Still not convinced? Consider these further benefits:

**Farewell to obsolescence**

Access to state-of-the-art equipment, especially grass-cutting machinery, provides a cushion against technological obsolescence. Though certainly not in the same league as computers, which seemingly become obsolete on the scale of minutes, machinery provides a cushion, especially grass-cutting machinery, which helps enormously if you are seen as the guy who makes the most of what he has; one who does a good job and solves problems.

Unless your Green Chairman is an absolute no-hoper, you will gain Brownie points by aiming his attention to each little area of improvement that can be made on the course – moreover those that need extra application – while, of course, explaining the reason and thinking behind what you would like to undertake, if only...

Choosing the right moment for discussion is important, which might well come during those times when your Green Chairman is making his inspection. Even better, if you can play a few holes with him this will provide you with a great opportunity to draw comparisons, perhaps by calling upon experiences shared with a colleague at ‘the course down the road.’

Every chairman worth his salt wants to see a well-conditioned golf course. Simply by carrying out a little homework beforehand you can present him with a well-conditioned golf course. By matching payments with the income a club generates over a complete year, working capital will be released, rather than being tied up.

**Say farewell to bottling**

Nothing is more irritating than making do with machinery that is ill-equipped for a job. At best it’s inconvenient, at worst it can be downright dangerous. Spreading the load by financing equipment will give you the proper tools to do the job.

**Machinery that is in peak condition**

Ransomes and FAF want you to keep your equipment in tip-top order. With their finance option, they will ensure the machinery is serviced by an approved dealer on a regular basis.

**How you can sway the decision – in your favour!**

No one knows better than you what new machinery is needed, or which piece needs replacing, though to smooth the go-ahead for capital improvements it will pay you to do your salesman’s hat.

Preparing a plausible presentation and ensure that you include specifications so that you may talk in precise terms about the improvements that proposed new machinery will offer. You should include all the benefits that will come from upgrading, for example the increase in the speed of greens or fairways cutting, improved turf conditioning and a reduction in running costs.

This latter item, increasingly, is a vitally important factor. Let him know how much you want to retain a competitive edge. He’ll thank you for it.

Finally, enlist the help of your dealer and get him on your side. Developing a sound relationship will never hurt your cause.

Portable hand-held chainsaws are widely accepted as being potentially dangerous machines which need to be handled with utmost care.

The Health and Safety Executive has produced Guidance Note GS48 which is aimed at people who either use chainsaws at work or who employ others to do the work.

The Guidance Note is concerned with the minimum levels of training and competence required by chainsaw users. It states that operators should be adequately trained and that by obtaining a relevant certificate of competence or national competence award (NVQ/SVQ) recognised by industry will show that adequate training has been received.

This applies to employers, employees and the self-employed.

There are several regulations within the Management of Health and Safety at Work Regulations 1992 which place legal duties on employers and the self-employed in relation to the use of chainsaws at work.

Chainsaw operators should have a reliable and mature attitude to their work. They should have a reasonable degree of physical and mental fitness. People with disabilities need not necessarily be excluded from work with chainsaws, however, medical advice should be obtained about their suitability.

There are many hazards when using a chainsaw, the most obvious are contact with the moving chain, being struck by falling timber and incorrect manual handling techniques.

Most accidents occur due to lack of knowledge and failure to provide adequate personal protective clothing (PPE).

Training is very important in the control of accidents - it should be of the highest quality and normally carried out by specialist instructors or organised training courses.

Although most courses contain small amounts of theoretical classroom work the majority of the course is devoted to practical supervised instruction.

In the next issue we will look at the requirements of PPE and the different routes to certification in the safe operation of chainsaws.

For further information on training courses and consultancy contact Agility Training Ltd - Jean John Tel: 01282 831973 or Tim Kirk - T. Kirk Forestry Tel: 01484 685114.
