New spray nozzle from Lurmark

Spray nozzle manufacturer, Lurmark, has developed a range of nozzles which can be used in place of traditional spray booms, enabling chemists to be applied to targets which cannot be reached by a conventional boom sprayer due to natural or man-made obstacles. Known as MaxXThro, Lurmark's new long-throw nozzle is available in seven sizes capable of applying chemicals on swath widths from 5.18m to 8.45m and at flow rates ranging from 7.9 litres/min at 3 bar pressure to 150.4 litres/min at 4 bar. An even spray pattern of at least 125 deg is produced by MaxXThro, depending on the selected nozzle size, with consistently large droplets across the range reducing the potential for drift.

Typical situations where MaxXThro is expected to improve the effectiveness and ease of chemical treatments include golf courses and stadia, sportsgrounds, amenity areas and field boundaries, orchards and specialist crops. The spraying of de-icing agents onto roads, pavements and runways, the application of suspension fertilisers and the distribution of waste products to encourage rapid biological breakdown.

Manufactured in durable Polyacetal with a stainless steel body, each MaxXThro nozzle comes with standard male pipe fittings, quick-fit couplers and a mounting bracket enabling fast, simple attachment to any suitable boom. Suitable for use as a single unit or mounted back-to-back in pairs, it has been designed to achieve the required swath width with the spray delivery office positioned horizontally.

To better target the spray, the nozzle can be rotated vertically or angled up or down, and the direction of spray can be altered by changing the selected nozzle size with the spray pattern. Comprehensive information on MaxXThro is available from Lurmark together with charts of typical application rates and the even spray distribution patterns achieved in replicated potenmation trials by the company.

Shifting Sands

Cherrington "sandsifting" technology is now available in a line of compact sandsifting equipment which provides a solution to small sand areas which are dirty, polluted, or compacted.

Offered in both walk-along and pull-type models, they screens out encroaching grass, garbage, rocks, cigarette butts, glass, and rotting seaweed, while putting the cleaned, sifted sand back on the beach or sand area.

For further information e-mail: sales@glenmac.com or visit the web sites at www.cherrington.net

Medium weight flail mower from Rytec

Rytec has announced the introduction of a medium weight flail mower suitable for front and rear mounting on tractors from 20 to 75hp. The new Professional SS models are based on a well proven and robust design but incorporate a new SIDE SHIFT linkage, allowing on the move, lateral travel of the mower around obstacles. Available in 3 cutting widths 1.2, 1.6 and 1.8 metres, the new Professional SS machines are ideal for front mounting on a range of bank/reverse drive tractors with limited lift capacity and allow excellent manoeuvrability around trees, sign posts and other obstructions. As the operator can side shift the mower hydraulically. A rear mounted unit the machine is ideal for working under trees and hedges where it is important to cut grass but often difficult to reach because of access with the tractor and conventional in line rear mounted units.

The SS Professionals allow offsetting to both left and right hand side of the tractor and can therefore reach in under overhanging branches and hedgerows.

A range of flails allows the Professional SS machines to be used for a variety of work from rough cutting with heavy cast grass flails, to fine mowing with paddle type flails, the machines can also be fitted with scarring blades to further increase adaptability. With the front castor wheels and full width rear roller the cutting height control and ground following characteristics of the machines are a major feature.

Vermeer launch new brush chipper

The Vermeer BC625AI brush chipper continues the Vermeer tradition of rugged reliability, safety, and helpful features to enhance productivity. Like its predecessor - the BC625I - the BC625AI is a disc-style chipper, geared to meet the needs of all who use it.

The Vermeer exclusive patented AutoFeed system means fewer jams and reduced engine stress because it automatically monitors and controls the feed roller rotation by sensing engine load. Feeding is easy and convenient with the feed control bar located in front of the operator position and a wide chute opening to cut down on trimming and chain saw work. Safety is optimised by a discharge chute which rotates 240 degrees to direct chips away from the operator.

The BC 625AI is built for maximum cutting performance to handle brush and debris up to 15 cm in diameter. It features a four-sided bed knife and a thick cutter disc for more cutting inertia, and an improved variable speed hydraulic system that delivers 20 percent more torque to the feed roller. Two engine options are available, including a 25 HP (19 kW) air cooled Kohler Command, and a 23.5 HP (17.5 kW) water-cooled Perkins diesel.

In addition to safety, reliability and performance, the BC 625AI's has been redesigned for easier transporting and better stability. A wide axle with wheels mounted outside the chassis, enables the infeed table to be mounted 10 cm lower than its predecessor. This new stable, low design, not only makes it easy to get the machine where it's needed, it's also easier to feed.

Campey unveil latest Hi Lift trailer

The application of top-dressing after aeration work to rejuvenate heavily used sports turf is an essential grounds maintenance operation, but it can also be one of the most time-consuming. Normally, if substantial areas are treated, work has to be interrupted frequently to refill by hand, with the substantial quantities of sand required. However, with a Raycam Hi-Lift Trailer from Campey Turf Care Systems, the task is made quicker, simpler and much more efficient.

The Hi-Lift, which can carry over 3 tonnes, is powered by a tractor of 30hp or more, and is driven by the motive unit’s auxiliary hydraulic services. The articulated rear axle is raised quickly to discharge material from a maximum height of 1.4m (4ft 7in) into the user’s top-dressing unit, allowing work to continue immediately.

Hydraulic controls are conveniently situated at the rear nearside of the Hi-Lift, allowing the operator an unrestricted view of the entire discharge operation. The unit features low ground pressure tyres to eliminate the risk of turf damage, even when fully loaded.

For operational flexibility, the tailgate and controls detach quickly and, by fitting the standard tailgate assembly supplied with the Hi-Lift, the machine can be used as a standard tipping trailer for general maintenance duties. A road-going lighting kit can be added as an option.

New lightweight from Kawasaki

The KLF250-A has entered the market as Kawasaki’s new working market entry model and has been brought in to do a job at the lighter end of an ever increasing and impressive application range including farms, equestrian, parks, sports and recreational establishments.

In an exciting model re-shuffle, Kawasaki has retained the turning capability that make the KLF220-A popular for its agility within confined areas, while providing a noticeable increase in power from the new 250’s 16.8 hp, air-cooled, single cylinder four-stroke engine.

The end result for the working market is a similarly compact and lightweight 2x4 machine with all the same features, but with a greater appetite for hard work and all the inherent characteristics of performance, durability and reliability that have become associated with Kawasaki over the years.

One of the big advantages for the customer is the availability of a machine with a track record when it comes to the working environment at Kawasaki’s model entry level with a competitive price tag at £2,900.

New improved range from Symbio

Following a four year research and product development programme Symbio has launched a new improved range of products and substantially reduced the price for biological turf management programmes. It will be selling these new products directly to its customers in the South of England and Wales and has appointed two new regional managers. Neil Carter who is based in Portishead will look after customers from Wiltshire to West Wales and provide technical support to Don Hunt of Roffey Ltd who looks after Symbio’s customers in Devon and Cornwall. Neil ran his own landscaping company for many years before taking his HND in turf grass management at Cannington. This was followed by spells at The Paris International Golf Club and The London Club where Neil gained lots of experience in presenting courses for tournament play.

Richard Storer used Symbio’s products for four years as a Head Greenkeeper and liked the results so much he joined the company. Richard has 30 years experience of landscaping and turf management and is based in Surrey from where he will cover the area from Kent to Northamptonshire. Richard said “I’m delighted to be able to help greenkeepers and landscapers use the latest technology to help improve their greens and course presentation”.

New storage system

New rotationally moulded polyethylene storage units, designed to ensure the safe and secure storage of drums containing toxic, chemicals, oils and other corrosive or hazardous liquids, have been added to it’s range by drum storage, spill control and waste handling specialist Empteezy Limited.

Tough and durable, the polyethylene gives broad band compatibility and makes the units ideal for use in most agricultural and horticultural environments.

Model CP1 allows storage and dispensing from drums up to 200ltr in size, CP1S has shelves which provide storage for up to eight 25ltr drums [both have a 250ltr sump] The CP3 is a smaller unit with a 100ltr sump. All models have lockable doors and are available in either Green or Blue.
