BIGGA cracks down on abuse of courtesy golf

BIGGA is taking steps to tighten procedures following evidence that, in certain cases, the “courtesy golf” extended by golf clubs to full BIGGA greenkeeper members is being abused.

A small minority of greenkeeper members (and in some cases non greenkeeper members) are not contacting the club in advance, are not producing membership cards or are using membership cards that are not entitled to and are making frequent visits to the same golf club. As a result, an increasing number of golf clubs are now refusing to continue to offer the privilege of courtesy golf.

BIGGA Sections looking for host clubs for their golf days have also been affected and are increasingly being turned down by golf clubs. This has become a major concern to BIGGA and the vast majority of members who do not abuse their courtesy golf. The Association is, therefore, anxious to ensure that the selfish actions of a minority of people do not spoil this wonderful opportunity for the majority.

BIGGA has introduced several changes of procedure to ensure that only working greenkeepers obtain full membership, including the need for greenkeeper members to have their renewal form validated by their club, and as a reminder to members, has also issued the following guidelines:

- Only those with full greenkeeper membership should seek courtesy golf.
- Courtesy golf is only given at the discretion of the individual golf club and is not an automatic benefit of membership.
- Members wishing to seek courtesy golf at a club should contact the club at least 24 hours in advance of wishing to play.
- On arrival at the club, members should report to the Secretary/Pro Shop and follow normal procedures for playing golf.
- Members should always produce a valid membership card as proof of status to the club.
- Members should make a point of thanking the club for their courtesy on completion of their round of golf.
- Members should not seek courtesy golf at any one golf club more than twice per year.
- Golf clubs wishing to verify membership or requiring further details should contact BIGGA on 01347 838581.
- All suspected abuses of the card should be reported in writing to BIGGA headquarters where such complaints will be investigated.
- Members found guilty of abuse of the card will be disciplined under Paragraph 15 of the Association’s Constitution and Rules which gives Sections the power to suspend or expel the member if necessary.

Salary recommendations published next month

The findings of the Standing Committee on Greenkeepers’ Salaries, comprising representatives of BIGGA, the Association of Golf Club Secretaries and the Association of Golf Course Owners, will be published next month.

The Committee was formed following a significant increase in the number of golf clubs which were contacting BIGGA and asking advice on greenkeeper salaries and conditions of employment.

The 1998 Recommendations of the Committee will be mailed to every golf club in the UK and printed in the November issue of Greenkeeper International.

Golf clubs and greenkeepers requiring more detailed information can contact BIGGA for sample greenkeeper’s contract of employment, job specifications for all levels of employment as well as advice on greenkeeping qualifications.

“I am sure the recommendations of the Standing Committee will be a valuable tool for all golf clubs setting next year’s pay awards for their greenkeeping staff,” said Neil Thomas, Executive Director of BIGGA.

The Standing Committee will meet annually to review greenkeepers’ salaries and conditions of employment.
Facility helps students learn ins and outs of maintenance

After years of preparation and planning by Berkshire College of Agriculture, BIGGA Chairman Pat Murphy was the man invited to turn the first sod of the college's new six hole educational golf facility.

The six holes have been designed by Tom MacKenzie, of Donald Steel and Company, on 40 acres of parkland beside the main college building.

The six holes are each designed and constructed differently to give students of the college the chance to explore maintenance techniques on a range of styles.

The 1st will be a look into the future by examining a British specification; the 2nd is constructed to USGA guidelines; the 3rd will be badly constructed and badly managed to assist students with problems they might encounter later; the 4th will have a perched water table for tee and green construction; the 5th will be a traditional Old Tom Morris style hole using techniques from the last century while the final hole is a heathland style hole using a clay bowl style green and green construction taken from the 1920-30s.

The Industry Liaison Committee which drove the project consisted of Course Managers and Head Greenkeepers - including Martin Gunn of Temple, Alun Collins of Castle Royale, Ray Clark of Harleyford and John Nudds of Garrards Cross; Club Secretaries, students, trade and PGA representatives as well as Malcolm Peake, Chairman of Green at Temple Golf Club.

The college received a £60,000 grant from the R&A for the project towards the final cost of £136,000 while additional sponsorship came from Greenscapes Ltd, Roffey Ltd, Hepworths and Rigby Taylor.

Pat Murphy used a Kubota digger to lift the first sod and expressed his admiration for the project adding that he felt students attending the college would have a distinct advantage with such a range of holes to work on.

He then planted an oak tree to act as a permanent reminder of the occasion.

Environment winners announced soon

The 1997 BIGGA Golf Environment Competition in association with Rhône Poulenc and Amazone Ground Care is nearing its completion with successful clubs being notified early this month.

The standard of entry has been exceptional and principle judge Bob Taylor, Ecologist to the STRI, has been delighted by the commitment to both the competition and environmental issues generally shown by the entries.

"The quality of environmental work being carried out at the clubs I've visited has been outstanding and it has been extremely difficult to select the clubs to visit and then those deserving of a second visit," explained Bob, who over the last few months has been to 25 courses the length and breadth of the United Kingdom.

Bob has worked closely with Jonathan Smith in Scotland and Dr Keith Duff, Chief Scientist of English Nature, who has been extremely enthusiastic about the quality of entry and standard of environmental practice being undertaken by the golf clubs.

Rod Baker, Managing Director of Amazone Ground Care, who initially launched the competition several years ago, and Jonathan Hill, of Rhône Poulenc, have taken a keen interest in the progress of the competition.

"Jonathan visited two of the golf clubs with me, Gog Magog and Old Nene, and was delighted by the level of enthusiasm shown for the competition. I've also seen quite a number of Amazone machines on the courses I've visited," said Bob.

He was keen to stress that clubs which entered, irrespective of whether they won or lost, benefited.

"It is more than just a competition with winners and losers. I've been able to offer advice on all aspects of environmental matters while visiting the golf courses from tree, grass land or heather management through to care of ponds. All clubs will also receive publicity for the work."

The judging has taken the form of the European Ecology Unit's Commitment to Green project which was launched at the Ryder Cup in Valderrama.

Next month Greenkeeper International will carry a detailed report on Bob Taylor's experiences during judging and the winners will be revealed.

"I am so impressed with the results of Primer 604 on my greens, I am seriously considering using it on my fairways. It has become part of our maintenance programme for the future."
As you are all too painfully aware, probably the most important disease that occurs on highly maintained greens is Fusarium Patch. Microdochium Nivale is highly disfigured and occurs primarily in the late autumn and spring but may strike at any time of year under conditions of cool wet weather. Regarded as one of the best ways to control attacks of Fusarium Patch, as recommended by the STRI, is regular switching with a fibreglass flexible rod or brushing with a dew brush. Both perform the same job as they combine the droplets of water sitting on the surface of of the turf, dropping them onto the soil and allowing the natural drainage of the soil to disperse the moisture towards the root level of the turf. Indeed it is especially important to switch greens that are well protected by tall trees or buildings as the green is therefore well protected from wind and direct sunlight and therefore dries slower. An added benefit of switching is a better cut if it is performed immediately after it is done.

'Barenbrug makes its marque'

Barenbrug's Arnold Pilon has been driving from Europe to Asia as part of the Paris-Peking Classic Car Rally. For the car, Barenbrug chose the good old British Jaguar MK 1, dating back to 1960. Undoubtedly, it's the first time the marque has been driven to the Chinese capital with a bag of BAR 7/Amenity Leys on board, waiting to be sown! For Arnold, the trip has not been straightforward. As well as participating in the Rally he had the task of visiting many of Barenbrug's European offices along the way. At least he was greeted with a warm reception.

Meanwhile there’s a palpable air of excitement around Michel Mulder, Managing Director of Barenbrug UK. "It’s great to see a quality British car, taking quality British grass, on behalf of a quality British company all that way to China", he enthused. "I can’t think of a better form of cultural exchange."

Laser levelling brought in to fit new root zone

The first 18 hole golf course to be built using the new ProSport Eco-Zone root zone from Heworth Minerals and Chemicals is at an advanced stage of construction at Biddenham near Bedford. The course will be the focal point and principal amenity of a new development by Bovis on the western side of Bedford. David Pottage is the architect and designer and the course is being constructed by Golf Landscapes of Brentwood, Essex. A total of 5000 tonnes of ProSport Eco-Zone has been delivered by HMC for the construction of the greens. "One of the problems with this site," says Bob Dunning, the Director in charge of the contract, "is that across the full 50 hectares of the course there is a fall of only about five metres, so we had to be very accurate in sculpting the base of the greens to the architect’s design and that accuracy must be maintained as we fill them. Laser levelling has been needed."

After installing the drains, a porous membrane was laid on to a compacted depth of 275mm, with constant checks being made to ensure that the hand raked final surface followed accurately the line of the base. Where possible the vehicles, which each carry over 20 tonnes of root zone, tipped at the green site on to a porous membrane to prevent contamination. Where a green was not accessible to heavy transport, the root zone was tipped on a stockpile and taken to the green by dumptruck. "We handle root zones as few times as possible," says Bob, "not just for economic reasons, good root zones perform best after their initial mixing so it is preferable not to mix them again any more than is essential.

Course for all seasons' a good aid

This soft back A4 sized book has been produced by the Royal and Ancient Golf Club to bring some of the issues which their Golf Course Advisory Panel have identified as being of great importance to the management and maintenance of golf courses. The book looks at six main areas that have an impact on the management of golf; Best Management Practice, the World around the Golfer, Golf Course Management, Communications, Golf Course Developments and What the Golf Authorities are doing. The book sets out to illustrate some of the issues that lead to conflict between golfers and greenkeepers eg. green speed, the 'TV' effect, problems due to basic advice and as background information for talks to members, the book would be a useful addition to all Head Greenkeeper's book shelves. However, if the book was read by all golf course committee members and all golfers then many of the problems that confront greenkeepers would disappear as golfers developed a much better understanding of the complexities of golf course management.

Copies of the book are available, priced £5, from Michael Barratt Limited, Profile House, 5/7 Forlease Road, Maidenhead, SL6 1RP

GREENKEEPER INTERNATIONAL October 1997 9
In recent months the Greenkeepers' Store at Hallamshire has been burgled twice.

On the first occasion, last November, the offenders broke into the store during the night and removed much of the portable equipment such as strimmers, brushcutters etc and three new hand mowers which had been bought a short time earlier.

The three machines were Jacobsen 522 Pedestrian Green Mowers, complete with turf groomers, grass boxes and transport wheels, each one costing £5,300 plus VAT new. The serial numbers of the machines were 62261 02388, 62261 02390 and 62261 02317.

Subsequently, in April, the equipment was replaced. Following recommendations made by the Insurers and the Police, the alarm system was renewed with the very latest system installed and connected to the alarm monitoring company.

Despite all the increases in the security and alarm systems, last month the store was broken into and two of the replacement Jacobsen machines, with serial numbers 62261 03346 and 62261 03317, stolen.

It was obviously a carefully planned burglary as the Course Manager only left the store some 15 minutes before the alarm was activated and the offenders knew exactly what they could transport in the limited time available, and apparently did not mind the risk of burgling the store and stealing property in broad daylight, despite the alarms.

These machines are not common in this country, being American imported and will only be useful to specialist organisations such as golf courses and certain sports facilities ie bowls clubs, cricket clubs and the like.

From enquiries that have been made it is quite apparent that golf clubs have been targeted through the North of England over recent months and burglaries appear to have taken place at many course stores with similar results and even repeat burglaries have taken place where replacement equipment has been bought.

From the number of such incidents it is apparent that there must be an outlet for this equipment. South Yorkshire Police are asking if any Secretaries or Greens Staff are approached to purchase any similar machines to ours, or any other machinery which is being offered for sale by anyone other than their normal reputable suppliers, to acquire as much detail of these people and their vehicles discreetly and pass this to South Yorkshire Police either through me, or direct.

Aside from the extra premiums and conditions that will be added to our insurance on the next renewal, the theft of such important and essential pieces of equipment causes some disruption to the normal working practices and could lose income to clubs by prestigious events being cancelled due to the course not being able to be presented in appropriate condition for tournaments.

Success, but at a price

Tom Brannan experienced one of the quickest ways of emptying a wallet known to man at Winterfield GC recently. He holed-in-one in the East of Scotland Section Spring Outing, the feat occurring at the par-3 4th.

Apparently, and this comes from Chris Yeaman, of Swanston GC, his quote after holing the shot was: "Getting a hole-in-one was nearly as exciting as a Thursday night in Trotter's Bar in Harrogate this year." Whatever could he mean?
