NEW PRODUCTS

Yorkshire based Course Care has launched Course Wear a range of stylish yet rugged workwear featuring the Tuckaway Rain Suit - a lightweight, ripstop, pu backed nylon rain suit which comes in its own drawcord stuff bag designed to "tuck away" in any machine ready for the operator to combat sudden downpours.

The Drill Suit is a 300gm cotton rich two piece, sold either as a suit or separates. The pullover V-neck top with collar has elastication at the waist, adjustable cuffs and a generous radio/mobile phone sized breast pocket. The trouser has an elasticated waist with draw cord and ankle zip, and is cut with extra long body length to ensure optimum movement, comfort, and good lower back protection. Course Wear unites corporate smartness with sturdiness and durability.

Shropshire-based Links Leisure, has redesigned its golf practice net to include a one-piece net which, it claims, simplifies both installation and maintenance. The net is constructed in single bay multiples and each measure 3.5 by 3.5 metres in little or no maintenance, the nets can be constructed in single frame - either galvanised or coated in green plastic - and a cage net, plus a long-life baffle and adapters from BSP to JIC.

The Turfdry Drainage System combines maximum efficiency with minimum disruption.

Maximum efficiency is achieved due to the surface area of Hydraway being 40% greater than conventional 80mm plastic pipe, combined with the fact that water can enter the drain through 75% of that area, compared with only around 6% for plastic pipe. The geotextile allows water through at a rate of 60 litres per second per square metre under a 100mm head which, combined with the high in-plane flow rate of the drain, allows for the rapid dispersal of excess surface water.

Hydraway is only one-third the width of 80mm plastic pipe and can therefore be installed in a much narrower trench. Our specially designed equipment, on low ground pressure grassland tyres, enables machine installation of Hydraway as the trench is cut, with excavated soil being loaded directly into a trailer via a high-lift conveyor. After back-filling the trenches with tytag the installation is completed by an application of sand or rrotzezone, rolled flat, and the surface can be returned to immediate use.

Turf-Actant-Z is a highly concentrated extract of membrane effector substances of plant origin, which when applied as a foliar spray stimulates photosynthesis. As a result chlorophyll production is increased and the resulting sugars are transported to the roots and secreted in the soil to provide nutrients for beneficial micro-organisms. Because of the increased nutrient levels soil bacteria multiply and produce more enzymes which liberates nitrogen and other nutrients from immobile reserves in the soil, in addition the phytohormons which stimulate root development are also secreted. With higher levels of photosynthesis a considerable "green up" effect is achieved together with a significant increase in leaf mass which results in a denser sward, at the same time savings are made as a direct result of the reduction in the use of fertilisers.

An additional effect of applying Turf-Actant-Z is that the plant is induced to develop its intrinsic mechanical and chemical defences against fungal attack and some insect pests, this protection develops within 4-8 days of treatment.

Turf-Actant-Z is applied at the rate of 0.5 litres per 500 m2 in 25 litres of water and may be applied with other spray products. Best results are achieved by application being made every 4-6 weeks. Turf-Actant-Z has no negative impact on man, animal or the environment and leaves no harmful residue in the soil.
