NEARLY MEN!

The greenkeepers' team - pictured - recovered from last year's debacle to finish second in the Kubota Challenge. Full report and pictures inside.

THE OAKS

From small acorns comes a Yorkshire course destined to be a winner.
to BIGGA’s Turf Management Exhibition and the Learning Experience, the most comprehensive educational event in Europe in 1997.

Learning Experience starts January 20. Don’t miss your copy of ‘The Learning Experience’ in this magazine – and pre-register your place at BTME 97 for FREE by completing the card facing Page 51.

For more details, call the BTME Hotline: 01347 838581

HOW TO GET TO HARROGATE

BY RAIL: The comprehensive rail network means you can get to Harrogate very easily. For example, 25 trains run daily from London King’s Cross to Harrogate and there are some 35 trains from Edinburgh, 16 from Glasgow and 30 from Manchester.

BY AIR: Manchester Airport is 56 miles from Harrogate and there’s a convenient direct train via Leeds railway station. Leeds/Bradford airport is just 12 miles away from Harrogate.

BY ROAD: From North and South – A1 and Wetherby, nine miles from Harrogate. M1 and M62 to Leeds, which is 15 miles away.

BY SEA: North Sea Ferries, from Rotterdam/Zeebrugge to Hull, 59 miles away.

BTME is organised by the British and International Golf Greenkeepers Association, Aldwark Manor, Aldwark, Aine, York Y06 2NF.
The next edition of Greenkeeper International should be with you by December 7

NOVEMBER 1996

Regular features

Better - but still only second

The Kubota Challenge is a firm favourite on the tournament calendar. As Scott MacCallum reports, this year's efforts saw the greenkeepers' team finish in second position - a whole lot better than last year's disastrous last place. Pages 33-34

Plea for a return to traditional links

The Architect's Conference at Wentworth featured a clarion call from Donald Steel for more support for greenkeepers to preserve golf courses in the traditional manner. Page 11

Irrigation equipment in the spotlight

Hugh Tilley poses questions about current irrigation equipment to the people who know them the best - working greenkeepers, on courses throughout the country. Pages 15-20

From little acorns comes... The Oaks

Mix together an excellent piece of farmland, a superb location and attention to detail and you will have a course like The Oaks in Yorkshire. Scott MacCallum reports... Pages 36-37
WE SAY

I t's mid-November, bleak, depressing, not a favourite month. Through your letter box comes another invoice but one with a difference for this one is headed "BIGGA". Yes, it's membership renewal time again. To digress slightly before returning to the main theme, I have recently been reflecting on the great success of the inaugural Hayter International Cup competition where 24 competitors from around the globe played a stirring cup match and over a period of five days communicated and bonded in such a way that enduring friendships have been made. For Kim Macfie and Tony Bourke at Hayter as well as for myself, it was a wholly rewarding experience to see at first hand this coming together of individuals from many lands and diverse professional circumstances through the brotherhood of greenkeepers.

I use the word "brotherhood" advisedly as surely in many ways this is what BIGGA represents for our members. Defined in the dictionary as "members of association for mutual help", perhaps we have in the past been guilty of not emphasising enough this essential part of BIGGA membership. Never was it more needed than in today's greenkeeping world. The intolerance of society in general has pervaded this world and many of our members are increasingly put under pressure and find themselves in stressful situations. Our first recourse is to provide practical benefits to assist them in such circumstances, the legal and stress helplines immediately come to mind. The recent extension of the legal services to members through assistance from the Association's solicitors in appropriate cases represents a "first" for BIGGA. Hambro Legal Protection do not know of any similar professional body offering such a service to its members. It truly represents a material benefit of membership. The introduction this year of the transition package for the unemployed greenkeeper is another example of our concern for the member experiencing one of life's most difficult circumstances.

Briefly then I have touched on some of the practical benefits of membership the details of which can be found within the pages of this month's magazine. Let's look more closely though at this concept of brotherhood. Mutual help can be made available in so many ways, most often perhaps in simple, social networking. Picture the scene and a common one it is for BIGGA members. You have enjoyed a good round of golf in your section competition, the catering has been excellent and now you have retired to the bar. I have never known it otherwise than that conversation turns inevitably to greenkeeping. So many greenkeepers have come away from such conversations with either a tip to help them in their daily tasks or with a solution to what seemed at the time an intractable problem. Mutual help at its most distinctive I would venture to suggest.

BIGGA's main brief has been and remains the education and training of greenkeepers. Members enjoy the benefits of heavily subsidised training courses, subsidies made possible through the operation of the Education and Development Fund which enjoys the support of companies and individuals throughout the industry and the profession. Too often members take that support for granted. It is not theirs as of right and recognition of and appreciation for it needs to be more readily given. Through such training once again mutual help is available – greenkeeper can speak to fellow greenkeeper either through a formal lecture situation or in subsequent question and answer sessions and informal discussion.

Finally on the subject of mutual help I mention again the intolerance of society. This indeed pervades so many golf clubs in this day and age. The course condition is all important. If that condition falls below the perceived standard required by club committees and members, the greenkeeping staff are immediately, and quite literally, in the firing line. Key issues such as level of maintenance budget, provision of equipment and particularly in 1995 and 1996 prevailing drought conditions are conveniently ignored as the rumble of discontent grows into a roar. While the greenkeeper can utilise BIGGA's practical benefits in such situations, he often has a need for advice from his peer group and within BIGGA there is always a friend he can turn to or an influential figure who will lend support.

The brotherhood of greenkeepers can therefore be seen to be increasingly important. It manifests itself within BIGGA and all that BIGGA has to offer. To remain on the outside is always a choice open to the individual greenkeeper but I would argue that it is leaving that individual increasingly vulnerable and isolated. The old adage applies to BIGGA that there is strength in numbers and today BIGGA is strong with over 6000 members and recognised within the game as one of golf's leading professional bodies. It is true that those of us working within BIGGA share a sense of frustration that the Association still has to convince greenkeepers on the outside who cannot or will not see the benefits, both visible and invisible, of BIGGA membership. BIGGA is committed through its Constitution to promote the welfare of greenkeepers and this it will most surely continue to do. Its Mission Statement declares that "BIGGA is dedicated to the continuing professional development of its members and in serving their needs will strive through education for standards of excellence in golf course management throughout the greenkeeping profession".

There are therefore compelling reasons for members to renew their membership and for non-members to join our vibrant Association. There has never been a better or more apposite time to renew or apply for membership. If you are joining, welcome to BIGGA, if you are renewing, we appreciate your commitment and confidence as we move forward in a spirit of optimism.

I will conclude this month with some words of Charles Dickens from A Tale of Two Cities which give food for thought and which are worth dwelling upon. A case perhaps of 'a tale of two greenkeepers'? It remains my conviction that greenkeepers have everything before them if they continue to move forward united and purposefully, with dedication to their profession and commitment to the ideas and aspirations of BIGGA. The alternative is indeed a gloomy prospect and not to be countenanced. As a greenkeeper which direction are you set upon?

"It was the best of times, it was the worst of times, it was the age of wisdom, it was the age of foolishness, it was the epoch of belief, it was the epoch of incredulity, it was the season of Light, it was the season of Darkness, it was the Spring of hope, it was the Winter of despair, we had everything before us, we had nothing before us, we were all going direct to Heaven, we were all going direct the other way".
As I see it...
BY DEAN CLEAVER
BIGGA CHAIRMAN

This has been one of the quieter months I've had since becoming Chairman and I've actually been able to get some work done on my course. In fact the joke is that I had to dig out the A-Z to find my way to the club. I made the most of it though and did some vertidraining just to show the membership that I'm still about!

It hasn't meant that I have been totally quiet however.

I attended the British Institute of Golf Course Architect's Silver Jubilee Conference at Wentworth. The dinner was certainly a unique occasion with many familiar faces from the golf world gathered in the stunning surroundings of Wentworth's Ballroom.

Although I had to miss the actual conference I understand it was superb and the role of the greenkeeper and work of BIGGA was highlighted by many of the speakers. Howard Swan who organised the Conference wrote to me and thanked BIGGA for supporting the event.

After Wentworth it was on to The Belfry for the annual Kubota Challenge, one of the highlights of the year. After coming fourth and last last year it was better this as we got to the final only to be beaten by the English Golf Union, who won for the second successive year.

Now I'm not one to carp, and each one of the eight men who represented us in the final was a superb ambassador for BIGGA, but I do believe that if an 10am curfew had been in place the night before the final the result may have been different. I curse the fact that I was unable to arrive a day earlier to supervise preparations for the final. Joking aside it was a wonderful event and I'd like to congratulate Rene Orban on his excellent Kubota Challenge debut.

At the moment I'm preparing for a trip to Interlachen in Switzerland for the International Greenkeepers Association Conference. I'm attending in my capacity of Chairman of FEGGA. I'll report back on my time in Switzerland next month.

Jobs boost for new John Deere dealer

Nairn Brown Ltd at Busby, near Glasgow, is the latest recruit to John Deere's nationwide grounds care dealer network – the first time a main John Deere dealership has been established in the west of Scotland.

The appointment increases the opportunity for professional and domestic customers from Oban to Dumfries to invest in John Deere's full range of commercial and consumer equipment.

Dealer principal Nairn Brown founded the business in 1965. Nairn Brown Ltd was the Mountfield distributor in Scotland for 20 years, and several of the key staff have been with the company for over 25 years.

"We see the John Deere range as a way of extending and developing our customer base," says Nairn Brown. "Around half our current business is with local authorities and golf courses. Staffing levels will be increased to provide full sales, service and parts back-up to all our customers. We carry 18,000 parts in stock, and are computer-linked to John Deere's worldwide Distribution Network System."

The company has been accredited to ISO 9002 certification since 1993, one of the few grounds care dealerships in the UK to have achieved this international quality standard.

Pictured: Nairn Brown staff celebrating the new deal.
Worth their weight in gold

On behalf of the game of golf and of greenkeepers everywhere, BIGGA would like to thank members of the Golden and Silver Key Circles, both companies and individuals, for their commitment to a brighter future through their support of the Education and Development Fund.

Their support can be seen in a variety of educational and training opportunities, books and videos.

We share a common goal.

Together we’re creating better golf courses – and dedicated professionals to maintain them.
Environment competition winner nets £5,000

As reported in last month's magazine Rudding Park, in only its first full year as an operating golf course, clinched the Amazone Golf Environment Competition. Mark MacKeness, Managing Director of the golf course received the £5,000 first prize from Rod Baker, Managing Director of Amazone Ground Care at a presentation at Rudding Park last month.

Other winners in the competition this year were as follows:
- Northern Region: Rudding Park Golf - Winner; Catterick GC - Highly Commended.
- Midlands Region: Lindrick GC - Winner; Amstall GC - Highly Commended.
- Southern Region: Linlithgow GC - Winner; Wilderness GC - Highly Commended.
- Western Region: Manor House GC - Winner; Burnham and Berrow - Highly Commended.
- Eastern Region: Old Nene G&CC - Winner.
- Scotland: Linlithgow GC - Winner; Newtonmore GC and Royal Dornoch GC both Highly Commended.

Six information boards have been erected at Rudding Park, covering aspects of their flora and fauna.

Optimism for 'great' jobs on golf courses

Great job opportunities still exist on golf courses in spite of the continued march of mechanisation. That's the optimistic view of Walter Woods, former links supervisor at St Andrews Links.

Speaking at Scottish Grass Machinery's turfgrass seminar held at Glenegles, Walter pointed out that much had changed during his lifetime in the industry.

"People now expect to be able to play golf all year round and in all weathers, creating major difficulties with compaction and course wear and tear," he said.

"Although specialist machines are now available to help combat the problem, they are becoming increasingly complicated to set up, use and maintain. The ever-growing sophistication of equipment virtually demands the full-time employment of a trained and dedicated engineer to look after it."

"There is also a requirement for qualified irrigation technicians to help look after pumps, control systems and the associated water delivery systems. There must be a fortune in materials buried underground." Walter pointed out that it was 20 years since the various authorities had recognised that greenkeeper education would have to be a priority if the standard of golf club management and maintenance was to move forward.

"I was fortunate that my position at St Andrews allowed me to bring young trainees onto the links to further their training," he commented. "Our mission was helped greatly by colleges such as Elmwood, the greenkeepers' associations and the golf unions, who helped promote the need for education to be extended beyond a basic first year."

Such has been the march forward in technology and standards that greenkeepers today need to be assessed on a regular basis in both the practice and theory of their job. The more enlightened are now able to study to become supervisors and, if they are high flyers, can move on to an HND course which can lead to a golf course manager's position.

"There is a clear and growing demand for more advanced education and training," pointed out Mr Woods. "New courses continue to be built and these will be looking for advanced greenkeeping skills and knowledge. At the same time, the older courses will have to sit up and take notice in order to compete with the growing challenge to provide the highest quality playing conditions throughout the year."

Walter predicted that the staffing levels on many private golf clubs will double over the next 10 to 20 years in order to provide the conditions that golfers want. As a result, greenkeeping career prospects look extremely good, with better pay and better conditions backed by a strong association which will help look after the interests and needs of all involved in the industry.

"I admit that I could not handle all the education nor the machinery that greenkeepers need today," stressed Mr Woods. "However, I believe that golf clubs are really starting to appreciate the value of their maintenance staff and their needs and problems. The educational opportunities are being put in place to help greenkeepers achieve perfection and I believe that many are well on the way to getting there."

"There will be a wide range of greenkeeping career opportunities in the years to come and I see no reason why they should not be grasped by young men and women alike."

Thanks from Don Hunt

Don, Liz and the girls would like to take this opportunity to thank all those friends who so kindly phoned or sent cards, letters, flowers or fruit during my recent illness. I apologise for not writing personally to all concerned but the strength of the support has been so great it was impossible.

A big thank you to Bill and Carol Pile and Gordon and Marion Childs who visited me in Torbay hospital and kept me in touch.

See you soon on my usual route.

Don
A full selection of tools for the greenkeeper and groundsman are available to maintain your courses and hopefully make life a little easier for you!

Bangkok Golf Club at sea in worst flood in golfing history

Don Major, formerly of Betchworth Park GC, had some interesting reading when he returned from Hong Kong on a Cathy Pacific flight earlier this year. In the South China Morning Post, which thankfully for Don is in English, was a report on the horrific flooding experienced by the Bangkok Golf Club and their Course Superintendent Chan Mekavichai.

"I couldn't believe the flooding that the golf club had experienced and I thought readers of Greenkeeper International might want to read about it as well," said Don.

Reports the South China Morning Post: "It probably has to go down as the worst flood in golfing history," said American Greg Jerolaman, who doubles as General Manager and Professional.

A mere 90,000 sand bags could not prevent a dyke and a 12 inch thick concrete retaining wall bordering the 7th hole from collapsing under the sheer weight of pressure of the rain that had fallen incessantly for eight weeks.

Over the next 24 hours in the region of two million cubic metres of water (about 20 cubic metres per second) poured on to the course, which had been closed for three days due to the non-stop downpours.

"It was terrible. There was nothing we could do except watch the water level rise," said Chan. As it rose by between 10 and 15 centimetres per hour, Chan led the frantic rush to reinforce the clubhouse by placing a further 5,000 sand bags around its perimeter.

The defence was neither high enough nor strong enough. At 5.30pm some seven hours after the flood gates had opened the water burst through. Fearful for the safety of the staff the clubhouse was abandoned. Ten minutes later the basement was under one metre of water.

Returning to survey the wreckage the next morning in boats rented from the military, it was doom and gloom. The average depth of the water on the course was eight feet. In some areas it was 11 feet. "It was surreal. Everyone was in a state of shock," said Jerolaman.

For two months it was only possible to reach the clubhouse by boat...

For a four month period leading up to the reopening on the last day of March this year 200 labourers joined club staff working 12 hour shifts clearing the debris and irrigation system and constructing a new 8,000 metre cart path, re-grassing 16 greens and planting 200,000 square metres of grass, 10,000 flowers and 1,000 trees...

It is understood that just 20% of the work was covered by insurance and the bulk of the $4 million had to be met by the Club President.

Many thanks to Don Major for bringing this harrowing tale to our attention and perhaps allowing us to put our own problems in perspective!

The amphibious Watermaster dredger 'walked' into the lake to clear it of weeds and reeds before dredging it

...but clear water adds praise for St Pierre GC

Land and Water Services, the Surrey based inland dredging contractor and lake builder, was responsible for much of the excellent praise heaped on St. Pierre Golf Club, Chepstow during the Solheim Cup.

The work done by the company involved dredging and restoration of the existing 11 acre lake and construction of a new reservoir to hold 22 million litres of water.

The first stage of the work was to completely redefine and landscape the lake edge, using a Nicopan geotextile to support the fill material. This, together with clearance of the weeds, detritus and debris, has returned the lake to a focal point of outstanding natural beauty.

To prevent further weed growth the lake was deepened in places by up to one metre. Extreme care had to be taken at all times in order to cause as little disturbance as possible to the wildlife of the lake, one family of nesting ducks posing a particular problem.

Now's the time to do something about your bald patch

After another year of wear and tear, and difficult weather conditions, are your tees looking a bit thin on top?

Tillers Arena is a high quality, hard-wearing turf, suitable for restoring tees to their former glory. And getting them back into play quickly. 350 Greenkeepers chose Tillers last year, why not make it your choice this year?

For more information about our service, our products and our delivery, please phone 01652 650 555.

TILLERS
growers of fine turf
Keen-to-learn staff receive top training

A series of product training sessions has been held for the whole of the workforce at Ransomes' European headquarters and manufacturing centre at Ipswich.

Designed to give all Ransomes' staff an insight into the design, operation and various applications of the company's professional grass and turf care machinery, the familiarisation sessions are an integral and essential part of the programme being followed by Ransomes in order to achieve an 'Investors in People' award.

A total of eight training sessions have been held at the Ipswich factory during the past six weeks. Attended by 400 staff, the sessions were split between the company's range of golf course equipment and machines used primarily for local authority and contract grounds maintenance.

Leading the training was Ransomes' Product Training Manager, Nigel Church: "The interest and attention paid by staff from all departments demonstrated that they are keen to learn about the products that they help build and the company for which they work," he commented. "Seen from both the human and the commercial points of view, it is important that everyone understands and appreciates what the company does and where they fit into the operation. It can only help instil greater pride in their work and further boost Ransomes' position within the industry."

PSD Agronomy Ltd has responded to the call for a better understanding of conservation issues on golf courses, by securing an arrangement with Michael Schofield. A former director of English Nature, Michael, pictured, is to head PSD's new ecology section. This follows PSD's recent recruitment of David Pycroft, hydrologist, and continues the policy of providing a package of high quality, expert consultancy to the golf club.

Michael Schofield is a career conservationist, who has worked for the Nature Conservancy, the Nature Conservancy Council and English Nature over a period of 30 years, making his way from Warden Naturalist to Ecology section's leading expert at the helm. Member of the Management Board He is, therefore, well versed in both the theory and practice of ecological management, and the implementation of sound policies.

Mike also understands the problems of the golf club committee member. Having been Chairman of Green at his own Club for a number of years he has had a good view of what some see as the other side of the fence. His links with golf extend further than one club though - he has prepared plans for good ecological management for a number of others, and has advised the R&A, the EGU and the European Golf Association on conservation matters.
Donald Steel made this plea during the Architect's Conference at Wentworth

"We need to help greenkeepers and committees preserve golf courses in the traditional manner."

That was the clarion call of respected golf course architect, Donald Steel, at the at the Silver Jubilee Conference, sponsored by Barenbrug, of the British Institute of Golf Course Architects held at The Wentworth Club last month.

"Heavy handed fairway irrigation alters the terrain. Everyone should be aware of the problems of fairway irrigation," he said.

"The phrase 'beautifully lush' is one which grates and colour is no guarantee of quality. You must remember that a watered course is a longer course which is not what the members want," he told delegates.

He called for law makers to provide help for greenkeepers and committees by giving a stronger lead when it came to controlling the ball and the clubs.

USGA Guidelines

Another issue discussed at the conference was that of USGA guidelines on green construction with Jim Moore, of the USGA, stressing that they where not actually "specs" but guidelines.

"We are often asked why do we change the guidelines. Well we are always looking for weaknesses in the guidelines so we can amend them. We learn and change rather than decide that we are perfect and not change it."

He revealed that most clubs which claim to have USGA greens do not, in fact, meet the guidelines and he said that they would like to drop hydraulic conductivity from the guidelines.

More New Courses

The boom in golf can be reflected by the fact that over 1,000 golf courses will open worldwide in 1996 - the greatest number in history - revealed Geoffrey Cornish, a highly regarded American architect.

With 503 of these opening in the States and the rest throughout the world it is good news for greenkeepers looking for future career opportunities. It has also, as Jim Moore explained, created a new profession - the Grow In Superintendent, who spends six months on a course before moving on to his next project.

On the same theme Hamilton Stutt, who can recall travelling to golf courses as a youngster in the back of a car with his father and James Braid, said that he always encouraged owners to appoint the future Head Greenkeeper at the start of the construction work so he could act as the Clerk of Works and feel a part of the team right from the beginning.

Another point which was raised was the need for Post Construction Manuals so everyone can be made aware of the materials which were used during construction and therefore what is required to maintain greens etc. It would be particularly useful in continental Europe.

Fungicide Bans

BIGCA Associate Member Tom Mackenzie, predicted that within 10 years fungicides would be banned and fertilisers and water rationed and that change is going to be forced on the committee.

"Architects are going to be required to design courses to be played under the conditions which prevail if this does happen," he explained.

This would involve designing greens to accept the running shots which will be need to succeed in the firm fast conditions.

Presentation

Hamilton Stutt, Peter Harradine on behalf of his father Donald Harradine, who died a week before the Conference, Eddie Hackett, Geoffrey Cornish and Dr Martin Hawtree on behalf of his father Fred Hawtree were all presented with Gold Medals by the Institute in recognition of the work they had done.

New Federation

A Federation of European Golf Course Architects was formed during the Conference with the coming together of the three professional organisations in golf course design in Europe.

AGFA, BIGCA and ESGA formalised their relationship in the formation of the Federation to progress towards a single voice in the European Golf market.

Representing almost 100 architects in practice the Federation will lobby on matters such as ecology, safety planning, education and so on to governments and administrative organisations.
A blending of the seasons

Troublesome diseases are usually dealt with by using a full dose rate of Carbendazim which means that those greens treated get their worm killing for free. Should Take-All or Anthracnose threaten I dash for the Chlorothalonil which does seem to have some suppressing effect. I once tried to tough it out with Anthracnose and refused to spray. It was like sparing with Mike Tyson - a brave but painful experience not to be recommended.

As you would expect mowing heights on all areas are now a few mms above summer levels with one exception - the colour of green surrounds. Varying growth rates of different species in winter can leave them scruffy if left to their own devices so I cut down to 25mm to leave a more open, even and tidy surface during the winter.

One of the most important jobs at this time of year is traffic management. I ban all heavy vehicles from the course when the ground conditions dictate. It is not a good idea to trundle tractors about when you are about to announce the first trolley ban of the year. I have tried various methods to guide golfers over different routes; post and rope, post and chain, hoops and signs of all descriptions but nothing works as well as the humble white plastic strip. It does not rust, rot nor need painting and does not interfere with maintenance operations. It is not obtrusive on the eye and best of all it actually works.

Above ground items are invariably moved by golfers thus leaving a gap for all to trample through. The plastic strip is not movable and seems to throw up an invisible wall which is powerful enough to overcome the superficial nature of striping I have to leave a wider traffic route for mowing and hand mow the greens at least once a week to present well during the winter months. After a dose of iron I might double hand mow the putting green and first tee or choose a short fairway and double cut with the tee triple, hand mow the tee and the green stripe up the rough with a chain harrow or brush.

The idea behind this short lived Augusta syndrome on one or two holes is not to show that we can stripe with the best of them or to improve turf conditions nor even to try to increase resources so that we could achieve this all year round. I do it to show members that we can be plain one day and stripy the next but turf conditions have not changed.

No matter how much I dislike the superficial nature of striping I have to admit there is something undeniably alluring about it. However it can so easily be flatter to deceive. Having demonstrated this fact to golfers I hope that they will be more understanding of the need to produce quality green side surfaces and less enamoured by how they go today gone tomorrow.

November is the month I hold our autumn appraisal interviews where we discuss individually their aspirations and review their agreed development programme. Of all the meetings I attend during the year these are the most important. A great deal of time and resources goes into preparation for and the delivery of outcomes of these interviews but the results are well worth it and I recommend them to all.

November of course means bonfires. I like nothing more than to stack up accumulated rubbish both physical and metaphorical and erase it from memory. A good clear out will make room for a more ordered and tidy approach and allow the mind to concentrate on a positive move to the future. Just around the corner is another year and everything is possible.
Experience 'Relief' savings and make your course a 'Cut' above the rest

Satisfied customers:

"Every forward thinking Golf Club should have a Juno in their workshop, a truly excellent machine." — Mr. Mark Jones, Head Greenkeeper, Prestan Golf Club.

"Hunter's relief grinding is far superior to anything I have ever seen, each blade cuts true, the savings are substantial and the cost is minimal." — Mr. John Balfour, Head Greenkeeper, The Royal Portrush Golf Club, County Antrim.

"It is the best piece of machinery this course has ever invested in, a fine machine that I would recommend to anyone." — Mr. John Balfour, Head Greenkeeper, The Royal Portrush Golf Club, County Antrim.

"A quality machine that gives a superb finish to our cylinders, and saves money." — Mr. Derek Green, Head Greenkeeper of Royal Liverpool Golf Club.

YES! All these clubs are breathing a big sigh of 'Relief' — let us tell you why!

With our unique and accurate 'Relief angle' grinding method which:

- Reduces contact between cylinder and bedknife (blades last up to four times longer)
- Reduces drag which means less friction, less fuel, less problems, less maintenance
- Makes cutting units easier to 'set'
- Blades cut cleaner and stay sharp longer

But the biggest 'relief' is cutting service costs, reducing downtime and improving standards.

"Hunter's relief grinding is far superior to anything I have ever seen, each blade cuts true, the savings are substantial and the cost is minimal." — Mr. Roger Shaw, Course Manager, Ramside Hall Golf & Country Club.

"It is the best piece of machinery this course has ever invested in, a fine machine that I would recommend to anyone." — Mr. John Balfour, Head Greenkeeper, The Royal Portrush Golf Club, County Antrim.

"A quality machine that gives a superb finish to our cylinders, and saves money." — Mr. Derek Green, Head Greenkeeper of Royal Liverpool Golf Club.

YES! All these clubs are breathing a big sigh of 'Relief' — let us tell you why!

With our unique and accurate 'Relief angle' grinding method which:

- Reduces contact between cylinder and bedknife (blades last up to four times longer)
- Reduces drag which means less friction, less fuel, less problems, less maintenance
- Makes cutting units easier to 'set'
- Blades cut cleaner and stay sharp longer

But the biggest 'relief' is cutting service costs, reducing downtime and improving standards.

The chase after colour must cease

I have no wish to compound Alistair Connall’s problems and indeed I make it a rule not to criticise unless I have seen matters for myself and although I am fully conversant with both background and events my intervention is on the basis that there is so much to learn from his comments, in general rather than particular terms, that my observations may draw attention to the revealed causes of the crisis.

Collingtree, established 1987, is hardly a new course. The long line of problems it has experienced follow, as night follows day, the decision of an inexperienced US “designer” to use “pure sand greens and Pennnecos”. Both have been comprehensively condemned, often and specifically, by most of not all advisors – certainly by STRI and myself for years. “Unfortunately the predominant grass species is now annual meadow grass which seeds almost continually”. Precisely! Any plant seeding “almost continually” is clearly under stress – nature’s reaction to the threat of imminent death is to reproduce.

Sand only greens demand constant feeding with NPK and lime; this ensures total dominance of Poa annua in temperate climates. Failure to do so results in massive attacks of Take All Patch disease. This grass is the source of 90% of the problems in greenkeeping. Slow (seeding) putting surfaces follow – and encourage close mowing to try to collect roots and spread out putting surfaces. Stressed grass responds for a limited period to this feeding but constant close mowing pushes even Poa beyond its limits of endurance.

“Symptoms seemed to indicate leaf spot!” This is never a significant disease – but the symptoms did indicate severe stress not disease. Fungicides would be counter-productive and ineffective. Allowing the cuttings to fly would ensure Poa dominance but it died instead – end of story. The stressful regime “caused Poa to complete its life story? Where does the blame lie? Not the one or two that are, are a tribute to the great God television and ill-educated entry golfers. All those spectator golfers who enthuse about “beautifully green” courses for summer tournaments will be the first to moan if as a result they are on temporaries for most of the winter – when the Tour will be enjoying golf in warmer climes. If our traditional game is to survive and all year round golf remain feasible then this chase after colour – the “Augusta syndrome” – must stop.

Before dismissing me as some crotchety old Victor Meldrew of golf, think on! We have seen it all before (well, I have) in the ’60s and ’70s, when the feed and water brigade destroyed so many of our courses – and here we go again. If basic principles are ignored and sound management stopped eg by hotel managers, “because it might upset the guests” then nemesis will assuredly strike and strike again. Too many venues for televised golf fall far short of expectation for this to be mere coincidence. Failures are not acts of God, unfortunate accidents or due to previously unheard of diseases. They are the direct result of bad construction methods and bad subsequent management.

Jim Arthur

How value for money

I write to you to convey my thanks through your magazine firstly to Rod Clark of Vector Training and Ken Richardson BIGGA for running an excellent two day course in Computer Skills at Falkirk recently. The training was first class and I and other members of the class gained excellent practical use of computers which I hope will become of great use in the future. Secondly I would like to thank all contributors to the BIGGA Education and Development Fund for making these courses possible.

I would recommend any of these courses to anyone. Great value for money!

Thanks again.

Times change

How times have changed. I was a Head Greenkeeper at two golf clubs for a number of years in the ’70s. The frustrated lack of investment in machinery and the fact that the job was not being done to my satisfaction finally drove me out of the job, which I still think is the best job for any outdoor worker.

Recently, I started back at my local golf club as an assistant and was amazed and envious of the amount of equipment now available to the Greens Staff. With so much equipment on hand and double the staff when I was Head, the opportunity is there to do the job quicker and to do it better.

Unfortunately I was also amazed and dismayed at the frenetic and often obscure efforts to get certain jobs done in record times.

Golf courses are becoming very busy places, more and more people want to play this great game and any ideas of how to get the job done quicker is obviously very welcome. What I can’t accept is the surrender of quality to quantity. There should be no compromise on presentation.

Taking an ecological view

I found the article entitled “The Buzz Never Stops at Wentworth” about Chris Kennedy – October Greenkeeper International – very interesting but felt that relating to heathland management the comment “some people say there shouldn’t be any trees on a heathland golf course but I disagree” if taken literally could lead to the loss of heathland courses and their reversion to woodland.

Heathlands by definition are “open landscapes largely devoid of tree species, characterised by nutrient, poor acid soils and a domination of low growing shrubs, principally of the heath (Ericaceae) family, (Culluna vulgaris) being the most prominent species”. Management is the key to maintaining the heathlands, either naturally through grazing or via physical methods employed by man. These processes have continued for over 4,000 years since the first forest clearances by our early farming ancestors depleted the nutrient status of these predominately sand areas. Many species of wildlife have, over this period, become totally dependent upon the heathland conditions, several are of international importance ie Red data species on the brink of extinction. Golf is contributing to the conservation of heathlands, helping to extend what is now a very fragmented resource.

The final straw leading to a further loss of our heathlands would be to stop management and let succession take its course. From an ecological viewpoint loss of heathland through tree regeneration and the reinstatement of woodland would not be the most appropriate conservation strategy. From a golf point of view, tree invasion will reduce the prestige and status of the heathland course, its strategic/playing quality whilst at the same time reduc- ing the overall aesthetic contribution that the open heathland condition can offer.

Indeed, on so many courses where heather was once a dominant feature large areas of this attractive and penalising hazard have now already been lost.

Thus, whilst some trees are tolerable, and indeed necessary, on our heathland courses their potential for natural spread must be recognised and rigorously controlled.

R.S Taylor
STRI Ecologist

Hugh Tilly looks at a range of irrigation equipment on the market.

Past seasons have put "automatic" irrigation to the forefront of most greenkeeper's minds and although there are still some, particularly on links courses, who believe that drying out is a natural phenomenon which should be part of the game, most recognise that water is essential to maintaining a playable and attractive surface – not to mention sustaining the grass.

How far you go in irrigating depends upon a number of factors including any requirements for "a pretty course". The norm is for greens, tees and approaches to be watered, however some clubs have watering on specific banks and some surrounds while others have found a need for water on some or all fairways. One of the controlling factors in selecting an automatic irrigation system is the availability and cost of water, and while many clubs are still linked into mains water and thus pay through a meter, there are a growing number which have installed a reservoir or borehole – and still pay. A valid point made by one Course Manager was that it was logic, even essential, to consider irrigation as an integral part of overall design – and to consider where the water would be sourced. Obviously the most satisfactory answer for the environment is to save winter rainfall, however, this needs a large reservoir which can be a major capital expense if the terrain is not water retentive. Boreholes are another option however often these cannot always be relied on to provide the volume required when it is most needed – much depends on the sub-strata. Whichever way you acquire water you will have to pay – the important point is that water should sourced economically and reliably, this latter being as vital as the source itself.

While it was once common to find portable hose and sprinkler systems which connect to hydrants around the course, these are labour intensive and have become increasingly rare. Nevertheless most courses still find a need for some manual watering. Some fairways can be watered using travellers irrigators but these are only semi automatic and need good hydrant around the course. The most favoured system for today is fully automatic with an electronic controller to operate remote valves and pop-up sprinklers. Modern systems, and all in this survey, are of the pressure type which keep pressure in the line using a pressure vessel with a switch to activate a pump when pressure goes below a pre-determined minimum. Modifications can be used to improve response and control. Perhaps the most important factor for successful installation and operation is the ability of the designer and installer. There have been some horrendous tales of poor installation, of underground lines which are always failing, and of valves and pop-ups which jam regularly, however, there are now several specialists who have the experience to "get it right" and to rectify the inevitable glitches fast and with minimum fuss. While most modern systems are very versatile, getting them set up to put water where you want it, when you want it and in the right amount is not always quick nor simple – especially as most irrigation is carried on overnight. A growing body of opinion says that setting and operation of irrigation is a specialist task and perhaps a full time one – particularly in the early years of use. A mixture of imperial and metric units are used in this feature, usually those in most common use in irrigation. There are about 225 gallons in a cubic metre of water or 1000 litres.

The Oxfordshire Golf Club
Designed to championship standard by Rees Jones, the 18 hole Oxfordshire at Thame, this year hosted the Benson and Hedges International Open on the European Tour. It has irrigation installed by Turf Irrigation Services on all greens, tees and surrounds plus watering of part fairways as well as "feature roughs" and other important clubhouse turf. The installation was put in when the course was built – it opened in July '93, which enabled TIS to trench all pipework and control cabling. There are some 1400 individual sprinklers, all Toro gear driven pop-ups in five models, full or part circle, and spaced to water head to head – varying nozzle and model sizes ensures that output met the specification. Control is by a Toro Network 8000 with 46 satellite stations which operate the sprinklers and most have individual control. There are three pumps, of differing sizes from 25 to 60 hp to give it the ability to output up to about 1050 gals/min – and these are automatically selected to suit demand. What is radically different to many other systems is that the Oxfordshire has a weather station which provides input into the system. Course Manager, Martin Jones, says that it is most revealing how conditions can vary day by day. He, or the computer, uses an index of 'evaporation/transpiration' – (E/T) to assess water need and this can vary dramatically when objectively measured. He is totally convinced about the efficiency and effectiveness of this method and has altered his thinking to E/T rather than minutes of application. Fixed parameters such as soil type, aspect, exposure to sun and...

wind and slope as well as location and use are all fed into the computer – and these can be reprogrammed if they are altered. This programming was initially mainly done by the supplier, and it controls output from each head. Martin says that he does not think in terms of length of watering allowed as the program is based on E/T and automatically allows for these variables. The critical measurement used is millimetres/week which is processed to a specific formula to interact with the settings and demands of the Toro controller. The Network 8000 can be programmed to operate on daily, alternate, three day or weekly cycles and Martin programmes it to apply water as a percentage of the “E/T” rate. He programmes sprinklers into four types according to location, i.e. greens, surrounds, tees, and other and normally applies from 35% to 48% of the E/T figure provided by the weather station. He commented that as a rough guide 40% is maintenance level while over 45% gives lush grass, when taken over a period. The controller has the ability to apply from 1% to 900% of set rate. Double normal rate – i.e. 80+% is used for watering in feeds etc.

As Martin says, he was very pleased with it, there is little maintenance required, it can be drained down with the existing drain points without needing compressed air to clear the lines and frost has not caused any damage to lines or sprinklers – the pump house and control electronics have automatic frost heating. And there have been very few stuck sprinklers.

The Oxfordshire takes all its irrigation water from two lakes which collect rainfall from the course – the entire course is drained, either with ditches or underdrains. These lakes have PVC linings – at the instance of the NRA – with clay on top and hold 200,000m3. Use in 1996 equalled about half of this. Location for the weather station is all important and the supplier provides some critical requirements which have to be met for it to give accurate and representative readings. On the Oxfordshire it is placed well away from trees or other disturbing features, about 100m from the course manager’s office which houses the controller. The lakes and pumps are some distance from the controller. Control cables carry 240 volts to the satellite stations which decode and relay 110 volts to individual valves. All pipework is uPVC with solvent welded joints and has been leak free – the few problems have been caused by subsequent ground settlement or heavy traffic over uncompacted ground.
There is no specific system that meets the demand for every sports field. That's why Rain Bird offer a choice of systems to meet the individual requirements of your sport, local conditions, budget, water and manpower.

As professional distributors and installers of irrigation equipment for over 24 years we will put our experience behind you.

So make our reputation your choice.

Being wear on the impact drives, and sticking pop-ups close to bunkers when sand has got in. There have also been a few blown fuses. Frost damage has been limited to the outer castings on a few heads, but Marc thinks this was due to ground water seeping in. The course is on clay which forms the impermeable strata for the lake. Where heads have stuck they have been easy to spot, either due to the dew still being on the grass or by turf colour and growth.

Overall Marc said the system has been trouble free, and while past experience has led him to expect some problems he said the Ocmis system at Cumberwell has almost always gone through its cycle without trouble. Installation had been “very good” and Ocmis were “very helpful” were his summary words.

Canford Magna

This course began as a 9 hole and has been extended to 36 in the past few years. It is variously laid over gravel or on silt over gravel in the Stour river flood plain and all greens are to USGA spec, thus drainage is exceptionally good.

Course Manager, Trevor Smith, said he feels that it is essential to keep the root zone moist. The system was installed by Salisbury-based ISS and it now comprises of a computer (IBM) control running about 400 sprinklers through six zones. Water comes from a spring fed lake via three
main Godwin pumps with a small pilot pump which is used to maintain pressure. The controller has recently been changed from the original ISS BBC "Aquaflow" to a new IBM 486 computer and "Aquaflow +" software. Changeover has not been entirely straightforward due to some misunderstandings and polarity mix ups which ‘blew' several chips - ISS are sorting this out. The new controller will give the system almost infinite flexibility and being 'Windows 3.1' based will enable the operator to use a mouse to set all parameters more quickly and easily. Important features of the Aquaflow+ program include "global adjust" which allows the operator to alter the times on all heads by percentages from -50 to +100%. Producing new programs - or files or adjusting old ones is quick and easy by copying, modifying then re-naming - several files can be ‘chaired' together to operate consecutively. ISS says the new controller system was released in March 1996 and some 32 new systems or upgrades have been sold to date.

Pipework and the low voltage control cables were all trenchcd in, the pipes all being 6 m lengths of uPVC with solvent cement joints. All were protected by hand by the greenkeepers with a layer of sand over the top and Trevor said that the care with which this laying was carried out has ensured that there have been absolutely no problems - no bursts or leaks over three years.

Greens and approaches are watered by Toro 650s and 760s, adjustable part or full circle, gear driven pop-up sprinklers while all tees are irrigated by Hunter 131 ADS pop-ups, the latter having proved to be easy to service and clean out. Trevor said that it was his belief that all greens and approach irrigators must be of the in-head control so that they can be individually set to allow for shade or wind variations etc. He said that it was also important that each green had a hydrant for hand watering.

Canford Magna is going to change its water source in the next winter from the spring fed lake currently used to a borehole fed lagoon. The main reason Trevor gave for needing this change was the high pH found in the spring water. The club has always worked in close consultation with the Environment Agency - previously NRA - and a significant factor in this has been that the River Stour bounds the club. Trevor feels that a weather station is but an expectation of putting some files can be 'chained' thus keeping surfaces playable a must.

Consideration was also given last year to installing a weather station, however this was deferred in preference to upgrading the controller. Trevor feels that a weather station is but another aid to the management of the course, but he still has to be convinced of its need. ISS believe that once installed he will give it increasing credence.

**Hankley Common in Surrey**

This 18 hole sandy heathland course on lower greensand had its first irrigation in the 1960s - installed by locally-based Watermation. Upgrading in 1971 put automatic irrigation on all greens while an 1991 upgrade resulted in tees and surrounds being included in the system. In 1995/6 the whole system was virtually reinstalled or refurbished with water on all fairways as well, a borehole feed and new controls and pumps. Prior to last year the club took all its water from the mains and last year only had a licence to extract 3 million gallons, which, said Course Manager, Ian McMillan, was insufficient. An abstraction application for 9 million gallons including summer use has now been sought and should mean independence from mains water supply. The specification with which the club went to tender included an ability to apply 21mm per week from 7 hr/day working. Some 16 hectares in total are now covered by irrigation from pop-up sprinklers.

Watermation won the contract for the last improvements and Ian admitted that the company's satisfactory past record and local base, as well as the quote price, were important considerations. No details of the other bidders were given but it was intimated that there were about three and all were nationally known names. The installation has mainly GR series pop-up impact heads, variously full or part circle, some 530 of them, which are mostly controlled in stations of 3 or 4 by two TW2/4 controllers operating two pumping stations with a total of five pumps. The overall system is divided into two (old and new) with three zones for fairways and two for greens and tees. Ian said Hankley Common opted as an extra, for a radio remote control, with the header tank, was��水/gif fungicides etc. without his needing to stop or leave his vehicle - this not having to stand around was a major time saver. In particular it means that he can switch on or off as he drives around or as greens are fertilised.

All heads have the same nozzle, with variations in water delivery being made either by spacing or by run time. Full circle sprinklers are placed in parallel lines on either side of fairways to give full application to the fairway and this meant that they apply only 50% to semi-rough. The use of travelling irrigators for the fairways was considered but rejected as being too labour intensive.

Installation was undertaken by Watermation supervised by McMillan Shields in a strictly controlled schedule which allowed each hole to be closed for only two days. Pipework was all uPVC - in 6m lengths, solvent welded and then mole ploughed in - larger sections also having a mechanical ring to ensure water integrity. It was, Ian said, a very smooth operation. There have been no problems with installation and the only small problem, with the header tank, was painlessly sorted out by Watermation. The impact heads, the GR3 in particular, have been very...
The place, the time, the event...

It’s almost here – BTME 97, January 22-24. The biggest, the most comprehensive, the most exciting event for 1997! Have you pre-registered yet? See the back of this issue for your pre-registration card.

Fancy a night out?
Have you booked your banquet ticket? It’s the hottest ticket around for those in the know! Contact Sami Collins at BIGGA HQ on 01347 838581 if you haven’t already reserved your ticket to see top comic Bobby Davro and experience the delights of Laine Kennedy’s cabaret – all together, a night not to be missed!

Four halls to visit
All 154 companies large and small are primed and ready to talk to you about all that is new in your industry. So what are you waiting for? It couldn’t be easier – send your completed registration card back to BIGGA HQ and avoid the queues.

Especially for you...
Are you a Chairman of Green or Golf Course Secretary? If so, register for the course presented by the STRI. The course aims to introduce Chairmen of Green and Secretaries to the practicalities of golf course construction and management. It also includes a visit to the STRI trial grounds and laboratories. Call Sami Collins at BIGGA HQ to book your place.

Andrew Hall of St George’s Hill

successful and easy to get out for maintenance, as has all maintenance and draining down.

The TW2/4 controllers have been found to be particularly user friendly and have a good level of diagnostic ability built-in. Programming is very easy and Ian insisted that all important documentation, i.e. user manual and maps, were encapsulated in plastic making them durable even if used with wet or dirty hands. As far as Ian was concerned user manuals are extremely easy to understand. He relies on traditional greenkeeping principles to judge when and how much water to apply and this includes a regular use of probes.

St George’s Hill in Weybridge, Surrey

Superseding the original 1970s installation the club’s latest system by British Overhead Irrigation Limited has three variable speed pumps, a Photon CIC4 controller, three zones covering the 27 holes and allows for the use of (three) self-travelling sprinklers – with a 200m cable. The heathland courses are extremely free draining however Head Greenkeeper, Andy Hall, uses wetting agent and Toro Hydroject aeration to ensure optimum use of water. This is particularly pertinent as all water is bought from the local water company and stored in a 21,000 gallon butyl lined above ground tank. A key-stone policy is to keep the system simple, and Andy said this applies to programming the system. Nevertheless the CIC4 which superseded a CIC1 model is extremely flexible. Mr Gerry Wilkins of BOIL suggested perhaps more flexible than any greenkeeper is likely to need. CIC controllers are produced by a ‘sister’ company. The previous irrigation system only had a single zone and single phase pumps of limited output which meant that it was taking over 14 hours of watering “just to keep the course alive”. While the original system was only designed to irrigate 18 greens the addition of 9 holes plus watering of tees (and some banks) called for a radical re-think. The new system has just completed it’s first season. The system is a constant pressure system, however a time clock maintains a lower pressure during the day and this is increased at night for irrigation. The design pressure is 9.23 kg/cm² at the lowest point – at St George’s Hill there is a variation of about 30m between top and bottom points in the system. Typically each green has four heads, controlled in pairs, while approaches have three or four, and the tees have from four to six each. All are pop-up gear driven Hunter G600 or G650 heads, full or adjustable part circle. Fairways are covered by three BOIL travelling sprinklers each with an output of 1600 gallons per hour, these take water from hydrants through 1in. flexible pipes. However, consideration is being given to about putting in a permanent pop-up system for some or all of the fairways. Virtually no hand watering is carried out.

The sophisticated pump control system allows any of the three Grundfos pumps to be set as the duty pump which maintains line pressure – and this can be operated at a much lower revs little more than tick-over so minimising electricity consumption. It is only when demand exceeds this pump’s capacity that the other pumps are called in. The variable speed motor controller means that each motor soft starts, avoiding starting under full load and considerably reducing the sudden pressure stress placed on the whole system but in particular on pipework.

A notable feature of the CIC4 controller is the “duration percentage” function which allows an overall percentage increase or decrease to be made to all watering times, without the need to alter individual settings. Pipework is uPVC solvent welded in sizes suitable to location, some 8 miles of it, and most was mole plumbed in. Ample flush out and drainage points were installed and any section is easy to isolate says Andy.

There were a few small teething problems, but no more than Andy was expecting and these were readily rectified by the supplier. Once the system was set up, fine tuning and operating proved to be quick and simple. Andy said that knowledge with the previous system made using the new one simple.

The one question I would like to ask other greenkeepers is:

“How much do you earn?”

Terry Crawford, Clandeboye
Selecting the best spray chemicals for your turf is one thing, applying them with the required accuracy is another. That's why at Hardi we don't measure the performances of our spraying equipment solely in terms of tank capacity, nozzle output and bar pressure. We measure it in your terms. Uniform coverage, speed of application and effective results.

For example, we know that your individual requirements, in terms of chemical choice, climate, terrain and turf condition, are unique.

That's why Hardi offer a complete range of amenity sprayers to suit all situations with tank sizes from 100 - 1500 litres.

When it's the end result that counts you can always rely on us... no matter what the pressures.

For more details or the name of your nearest Hardi distributor call 01455 233811
Due to a lack of space in last month's magazine some of the interesting new products at Saltext had to be held over to this month.

**JCB**

JCB launched a new materials handling machine. It has the manoeuvrability and centrally mounted visibility of an articulated loader, the reach and lift capability of a telescopic handler, the lift capacity and stability of a rigid loader and compact dimensions similar to a large skid steer.

The new JCB -20-50 Loadall telescopic handler is based on the tried and tested drive train of the popular JCB 2CX compact backhoe loader and uses the proven single arm technology of the world renowned Kobot skid steer loader.

At only six feet wide, less than seven feet high and with four wheel steer it is sufficiently compact and manoeuvrable to work in almost any confined space; warehouses, industrial applications and inner city sites, including multi story car parks. Yet the 520-50 is powerful enough to lift two tonnes to a height of five metres.

The 520-50 is powered by the 71 hp (53kW) naturally aspirated Perkins 1000 series engine which has easy access to all daily checks from one side of the machine. And at only 4.5 tonnes it has a high power to weight ratio.

The new JCB 520-50 is well equipped in line with other machines in the JCB Loadall range. Features such as; JCB Safe Load Indicator, power braking on all four wheels and a low maintenance parking brake are fitted as standard.

Product Information Line: 0800 581 761.

**Lawn-Boy**

Lawn-Boy introduced a cleaner, quieter, lightweight 24 volt cordless mower. The mower eliminates tune-ups, oil changes, fuel spills and engine emissions. The lightweight polyethylene deck with steel liner and moulded bumper is gentle on trees and shrubs while it offers versatility as mulching and side discharge are standard and bagging optional. It mows up to an hour or cuts up to half an acre on a single charge.

Further information: Tel: 01366 382 041.

**Turf Machinery**

Turf Machinery's new Bulk Top-Dresser with its spreading width of 10 metres can spread over 400 tonnes per day. It has a spreader for application of a wide variety of products. The top dresser requires a minimum of a 50 HP tractor with spool drives. Further information: Tel: 01483 764 467.

**Tildenet**

Tildenet unveiled a new bunker membrane designed for lining bunkers to prevent stones and underlying soil from moving. The membrane also provides good water dispersion rate so it assists with drainage. Further information: Tel: 01179 669 684.

**Iseki**

High standards of operator comfort, exceptional lift capacity and well proven, fuel efficient engines are key features of two new multi-purpose compact tractors from Iseki which made their debut at this year's Saltext.

Ideal workhorse machines for golf courses, local authorities and market gardens, the new 20 DIN hp TF321 and 25 DIN hp TF 325 (which replace Iseki's TU range) come equipped with spacious operator platform, mechanical or hydrostatic transmission, four-wheel-drive, rear and mid-PTO plus turf or agricultural tyres and optional Mauser cab.

The Iseki TF 321 with mechanical transmission sells from £10,744 and with hydrostatic transmission from £11,780 while the Iseki TF 325 with mechanical transmission is from £11,552 with hydrostatic transmission from £12,856.

Further information: Tel: 01203 851 320.

**Dennis**

Dennis launched its new "Power Barrow" which can be used as either a pedestrian or a ride-on. It features a tipping galvanised barrow capacity of 250 kilogrammes and is operated by a easy start Briggs engine, a simple forward and reverse twist grip and a tiller steer with foldover handle.

There are options of alternative units in place of the barrow and a trailer attachment Cost is £1600 + VAT. Further information: Tel: 01332 824 777.

**Headland Amenity**

Headland Amenity launched a new range of resin coated, precision controlled fertilisers at Saltext '96. Multi-Gro fertilisers could help groundsmen and greenkeepers reduce the number of fertiliser applications to just one per season – a significant time and labour saving, claims the company.

"Multi-Gro fertilisers incorporate the very latest formulation technology," according to Mark De Ath, National Amenity Manager for Headland Amenity. The majority of granules are resin coated which enables them to release nutrients at a steady rate over a period of 5-6 months under UK conditions. A proportion are uncoated which means they are immediately available for rapid green-up.

"The products are unaffected..."
by moisture, pH or soil type and the release mechanism relates to soil temperature - which exactly mirrors the growing season," says Mark.

"Independent trials show Multi-Gro fertilisers are effective for up to 200% longer than the current market-leading poly-SCU-based fertilisers," claims Mark.

Further information: Tel: 01761 410877.

**Etesia**

When areas are infrequently cut, the resulting heavy undergrowth can become very time consuming and expensive to clear. This task is often made more difficult because of sloping terrain and then the job can only be carried out using hand-held brushcutters. The new Attila 85 ride-on brushcutter from Etesia UK is designed and purpose built to make light work of this type of application, and efficiently clears scrub, brushwood and long growth. Built around a reinforced tubular chassis, this 85cm-wide brushcutter is made for the roughest conditions. With its low centre of gravity, differential lock and heavy chevron tyres, it will take slopes up to 30 degrees in its stride.

The well proven 14hp Briggs & Stratton Vanguard engine ensures there is plenty of power for the toughest of jobs, plus noise level is kept to a minimum. The variable speed drive provides a range of forward speeds up to 8km/hour and 3km/hour in reverse. Underneath the heavy-duty steel cutting deck there is a 7mm thick cutterbar which is fitted with swing blades. These can be fixed in a ridged position when working in very tough conditions.

In addition, a built-in safety system protects the cutting mechanism from heavy impacts. Four cutting heights up to 90mm are adjusted by a central lever. Attila’s low profile enables the operator to drive it under low hanging branches and its variator drive, plus specially designed steering assembly, make the machine very manoeuvrable for working in confined areas. The machine is ideal for river and water authorities, forestry commission, and contractors who have to maintain motorway banking, verges or clear sites.

**Mercedes-Benz**

A new, higher performance U100L Unimog from Mercedes-Benz made its show debut in the UK at SALTEX.

Power output has been increased by 24% and torque by 45%.

Geared for a maximum road speed of 95km/h (59mph), the new generation U100L is the ideal on-road/offroad vehicle for trailer work, and equipment and load-carrying operations.

Improved low-speed torque characterises the new generation Unimog’s cleaner-burning Mercedes diesel engines.

In Euro 2a form, the Unimog U100L can be leased for the equivalent of £120 per week, with purchase prices starting at £30,900. Seven year leases or contract hire can only be carried out using hand-held brushcutters. The new Attila 85 ride-on brushcutter from Etesia UK is designed and purpose built to make light work of this type of application, and efficiently clears scrub, brushwood and long growth. Built around a reinforced tubular chassis, this 85cm-wide brushcutter is made for the roughest conditions. With its low centre of gravity, differential lock and heavy chevron tyres, it will take slopes up to 30 degrees in its stride.

Ayrshire
The Section Autumn Outing was held at West Kilbride GC on September 24. the Committee would like to thank the Captain and the Committee of West Kilbride for the courtesy of the course. The weather held out quite well and everyone had a most enjoyable day. The prize winners as follows:

Texas Scramble. 1. Ian McNab, Roland Blackburn, William McMeikan and Gordon Heron, 59-4-55; 2. Jimmy Johnstone, Gary Crosbie, John MacLachlan and Dan O'Connor, 64-5-58.7.

At our recent committee meeting a discussion took place about one of our most esteemed members, Harry Diamond. Our Section Committee has requested from the Scottish executive its approval to put Harry forward for life membership.

Our Section lottery was a success and the winner was A. Groves, of Newton Stewart. Derek Wilson, Robert Bruce and I went down to The Open to do the draw

Firstly on a sad note is the death of one of our younger members Mark Johnstone who was an assistant greenkeeper at Muirfield. Mark was 20 years old and has been at Muirfield since 1992 he also attended Oatridge College. He died in a road traffic accident near his home on the August 24 and all our thoughts go to his family and friends at this time after such a tragic loss.

On a much happier note, congratulations go out to two people on the move (These I know about if anymore please let me know) Firstly, George Purves who moves from Melville Golf Course and Driving Range to Kings Acre GC as Head Greenkeeper (Kings Acre which was featured in Greenkeeper International a couple of months ago) George who will be putting the final touches to the growing in process as they hope to open in June '97. So a fair bit of work to be done between now and then (shaping fairways, grading semi rough etc etc) Hope all this work affects his golf as I would like a chance of winning something in the 2nd class wishful thinking on my part I suppose. Secondly Steven Holiday, who is moving after a good number of years (14 I think he told me) from Royal Musselburgh GC where he was first assistant greenkeeper to Melville Golf Course and Driving Range as Head Greenkeeper. All the best to both of them from all the section. Also I had forgotten I had been a good number of years ago (you know the rumour is it has had his partner playing shots from places that the green staff haven’t been. David Hartings Stevie’s Partner has had bad problems since carrying him round that day)

Next down to the Autumn Tournament at Murrayfield GC who were celebrating their centenary this year. Thanks to the Captain and Directors of Murrayfield GC for the courtesy of the course, clubhouse staff for keeping everybody well fed and refreshed and also Jimmy Neilson and all his team for having the course in terrific condition. The course was a credit to each and every one of you. Thanks again to everyone who made this day possible.

It was good to see Scott MacCallum the Editor of Greenkeeper International in attendance. I hope he had a good day and hopefully we will get him to some more events in the future. Our Chairman/Secretary presented Murrayfield G.C with a plaque to commemorate our playing there in their centenary year which was a nice touch.

Well I am sitting writing this at the side of the pool here in San Antonio in Ibiza where the temperature is 90-degrees which is quite warm. So that’s it for this month, I will be writing again next month if I stop drinking long enough (it’s too hot you see – don’t want to become dehydrated)! So anything you want to know or tell us let myself C. Yeaman, S. Dixon, A. Forrest or any Committee Member know and we will try to help you out.

Just one last thing. Your last chance for dance tickets for the annual dance on the 7th December at the Kipsinide House Hotel, price £18 and not many rooms left if you want accommodation at £20 per person (£8 & £). Be quick as I think there are only about 12 tickets left.

For any information call Steve Dixon on 0131 6600 3965 (so hurry).

P.S. To the Editor. I mentioned Chris four times in this article this month. Don’t tell me it means another yellow card or worse a red! That’s it bye for now.

P.P.S Committee day out won by yours truly Chris Yeaman – 78-12-66 Chairman v. Vice Chairman Match – won by Vice Chairman Team which I was a member of. Hard luck Steve. Thanks to sponsors Lothian Tractors, Haddington Golf Club Captain and Council for the courtesy of the course clubhouse, staff for keeping us well fed and very very well watered and also thanks to anybody I have missed this month.

Chris Yeaman (on location).

West of Scotland
Well, well, who would have predicted the finalists in the five a side tournament, enough, the ringers were brought in. Could be we have to revise the rules again. Congratulations to the eventual winners Campsie/Russells (on penalties I might add) and hard lines the losers Rigby Taylor. Well fought both semi finalists Clyde Bank/Windyhill and East Kilbride/Polllock. Most teams appeared to have enjoyed the day, as the weather was good and good company. The referees made all the difference, keeping play flowing and punishing any hefty challenges.

The Loch Lomond event had a good attendance and from the Greenkeepers I’ve spoken to they really enjoyed the experience.

The Autumn outing at Buirmore once again was excellent with the course presented Murrayfield second to none. Well done Charlie and his team, thanks to mon-
and the Old Rule 19 will be thrown about, a career in Greenkeeping, so if any courses in the area are looking for a trainee, Stewart can be contacted on 01479 872428.

George Rollo rejoin the Section, George is Greenkeeper at Gaernoch. The lucky winners of the Patron award for 1996 are Stuart Hogg, Fortrose, and Steve Sullivan, Craigie Hill, who each receive £200 to be used for educational purposes, a course or trip to BTME at Harrogate. We are indebted to the members of the Trade who contribute to the Patrons Scheme and therefore make awards like this possible.

The AGM will be a Cullen GC on Thursday November 7, at 3.45 pm after the Annual Chairman, Vice Chairman’s golf match, please attend and have your say in the running of your Section.

Finally the Committee are putting on a free bus from Aberdeen to Ellon for the Dinner/dance on November 29, phone Sam Morrison on 01224 795083 for details of pick up points.

S. Macleod

North

It was second time lucky for the Section outing to Grantown-on-Spey as this year we had no problems during a wonderful day at the Speyside venue, and it was certainly worth the wait as Ken Kinnaird and his staff had the course in excellent condition. The lucky winners on the day were as follows: Scratch: 1. Bradley Wood, Westhill, 70; 2. A. MacGinger, Caithness, 77-10 = 68.

The results as follows: Scratch. 1. Bradley Wood, Westhill, 70; 2. A. MacGinger, Caithness, 77-10 = 68; 2. A. Bayfield, Buchanan Castle, 78-9 = 69; 3. C. Fulton, Douglas Park, 78-16 = 68.

3. C. Fulton, Douglas Park, 78-16 = 68.

This annual match will hopefully continue again the greenkeepers were kindly donated by Titleist, Colin Trainee, Stewart can be contacted on 01479 872428.

Another busy month in the N/W calender, which was the annual match with the golf course in great condition and once we had no problems during a wonderful day at the Speyside venue, and it was certainly worth the wait as Ken Kinnaird and his staff had the course in excellent condition. The lucky winners on the day were as follows: Scratch: 1. Bradley Wood, Westhill, 70; 2. A. MacGinger, Caithness, 77-10 = 68.

Northern

At our invitation day at Bingley St Ives we had an excellent turn out. Thanks to Joe Baxter and his gang for turning the course out so well. Also many thanks to John Walker, of Ritefeed (UK) Ltd, for putting up full sponsorship of the prizes, many comments were made on the high standard of prizes on show. The results for the days better ball competition were as follows:

Many thanks to Mel Guy, Dennis Cockburn and the rest of the committee for their help on the day. Thanks also to the trade lads for bringing raffle prizes along.

On behalf of the Northern section I would like to welcome Mr Melvin Guy, of Greenotech, on being newly elected as the section's President. I am sure Mel will continue to serve the section well and carry on his hard work and effort for the section.

Any member willing to volunteer for helping out at the BTME on the 22nd - 24th January 22-24, '97 please contact myself at 1 Cockley Meadows, Kirkheaton, Huddersfield, HD5 OLA. Tel: 01484 519829.

Finally I would like to congratulate Phil Batsey, from South Bradford GC, on recently getting married to Amanda in Gretna Green.

Simon Heppenstall

Sheffield

In September of three of our members played in the Hayter Final at Fairhaven GC, they were Allan Atsop, Colin Hopper and Paul Neve.

Paul Neve did very well by coming second in his handicap division and he came second in the overall competition. Well done Paul!

All three of them were members of a winning team as the Northern Region team won the regional team prize, well done lads!!

Also in September Derek McMannet played in the Hayter International Cup at West Lancs GC. Derek halved his four ball match and won his singles match, but the team lost by beaten by the Americas. Well done Derek.

Our congratulations also go to David Milbourne who was recently elected to the BIGGA Board of Management.

Our Christmas competition will be held at Worley GC on November 27. Please return entry forms early! Thank you.

Our next lecture is on December 12 at Rotherham GC at 2.30 pm and will be given by Mr C. Peel from ADAS.

MIDLAND

Peter Larbr
Tel: 01480 437507

East Midlands

This year's autumn Golf Tournament was held at Ramsdale Park on September 12, with a turnout of 35 members (which was surprisingly less than normal). Despite difficult windy conditions some excellent golf was played with the category winners as follows:

The highlight of the day was seeing our Chairman chasing his scorecard across the 12th Fairway and only just retrieving it before it blew out of the bounds.

Our section would like to thank the Centre Manager of Ramsdale Park, Brian Jenkinson, for allowing us courtesy of their course and also to Course Manager, Martin Smith, and his staff, for preparing such a great course.

A special thanks should go once again to our sponsors Charnwood and Highmeers Lawnmower Services for supplying us with such a grand prize table. Also I would like to thank all the committee members for their help on the day, especially to Gavin Robson who, despite being unable to play, was willing to make the long journey to be starter for the day.

Congratulations to Steven Heap, of Rothley GC, for winning this year's Hayter National Final at Fairhaven GC with a nett score of 74.

Two dates for next year's diary Spring Tournament and Hayter Qualifier May 1, Cosby GC; September 3, Autumn Tournament, Chevin GC. Thanks again to both golf clubs for allowing us to stage tournaments.

Finally I would like to wish both Robert Couller and Mark Huthwaite of Ramsdale Park speedy recoveries after their recent car accidents.

Antony Bindley

East of England

The East of England Section took home the Chandlers Challenge Cup when they defeated the East Midlands Club Secretaries at Blankney GC.

It was the first win by the triumphant greenkeepers, having narrowly lost on the last green last year.

The result was 3½ - 2½, but the secretaries got their own back by winning every ticket in the raffle.

Thanks to Jim Carr for sponsoring the event and supplying the raffle prizes.

Greenkeeper names only; Mick Wood and Alan Buckley, lost 2½; John Henson and Barry Anderson won 3½.

Charlie Macdonald and George Venables lost 1 down; Peter Down and Peter Fell, won 5½; Josh White and Jim Burton, won 1 up; David Welberry and Les Purdy, won 4½; Graeme Macdonald and John Scotney won 3½; Phil Wilkinson and Ted Lake, halved.

The Lamberts Cups was won by Barry Anderson, of Toft GC, with 37 points. He was a very late entry, only hours before the competition started, but his impressive points tally was four ahead of Charlie Macdonald on 33 points. Third was Allan Buckley, Peter Fell and George Venables all on 32 points.

It was a pity our main sponsor Robin Lamb could not take part as he was on holiday in Egypt, but thanks for donating some prizes. The other sponsors were Fieldcare, Atkens, Collier Turfcare, Banks Toppingd, Purdy's and Chandlers. Thanks to all of them for making it a super day.

The day was held over one of my favourite courses - Luffenham Heath. This must be one of the most natural courses in the country and manicured to a superb quality by Head Greenkeeper, Dick Fogg, and his staff. The course grows windgently through testing individual holes lined by Hawthorne, Gorse and Heather and you finish with a superb par three - one of the most picturesque views in Rutland.

This hole was our nearest pin sponsored by Rhone Poulenc and won by Michael Wood.

My last thanks go to the Secretary, Ian Davenport and Luffenham Heath GC, for extending us courtesy for the day and providing a super meal and wine.

The Hayter National Finals at Fairhaven saw John Henson and Graeme Macdonald represent the Midland Team. Graeme fared well in testing conditions and picked up best gross overall - all four and five's, keeping six off his card – and second nett in Category one and the Midland Team finished second. Fairhaven GC was in great condition with the fastest greens I have played on this year. The course played exceptionally long off the back tees and to cap it off the wind was blowing a gale over the 6833 yards course.

Many thanks to Kim Macfie and Hayar for making our stay and the tournament a memorable occasion and such a success.

Please ring 01733 260297 if you have anything that may be of interest to your fellow greenkeepers.

Graeme Macdonald

Bucks, Berks and Oxon

Well it had happened a time, a golf day that was over subscribed. We originally booked our Autumn Golf Tournament for a maximum of 40 people with strong reservations about hitting the magic number. Although we were cutting it fine when sending out the entry forms...
the point that I had to disappoint one or two people who left it late. The final total squeezed in was 50. Thanks to Studley Wood for allowing the extra players to participate.

The weather forecast for the day was a bit dodgy (me without waterproofs again) but thankfully it turned out fine. It had to be said the standard of golf was outstanding, with the adjudicators requiring calculators to add up the Sta- blerford points. Judge: T.D. Schillace & M. Jones (47am & 43pm = 90 pts); T. J. Hookham & T. Strange (48am & 41pm =88pts); 3. J. Scoones & I. Scoones (50am & 38pm =88pts)

NOTE: I think its about time we appointed a handicap secretary. Any vol- unteers phone me.

Wooden Spoon: P. Gethin & M. Gethin 59pts

Many thanks to Studley Wood for their hospitality on the day. Congratula- tions to Ian and his staff for preparing the golf course, all comments from those who played that the greens were superb. I certainly holed a few putts. Thanks to all the support as usual especially Richard Haynes, Auncroft, for taking charge of the scorecards and Steve Denton, Pattissons, for breaking into my partner's car to retrieve his keys!

Definitely a sign of misspent youth.

The Rigby Taylor Final is between T. French & G. Wheeler and P. Critchley and J. Thorne. Good luck to both. Next golf day is the Turkey Trot & AGM to be held at Calcut Park GC (Reading) on Thursday, November 28. Entry forms will be arriving through your letterbox soon. Lindsey T. Anderson

SOUTH WEST AND SOUTH WALES REGION

Gordon Child

Tel: 01803 844056

South West and South Wales Region

The Region's Seminar, in partnership with Rhone Poulenc, at Cannington Col- lege on November 27 will include talks by Paul Clifton of Rhone Poulenc, Bill Lawson, George Brown, Gordon Irvine, an HND student and the BIGGA Road- show. Among the topics are the 50s and 60s - examination of work- ing conditions and BIGGA. I'm pleased to announce that his will be held at Royal Winchester GC on December 3 as stated in the section pro- gramme. On completion of the AGM there is the Christmas dinner and prize giving. All members wishing to play should send their handicaps and a fee of £15 to Mark Webb, 12 Lime Road Arels- ford, Hants SO24 9LD Tel: 01722 330277 to be received no later than three weeks before the AGM.

Lee on Solent Golf Course the result 4-2 to the Greenkeepers well done lads and a good time was had by all. The day's events were well organised and everyone of us thoroughly enjoyed ourselves, so much so that it is hoped that this will become an annual event, in fact Mark is already making arrangements for next year - possible venue Arelsford Golf Course. A trophy was supplied by Course Care who we thank for their gen- erosity. I am told the course and espe- cially the greens were in excellent condition - well done Steve and staff. A big thank you to the catering staff who provided a superb meal and last but not least, the Captain, Committee and Mem- bers for making everybody so welcome, their hospitality was second to none.

Arrangements are at present going ahead in organising our Section Seminar at Sparsholt College on February 16, 1997. The cost will be £15 for members and £20 for non members; this includes lunch. One speaker has confirmed, that is Scott MacCallum, our Editor. Last year speakers were of a very high calibre this time we hope to give you even better value for money. Up to now we have four sponsors Huxleys Grass Machinery, Its, Gem and Driving Force Leisure. These companies will be showcasing off their products, more details will be published when known.

Lastly, I have one more name to our list of assessors that is Simon Pickett, the Course Manager at Blacknest GC, this is North Hampshire. Anyone wishing to be assessed for their NVQs or has any queries you should contact Simon, who I am sure, will be only too pleased to help you. While on the subject of NVQ's all our assessors in the section tell me their telephones have been quiet. All the assessors in our section are qualified to examine you on various stages of your NVQ's - make use of them and contact them. NVQ's are our recognised qualifi- cations - they are what our employers value. We wish them good luck in their achieve- ment level are available with some being conducted a survey on aspects of work- ing conditions and BIGGA. I'm pleased to inform you that the survey has now been completed and results will be available at the event. If you do not have access to one of these forms then please once again speak to Gordon or Marion Child on 01803 844056.

Forms for BTME 1997 have now been distributed to all Head and Deputy Head Greenkeepers in the Region in the intention that they inform their staff of the event. If you do not have access to one of these forms then please once again speak to Gordon or Marion Child on the above number to reserve a place on the coach. The cost for members is £125 for three nights bed and breakfast in York which includes entry to all semi- nars and the exhibition. The cost of the banquet ticket which is optional is an extra £29.

As always educational courses at section level are available with some being arranged at present to cover PA1, PA2, First Aid etc.

The Hayter Final took place at Fairhaven GC on September 18 and although there were no outright winners for the South West Section everyone who participated enjoyed the day. Thanks once again to Hayter for their continued sponsorship.

This year's AGM at Bristol & Clifton GC takes place on the November 14 with Rigby Taylor sponsoring the day. A morning round of golf will be followed by a short talk from a guest speaker before completing the day with the section AGM. There will be vacancies on the sec- tion committee so any of you who feel...
Levington Turfclear® the double action worm control and fungicide for clean and healthy turf. Banishes casting worms and Fusarium Patch from all playing surfaces in one cost-saving operation.

- Contains the most effective worm-cast control agent available.
- Systemic fungicidal action without risk of damage to fine turf.
- Unaffected by rain or irrigation.
- Original flowable formulation now available in 800ml and 5L packs to suit all needs.
- Turfclear WDG provides convenient, pre-measured, water soluble sachets of water-dispersable granules to increase user safety and ensure accurate dosing.

ALTOGETHER AN UNBEATABLE COMBINATION

you could contribute some time to running the section please ensure that you attend.

Finally the Christmas Tournament takes place this year at Worlebury GC on December 12. Please find time to attend this popular seasonal event.

Kevin Green

South Wales

Our recent annual match versus the Golf Club Secretaries took place over the Southerndown golf course near Bridgend, the weather was superb the course could not have been better, altogether an excellent day! A good equal attendance this year of 8 teams a piece resulted in a 4 1/2 to 3 1/2 win for the secretaries.

Results: Gervyn Price/Cari Jones v P. Plumb/B. Bennett Lost 3/2; Andy Roach/Malcolm Davies v D. Peak/R. Doderick Won 2/1; David Glidewell/D. Bray v J. Graham/G. Rees Won 2/1; John Phillips/Alan Richards v D. Davies/ D. Lloyd Lost; Herbie Probert/Peter Edwards v K. Thomas/E. Evans Lost; P. Lacey/G. Johnston v J. Whitaker/B. Jones Won 2 holes.

My sincere thanks to everyone for making the effort to turn up and ensure that this annual event is such an enjoyable and keenly fought competition. My thanks also to Fred Crossman for his organisation of this fixture, it was so good to see Fred in attendance despite his recent misfortunes of health and in such good spirit. Lastly I would like to thank everyone at the Southerndown GC for their part in ensuring that an enjoyable day was had by all. Gary Johnstone and his green staff for the course, Ann Fletcher for the feast, Jim Graham and the Executive Committee of Southern down for their courtesy.

Peter Gee, 3G, is the new Course Manager of Langland Bay GC, near Swansea.

Peter, a Kent man, comes to Langland having been previously at the Ridge GC, Maidstone. We wish him well in his new position. Double celebrations in the home of Mr and Mrs Chris Solman at present, firstly on the news that Chris has been appointed the new Head Greenkeeper of the Cardiff GC and secondly on the arrival of his new baby daughter 6lb 5oz Emily Jane. Well Done!.

On Thursday, September 12, the Porttardave GC played host to our Autumn Competitions.

The day was sponsored by Keith Morgan Movers of Usk. Our sincere thanks to Keith for his continued support. Again the weather was glorious and the course was in superb condition. A credit to Jamie Probert and his staff. 21 Golfers took to the course.

Results: Jacobsen Cup - Nett 67 - Alan Critchton - Kings GC, Waycott Cup - Nett 67 - Richard Patterson - Cradoc GC; Presidents Cup - Andrew Reach - 70 - Haverfordwest GC.

Our thanks to all at the Porttardave GC for their hospitality and course courtesy, to John and Ben Morgan for the presentations.

Around the Green

At the Orangery, Margam Park, near Swansease, recently, Celtic Mowers/ Kubota held an open day.

The agenda was a presentation/slides demonstrations of the new Kubota range machinery, including the superb range of compact tractors and an explanation / insight into what Celtic mowers have to offer – machinery hire, sales, repairs, as well as a full range of turf maintenance products ie fertilisers, seed, tools, etc. Then practical demonstrations of the presented machinery followed by a buffet lunch, including the Grandcal range ST 30 and superb b 2400.

An excellent event made all the more so by the fact that I won first prize in the raffle draw, a ghetto blaster! The only downside being the RSVP’s were made by some 75 or so people and only 40 or so turned up! Thanks to Kim Davies, of Celtic Mowers, and Colin Hennah of Kubota for their sterling work, Well Done!

Amenity Land Services recently held a seminar day at Usk. The day being primarily to promote a new range of Organic turf fertilisers and soil conditioners.

An excellent presentation and explanation of soil science and the reactions of organics was made by Belgium Agronomist and soil specialist Frans Pauwels.

This was followed by an explanation of each product and its function/benefit to the soil. This presentation was given also by a Belgian, soil specialist, Dirk Creve.

An excellent informative day that was well supported with over 40 people in attendance from as far afield as Worcesters and Haverfordwest.

Many thanks to all at Amenity Land Services Limited but especially, John Reynolds and his staff for their hospitality.

Finally we would like to congratulate Course Manager, Mark Proctor and his staff at the Marriott St. Pierre Hotel Golf and Country Club, for the success of the recent Solheim Cup.

Both courses have recently undergone many changes and improvements including larger reservoirs, refurbishing of the 11 acre lake, over looking the 17th and 18th holes and a completely new irrigation system which has been extended to include both aprons and fairways.

The course seen by millions of viewers recently certainly looked the part. superb in fact, well done!

Surrey

September has been quite an eventful month as far as golfing events are concerned. First, the inter country charity event which was organised by C. J. Collins Construction Ltd was not only a very enjoyable but also a hugely successful day. C. J. Collins managed to raise in the region of £14000 to be donated to St Catherine Hospital.

The man who takes the credit for this most successful event is Barry Pace, from Collins, who organised teams of 10 players from Kent, Surrey and Sussex to compete for the inter country charity trophy of which I am proud to say as captain of the Surrey team this year we returned victors by 12 clear points from the opposition which we prove which section has the best golfers. Extra thanks go to Birch Grove House Golf Course which was built by Collins and proved to be a real hard test of golf.

Thanks to Course Manager, John Hills, for his extra efforts for the day.

The Huxley bowl came to a close with Epson Golf Club's David Jones and Mark Harvey beating himself and Roger Gizlser 5&4 over 36 holes. Well done to the both of you.

The Rigby Taylor Autumn Tournament was held this year at the Effingham GC. Thanks firstly to Effingham for allowing us to hold the event at the club, and also to Rigby Taylor for their sponsorship and to Sendmarsh Tractors for their co – sponsorship thanks to both of you for your generosity not forgetting Peter Broadbent and his staff for turning the course out in such great shape the course is a real credit to you all.

Forthcoming events include the first winter lecture which is to be held at Kingswood GC on Nov 20. The lecture will be given by Liquid Sod on the subject of nutrition amongst other things please try and support the evening 7 – 7.30pm. Dress smart and casual.

The turkey trot on December 3 at 7.30pm. Dress smart and casual.

Forthcoming events include the first winter lecture which is to be held at Kingswood GC on Nov 20. The lecture will be given by Liquid Sod on the subject of nutrition amongst other things please try and support the evening 7 – 7.30pm. Dress smart and casual.

Your Committee are considering starting a foursomes knock-out for 1997. Please let me know if you are interested. We also have an opportunity to visit the Ransomes Factory at Ipswich, Again, let me know if interested.

Our next tournament is the turkey trot at Darent Valley in December. Letters will be going out in November. Happy autumn maintenance.

Huw Morgan

Kent

First of all, apologies for missing last month's magazine. Believe it or not I have been very busy.

Our last tournament was held at Knole Park in Sevenoaks. On a sunny day at a very picturesque golf course a good day was had by all. Our thanks must go to Mr. Hoppe, the Secretary, for arranging courtesy of the course and to the committee for a fine meal. However the two biggest thank you's should go to Andy Arthur and his staff for presenting a fine course and to Bernard Diddams and Rigby Taylor for superb prizes again.

Details of our next tournament including results will appear next month. Our best wishes go to Callum Arthur who has left Knole Park to go back to Scotland.

Your Committee are considering starting a foursomes knock-out for 1997. Please let me know if you are interested. We also have an opportunity to visit the Ransomes Factory at Ipswich, Again, let me know if interested.

Our next tournament is the turkey trot at Darenth Valley in December. Letters will be going out in November. Happy autumn maintenance.

The need for new greenkeeping facilities at St Andrews had been apparent for some time. For more than 40 years, the staff looking after the original four courses on St Andrews Links had worked out of ageing buildings situated at the southernmost end of the Jubilee Course – the 18 holes laid out closest to the sea.

The result was that maintenance of St Andrews' four oldest courses, the Old, the New, the Jubilee and the Eden, involved crossing numerous fairways, public paths and tracks and even a now disused railway line, a situation far from ideal, especially during the run-up to important tournaments and championships.

The logistics problem was exacerbated further in 1972 and 1993 following the respective openings of the nine-hole Balgove and the 18-hole Strathclyde Courses – both located inland adjacent to the Eden Course. The distance now being travelled from the existing Jubilee sheds to mow the most distant tees and greens was almost two miles.

"The facility had simply become inadequate for the staffing levels and the higher standards of maintenance demanded across the links," commented St Andrews Links Manager, Ian Forbes. "It was also in completely the wrong place to look after six separate golf courses."

A decision was taken by St Andrews Links Trust in 1993 to develop two new greenkeeping centres. One would serve the latter three courses, the other would house the staff and machinery maintaining the Eden, Balgove and Strathclyde Courses.

Because there was a pressing need for a brand new facility close to the latter three courses, it was decided that construction should start first on the new Eden Greenkeeping Centre. But where should it be situated?

Initial plans drawn up in April 1994 by consultant architect, Fraser Smart, identified 10 possible locations for the new building. Six of these were quickly discarded as being unacceptable to either St Andrews or the local planners.

The remaining four sites were then studied in detail with particular emphasis being given to their position in relation to the courses. "Accessibility and the ease of serving the three courses were paramount in reaching the final decision," pointed out Ian Forbes. "However, selection of the best location from an access and operating point of view had to be set against the fact that this is a very sensitive area. Not only would the new greenkeeping centre be visible from the Old Course and the main road into the town, but it would also be close to the Links Trust offices, the Golf Practice Centre and the reception and ticket office for the three courses roundings and the required traffic flow without detracting from the building's main function as a working greenkeeping centre."

"We needed to combine a low building, which would have minimum impact on the landscape, with a large internal volume to maximise the working space from an available floor area of 1,000 square metres," explained Fraser Smart. "This was achieved through the use of an asymmetric portal frame design which gave us a low eaves height, yet provided adequate internal headroom and plenty of useable space within the span of the building."

The major problem of low centre which allows machinery to be driven from one course to another without hindrance. Machines can also move smoothly from the roadway into the greenkeeping complex on route from the Eden to Strathclyde or Balgove courses and vice versa. They can also leave the building by a different door to the one by which they entered.

From the beginning, the new Eden Greenkeeping Centre had to include three main elements: Storage for greenkeeping equipment, storage for buggies, and offices and facilities for greenkeepers, rangers and course orderlies.

Because the main workshop will be housed within the new Jubilee building, currently under construction, the Eden has minimal workshop facilities although there is a purpose-built separate covered storage area for fuel, soil and top dressing materials.

While the L-shaped layout of the main building has kept the individual internal elements separate, the greenkeepers are sharing rest and wash room facilities with the staff employed on the links to carry out support functions such as ranging, cleaning and waste management, painting and general repairs and maintenance. This integration is proving successful and has helped improve staff relations and the understanding of each other's role.

Concerns about the visibility of the Eden facility from other parts of the links were answered by a 2m high embankment located around the new building. This gave a fast, effective screen at considerable cost saving over the trees originally planned.

In designing the building, architect Fraser Smart included several interesting features. Ventilation is natural rather than mechanical combining air entry ducts beneath the eaves and louvered air outlets within dormers set into the roof at the same level as the top of the main doors. Apart from complementing the overall
design, the resulting air circulation movement is said to give five complete air changes an hour within the building.

Because all of the washings go to soakaways, proper separation of grass, oil, fuel and silt is essential to prevent soil contamination and waste pipe blockage.

Oil and fuel is handled by three filtering chambers and there is also twin silt traps. Collection of grass clippings was considered a major problem and paid special attention by Fraser Smart. The solution was found in a specially-designed three-stage tumbling filter comprising three chambers of gradually increasing depth through which washings passed, depositing stray grass on the way.

The end result is clean water flowing to the soakaways, leaving grass behind in the regularly-emptied traps.

"In the Eden Greenkeeping Centre, we have a facility which has helped raise the all-round standards and efficiency of links maintenance," commented Ian Forbes. "From a greenfield site, it was up and running within the three months originally scheduled and was delivered within the planned budget of £325,000. At £400,000 for the building and £120,000 for the associated services and roads, St Andrews has a cost-effective unit providing one of the best greenkeeping facilities in Europe."

Next month, the Learning Experience considers the design, management and operation of St Andrews' Eden Greenkeeping Centre from the greenkeepers' point of view.

"How would you go about getting an annual invitation to the Kubota Challenge?"

Scott Ballantyne, Cowglen

---

The main doors are set into the roof dormer-fashion to maintain a low eaves and building height in keeping with local architecture.

Perma-Soil Stabiliser

Perma-Soil stabiliser is a proven soil additive that dries, strengthens, and bonds soil into usable backfill. It minimises subsidence of restored excavations and potholes. It can even hold utility poles in position. Perma-Soil stabiliser increases strength 3 to 16 times more than untreated soil, while retaining original size and shape. Use it for a wide variety of applications to save both time and money.

**How can Perma-Soil Stabiliser help you?**

- Waterline breaks turn wet soil into usable backfill within minutes.
- Trenches and excavations - minimises settling of backfill.

**How is Perma-Soil Stabiliser applied?**

As soil is excavated, add Perma-Soil stabiliser to the backfill. While your crew makes repairs, your backhoe operator can turn the backfill to mix properly.

Place the mixture back into the hole in 6- to 8-inch layers, tamping each layer as you go.

**Perma-Soil is environmentally friendly**

Environmentally friendly construction aid which is totally harmless to man, flora and fauna.

After the debacle of '95 our boys improved in the '96 Kubota Challenge but they still didn't win. Scott MacCalum was there to support and record events.

Having carried the can for the horrendous showing in last year's Kubota Challenge when the BIGGA team came last for the first time in the history of the event it was with trepidation that I made my way to The Belfry for the 1996 event.

The news which greeted me when I arrived was extremely positive. We were in the final, having scraped through on countback after tying four all with the secretaries. The stars were Raymond Day and Steven Heap who's big wins carried the day.

The other news was that the final had already started and every match was out on the course.

It appeared to me to be a desperate bid to avoid my evil eye after I had “cursed” our team last year and I was still thanking my lucky stars that I possessed a thick skin. It was only then that I discovered that a morning instead of an afternoon start had been adopted due to the hectic Belfry schedule and the traditional drive and chip would be later in the afternoon.

Hot footing it out to the course and honing in on our lead man, Ray Day, I was about to learn that I was not going to see a great turn around in my own or our team's fortunes. Good though our men were playing the defending Champions the EGU were a tough nut to crack and those in the early games who were receiving shots from our boys were certainly making them pay.

By the turn the writing was on the wall. We were well down and a collapse of Greg Norman proportions was needed by the men from Woodhall Spa to deprive them of the title.

Credit where credit is due our magnificent eight fought well but half a point from the first five games was a poor return and meant that the efforts of Neil Malby and Steven Heap who produced maximum points over the two days and fought back to win their games in the final were in vain.

So who were our representa-

tives in this rare opportunity to represent the profession and how did they fare individually?

Ivor Scoones. The team Captain was seven down in the final at the turn. He found sand off the tee at the world famous 10th and BIGGA's photographer recorded his recovery over the water to rough on the right side of the green. He also recorded his mishit chip which left the ball in the rough. Unfortunately he put the camera down just as Ivor chipped in for an unlikely par.

Ray Day. Returned to the scene of his stag night a few weeks earlier and was the man on the match in the first round. He won 5&4 and was just one over par in difficult conditions in doing so. I can only imagine that the celebrations of such a stunning display diluted his display in the final as he succumbed by two holes - although in mitigation, his opponent nearly holed his third at the infamous 18th from across the lake.

John Berry. Qualifying for the team by his stunning performance in the National Tournament at Seacroft but he perhaps peaked too early as he lost both his matches. The real tragedy was that he took souvenir pictures of the course during his round only to find he had no film in his camera.

Richard Barker. Nobbled Antony Bindley, his First Assistant at Kirby Muxloe, to get in the above: Ivor Scoones collects his ball after chipping in at the 10th.

Top picture: Guess who!
team as a last minute reserve and give him yet another picture in the magazine. Unfortunately he too, despite having an excellent season, lost both of his matches. He did, though, go down the last in both of them.

Scott Ballantyne. Came from two down with two to play to grab the half point in the final and at least by the man to avoid the whitewash as we were already four nil down at the time.

Roger Willars. The only survivor from last year’s humiliation. Won his first game but was the victim of a strange virus which affected his co-ordination the night before the final. At 2.30am he totally missed his mouth with a bacardi and coke, splashed it all over the bar and had to fork out £1.90 for a replacement. Remarkably his co-ordination returned sufficiently to make it to the first tee on the final but his brave fight came to an unsatisfactory conclusion on the 16th green.

Neil Maltby. Showed his team mates what conscientious professionalism can do by staying on soft drinks and being in bed by 10 the night before the final. He was rewarded by a 100% record and being the first greenkeeper to record a win in the final. He was also a star at the dinner because being from Doncaster he was able to translate the jokes of the excellent Duggie Brown, also from “Donnie”, for the rest of the team.

Steven Heap. Carried on the form he showed in winning individual honours in the Hayter National Final at Fairhaven to also record full points. His 5&4 victory in the semi final along with Ray Day’s similar victory margin helped ensure that the countback went in our favour.

It was a marked improvement on last year’s showing when we came last but bearing in mind it required a countback to reach the final there is improvement required to reach again the giddy heights when we won it five years in a row to ’89 and three times in a row to ’93. It is now three years since the cup has resided at Aldwark Manor the longest barren patch we have suffered in the event’s 14 year history. The one saving grace continues to be the drive and pitch where despite a severe handicap with regards to equipment we won convincingly. Behind the wheel of a Kubota our men are as at home as Chopin at the piano or Gazza in an early bath and, complimented by skill with the wedge that they hadn’t displayed earlier, they romped home with time to spare.

The Kubota Challenge is a firm feature on the calendar and although there was a change this year with Brian Hurtley now enjoying his well earned retirement, Rene Orban took up the reins and immediately displayed a genuine feel for an event which should ensure it continues well into the next millenium.

All those, greenkeepers, secretaries English Golf Union and Golf Foundation representatives who have played since 1983 will certainly hope so.

THE ONE QUESTION I WOULD LIKE TO ASK OTHER GREENKEEPERS IS:

“How do you combat disease?”

Steven Heaps, Rothey Park
Ecology on the course: always a lot to learn

Following on from the very successful, but tiring, regional finals of the TORO/Lely/PGA European Tour Student of the Year Competition and prior to the start of this year's Regional Supervisory Management Courses, in Scotland, I attended an interesting and informative seminar on golf course ecology, at the Royal Holloway College, University of London.

Audubon International Golf Ecology Seminar
26 September 1996

Audubon International is the major ecological organisation in the USA. Together with the United States Golf Association, they have initiated a Cooperative Sanctuary System which aims to encourage golf courses, in the USA, to operate to an ecologically responsible management plan.

The aims are to preserve biological diversity, reduce dependence on non-renewable resources, increase natural habitat and protect water quality and quantity.

The European Golf Association Ecology Unit, which was established in January 1994, was developed in recognition of the need for a coordinated European approach to environmental issues in golf. The EGA Ecology unit aims to establish a solid factual understanding of the environmental attributes of golf courses, to develop the environmental aspects of golf courses, to encourage a higher standard of environmental performance and to provide a contribution to environmental debate in Europe. The EGA Ecology Unit hopes to realise some of these aims by initiating its Pan European Environmental Management Programme for golf courses. There will be two key components to this programme:

a. A Green Flag Campaign for European Golf Courses. This will be in the form of a voluntary Environmental Management Programme based on the principles of the Eco Management and Audit Scheme and the highly successful Audubon Cooperative Sanctuary Programme. Golf Clubs which engage to improve their environmental performance and implement Best Management Practice guidelines will be eligible for recognition in the form of a green flag award.

b. An environmental dimension to the Ryder Cup. The focal point for the launch of the Scheme will be a major public awareness initiative in association with the Ryder Cup at Valderrama, Spain, in September 1997. The aim of the campaign will be to raise the awareness of not only golfers and all those involved in the golf industry but also to show the general public that golf courses do have a major part to play in preserving the ecological balance by using best management practices on the golf course.

Best Management Practice for the Protection of Natural Resources on Golf Courses

Because of continuing public concerns, general awareness and media pressure, golf course management decisions of the future will have to be based on sound ecological practices. In many peoples eyes, golf courses are gross polluters and energy wasters but those with a knowledge of turfgrasses can offer many positive aspects of golf courses and golf. Dr Charles Peacock, from North Carolina State University gave an example of how public perception can be influenced by the popular press printing ill informed and, sometimes, completely untrue information. The following information was printed in a newspaper in North Carolina:

"City sewage, industrial wastewater, farm fertilisers, livestock manure and lawn and golf course chemicals are changing the Neuse River, choking it with Nitrogen and Phosphorus!

When the reporter was questioned about research which showed that any of the river's pollution problems were associated with turfgrass or golf courses she admitted that she had made generalisations. However, the damage was done and the public linked pollution of a river to golf courses. To prevent this type of misinformation being published, golf course managers will need to be proactive and develop sound ecological management plans to ensure that the media and the general public do not have any material to support the anti golf lobby.

How does all of this affect BIGGA, its members and all golf greenkeepers? Pressure from governments, the general public and pressure groups will not go away. The EGA Golf Ecology Unit initiative will make European Golf Courses think about and perhaps change the way that golf courses are managed. Golfers will expect to see courses managed in ecologically sound ways and golf greenkeepers will have to adapt their skills to meet these demands. BIGGA recognised the need to make greenkeepers more aware of the need for ecological management by the launch of its book A Practical Guide to the Ecological Management of Golf Courses, in cooperation with the Sports Turf Research Institute, inclusion of speakers at the National Education Conference and Seminar Programme giving talks on ecological management and by commissioning a training video which will complement the aforementioned book. These initiatives should give greenkeepers the knowledge and skills needed to conduct an ecological survey, produce an ecological management plan and follow the greenkeeping practices needed to ensure that golf courses continue to be assets to the environment.

Many of the delegates at this seminar were from non-golf, environmental backgrounds and it was obvious that the message that golf courses could be great assets to the environment was not getting across. It can only be hoped that the efforts of the EGA, the Home Golf Unions, the R&A and BIGGA in educating golfers, greenkeepers and the general public make sure that the positive contribution that golf courses make to the environment is recognised.
From little acorns... THE OAKS has grown

When the Demand for Golf was first published by the R&A in the mid '80s it was as if the starting pistol had gone in a great race for land owners and developers to produce the "biggest", the "best ever", the "most expensive" golf courses yet seen in the country.

With the benefit of hindsight the sight of white elephants and smell of burnt fingers were almost inevitable but it was easy to sympathise with those who tried and failed at the time.

To compete with the Turnberrys, Wentworths, Sunningdales and St Andrews of this world with their rich history and world renown new courses used different tactics to attract members - most expensive memberships, big name designers, signature holes, five star clubhouses. All to grab publicity and entice golfers to part with their money and join.

The problem was that the investment required was colossal and the competition among new clubs huge and, ironically, no matter the quality of the final product many golfers would still rather become members of a traditional members' club given the opportunity.

Robert Knut is one of the new breed of golf developer who watched the banks and third parties move in to rescue magnificently, but failing, courses and paying a fraction of the initial cost to do so. He watched and he learned and he constructed proper business plans before beginning his own course.

Like many of its impoverished colleagues The Oaks is an outstanding golf course and no expense has been spared. Unlike the others steps were taken to minimise the possibility of financial collapse.

For one thing The Oaks is sited just north of Selby, in Aughton, close to York, close also to the A1 and the M62.

"We counted the chimney pots," explained Robert. It's a nice way of saying that the demand was gauged before any other move was made.

"Primarily we thought we had a block of land which was suitable for a golf course with woods and some water and being situated where we are we felt that there was demand for another course around York.

"We knew we had to go to the top end of the market to compete with the clubs which had big waiting lists like Fulford, Strensall, Ganton, Selby and Brough," he said.

"We were convinced that there is always a demand if the job is done right. You just have to avoid getting cold feet.'

The feasibility study was so wide ranging it also took into account the fact that the Central Science Laboratories and the Ministry of Agriculture had relocated to York from London.

"We worked out how many of the staff were likely to be golfers and that they would require somewhere to play golf. It was one of the main reasons we decided to go ahead."

As it turned out the "new golfers to the area" would not have been required as around 85% of the membership has come from neighbouring golf clubs and the The Oaks opened with a full membership of over 640. They even have a waiting list. How many new clubs could claim that within four months of opening the gates?

The course was built by Fox Plant, of Lincoln, a company which had built its own course near Birmingham about two years before.

"They were absolutely invaluable when it came to credibility for the course and when they began building they came in with a lot of equipment and it was built quickly," explained Robert.

"The grass seed was one of the biggest decisions we had to make and we looked at a number of golf clubs, visited the STRU and most of the major seed breeders at their own trial sites before making up our minds," said Robert whose family are also seed merchants.

"My brother, father and I went to Bingley twice and we each identified what we thought were the best grasses and we were unanimous each time. So in the end it was easy."

They went with Barenbrug in the end and have been impressed with the "hands-on" attention of Michel Mulder who frequently popped in on the course to check on progress of his grass.

"Being a specialist grass seed company as well as farmers ourselves made us look harder than some people would have done when it came to seed. We had contacts in the trade ourselves but the odd thing was that we had never dealt with Barenbrug," explained Robert.

The greens and greens surrounds were both sown with the same mix - 20% Lance, browntop bent; 40% Barcrown, slender creeping red fescue and 40% Baragreen, chewings fescue - to reduce the chances of invasion by poa and as an added insurance we had three men for three weeks.
The team: Assistant Richard Webster, First Assistant Nigel Tate and Head Greenkeeper Philip Young

who spent all day on their hands and knees roguing poa by hand.

"We took the attitude that if we start as near perfect as we can we will try and keep on top of it. It's an on-going problem so we had a rule that every time the green was cut a dozen meadow grasses had to be rogued out.

"We decided not to go with dedicated rough mix – they went with fairway mix is 25% Barcrown; 20% Barumba/Bargreen, chewings fescue; 25% Barnica, chewings fescue; 20% Limousine, smooth stalked meadow grass and 10% Highland, browntop bent – because it allowed us more flexibility as to where to put the rough and meant less compaction at the sowing stage.

"We said from day one that we would reduce compaction and use light vehicles and special tyres."

"Trees have rough round them so there is no strimming while wherever possible jobs can be mechanised.

The course was designed and constructed to be maintenance friendly and manageable by the full time green staff of three – Head Greenkeeper Philip Young, First Assistant Nigel Tate and Assistant Richard Webster.

"Philip and the team work on tees, greens, fairways and bunkers while we have someone in the summer months who does nothing but cut rough and semi rough. There is nostrimming to be done. Trees all have rough up to the bottom of them while slopes are all shallow enough to allow them to be cut by ride-ons and all greens and tees can also be cut by ride-ons. We don't have steps up to tees because that creates wear areas and again the areas around them would have to be hand cut."

Farm staff can also be brought in to assist in non-greenkeeping work like dyke building if the need arises.

Robert has brought some agricultural practices to the job of maintaining golf courses.

"On the measuring side greenkeepers have traditionally walked up and down with a hand pushed fertiliser spreader and there is no proper speed monitor. The speed could vary depending upon how tired he was that day. With proper speed recording equipment and doing it in a vehicle 100% accuracy can be achieved and the job done much quicker."

"My tractor man who does the spraying on the golf course can take the sprayer to within half an inch of a green and you can do a job in four hours what it would take three days to do by hand."

"They use liquids on The Oaks because of the accuracy it affords and because they can tailor a liquid by adding iron, sulphur or any of the trace elements and applying them in one application.

"I am absolutely delighted with the way the golf course and the club has established itself so quickly – we already have 39 single figure handicappers in the club one of the highest number in the area," explained Robert, whose bid to become one of them, admittedly from a standing start, is hampered by an inability to find time to play on his own golf course.

You can be sure that like the famous trees which share the club's name The Oaks will become ever more impressive with time and become an established part of the golfing community of the area.

EQUIPMENT INVENTORY

Two 6x4 John Deere Gators
One John Deere 2243 Diesel Greens Mower
One John Deere 2243 Petrol Greens Mower (Tees and Approaches)
One Toro Reelmaster 6500-D Fairway Mower
One Sabo Roberine Continent 400-3D Triple Mower
Three Ransomes Greenspro 42 Hand mowers
One Lastec F Deck Articulator
One Huxley TR 84 Three gang Hydraulic Reel Mower
One Wessex Trailed Rotary Mower
One Kubota L4200 4WD Tractor
One Massey Ferguson 1210 4WD Tractor
One Blec Top Dresser
One Techneat six metre sprayer
One Kubota LA680 Loader

Rough is allowed to grow around trees to ease maintenance
Because engines are, in a majority of cases, only component part of any piece of mechanised equipment - albeit the most vital one - their importance is often taken for granted by end users. Only when they refuse to respond to the turn of the ignition key do they come under the spotlight. The modern engine is required to produce sufficient power to drive sophisticated transmission systems, hydraulics and cutting mechanisms. Development and technology over the last two decades have produced a compact, lightweight power unit, which has a cleaner and more efficient internal combustion process than its predecessor. However, this method of producing power still has a long way to go and in the meantime will continue to be one of the top items on the environmentalists' 'clean up your act' list.

It was back in the seventies that we began to see changes in engine design - these were mainly in small industrial units many of which were fitted to lawn mowers. Engine manufacturers, including some UK companies, had been supplying this market for a number of years, but it was the entry of Japanese companies that was to play a major part in it at this stage. What they bought to the marketplace was not so much innovation, but quality. Using the latest in precision manufacturing they produced extremely high quality engines. As a result, other manufacturers soon realised they had to respond quickly to the situation. This meant considerable investments in engineering processes and machine tooling. Unfortunately, as with the motor cycle industry, it heralded the demise of UK small engine manufacturers. The overall outcome was that the quality of engines, regardless of where they were produced, greatly improved. Unfortunately, as with the motor cycle industry, it heralded the demise of UK small engine manufacturers. The over all outcome was that the quality of engines, regardless of where they were produced, greatly improved.

Throughout this period an increasing number of companies began producing outdoor-power equipment, especially grass cutting machinery. Each new product launch set the competition the challenge to improve the concept further. Engine producers were under pressure to come up with new innovations such as increasing power output, but not weight or over-all dimensions. It is during this period we see some big changes.

Early two-stroke engines had been anathema in the industry. They were often inefficient, difficult to start and difficult to start and require running for long periods. The development of equipment that required this type of engine such as chain saws, brushcutters and hedge trimmers demanded changes. Today, the modern two-stroke is found on a wide range of machinery and gives very few problems. With the introduction of electronic ignition contact breaker points were eliminated and the engine's performance and starting was dramatically improved. On larger machines electric starters were soon fitted as a standard feature.

One of the biggest changes was on the diesel engine front, especially the single cylinder air cooled units. Up to this point they had been heavy cumbersome units that were ideal where a steady output was required. On machinery, especially rotary mowers, they failed to respond fast enough when placed under load. The advent of a small fuel injector and redesigned combustion chamber, plus the use of lightweight alloys, eventually produced an engine that was on par with its petrol cousins. Mainly because of the savings in fuel costs, increasing numbers of commercial users were demanding diesel powered machines and twin and triple cylinder water-cooled engines began appearing on larger grass cutting equipment.

Today, turbo-charged units are begin to appear as a result of manufacturers requiring high engine output without increased weight or dimensions. A super turbo-charger can be a mechanical unit or is more likely to be driven by the exhaust gases. These pass through an impeller which drives a compressor to produce the necessary pressure that is required to deliver fuel into the combustion chamber.

In recent years legislation, especially in America and some countries in Europe, has meant engine designers have had to find ways of reducing exhaust emissions, noise and vibration without affecting performance. Not an easy task, as the levels of these three factors are being continually reviewed and reduced. This again has lead to a host of new developments.

Most single cylinder petrol engines now have overhead valves. This configuration not only reduces the over-all size of the unit, it is said to also enable the fuel/air mixture easier access to the cylinder and likewise the burnt gases can escape faster - both contributing to a more efficient performance.

The combustion process in itself is very wasteful and a lot of unburned fuel is passed into the atmosphere in the form of gases. These are Carbon Monoxide (CO), Hydrocarbons and Nitric Oxides (HC+NO). Reductions in their levels will depend on:
1. The efficiency of the engine's carburettor system. Rich fuel mixtures mean higher levels of emissions
2. Unfortunatel y lean mixtures result in losses of power and starting problems, so designers have had to find a fine balance between the two on the latest models. Poorly maintained or worn engines will also be emitting high levels of emissions.
3. Fitting a catalytic converter will reduce emission levels. These are becoming more commonly available for smaller engines, but are at present a relatively expensive addition. There are a number of
1997 STYLE

Smokeless two-stroke oil only produces water vapour and carbon dioxide. The problem of noxious oil smoke is eliminated

components plus specialist mountings reduce the levels of vibration from an engine. On small power units fitted to chain saws, brushcutters and hedge trimmers, improved damping systems provide extra operator comfort. All this mainly applies to new engines and equipment so what about all those machines that are already in operation? There are a number of things that greenkeepers can do that will not only contribute towards a cleaner environment but help towards getting the optimum performance from their equipment with the minimum of engine downtime.

Re-powering equipment

The engine's performance is at the heart of any piece of equipment's performance. When this starts to deteriorate it can have the following affects:

- There is marked difference in the quality of finish
- Operations take longer
- Starting becomes difficult
- Fuel and oil consumption increases
- Emission levels rise
- More pressure is placed on the machine's other components

The risk of a breakdown at a critical time is greatly increased.
- Costs rise, frustration increases and efficiency declines.

At this stage there a probably two courses of action that could be considered. Firstly the machine is replaced with the latest version, but funds may not be available for this solution. An alternative answer is to fit a new engine, but before taking this route there are a number of factors that need to be considered.

What is the condition of the rest of the machine? It is pointless to replace the power unit then find other components, transmission drives or cutting mechanism breakdown because they too are worn out.

The unit you are considering using will need to fit into the existing engine compartment without major modifications. Engine suppliers usually have list of suitable replacement power units plus any modification kits that may be necessary.

The advantages of taking this course of action are:

1. The latest model of engine is installed with all the latest benefits. It will carry a warranty.
2. Compared with replacing the whole machine it will be a much less costly exercise.
3. The efficiency and performance of the machine is greatly improved.
4. The chances of any downtime are reduced.

Anyone contemplating fitting a new power unit should consult their local engine supplier who can not only advise on the best course of action but also may have some attractive packages to offer.

Other environmentally friendly actions

- Maintaining equipment, especially engines, to the highest of standards will always pay dividends.
- Air filters. A dirty or blocked air filter makes the mixture richer and as a result exhaust emission rises dramatically. Fuel consumption rises and starting becomes difficult whilst performance deteriorates. Therefore, clean air filters regularly, especially in dusty conditions.
- Fuel. Use the correct two-stroke mixture. Clear up any spillage immediately as these are one of the worst forms of atmosphere pollution. Ensure carburettor settings are regularly checked as these are vital to maintaining the lowest levels of pollution possible.
- Oil. Keep at the correct level and change at the recommended intervals. Oil contributes towards keeping the engine running at the correct temperature. Use a smokeless oil in two-stroke mixtures.
- Cooling systems. On air-cooled engines the fins around the cylinder head need to be kept free of debris as blockages in these cause the engine to run hot and produce more pollution. Units, especially diesel, are generally water-cooled and the radiators on these need to be kept free of grass clippings and dirt.
- General. Regularly attend to any components that require greasing, oiling or adjustment. It reduces any strain placed on the power unit. In addition to reducing pollution, this is good machinery management and makes for a more efficient and productive operation.

The race is on to find an alternative to the internal combustion engine, but in the foreseeable future it is likely to continue as the major source of power for most professional amenity equipment. However, whilst the basic principle is unlikely to change, man's ingenuity will continue to find ways of refining the process and design of engines to meet the demands and requirements of both the legislators and users.
Agronomy

B Jamieson Golf Advisors Ltd

Bruce Jamieson, formerly Director of Agronomy with the PGA European Tour has now formed the above company offering expert advice on:

• Golf course maintenance
• Irrigation - preparation and presentation
• Machinery selection
• Budgeting
• Staff recruitment

Greenkeepers' Stores

You're onto a winner with Greenkeeper International

Find three tiny £50 notes - win a real free, for free!

HERE WE GO with another chance to WIN £50 with Greenkeeper International!

All you have to do is take a look at this £50 note symbol. Now look through the ads in the Buyers' Guide section and spot THREE of them - they've been reduced in size, but they're there, somewhere!

Write down the names of the three ads where the £50 notes are located and send your entries on a postcard to: Note the Notes Competition, BIGGA, Aldwark Manor, Aldwark, Alne, York, North Yorkshire YO6 3NF, to be received by first post Friday November 22, 1996. The first correct entry drawn after that date will win £50. It could be YOU! Enter today - and Note the Notes!

Judges' decision is final. Not open to BIGGA staff.

£50

Steven Kitchen, First Assistant at Elland Golf Club, Halifax, was the lucky winner of last month's competition. A crisp £50 is on its way. Don't despair - YOU could be the next winner! Get searching straight away!

North Foreland Golf Club
Requires an
Assistant Greenkeeper
For Open Championship Final Qualifying Course.
The applicant would need suitable experience or qualifications. BIGGA rates apply. No accommodation.
Apply in writing with CV to:
Head Greenkeeper, North Foreland Golf Club,
King's Gate, Broadstairs, Kent CT10 3PU

The North Shore Golf Club
Skegness, Lincs
Requires a
Qualified Head Greenkeeper
For its 18 hole long established very popular course.
The successful candidate will have a working knowledge of maintenance of links as well as parkland, and be experienced in personnel leadership, motivation, irrigation, turf maintenance and machine maintenance.
Applications in writing with full CV including current salary to:
The Company Secretary, Mitchell Leisure Inv. Ltd., Skegness Pier,
Grand Parade, Skegness, Lincs PE25 2UE

Colville Park Golf Club
Requires a
Head Greenkeeper
Applicants must be experienced in all aspects of greenkeeping, properly qualified and have the ability to lead, motivate and work with existing staff.
Applications in writing to include full CV to:
The Golf Club Secretary, Colville Park Golf Club, Jerviston Estate, Motherwell ML1 4UG

---

**Pleasington Golf Club**

**requires a**

**HEAD GREENKEEPER**

Pleasington, near Blackburn in Lancashire, is one of the best inland courses in the North of England.

The head greenkeeper will be a fully qualified experienced greenkeeper able to maintain the course to the highest standards, successfully manage course improvement and development, and generally be a sound organiser.

Application forms may be obtained from:

The Honorary Secretary
Pleasington Golf Club
Pleasington
Blackburn
Lancashire BB2 5JF
Telephone: (01254) 202177

---

**Haggs Castle Golf Club**

**MECHANIC/GREENKEEPER**

Required to service and maintain a full range of greenkeeping machinery. Experience in cylinder grinding is essential.

Basic knowledge or experience in greenkeeping would be an advantage.

Salary negotiable. Apply in writing with CV to:

The Secretary
Haggs Castle Golf Club
70 Dumgree Road, Glasgow G41 4SN

---

**Upton-by-Chester Golf Club**

**requires a**

**HEAD GREENKEEPER**

A busy 18 hole Parkland Course require applicants with recognised qualifications and sound knowledge of modern greenkeeping methods. Experience in course maintenance, organisational skills and ability to maintain a wide range of modern machinery essential.

Salary negotiable according to experience and qualifications.

Applications in writing with full CV to be sent to:

Mr John B Durban, Secretary, Upton-by-Chester Golf Club,
Upton Lane, Chester CH2 1EE

Closing date for applications: 30th November 1996

Golf und Country Club Seddiner See
in Berlin, Germany, requires applicants for:

HEAD GREENKEEPER
AND EXPERIENCED ASSISTANTS

Positioned close to the city of Berlin, the 18 holes is one of a pair of championship courses situated on the banks of the Seddiner See, with golf facilities which also include a 4 hole academy, driving range and two putting greens. The position reports directly to the Course Superintendent and is responsible for the maintenance and development of 18 championship holes.

The successful candidate will possess recognised qualifications and be able to organise and motivate his own team on a daily basis. A knowledge of German would be advantageous.

Interested candidates should apply to:

The Course Superintendent
Golf und Country Club Seddiner See
Fercher Weg
14562 Wildenbruch
Germany
Tel: 0049 33205 64904
Fax: 0049 33205 64905

AMENITY SALES REPRESENTATIVE

£ neg + car + benefits, N England/Scotland

Levington Horticulture Ltd is the market leader in the manufacture and supply of high quality branded products to both amateur and professional gardening markets.

In the Professional market, our customers are professional growers, local authorities and sports/leisure facilities which encompass golf courses, bowls clubs, etc.

A rare opportunity now exists in our Amenity team for a sales professional living in the West Yorkshire region. Ideally aged 25-40, you should possess the flair, drive and ambition to sell strongly branded fertilizers and chemicals used in the care and maintenance of turf. A background knowledge of horticulture/agriculture would be particularly advantageous, but of equal importance is a demonstrable record of sales achievement.

Applicants not already possessing the BASIS qualification will be required to achieve this level of competence with the Company's financial support.

Our competitive benefits package includes a fully-expensed company car, 25 days holiday, contributory pension and subsidised health schemes.

Please write with full career details, including current earnings, to: The Personnel Department, Levington Horticulture Ltd, Paper Mill Lane, Bramford, Ipswich, Suffolk IP8 4BZ.

Closing date for applications: 18th November 1996.

---

**THE LONDON GOLF CLUB**

**ASSISTANT GOLF COURSES SUPERINTENDENT**

Applications are invited for the above position.

This post will give the successful applicant a unique opportunity to join our dedicated maintenance team, maintaining quality playing surfaces across our 36 hole Golden Bear designed private members club.

With a minimum of eight years experience and all relevant qualifications, the successful applicant will be required to motivate and supervise staff and take responsibility for programming and overseeing the day to day maintenance of the Heritage Courses, under the guidance of the Golf Courses Superintendent. In the absence of the Golf Courses Superintendent the job holder will be required to deputise.

Applicants will need to demonstrate sound and positive team management, self motivation and good communication skills, working closely with the Head Greenkeeper from the International Course.

Please forward your CV in the strictest confidence, no later than 15th December 1996, to:

Mr Steve Jones, Golf Courses Superintendent,
The London Golf Club plc, South Ash Manor Estate, Ash,
Nr Sevenoaks, Kent TN15 7EN
Who will be the lucky seventh?

**PAUL JENKINS**

**Age:** 37  
**Golf Club:** Lilleybrook GC  
**Region:** South West and South Wales  
Paul has been Course Manager at Lilleybrook, a course built on heavy clay, for four years and in that time he has overhauled all the bunkers and upgraded most of the machinery.

He began his career as an assistant at King's Norton GC where he was involved in the hosting of a televised PGA event. From there he became Head Greenkeeper at Osborne GC on the Isle of Wight, set in the grounds of Queen Victoria's summer residence. In 1985 he moved to Gloucester Hotel and Country Club as Assistant Grounds Manager where he was involved in the running of an 18 hole course, nine hole par three course, ski centre, driving range as well as the hotel grounds.

Married with two step children, Paul's hobbies are badminton, skiing, photography and ten pin bowling - under the heading of achievement Paul put managing to get four pit passes for the '97 British Grand Prix!

He believes that the key to good greenkeeping is common sense and an eye for detail both of which he says he possesses.

**CEDRIC GOUGH**

**Age:** 50  
**Golf Course:** Broadway GC  
**Region:** Midland  
Cedric has been at Broadway Golf Club for 23 years and had his job redefined as Course Manager in 1989 and works with a team of three greenkeepers and a greenkeeper/mechanic - he has never appointed a Deputy or First assistant as they work well as a team.

He began his career at a nine hole course at Bridgenorth which he work on singlehandedly and it was the pro of the course Willie Evans who set him on the path of greenkeeping. After three years he became First Assistant at Ross-on-Wye where he worked under Derek Blades before moving to Broadway as Head Greenkeeper at the age of 27.

Outside of work he likes to keep up to date with work at other golf courses by playing and visiting while he likes to relax by fishing, cycling with his wife Judith or being at home with his birds and fish.

He is also a regular supporter of Wolverhampton Wanderers following their quest to get into the Premiership.

**STEWARD “Huw” MORGAN**

**Age:** 30  
**Course:** Wildernesse Club  
**Region:** South East  
Huw has been Course Manager at Wildernesse for three and a half years where he manages the woodland course and the 100 acre woodland with a mix of tree – the course earned an environment award recently.

Was the IOG Young Groundsman of the Year in 1987-88 and visited the GCSAA show in Houston visiting 20 golf courses and studying maintenance techniques during the trip.

Before arriving at Wildernesse Huw was Course Manager at Fairwood Park GC in Swansea and Head Greenkeeper at Southern-down GC in Bridgend.

Outside work he enjoys football, golf off a handicap of 6, indeed any sport while he is an active BIGGA committee man currently Vice Chairman of the Kent Section and on the South East Regional Board.

His aim is to continue to enjoy going to work in the morning and spending time with wife two children and friends.

**STEWART McBAIN**

**Age:** 37  
**Golf Club:** Hazlehead GC and Balmagask GC  
**Region:** Scotland  
Stewart is employed by Aberdeen City Council and his job title is Grounds Services Supervisor and as such is responsible not only for the two golf courses but three sports centres, five bowling greens, eight tennis courts and two 18 hole putting greens. However he lists as a major achievement getting Hazelhead, a Alistair McKenzie designed course, up to a standard fit for tournament golf – in '94 it hosted a Scotland v England professional women's event.

He served a four year apprenticeship at Stonehaven GC and spent a further four years there as Assistant Head Greenkeeper before moving to Morcar GC as Assistant Head.

He moved to Aberdeen City Council as Head Greenkeeper at Balnagask (Nigg Bay GC) before restructuring within the City Council saw him apply for and get his current position.

He is married, a 7 handicap golfer and is also a carpet bowling champion and DIY enthusiast.

**DAVID LEACH**

**Age:** 31  
**Golf Club:** North Manchester GC  
**Region:** Northern  
David has been Head Greenkeeper at North Manchester for six and a half years having previously worked under Arthur Warhurst. He has worked on green construction, tees, bunkers etc and has recently planned and laid a fully integrated drainage system in a fairway using 1200 metres of pipe.

The club borders the biggest overspill council housing estate in Europe and serious vandalism is a serious, daily problem.

He began his career at Manchester GC where he worked with Edwin Walsh for five years, becoming fully qualified in 1985. He was promoted to Deputy later and moved to North Manchester in '88. Married with three children he is a keen recorder collector and DIY enthusiast.

He is also working towards Master Greenkeeper status.
