head greenkeeper at Pachesham Golf Centre, has taken charge at 18-hole Crewe GC following the retirement of Ron Fimmer.

British Seed Houses has published the first edition of a new Wild Flora manual for the landscaping industry. The 48-page illustrated manual sets out the basic ground rules for successful establishment and maintenance of wild flora areas. It provides a practical, technical guide for greenkeepers who want advice on seed source and mixture specification, site and mixture selection, ground preparation and establishment techniques. Copies are available from British Seed Houses Ltd, Portview Road, Avonmouth, Bristol. Avon BS11 9JH. Price is £4.95.

Silvermere Golf Club, Surrey, now has two of the “most inspiring” closing holes in the country, says architect Martin Gillett. Martin was asked to remodel the fairway to eliminate a blind drive and a spectacular finishing green has been built to give a shot over water to a bulkheaded green.

The Brentwood-based architect has also redesigned the 18th at Redbourn GC, Hertfordshire. The green is now in front of the new clubhouse following an upgrade of the range building and a new target range.

Members will be saddened to learn of the passing of Ivor Scoones’ wife, Ann, following a long illness bravely borne. During Ann’s illness, Ivor continued with his Board of Management and Regional Board duties and indeed was chairman of the Association during 1959. Often under considerable strain, Ivor carried on both his professional and voluntary duties with great fortitude whilst at the same time giving Ann his constant and total support. The Association remains indebted to Ivor for his efforts on BIGGA’s behalf particularly during recent years when Ann fell ill. We send our deepest sympathy to Ivor and his family at this sad time.
Greenkeepers urged to think now about pension provision

Planning for retirement starts on your first day in work. That sounds extreme but it is true for the most crucial aspect of your financial planning – your pension. After life assurance protection for your dependants, your pension is the single most important item in planning for retirement. It forms the foundation and several courses of the brickwork for that time of your life when you decide to stop working. It has to be built to the very best standards your resources allow. But, as with any finished construction, the foundations are just the start. It is the quality of the fixtures and fittings that can determine a building's value. Equally, it is additional planning on top of your state pension that decide whether your retirement years are comfortable or just adequate.

The earlier you discuss retirement planning with your Independent Financial Adviser – IFA for short – the better.

What does the State provide?
In short – not very much. Provided you have a complete National Insurance contribution record there is a basic pension of £57.60 per week for a single person and £92.10 per week for a married couple. There may be an additional pension payable from the State Earnings Related Pension Scheme (SERPS) but this has a maximum for high earners of £74.60 per week and will probably be very much less. Anyway, most young people will take the opportunity to contract out of SERPS and increase their private pension instead.

Some employees will have joined a company scheme where the employer will pay a fixed amount or a percentage of salary. With this type of scheme the employee can pay personal contributions up to a maximum of 15% of salary but is disbarred from effecting a personal pension unless it is used solely to collect monies received from contracting out of SERPS. The majority of employees will not be invited to join a company scheme and so have to make their own arrangements either with or without the help of their employer. For this group the only logical choice is to effect a personal pension.

How do personal pensions work?
A personal pension plan works in two stages. Up to the time of your retirement the amounts paid in by you and by your employer are invested. Whoever is investing the money will try to earn the best return they can with the money. When you get to retirement, the proceeds of the investment must be used to buy you a pension from an insurance company. This does not need to be the same insurance company that you saved with. Your IFA will help you select the best available under the Open Market Option. There may also be a lump sum available at your retirement – normally 25% of the fund.

How much can I pay in?
The maximum amount you can pay into a personal pension depends on your age at the beginning of the tax-year. If you are aged 35 or under you can pay up to 17.5% of your earnings rising in bands to 40% for those aged between 61 and 74.

What is this tax relief I’ve heard about?
In order to encourage you to save towards your pension the government allow you tax relief at the highest rate of tax you pay. For example, a standard rate taxpayer pays £25 from the government minus a total of £100. A higher rate taxpayer paying the same receives £25 from the government plus an extra £15 per month increase in take-home pay after adjustment to his tax code. It therefore costs a higher rate taxpayer £60 to invest the same £100.

In addition your money is invested in a tax free fund that increases the growth potential.

How do I choose the right pension provider?
With care! There are over a hundred pension providers willing to accept your money. Some have performed well over the years – some have not. This is where your IFA is able to provide specialist advice.

Why an independent financial adviser?
Advisers on life assurance, personal pensions and unit trust products are of two types. Either, representatives of a particular company, or independent.

Both types of adviser should only recommend life assurance, personal pensions or unit trust products if they consider such a product is suitable to your needs.

An independent will act on your behalf in recommending a product picked from the ranges of all companies that make up the market place.

Does it cost me anything to obtain independent advice?
Not directly – your IFA is paid by commission that comes out of the normal charges applied by the insurance company.

How do I get in touch with an IFA?
Contact BIGGA who has made arrangements for a panel of IFAs to provide members with impartial advice. Complete and return the coupon on Page 30 or phone for advice on 0347 838581.
In 1888 there was just a small party of undergraduates playing golf at St Enodoc. By 1988 there were thousands trampling over the pretty little Cornish course. This year there are even more. Chris Boiling talked to Stuart Dymond about compaction and other problems.

With all eyes on Turnberry this month, it's not easy thinking of an introduction to an article on a links course at the other end of the country, in Cornwall.

I could write: "Everybody has heard of St Enodoc but not nearly everybody who ought to has been there. It represents a gap in the golfing education of far too many golfers. Personally, I had first heard of it 40 years prior to my first visit. When I did go, not only did the course fully live up to all the exciting things I had heard about but I realised that it was a very simple matter to get there, for Rock is only a few miles from Wadebridge.

"St Enodoc unvisited had always been portrayed to me in much the same terms. The golf had been described as eminently natural, amusing and dramatic in a country of glorious and terrific sand hills. All this proved to be perfectly true and yet when I saw it I felt that full justice had not been done."

Aeration/decompaction: what the scientists say

by WA Adams of the University of Wales and RJ Gibbs of the New Zealand Turf Culture Institute

The most frequent need on golf greens is to improve (or restore) water infiltration and air entry into the rootzone. This does not require decompaction and can be achieved by physical penetration of the surface with solid tines which may be flat or round. Frequency of operation should be determined solely on need. In the growing season spiking should be required once per month or less often. A higher frequency is likely to be needed on golf greens from autumn to spring when rainfall is in excess of evapotranspiration. The depth of penetration required may be shallow (less than 40mm) but this will depend upon the nature of the rootzone.

Hollow tine coring is the most widely used technique to improve aeration and relieve compaction in the top 100mm of rootzones. On intensively used golf courses, treatment in autumn and spring may be necessary. On less intensively used golf greens annual treatment in autumn (with one or two passes) will suffice. Too frequent use results in a soft surface. An operation to relieve compaction below 100mm should not be needed on an annual basis. Indeed if it is there is an underlying problem which should be identified and rectified.

Compaction problems are relatively minor on fairways except on restricted thoroughfares which may require special attention. Routine aeration maintenance using a slit tine spiker is normally confined to the period between late October and April. The purpose is to penetrate a surface which has become sealed. Decompaction at a depth exceeding 100mm is rarely necessary but, when it is, a moderate amount of surface disturbance can be tolerated so that minimo ploughing is practicable.

This extract is taken from a recently published book, Natural Turf for Sport and Amenity: Science and Practice. The book covers general principles and how they work on golf courses, bowling greens, soccer, rugby and cricket pitches. Aimed at students taking courses in turf science and sports ground management, the 416 pages cost £24.50. Tel: 0491 832111.
Dymond. But there are now 36 holes – the 6,243-yard par 69 Church Course and the easier 4,142-yard par 61 Holywell Course, which was completed in 1982. For much of its history, St Enodoc has had 27 holes, although the short course had long periods when it was not used.

Club records show that in the early days the highest handicap for a round of 27 holes was 60, which suggests either the standards of play were low or the course was very difficult.

The courses lie in 250 acres of which 40 are fairways, two are tees, and three are greens. The rest is left to mother nature.

The James Braid-designed main course, only called the Church Course since 1873, hasn’t changed much since Darwin’s day, but it has seen a tremendous increase in traffic, which has necessitated a great deal of aeration work to relieve compaction.

75,000 rounds
In 1949 the club took 1,123 green fees, in 1989 the figure was 19,645. Now there are 1,200 playing members and 75,000 rounds played per year (over the two courses), the bulk of which comes during our short summer.

“If you haven’t done your work by 10.30 you’re struggling, it’s just heaving,” says Stuart, who came to St Enodoc after seven years as head greenkeeper at North Wilts and 15 years at Bude, of which ten were as head greenkeeper.

The greens are verti-drained once, in the autumn, using half-inch thick tines and left open. During the winter they are spiked every 7-10 days. In the spring they are hollow-cored to a depth of 4-5ins using quadro and solid tines and topdressed. This is the only topdressing they will receive.

“Too much topdressing only causes problems,” says Stuart.

The greens are scarified every fortnight and aerated before receiving their monthly dose of liquid manure and wetting agent.

“It’s something we tried last year and it seems to be working – the greens are looking beautiful at the moment,” he says.

The greens are about 50 per cent annual meadowgrass, compared with the 99 per cent when he joined. This turnaround has been achieved by a lot of aeration work. “We’ve never overseeded them, we’ve spiked and proded a lot but mostly we’ve left it to nature,” he says.

Equipment update

The Jacobsen Aero King PT2448 is a tractor mounted aerator for large turf areas. There is a choice of hole patterns which will match aeration needs, and can be combined with a variety of tine sizes. Easy to fit, it can be used on any three-point hitch, 540rpm PTO tractor with 18hp or more. The Aero King T1224 is a self-propelled aerator which gives you a choice of five coring patterns to handle different aeration needs. There is also a choice of tines.

Sisis recently launched the Technicore, a vertical aerator for all year round use. The interchangeable hollow coring, slitting, solid and large diameter hollow tines have quick release fasteners. Multitine and Microcore heads are also available. A wide range of hole patterns can be obtained and a true 127mm depth of penetration. All Sisis tines now have an upgraded hardness specification.

Many of the greens are old – built in the days when £50 would get you four new putting surfaces – and have sunk in places. Stuart and his team have redesigned two of them since he’s been at the course, and he hopes to do a couple more this winter, if he gets the go-ahead from members. Most of the redesign of the 12th and 14th greens has involved taking out the “silly slopes”. For example, to remove the hollow on the 14th they had to lift it by nearly 3ft. They started the work on a Monday morning in November and had finished it by the Friday after taking off the turf and top soil, building up the hollow using nearby sand, replacing the top soil, remodelling it and putting the turf back. The green was in play again by January.

Stuart is quick to praise his men for their efforts: ”They’re a bunch of blokes second to none. They can do a week’s work in a day and a half.”

Wear and tear
When he first joined they concentrated on the greens, now they are putting a lot of effort into the fairways. The problem there is a common one: wear and tear and lack of growth. “When I moved down nine years ago we decided to get stuck into the greens first and the fairways were only tittivated a little bit. But recently we’ve spent a lot of time on the fairways – spiking them basically and a couple of applications of potash, which has made a fair improvement to them.”
"I think they are better now than they have been in a long time."

One little change that has made a big difference is switching from conventional gang mowers to Hayter gangs with rollers on the front and back, so they don’t scalp the humps. "We’ve actually got grass now on the tops of the hills."

The fairways are slit throughout the winter (almost weekly) using a Ransomes TM80. Bottle-necks and other areas that take a lot of traffic are verti-drained.

The fairway sward comprises natural fescue/bent grasses "and rubbishy coxsfoot". They’re winning the battle against this by scarifying and digging it out.

The finest of turfs - that’s what this greenkeeper achieves with Toro’s unique water injection Hydroject aerator. Able to tackle very wet or rock hard ground conditions, it allows play to resume immediately. On the golf green, bowling green, cricket wicket or tennis court, Hydroject complements conventional aeration methods. And for large turf areas, Toro’s Fairway and HC4000 heavy duty aerators cover up to 1.5 acres per hour with ease.

Other work they’ve been doing includes extending tees, improving pathways (they’ve laid 90-tonne of stones and grit to cope with the traffic and buggies), and revetting bunkers. In January they revetted six of the 29 bunkers using 1,000 sq yd of turf “so we’ve just got the little ones left to do this winter”.

The course’s most famous bunker is the aptly-named Himalayas (according to Darwin, “the highest sandhill I have ever seen on a golf course”). It’s about 80ft high and the top is blowing away. The greenstaff know something needs to be done, but what?

“We put some netting around to protect it on a temporary basis and it has stayed like that now for five years. We’re going to have to think hard and do something up there but what we haven’t decided yet. It’s going to be difficult to do anything because it’s so far up. How do we get stuff up there?”

Fellow greenkeepers wondering whether they need climbing gear to rake it need not worry.

We’re going to have to think hard and do something up there but what we haven’t decided yet. It’s going to be difficult to do anything because it’s so far up. How do we get stuff up there?”

Fellow greenkeepers wondering whether they need climbing gear to rake it need not worry.

The course’s most famous bunker is the aptly-named Himalayas (according to Darwin, “the highest sandhill I have ever seen on a golf course”). It’s about 80ft high and the top is blowing away. The greenstaff know something needs to be done, but what?

“We put some netting around to protect it on a temporary basis and it has stayed like that now for five years. We’re going to have to think hard and do something up there but what we haven’t decided yet. It’s going to be difficult to do anything because it’s so far up. How do we get stuff up there?”

Fellow greenkeepers wondering whether they need climbing gear to rake it need not worry.

Fellow greenkeepers wondering whether they need climbing gear to rake it need not worry.
They only have to rake it for a couple of major events each year, locals can pick their balls out under penalty.

Another unusual feature of the course is granite and slate posts in the semi-roughs. Presumably old boundary markers, they have to be trimmed around once a week.

Old boundaries were also marked by stone walls. One forms an obstacle on the third fairway and another is a feature of the 14th green.

But all these oddities add to what Darwin called “fine, vigorous, adventurous fun”. And as you walk around the course it is easy to be reminded of the last verse of John Betjeman’s poem, Seaside Golf, which was inspired by the 13th hole at St Enodoc:

“Ah! seaweed smells from sandy caves
And thyme and mist in whiffs,
In-coming tide, Atlantic waves
Slapping the sunny cliffs,
Lark song and sea sounds in the air
And splendour, splendour everywhere.”

A splendour enhanced by Dymond and his gems: pictured from left, Mike Lane, Charlie Bosley, Steve Evans, Mike Bosley, Graham Mitchell, Malcolm Bosley and Stuart Dymond.

They’re each examples of how we’ve worked to provide you with precision engineered tools for the perfect finish. Give us a call. We’d like to walk your course with you and discuss your needs. You can trust Toro quality. For a down to earth investment simply telephone 0480 476971 and we will arrange for a local dealer to contact you.
This story begins back in December 1992 when I received a telephone call from an architect friend who asked if I would be interested in a project starting soon in the Far East. At this point I was thinking he meant Hong Kong or somewhere like that, so when he said it was in Vietnam I thought he was joking. But after he repeated himself several times I realised he was not.

By the time everything had been arranged and contracts and tickets were finalised, it was February 1993 before I was on a plane heading for Bangkok and my first meeting with the American and Thai people organising this project – the very first golf course in North Vietnam. I had to spend one week in Bangkok to get my visa for entry into Vietnam. Once this was arranged I was on a plane bound for Vietnam’s international airport which is no bigger than a small private flying club would use over here. We then had to travel to Hanoi where we had to stay in the army guest house (hotel). On the way to Hanoi I got my first impression of Vietnam which is very primitive – there were people working in paddy fields, there was no drainage or sanitation, no lights, the roads were unmade. As for the vehicles, they may have a bonnet but usually two wings are missing and it was nothing to see a six wheeler with only four wheels. They all seem to drive in the middle of the road with their hands on the horn and whoever has the most courage and the loudest horn wins.

I had to spend a week in Hanoi to get SCCI (department of commerce) approval, then began the epic journey up country to see the site. The site is surrounded by the most beautiful islands, water and mountains, and a few shacks they called holiday homes as this is a bit of a tourist place for the Vietnamese. I walked the site with the company directors. I asked if they had any drawings or plans but was told they had not but were relying on me to come up with something, so I sat down and came up with some which took some time for us all to agree. My first objective was to mark out the course which took a few days then the next big task was to sort out the machinery which proved to be very hard because plant hire is very limited and mainly controlled by the army. But at long last I managed to get two bulldozers and one excavator, one of the bulldozers must have been 44 years old. As for the lorries, well they were very old and pure Russian, but they did all eventually arrive on site.

Now I could finally begin trying to explain to the Vietnamese workers why we needed to flatten the land and make shapes but I was very grateful that they were very quick learners. My next problem was to find the right mixture for the greens. The stones and gravel were no problem, I had discovered a quarry on my travels. I got the sand from the river beds – it was lovely, they had been untouched for years and I found the mixture made a fine base for the greens, it was also used for the sand cement.

We are now two months into the project and I am two stones lighter as the food was scarce and, more importantly, the beer limited. Eventually I had it shipped up country via the black market. Now things are moving very quickly so I now have my next problem which I had managed to get two bulldozers and one excavator, one of the bulldozers must have been 44 years old. As for the lorries, well they were very old and pure Russian, but they did all eventually arrive on site.

to explain I did not want to pump high but a long distance. We finally came to an agreement and I purchased 4inch, 2inch and 1inch pipe that was all they could offer me. I managed to get some sprinklers shipped in from Bangkok. Yet again on my travels I came across a man who specialised in pumps and we obtained an engine and pump combined, the same as the ones used over here on fairgrounds. It was very powerful so all was order and progressing very well.

Next I needed to find 40 women to start sprigging out the grass on the greens and tees. For the tees I used local, natural Hermucla grass; for the greens imported Tiffwarf; and Sahara seed for the fairways. We imported an Amazone spreader that fitted an old Russian tractor. I found once I had shown the people how to do the seeding they carried on with no problems but when it came to the cultivation on the fairways believe it or not I came across a farmer who had a set of discs which I used but for levelling I had to go to a shanty town called Son Tay where there are many blacksmiths which comprise an open fire with bricks around with someone who turns a bike wheel with fans on it, an anvil and two little boys with sledge hammers. As the metal turns, the boys, standing either side, hit it into shape. And that is how I got my land leveller made.

The Vietnamese will survive on anything and everything. One day I managed to get some paint, very watery, out on the site. I remembered I had no paintbrushes so my surveyor, Mr Hiat, went into the woods, cut a branch from a special tree and frayed out the end, bound it with reed and there was my paint brush. One women who was 28 years old with four children used to plant grass seven days a week. She lived in all weathers on a reed boat about 10ft long, 2ft wide with a small roof. The weather in winter is very cold and damp but in the summer it is 46 degrees which means it goes from one extreme to the other.

Anyway, back to golf course work. Another challenging experience for a good greenkeeper – once the course is all seeded, sprigged and the irrigation installed and working – is there are some very big Canadian snakes out there.

The future of Vietnam looks very bright. There are many people from Taiwan and Japan looking at developing golf courses to attract tourists. I have been approached about a couple of future projects and am looking at the site of the second course in the North. Another one has opened in the South. And there is room for a lot more.

This was a great experience and challenge and I am very pleased I was given the opportunity to be part of the project. The Vietnamese are wonderful people to work with.
WIN A BIGGA BLAZER OR £50 IN CASH!

This month we’re replacing the Greenkeeper’s Crossword with a Namesearch. Starting at *H, trace a route through the surnames of 14 former Open champions, moving only one square at a time either horizontally or vertically (but not diagonally). Every letter must be used once and once only.

When you have completed the Namesearch, answer the following questions:

1. Which surname appears last in the sequence?
2. What was the player’s first name?
3. In which year did he win the Championship?
4. On which course was the Open held that year?

Answer the four questions, add your name and address and send it to: Namesearch, Greenkeeper International, Aldwark Manor, Aldwark, Aine, York YO6 2NE. Closing date is July 22, 1994. Photocopy your entry or send in a postcard if you don’t want to cut up your magazine. First correct entry drawn after the closing date will win the prize – either a BIGGA blazer worth £87.95 or £50 in cash. Please state on your entry whether you’d prefer a blazer or the cash if you are lucky enough to win.

Winner of the May crossword was John Harrowing and the winner in June was Mr W Shipley. Both opted for BIGGA blazers as their prize.

Name: ___________________________
Address: ___________________________

If I’m the winner, please send me □ £50 cash or □ BIGGA blazer, size _______
If there's a better way to do it, you'll find it at SALTEX

You need an open mind to manage open spaces.
And if you're looking for a helping hand, you've just found it.

Introducing SALTEX, the new Institute of Groundsmanship event for sports, amenities and landscaping professionals. You'll see everything - from heavy machinery to horticulture, from chemicals to climbing frames - and much more.

You'll share ideas with Europe's most accomplished groundsmen, landscapers, architects and space managers. You'll see the latest equipment in action in the working demonstration area. And you'll get your hands on dozens of new products.

Join us for the IoG's triumphant return to Windsor.

**You're onto a winner with Greenkeeper International!**

**Find three tiny £50 notes - win a real one, for free!**

Here we go with another chance to WIN £50 with Greenkeeper International!

All you have to do is take a look at the £50 note symbol above. Now look through the ads in the Buyers' Guide section and spot three of them - they've been reduced in size, but they're there, somewhere!

Write down the names of the three ads where the £50 notes are located and send your entries on a postcard to: Note the Notes Competition, BIGGA, Aldwark Manor, Aldwark, Alne, York, North Yorkshire YO6 2NF, to be received by first post Friday, July 22, 1994. The first correct entry drawn after that date will win £50. It could be YOU! Enter today - and Note the Notes!

Judge's decision is final. Not open to BIGGA staff.

**Eagle-eyed Adam Morey, deputy greenkeeper at Dunwood Golf Course, was the lucky winner of our June competition. A very handy £50 is on its way to him. Would you like a crisp £50 note? Well, get searching - YOU could be next month's big winner!**

Cannington College

Quality our Priority

LECTURER IN GREENKEEPING/GOLF COURSE MANAGEMENT

Professional Lecturers Scale
Salary £11,661 – £21,135 per annum

Applications are invited from suitably qualified persons preferably with teaching experience, to join an established team of horticulturists at a quality assured college that is expanding to meet the challenges of the 90s.

Proven academic and practical ability will be essential.

Further details and application forms are available from the Personnel Section, Cannington College, Cannington, Bridgwater, Somerset TA5 2LS.

Telephone: 0278 652226.

Closing date: 13 July 1994
Interviews scheduled for: 21 July 1994

GOLF COURSE MANAGER
ELMWOOD COLLEGE
CUPAR, FIFE

Elmwood College is constructing a brand new 18 hole course which will be open to the public and also used for training purposes for College students. Construction will start in April 1995.

Applications are invited for the post of Course Manager. Applicants must be experienced in all aspects of golf course management and modern techniques of course construction and maintenance, including machinery maintenance and irrigation systems.

From the date of the appointment to the start of construction the successful candidate will undertake educational and training duties at the College. He/she will then oversee the construction of the course and finally move to the role of Course Manager/Head Greenkeeper.

This is a challenging and exciting position at the major centre for Greenkeeping education in the United Kingdom and in addition to the technical expertise, candidates should have a commitment to training within the industry. If you wish to discuss the post before applying then telephone the College in working hours and ask for Carol Borthwick or Mike Taylor.

Salary will be in accordance with BIGGA recommended rates.

Closing date for applications is Friday 29th July 1994, and interviews will take place on Friday 19th August 1994.

Application forms are available from Personnel, Elmwood College, Cupar, Fife, KY15 4JB.

Telephone (0334) 652781, Fax (0334) 656795.

If you think you have the necessary capabilities to fill the above position write in strictest confidence to:
Mark Barthelmie, Risboro’ Turf, Chinnor Road, Bledlow, Bucks HP27 9PH

Please enclose a full CV
No 1: George Brown

Age: 55

Appearance: Cuddly comedian, like Terry Scott.

Not the late Labour MP then? No, this George Brown is course manager at Turnberry.

What's a course manager? It's like a greenkeeper only you tell someone else to cut the grass, you sit in on meetings with bigwigs from the R&A and BBC, and you're allowed in the clubhouse.

So why's he in the news? The Open Championship is at Turnberry July 14-17.

Is it an important event? It's the Wimbledon of golf but, more importantly, it can break a greenkeeper. One bad word from Peter Alliss and his life can be shattered. Tom O'Brien, head greenkeeper at Royal Birkdale, never recovered from criticism of his course during the '91 Open. It devastated him, then they dug up the greens and found no-one could have grown grass on the plasticine-like soil below the turf.

How's George's course looking? Great, but someone will soon find something to complain about, especially if things aren't going well for them. Last time the Open was at Turnberry, in 1986, the pros said the fairways were too narrow and the rough too rough!

Isn't it supposed to be rough? Yes, but the pros don't like looking stupid on TV. If they're in the rough they still like to be able to reach the green, not chip out sideways with a sandwedge.

The course was too tough for them? The winning total was level par 280.

What's that mean? The winner had as many birdies as bogeys.

Oh! It also means Greg Norman's '86 winning score was way behind Tom Watson's winning total at Turnberry in '77 - 268.

Was the course easier in '77? It was for Watson and runner-up Jack Nicklaus - everyone else was closer to Norman's score that year. Hubert Green, who came third on 279, said: "I won the tournament I played in". No, the course was pretty much the same, the difference was the weather. In '77 it was hot and dry with little wind, in '86 it was blowing a howler. If there's no wind, it's a relatively easy course for top players. George Brown reckons some pros could shoot 59, but 63s and 64s are definitely on the cards. If the wind blows, however, it's easier to get 75s and 76s, and breaking 80 can be hard. That's the beauty of a links course.

A what course? A links course - near the sea, built on sandy soil, lots of mounds and bumpy fairways. No trees, only gorse bushes and wild flowers. Small, strategically-placed bunkers.

It doesn't sound like that pretty course I saw on TV recently? That was probably Augusta National in America. No, it's nothing like that. George Brown likes it when his fairways are brown. His Japanese bosses don't, but he says they're learning that links courses are different, that green is not necessarily beautiful.

But does he know what he's talking about? He's one of the most respected greenkeepers in the country. He's been doing it for 40 years, in fact since he was 15. And he's been at Turnberry since January 1986.

Do you have to know about golf to manage a course? No, but it helps. George was once the head greenkeeper and pro at the same nine-hole course in Hampshire. He plays off four now.

What's that mean? He's allowed four bogeys.

And is that good? Pretty good, but the idea is not to have any bogeys because it messes up the card.

Not to be confused with: George Brown, the late MP; George Brown, the author; Charlie Brown; Walter Woods; Jimmy Kidd; Jim Arthur.

Least likely to say: "Peter Alliss, you don't know what you're talking about."

Even less likely to say: "Let's plant some rhododendrons."

Most likely to say: "Augusta is like a blow-up doll - not as good as the real thing."

(With apologies to The Guardian's excellent Pass Notes)
