An American Adventure
The Hayter Harrier 56 is a quick, yet precise, solution to your tee problems.

Sorts divots, tees, cuts and stripes in one go

The classic Hayter Harrier 56 roller rotary mower is capable of picking up tees and divots quickly and effortlessly. The split ribbed roller with a differential aids manoeuvrability around the tee, and gives the traditional striped finish.

No tools are needed to adjust the height of cut, which can go as low as 13mm (1/2") giving you total control over each tee. Built in front fins on the deck noticeably improve the cutting quality and collection ability and the large capacity grassbag is easy to remove and fit.

The Harrier 56 can be used all year round and will minimise compaction of tees particularly during the winter months.

So versatile, the Harrier 56 can be used in so many areas around the club, you'll wonder how you managed without one.

For more information, call 01279 723444, email sales@hayter.co.uk or visit our website: www.hayter.co.uk.
WHAT IS IT ABOUT GOLF?

As I write the BBC are running a series of programmes in conjunction with the 50th anniversary of their Sports Personality of the Year Award with a view to identifying who is the Best of the Best.

Most sports are represented. Football by Bobby Moore, Paul Gascoigne, Michael Owen and David Beckham. Not, surprisingly, by George Best, who was beaten into second place by Princess Anne one year. Motor Racing has John Surtees, Stirling Moss, Jackie Stewart, Nigel Mansell (twice) and Damon Hill (twice). Athletics has more than any other, including reigning champ Paula Ratcliffe, David Hemery, Seb Coe, Steve Ovett, Liz McColgan, Daley Thompson, Linford Christie, Steve Cram and Jonathan Edwards among others. Cricket has Jim Laker, David Steele and Ian Botham. Boxing is represented by Henry Cooper (twice), Barry McGuigan and Lennox Lewis. Tennis has Ann Jones, Virginia Wade and Greg Rusedski. Even skating has John Curry, Robin Cousins and Torvill and Dean.

The point I'm getting at is that golf is very poorly represented. In 49 years golf has only had two winners, Welshman, Dai Rees in 1957 and Nick Faldo in 1989. Now bearing in mind that golf is a truly global game and is one of Britain's most successful sports, with players consistently in the world's top ten, not to have won more than Henry Cooper, a European but never World Champion, on his own is quite bizarre. Not only that, it's fewer than tennis, in which Britain have more often than not been a laughing stock, and fewer than figure skating. I'll repeat that. Figure Skating! It's shameful.

Tony Jacklin won The Open in '69 and the US Open in '70, and was the best in the world for a short time but in '69 Ann Jones won it and in '70, Henry Cooper. Sandy Lyle won The Open, the first Brit since Jacklin, in '85 and became the first Brit ever to win The Masters in '88, but in those two years it went to Barry McGuigan and Steve Davis.

For one reason or another golf doesn't catch the public's imagination. Class ridden; sexist; harmful to the environment; a prime candidate for the fashion police are all charges laid at the door of the Royal and Ancient game but much of it is down to false public perception and dare I say, lazy journalism.

I was listening to Radio Five Live a couple of weeks ago and the game was again coming in for a hammering. They had a woman from the Campaign to Protect Rural England and gleefully loaded the gun for her. The pro golf side of the argument was heavily weighted against. It's the same with the "Mickey Mouse" educational courses for which golf also takes a pelting.

A positive message must be put about or eventually we'll be forced to form support groups, along the lines of Golfers' Anonymous, to ease our way through life.

"My name is Scott MacCallum and I am a golfer."

Scott MacCallum, Editor

EX-GREENKEEPERS JOIN HEADLAND

James Watson and Steve Crosdale, both former greenkeepers with a total of 24 years experience in the industry behind them, join Headland Amenity as Regional Technical Managers.

James has responsibility for South East England, including South London, Surrey, Sussex and Kent, while Steve Crosdale takes East Anglia and North London including Essex, Hertfordshire and Cambridgeshire.

Andy Russell, Headland's Sales and Marketing Director said that the creation of these two new posts is indicative of the way the company is growing.

"We've never had full time regional managers in these areas and we need to give more support to our distributors on the ground. James and Steve will be responsible for sales and technical support to both end user customers and distributors."

Steve, a practising greenkeeper for the last 10 years, has always been interested in the technical side of the business, as well as the practical.

"This position provides the ideal opportunity to concentrate on this area and help customers achieve the best possible results from a technical perspective," he said.

James, whose father retired as a Course Manager in December, and who practised the profession himself for 14 years before moving into sales a year ago, says that he needed a new challenge but wanted something where he could use his experience built up on golf courses around Europe.

"This way I could take a leap of faith but I didn't have to leap too far," he explains. "I'm familiar with quite a lot of Headland's products, having used them myself in the past, and I like the fact that we are a flexible, forward thinking company that can respond rapidly to customer needs."

TURNER GROUNDCARE OPENS NEW MIDLANDS DEALERSHIP

Turner Groundscare is to open a new dealership in the Midlands to sell and service John Deere's full line of professional, golf & turf and domestic equipment, including 5010 Series utility tractors.

This follows E T Breakwell's recent announcement that it will be closing down its groundscare dealership in Solihull in the New Year. The new Turner's branch will cover Staffordshire and the West Midlands, including Birmingham, Coventry and Nuneaton; dealers Henton & Chattell and Parks & Grounds Machinery will now take on the whole of Leicestershire and the Rugby area respectively, in addition to their existing sales areas.

This will be Turner Groundscare's fourth John Deere commercial & consumer equipment (C&CE) dealership, joining branches in Bedfordshire, Buckinghamshire and Cheshire. The first was established 10 years ago in Tarvin, near Chester.

Initially six staff, including Breakwell's salesmen Kevin Wise and Robert Page, will be based at the new branch. This will operate alongside the established Mitchell Diesel Group engines business Central Diesel at Erdington Industrial Park, off the Chester Road in Birmingham.

Temporary sales and service support will also be provided from the Turner Groundscare branches at Tarvin and Bledlow until the new business is completely operational on April 1. Plans for development of the premises include a new showroom for domestic equipment, as well as dedicated parts and service departments and workshop facilities.

Joedy Ibbotson, John Deere Territory Manager (Left) greets Brian Spruce, of Turner Groundcare

MASTERLY

The third annual EGU Greenkeeping Master Class last month gave the 96 delegates an ideal opportunity to feed their minds as well as see the superb set-up at Woodhall Spa, both on and off the golf courses.

The programme, chaired by Colin Spurr, Chairman of the EGU Golf Services Committee, and organised by Neil Cockbill, started with a paper from Steve Isaac, Secretary of the R&A Golf Course Committee, on the European Perspective on Pesticide Regulations.

Steve was followed by Stella Rixon, of the STRI, who gave an update on the Institutes' research into biologicals.

Management and Communications was next on the agenda with an "interactive" presentation involving the delegates hosted by Kerran Daly, Courses Manager at Gog Magog Golf Club and Duncan McGilivray, Course Manager, at Potters Bar GC.

The evening saw a superb dinner, hosted by the EGU, with the guest speaker, Eddie Seaward, Head Groundsman of the All England Lawn Tennis Club, who gave a speech which contained real moments of hilarity but didn't disguise the fact that his job is one of the more pressured and stressful in the fine turf industry.

The second day was kicked off by Andy Newell, Head of Turfgrass Biology at the STRI, who gave two statistically based papers, looking at Grasses for Golf and which variety is best suited to each time of the year.

He was followed by Andy Cole, Senior Agronomist at PSD Agronomy, who gave a very interesting paper on green speed. Andy revealed that in the 1970's the average greenspeed in the USA was between 5' 6" and 7' 6".

Last up was Tim Earley, Managing Director of Waste2 Water Europe Ltd, who highlighted the dangers of falling foul to recently introduced pesticides.

SCOTTISH MODERN APPRENTICE AWARDS

Three Greenkeepers from across Scotland were among the six finalists in the recent 'Scottish Land-based Modern Apprentice of the Year Awards 2003'.

Kevin Jackson, a greenkeeper at Troon Municipal Golf Course took second place, receiving a special achievement award in recognition of his commitment and positive attitude to learning.

George Mitchell, of Newmacher Golf Club, and Fraser Cochrane, of St Andrews Bay Golf Club and Resort, also received certificates of achievement at the evening award ceremony hosted by Lantra, the Sector Skills Council for the Environmental and Land-based Sector.

Eligible candidates from across Scotland competed for the award, representing a range of land-based industries including greenkeeping, floristry, agriculture and equine. The award is designed to reward Modern Apprentices in Scotland who have demonstrated a commitment to training, gained knowledge in a specialised land-based subject and supported others as part of their personal development.

Around 800 individuals are currently following a Modern Apprenticeship in the environmental and land-based sector in Scotland. Over 300 have completed since 2000.

75 YEARS AND STILL GOING STRONG

Next year STRI celebrates 75 years in the turfgrass industry. To mark this milestone the Institute is planning a programme of events which will run throughout 2004, starting with a celebration launch at the BTME and ClubHouse Show in Harrogate in January.

All four issues of the International Turfgrass Bulletin magazine, along with the STRI's website, will carry special features highlighting the key developments and major achievements in the industry from 1929 to present times, alongside the regular editorial.

The October Bulletin will be increased in size to act as a commemorative record for the 75th Anniversary. Over the years STRI's unique position has enabled close ties to be formed with many eminent individuals and organisations throughout the turfgrass world. They will be inviting editorial from some of these key players for inclusion in this issue, to reflect the past and future of the sportsturf and amenity sectors worldwide.

To coincide with the publication of this commemorative edition, the STRI are also holding it's official celebrations in October around our 'Open Day' on Wednesday 6th, followed by a dinner in the evening.

A special logo has been created to mark the event, which will appear on all literature over the next 12 months.

ACQUISITION FOR AITKENS

Aitkens Sportsturf Ltd has acquired R.E. Rushbrook and Son. Rushbrooks have been trading in Bramford, Suffolk since 1912. Aitkens Sportsturf Ltd purchased this family business in November.

Colin Rushbrook will continue in his present role, as Technical Sales representative for Aitkens Sportsturf. Aitkens are taking the opportunity to increase their coverage of the UK, and to continue Rushbrooks level of service along with increasing the range of quality products available to the customer. Aitkens and their partnership in Avoncrop Amenity Ltd now mean that they have national coverage of the UK mainland.
As tough as the toughest job.
But gentle on turf.

We’re about to get tougher!

• Up to 680 kg payload.
• Industry-leading warranty.
• Unique corrosion free aluminium chassis.
• Armorflex impact resistant body.
• Lightest vehicles in their class.
• A full range of power train options.
• Rated No. 1 by turf professionals around the world.
• From £16-75 per week*

Come and see the exciting changes happening at Club Car at BTME, Harrogate - Hall M, Stand M25.

* based on 260 week Flexi-Options5 lease. Prices exclude VAT. Terms & Conditions apply. Written details on request.
YOUR LETTERS ARE REQUESTED!

Chemical Prices
I wonder if any other Golf courses have had a similar experience to us in respect of chemical prices? We have recently paid £750.00 to treat one hectare of greens for fusarium. When I was farming I would have expected to pay this amount to treat 25 hectares of beans! I understand that the public have access and have to be protected but chemicals on feed crops could be a potential threat. Through your columns I would be interested to learn why there is this difference between us and farmers and don’t forget we don’t get subsidies. We have to earn our money.
Thank you for your help in this matter.
John R. Button

Double Summer Time
The Golf Services Committee of the EGU is proposing to launch a campaign for the introduction of Double Summer Time to Britain. Before we do, however, we wish to consult, as there may be implications for greenkeepers that we have not identified. We are obviously aware that this is not something that golf alone will achieve, but before wider support is sought it is important that all of golf is in favour.

The proposal is to move the clocks forward two hours in the spring (rather than one) and two hours back again in the autumn. (It is also likely that the clocks will have to go back a few weeks earlier in October in order to avoid unacceptably dark mornings.) The benefits to golf are an extended period of time in the spring and summer months when it will be possible to play a full 18 holes after normal working hours and the corresponding extra revenues from green fees and food and beverage. A number of other sports will also benefit from this and it is perceived that it will generally improve the quality of life for the population during spring and summer.

History* shows that the previous attempts to move to double summer time have been included in a move away from GMT altogether. The consequences of this are dark mornings in the winter, particularly in the north of England and Scotland. Hence most of the objections came from sectors of workers who traditionally start work in the early hours - construction, postal, refuse, agriculture and the Scottish population were generally against because of the dark mornings. In favour were a wide range of organisations from the Police and Medical Authorities to the RHS and Sports Councils. There was much debate over the effect on road fatalities, particularly involving children going to and from school, which was inconclusive.

Our proposal for Double Summer Time leaves the winter months as they are and therefore the majority of objections raised last time should not apply.

We hope you will be able to lend your support to this initiative and look forward to receiving your response at the earliest opportunity.

Neil Cookbill, Golf Services Secretary, National Golf Centre, EGU, Woodhall Spa, Lincs

Many Thanks
I would like to take this opportunity to say a big thank you to Andy Brown, Peter Mansfield and all of BIGGA staff for the fantastic experience and the warm welcome I had in the Toro Student Greenkeeper of the Year final at Aldwark Manor. To be there with the other seven finalists was an experience in itself and we all had a great time with a good atmosphere around us. I hope to see you soon, and all the best for the future.

I also would like to say thank you to my tutor Graham Wright, from Welsh College of Horticulture, and Steve Jones, my Course Manager, for the support and encouragement that led me to the final.

Again I want to congratulate Keith for the Award, and I hope you will have a blinding experience in America, all the best!
Dylan Hughes, Greenkeeper, Pwllheli Golf Club

A Bit Out of Order
Though I have been retired over 12 years I do feel that the Royal Inverdibot Golf Club cartoon in the December magazine was a bit out of order.

The early 70's came to mind. When I was at Bromborough GC, the steward, putting me up, said, Tim, when you go on holiday, or even if you feel ill, you organise everything and complete it, ie fertilising, spraying, machines and even give the answers when the Chairman of Green tries to take over. Leaving the job is chaos."

James Sinner, Retired Member, Wallasey

KNOWLEDGE IS THE KEY TO FUTURE SUCCESS
Ken Richardson looks forward to the New Year of Education and Training that starts with Continue to Learn at Harrogate later this month.

Continue to Learn

Continue to Learn at Harrogate this month when the National Education Conference and Workshop Programme, presented in association with the GTC, take place prior to the BTME & ClubHouse Exhibitions.

There are still places left on the National Education Conference, which is supported by the John Deere Team Championship, that takes place on 19 and 20 January in Hall D of the Harrogate International Centre, when a range of speakers from the United Kingdom and the United States look at how the game of golf and the business of golf are inseparable. Moreover, they will show how both have an impact on golf course management.

Three one-day Workshops also supported by the John Deere Team Championship will take place in the Moat House Hotel on Monday 19 January. They are:

1. Water On the Golf Course presented by Dennis Mortram.
   This Workshop explores water resources, evaluating the need for water and justifying its future need.
   A must for all those wanting to see how they can minimise the effects of dry weather in a time of scarcer water resources.

2. Real Influencing Skills presented by David Bancroft-Turner
   Anyone attending David Bancroft Turner’s talk at the 2003 Conference will know that he has some innovative ways of presenting his slant on people management.
   Find out how a knowledge of organisational politics can help you to create effective working relationships.

3. Health and Safety presented by Jerrard Winter
   What can you do to make your golf club safer? Where do you start? What must I do?
   Find out the answers to these and many more questions by attending this Workshop.

BTME & ClubHouse Seminars

Please remember that the BTME & ClubHouse Seminars begin at 1.30 p.m. on Tuesday 20 January 2004 also in Hall D of the Harrogate International Centre. The first afternoon of Seminars looks at Golf Club Design, Development and Redevelopment. Aimed at golf club managers, this Seminar will cover the Financial Potential of Golf Facilities, Clubhouse Food and Beverage Operations, Refurbishing Locker and Changing Rooms, Constructing a New Clubhouse and Where to Start with a New Project. Completely free to all delegates, please check in at the Seminar Registration Desk on Stand Q8.

Wednesday morning of BTME & ClubHouse always begins with the Presentation of the BIGGA Golf Environment Competition which will take place at 10.30 a.m. in Hall D. This will be followed by the Presentation of three new Master Greenkeeper Jackets.

BTME & ClubHouse Keynote Speakers have always proved to be popular, inspiring the audience with their comments on motivation, team building and endurance. This year’s speaker, sponsored by Ransomes Jacobsen, should prove to be equally inspiring. Alvin Law calls his talk ‘No such word as Can’t’ and when you see and hear this highly inspirational speaker, it should encourage you to be more positive in your life. Entry is free to all delegates.

Seminars continue on Wednesday 21 and Thursday 22 January when a variety of speakers will be giving short snappy talks on a variety of subjects.

Watch out for an extra talk at 4.15 p.m. on Wednesday 21 January when you can find out about the workings of the Futures sub-Committee. This talk will be presented in Hall D immediately prior to the BIGGA AGM.

Thursday 22 January begins with yet another opportunity for delegates to discover what might be going wrong on their course when ‘The Turf Doctor’ holds his surgery at 9.30 a.m. in Hall D. More Seminars follow throughout the day with the final talk taking place at 12.45.

Please remember, that although it is best to pre-book Seminars to reserve your place, you can always book on the day, assuming that Seminars are not full.

Careers’ Fair

BIGGA will be running a careers fair in Hall Q during BTME & ClubHouse. The Fair, which is sponsored by Toro, includes the Careers Clinic where you can get advice on writing your CV and letters of application plus how to really read job applications.

The Fair also includes information on careers including, Greenkeeping and Golf Course Management, Golf Club Management, Agronomy and Further and Higher Education. There will also be a job shop where you may find that next job.

OnCourse

Many enlightened Golf Course Managers are seeing the benefits of using OnCourse, the Golf Course Management software package supplied by BIGGA. Why not see what it can do for you and your club by asking to see a demonstration during BTME & ClubHouse. If you decide to buy the package there and then, you can save £200 off the normal selling price of £800.

Regional Training Courses

Members of BIGGA should have received their copy of the Spring Regional Training Programme in the December Edition of this magazine. Anyone wanting further details should contact Sami at BIGGA House or on Stand Q8 at BTME & ClubHouse.

EFFECTIVE
That’s One Way to Describe Our Industrial Aerators

Effective circulation is critical to water quality management. Weeds and algae can surface at any time and are indications of troubled waters. Otterbine’s Industrial Aerators and Aerating Fountains are designed to work in even the most difficult environments, leaving your waterways clean and beautiful.

Otterbine’s diffused air system, the Air Flo, is able to operate in over 12m of water, providing optimal aeration and turnover of the water column. For over 50 years, Otterbine has been manufacturing aeration systems designed to improve pond and lake circulation.

The Otterbine product range includes:
• Aerating Fountains
• Industrial Surface and Sub-Surface Aerators
• Giant and Instant Fountains

For more details or specifications call Lely on 01530 814701

Membership UPDATE

Rachael and Gemma would like to welcome 53 new members to the Association and talk about the launch of the Privilege Platinum Card at BTME and ClubHouse.

Once again Gemma and I will be on the BIGGA stand at BTME and ClubHouse to answer all your queries regarding your membership. This year we are launching the Privilege Platinum Card as detailed in last month’s magazine. The card allows you to get discounts in lots of your local shops and also National chains. Just ring the shopping helpline or log on to the website to find out where you can use your card.

We will be issuing Privilege cards on the BIGGA stand (Q128) so if you have not received yours already then make sure you pay us a visit. We have negotiated lots of discounts in Harrogate especially for BTME and ClubHouse which should save you the money you pay for your subscription in this week alone.

Offers available on Production of your Privilege Platinum Card during BTME and ClubHouse

**JANUARY’S MEMBERSHIP DRAW WINNER**
Just introduce one or more new greenkeeping members to BIGGA and your name will be placed into a draw to win a fantastic BIGGA Clock/calculator/calendar and alarm.

Our congratulations go to John Wheeler from Mottram Hall Hotel Golf Club.

**Message of the Month Winner**
Each month the person who has written the best message on the BIGGA Bulletin Board, which is found on the BIGGA website www.bigga.org.uk, receives an 18 litre Gelert Rucksack featuring a multi function organiser, 2 mesh pockets and a grab handle. (Rucksack supplied may be a different colour to that featured).

Our congratulations go to January’s winner, Leslie Howkins from Cleethorpes Golf Club whose message was posted on the 2nd December under the ‘Talking Shop’ section.

**ACTIVITY DAY WINNER**
For the past year we have been holding an Activity Day prize draw for those of you who returned your renewal form before your membership expired.

Our final winner is Andrew Marsh from Dudsbury Golf Club who has a choice of at least 20 activities to choose from. Congratulations Andrew.
The Total Exhibition Experience

With BTME & ClubHouse on the Horizon it's worth taking a look at how to get the most out of this buying and selling opportunity. Pauline Thompson takes a look from both perspectives, the exhibitors who are selling and the visitors who are buying.

THE EXHIBITOR

Exhibitions should, if done well, include many different aspects of sales and marketing. It's a culmination of PR, advertising, promotion, presentation, selling, and interpersonal communication skills. It can be difficult to put all of these aspects of exhibiting together and make them work. However, having a clear objective about what you are trying to achieve, and knowing what your customers want from you when they visit your stand is a good place to start.

An exhibitor needs to make sure he or she gets a return on the investment. Along with the cost of the stand rental there are stand design costs, construction, show services and transportation. As well as the obvious exhibiting costs, an astute exhibitor will also have the added cost of pre-show and on-site advertising, telemarketing, direct mailings, training and of course post-show follow-up.

Exhibitors work very hard and spend a lot of time, effort and money in choosing, buying and planning their stand space in order to attract prospective and current customers. The main reasons for deciding to exhibit are to take orders; launch new products; to convert prospective customers into new accounts; to wave the flag and say "here we are"; to check out the competition and to entertain important clients.

It is important to remember that customers buy from people, not stands. It doesn't matter how good the stand design is, if the interaction between people is less than professional or the post-show follow-up is inefficient, it may just be a missed opportunity, or it could harm a reputation and credibility.

THE VISITOR

In the same way that an exhibitor needs to be clear about his objectives, the visitor must be clear in his own mind about what he is trying to achieve in order to get the most value from his time at the exhibition. BTME & ClubHouse lasts for three days and comes round once a year. Having recognised the perfect opportunity to compare a wide range of existing and potential suppliers the visitor must maximise his time in order to gain the benefits on offer.

There is a lot to do whether it's finding alternative or additional suppliers, selecting products, placing orders, or investigating a new opportunity. All this plus networking and gathering market intelligence will keep the visitor very busy. Planning is the key to a successful visit, otherwise the people may not be available and time could run out. If more than one project is to be achieved it can be beneficial to concentrate on one project at a time and spread appointments over two or three days.

It is vital to make the best use of time and take into account travelling time, registration, obtaining a catalogue and finding a way through the halls, half a day can disappear before any business has been done. Serious discussions at the end of the day may be difficult as, not surprisingly, both exhibitor and visitor have had a long day. However, while the exhibition is open, there will always be a sales person available.

Visitors can easily become overloaded with catalogues, price lists and brochures. Make use of the carrier bags given out at the show, and, by travelling light, the visitor can collect business cards, and make notes to accompany them. The amount of information gathered during the course of a full day can be astronomical. It is always a good idea to summarise the key points at the end of each day in order to reap the benefits of the exhibition.

Sales people have an enthusiasm for their products and services that enables them to talk at great lengths about why the customer should do business with their company. A useful skill is being able to close a conversation when it has become unproductive without being rude, or causing offence.

Networking opportunities which take place in the hotels and bars between show days can be invaluable. Many stories filter back about how a good time was had by all. However, a fine balance must be achieved in order for the following day not to become a total write-off.

BTME & ClubHouse is a major event at the start of every season, with careful planning, exhibitors and visitors will be enabled to measure how successful their attendance has been.

The bunkers are a fine example of the combined work of the greenkeeping and conservation teams.

Ipswich Golf Club, also known as Purdis Heath, is one of those excellent golf clubs which, once seen, you think, “If I lived around here, I’d love to be a member of that place”. A James Braid designed heathland course with all the attributes you associate with that genre – attractive, natural surroundings, a well appointed clubhouse and everything run with friendly efficiency.

But the thing about Purdis which marks it out from every other golf club in the country, and demonstrates an approach to the custodianship of the land in their care which is exceptional, is the fact that Neil Sherman and Mike Dickens, two of Course Manager Norman Fenwick’s highly motivated team of eight, are qualified conservation officers. There are some who feel that this is an extravagance and sheer indulgence on the part of the golf club, but Norman Fenwick uses the resources which Neil and Mike bring to great effect. After all, many clubs employ mechanics for their specialist knowledge!

Purdis Heath carries out a total area programme which embraces all aspects of the club’s land. Norman, who has been at the club for just over four years, feels that programmes for turf quality and conservation overlap so much that there is not a dividing line between them.

As part of the successful team, General Manager, Neill Ellice and Chairman of Green, Brian Laws, both have significant input into the club’s land management policy. As an indication of success, Purdis Heath is the only club to have won the BIGGA golf environment award twice – becoming the first ever winners in its guise as the Amazone Golf Environment Award in 1995, and then again in 2002.

The benefits are there to be seen with a huge variety of flora and fauna, including rare butterflies, birds, lizards, deer, foxes and a white squirrel who has made one area of the course home. The impetus for a more environmentally aware golf club came in the 1980’s with a group of Committee members who fostered a real interest in the subject. One of them, Ron Squirrel, a Past Captain and President of the club, has a nature trail named after him.
At that time, Neil Sherman became the first Conservation Officer, arriving initially as part of his Otley College work placement, and working one-day a week, then two. He became full time when Norman arrived as Course Manager and then, three years ago, Mike Dickens, who was a mature student also at Otley College, joined the staff, bringing the complement up to eight.

"Bringing in Mike as a second Conservation Officer was a bigger step than taking on Neil full time, but the work that we have done has proved the benefits of doing it," said Norman, who introduces a northerner's common sense approach to all that he does.

The key question, though, must be, "What does a Conservation Officer bring to the table that a greenkeeper with an interest in the environment doesn't?" It is one which Norman is well qualified to answer.

"The biggest benefit you get is the specialist knowledge. As greenkeepers, we would know what to do when it comes to woodland management, but Neil and Mike have the knowledge to do that and how to take it forward to the next stage. It is not just woodland management but looking after the whole site so that it enhances the golf course," said Norman.

The point is reinforced by Neil Sherman.

"You need to have the vision of what you want in an area and decide what will work and look appropriate. You have to plan ahead and, with heathland, that means looking at the soil and checking if it will be adequate for Heather or Gorse to grow," he said.

On Norman's arrival at Purdis Heath, he and Neil, with support from Neill Ellice and Brian Laws, produced a five year plan to cover all aspects of maintenance from greens to ponds. The plan was important as a means of identifying the full diversity of habitat within the boundaries of Purdis, which supports acid grassland, heath, dry woodland, wet woodland, fens, woodland trails, rides (vistas) reed beds and ponds. This plan is updated on an annual basis.

Another project undertaken on the site is an extensive nest box programme for both birds and bats. Over 120 bird boxes have been erected around the course with most occupied every year. The bat population around the club's lakes is very good, with the County's largest known colony of Noctule bats (Britain's biggest species) located at Purdis Heath.

One of the main thrusts when Norman arrived was to improve airflow and reduce shade problems by canopy raising and scrub clearance.

"This has had a massive impact on all playing surfaces. An example of this was the work which was done on the beautiful par 3 15th in removing the rhododendrons which had encroached to within three feet of the putting surface. Removing them vastly improved the quality of the green which had previously been extremely damp. It has also exposed James Braid's original landscaped contours around this green and restored its original character.

Having spent 10 years at the club, Neil Sherman has seen some of the projects come to maturity and around the course there can now be seen stands of Heather and Gorse at differing heights and stages of growth.

"I know in my mind that it takes time but always with these projects you want them to happen quicker. It's a case of having the vision in my head as to what will happen, and then waiting."

The work has been aided by success in the Environment Competitions with two polytunnels purchased after the first win which are used to grow Gorse and Broom in one and Heather stocks in the other.

"We use our home grown Heather stocks in small areas, like mounds in the centre of bunkers, otherwise we'd use our plants up too quickly on large areas. On those bigger sites we use the natural seed bank and also brashing material — the clippings from heather which we've already got around the course. We mow areas of heather as part of our annual maintenance and the material collected is then reused on the golf course so there is no wastage at all," explained Neil Sherman.

They also employ trial plots out on the course to identify which techniques are best for each area.

"We have tried using grasses, plain brashings and sieved material to get purer seed to use. The technique that might work best is dependent upon the soil in a particular area and the climate as well, which means we don't always get much re-growth of heather straight away. You know the seed is in there and it will come when conditions are right," said Neil.

Purdis Heath is more than just a heathland golf course with areas of woodland and wetland as well, but each area is treated with the same amount of care by the team. The club owns a 250 acre site and, away from the playing surfaces, they use the additional land constructively.

"We've created a new path through the woodlands and around our lakes and wetlands and worked on a new section of woodland to create features for people to look at as they walk. Among these is an area of hazel coppice which is part of the historic management of the site. Traditionally, the hazel was used to create hurdles for purposes of screening around the old duck decoy pond in the centre of the woods," explained Neil.

Neill Ellice is a man who gives 100% support to the work of Norman, Neil Sherman and the team.
The new nature trail gives ramblers a very pleasant new route

"The members are starting to see the benefits and have done so over the last year. These projects are not short term and the danger is that most golfers want a quick fix and instant results, and certainly it took some brave Committee decisions to go down the route we chose," said Neill.

"The important thing was that Norman was able to put his vision across to the Club Committee. Having been on The Committee myself eight years before becoming General Manager, I can remember years of arguments about an odd tree here and a bough there. Norman convinced the Committee that the long term vision was certainly worth trying to attain, and he was able to explain quite lucidly how to go about that."

But as everyone knows, convincing the Committee doesn’t mean the job is done.

"Once the Committee was on board, half the battle was won, the second half was taking the membership forward and this is where the education process has had to come in," added Neill.

With that in mind, the club has produced a range of different methods of getting information to the membership.

"We have course walks with Neil and Norman, open events at which members can, for example, come down and see the equipment they’ve seen out on the course, how it works and what it is used for. We keep them up-dated with a quarterly Newsletter which includes a question and answer session between Brian Laws, and Norman, in which they explain some of the complicated techniques which are used out on the course," said Neill.

Brian also reinforced the point.

"Getting the message across is still a bit of a slog and it is often only read by the people who know anyway, but we’re no longer getting the comment ‘What’s it got to do with golf?’ that we got on the early days," said Brian, who has been Chairman of Green for three years.

Norman also has strong views about the matter of getting the message across. "We’re not confrontational when it comes to communication. We just talk about the issues, but one of the problems is that people get emotional about it instead of just looking at the facts. My biggest benefit is that I’ve actually done it, so I can say, if you do it this way, that will happen in two or three years time or, if you do it another way, this will happen. My main objective when I first moved here was to ensure that everything we did was sustainable," said Norman, who is delighted that he enjoys an excellent relationship with Neill and Brian.

National 68

Taking the rough with the smooth

Allen Power Equipment Limited, The Broadway, Didcot, Oxon, OX11 8ES. Facsimile: 01235 515401. www.allenpower.com E-mail: sales@allenpower.com

Our Triple Mowers are designed to tour around the greens day in, day out, which means they’re course leaders when it comes to cutting quickly and efficiently. You’ll eliminate hours of hand trimming as our outboards boast the longest overhang in the industry. Being belt-driven, the three floating cutting units hug the ground giving you a close, even cut without scalping – even on steep slopes. These top performers give you championship quality with price tags that are certainly not out of range – and the new National 68 now includes a rear aerator feature too. You’ll need to go a fairway to beat our cylinder cutting units...National have been welding them longer than the competition have been around.

Call now and tee off with a National.

MITSUBISHI TRACTORS

Champion class performance, rugged reliability and maximum pulling power from 20, 26 and 30hp diesel compact tractors. 4WD traction gives total grip - always.

This vista, overlooking the lake, has been opened up by the team

"The General Manager is pivotal because he has to field the awkward questions from members. If he doesn’t like fielding such questions, perhaps because the answer isn’t what the questioner want to hear, it can become difficult. Neill can answer those questions but another Secretary/General Manager might not be quite so strong and pressure can then be exerted on the Course Manager. That is when things can start to crumble a bit."

Norman has nothing but praise for the work of his team and feels that they are in a win win situation, as are the club members. "In the event that any of the conservation work did not produce 100% of the desired results, then the worst case scenario would be production of increased areas of acid grassland, while the shade, airflow and root invasion problems would also be improved," said Norman, with Neill and Brian nodding in agreement.

The Squirrell Trail named after Past Captain and President Ron Squirrell
It was February 2002, and I was studying at Elmwood College, when Mike Clark and Ian Butcher asked if I wanted to go to America to work on a golf course and gain more experience. Of course I was interested, and was put in touch with agronomist Bruce Jamieson, who explained to me about a practical and academic programme offered at the University of Minnesota. It was called the Minnesota Agricultural Student Training (MAST) programme.

The MAST programme was initially set up over 50 years ago to allow Swedish agricultural students to go to the USA and expand their knowledge in agricultural practices. In 2001, the Toro Company, based in Minneapolis, through Helmut Ullrich and Barry Beckett, started an agronomy side of the programme, initially sponsoring two German students to work on a golf course and study at the University of Minnesota. The five students on my 2003 course were from England, Ireland, Germany and South Africa.

Bruce Jamieson helped facilitate my application and all arrangements and, fortunately, the Toro Company and the University of Minnesota accepted me as a participant in the MAST programme. So I applied for and got a J-1 work visa, which was processed within two weeks in Dublin.

So it was that I flew from Gatwick to Minneapolis on April 14, to embark upon such an exciting, if somewhat daunting, opportunity. Helmut and Barry met me in the USA, and accompanied me to the university campus for the MAST orientation session, which provided me with all the information I needed to live and work in the USA.

They told me I was to be placed at Midland Hills Country Club, located in St. Paul, the sister city to Minneapolis, and otherwise known in the USA as the Twin Cities area. Later, I met Course Superintendent Scott Austin, who introduced me to the other course staff and gave me a tour of the course and facilities. Scott had also made accommodation arrangements for me that were less than a mile from the course.

He asked what aspects of practical experience I felt I needed to improve upon, to maintain and run a successful golf course operation. He wanted to take time to make sure I would gain all the experience I could, and placed me on every major project that occurred on the course. He also charged me with the responsibility of leading crew projects. After a couple of weeks in the USA I figured that owning a car was a must! I found a nice vehicle and settled in very well at Midland Hills, developing many friendships with the staff and members.

During the practical training period the university requires students to keep track of all aspects of their training and gives participants full monthly reports to keep both the University and students up to date. This is while also giving an opportunity to iron out any problems that may occur during the training period. There is also lots of information to prepare students for the next academic programme, giving time to select classes for the spring term. There was quite a range of classes to choose from. I chose ‘Turf Grass Diseases’, ‘Economics’ and ‘Meteorology’.

I chose ‘Turf Grass Diseases’, ‘Economics’ and ‘Meteorology’.

Luckily for me, my time in the Twin Cities coincided with two major events held at nearby courses. The first was the PGA Championship at Hazeltine National, the other the Solheim Cup, at Interlachen Country Club. Both clubs have a lot of history when it comes to hosting high profile tournaments!

I attended both events. They taught me a lot about tournament preparation and the conditions needed for world-class events. Hazeltine National was hit with about six inches of rain on the Friday night of the tournament, which saw every bunker and low spot completely full of water. But I never saw water disappear so fast in the morning! I think every bunker pump in the Twin Cities was at Hazeltine that morning, along with the local fire department trucks that also helped with the pumping frenzy.

Amazingly, all was OK when the first paring stepped on to the tee on Saturday morning!

Following Christmas back in Ireland, I returned to the University of Minnesota. The classes were very interesting and the professors covered the subjects in great detail. The Turf Grass Diseases class was extremely interesting and included a lot of reading and taking part in practical laboratory assignments.

The University has a large agricultural and horticultural department with many valuable reference materials. All participants may work a maximum of 20 hours a week to earn spending money, and I continued to work at Midland Hills through the winter. This in itself was a unique experience - as it rarely rises above minus 15 degrees C in the winter!

On one day in particular, I think the thermometer in my car read minus 27 degrees C as I drove to work! A unique experience, but well worth it.

There is so much to do in the Twin Cities during winter. It gets really cold but people just get on with it. You can walk around downtown Minneapolis and actually never have to go outside, as there are structures called skyways that weave overhead through all of the buildings. It really is amazing architecture. In fact, Minneapolis has the world’s largest network of overhead skyways.

The academic programme lasted five months and finished with final exams in mid-May. At that time, I bade farewell to Minneapolis/St. Paul and set off for the world-famous Baltusrol Golf Club in the state of New Jersey.
Morgan O'Sullivan reports on his American adventure which saw him working at some of America's best known golf courses

Baltusrol impressed me immediately. I had read a lot about it in various magazines and it wasn’t a let-down. Being mid-May, the season was just getting into full swing.

The operation at Baltusrol is like nothing I have ever seen. It consists of two championship courses, the Upper Course – which has held the US Amateur and US Women’s Open – and the Lower Course, which has staged numerous US Opens and US Amateur Championships.

On my first day the superintendent of the Upper Course, Scott Bosetti, gave me a course tour and I was amazed at its condition. I clearly remember the words he used to describe the conditioning at Baltusrol. “This is a US Open course and that’s what the members want everyday – not just for a week in June,” he said.

And it’s true; we daily continued to set up the courses to US Open standards. Director of Grounds Mark Kuhns CGCS, who was also a director of the GCSAA, knows a thing or two about championship conditions, after previously working at Oakmont, the recent venue of the US Amateur Tournament.

Luckily for me, I came to Baltusrol at a very good time. They have just completed a maintenance facility that is second to none. Also, they now have on-site housing for two Assistant Superintendents and up to 12 interns. There are presently six interns but Mark Kuhns wishes to have 12 by the time the 2005 PGA Championship is held at Baltusrol.

Baltusrol runs a really good internship programme for students from all over: from Penn State, Rutgers University, the University of Guelph (Canada), and the MAST programme from the University of Minnesota. All interns are treated as team leaders and are given the opportunity to strengthen their weak points and make their strong points even stronger.

All the superintendents were always willing to help us learn on the course. We frequently had question-and-answer sessions with the superintendents, which proved to be extremely beneficial. We were responsible for many of the projects on the course, which tested our skills, knowledge and leadership.

Baltusrol has already begun preparing for the 2005 PGA Championship, with the semi-rough adjacent to the fairways already stripped and re-turfed to ensure uniformity for the tournament. Greens are being expanded for new pin placements, and some bunkers are being re-shaped to make them more challenging for the tour professionals in 2005.

I finished the MAST programme on October 14, and left Baltusrol to return to Minneapolis and my flight home.

All in all, I can say that the MAST programme, in association with The Toro Company, has been a really good learning experience and exposed me to so many different situations, both workwise and socially; while also working in America. I know that the host superintendent’s also learn from students like me as they like to hear about our experiences growing up in our home countries, as well as learning to use some of our language expressions that they don’t hear in the USA!

During my time in America I developed many friendships that will continue into the future and provide me with a network of relationships I can call upon when I need help or opinions in dealing with challenges at work.

Currently I am working at The Grove Golf Course, in Hertfordshire, under the guidance of Phil Chiverton. So I am at a top-notch facility and looking forward to continuing my education on the job as this new course becomes established.

I would thoroughly recommend to all young, aspiring greenkeepers to consider taking any similar opportunity to work in the USA, or anywhere else in the world for that matter. The experience of living and working in a different culture provides you with alternative ways of looking at things, both in and out of work settings, and certainly expands the mind when meeting new friends from other countries.

The whole experience will hopefully stand me in good stead as I move onto new opportunities within the golf industry, as I have learnt a lot that I may not otherwise have done if I had just stayed in Ireland.

Finally, I would like to thank Helmut Ullrich and Barry Beckett, from The Toro Company, as well as Toro’s distributor Lely UK, and Bruce Jamieson – in fact everyone who was involved with making this learning experience possible for me.

Many thanks.
California Dreaming for the BIGGA Delegation

Ten BIGGA members will head for San Diego next month as part of the fourth delegation, in association with Bernhard and Company.

In previous years the party has travelled to Vancouver and the Canadian Golf Superintendents Association Conference and Show and since then to Orlando and Atlanta, for the GCSAA Conference and Show.

So far 30 BIGGA members have benefited from the opportunity to attend the Conferences and Shows and meet greenkeepers from around the world. The 10 greenkeepers who will visit San Diego have a similar opportunity.

The group comprises those who took the trouble to fill in the entry form which appeared with the September issue of the magazine and then progressed through the two stage process - the initial written element in which questions were asked about themselves, BIGGA and what they felt they would achieve from being a part of the delegation. Those who were selected from this stage were then interviewed at either BIGGA HOUSE or a Heathrow hotel.

The interview panel for both comprised BIGGA Past Chairman, Richard Barker; David Haskell-Craig MG, Course Manager at Maidenhead Golf Club, and Sam McLean, Sales and Marketing Director of Bernhard & Co.

Much store is made of the information gleaned by the Delegation being spread and widely as possible and the 10 will be expected to give talks at Club, Section and possibly Region level when they return.

Bernhard & Co are to be congratulated for their commitment to the delegation, without which this valuable opportunity for BIGGA members would not exist.

Stephen Bernhard comments...

We are delighted to be taking our fourth Bernhard-sponsored delegation overseas to attend the GCSAA Conference and Show in San Diego, California, next month.

The growing number who apply hoping to be selected for these trips, not to mention the quality of entrant, reflects well on how the opportunity to take part in the delegation is viewed by the BIGGA membership. I am sure that the 10 greenkeepers selected will each take as much from the trip as is possible.

The information exchange which will inevitably take place between the delegates and the Superintendents they meet during the trip, together with an exposure to a different way of life, will be extremely useful to everyone, in the weeks, months and years following their return.

We are extremely fortunate to have a wonderful relationship with the GCSAA and their members and staff are generous in their support of the BIGGA delegation. This, again, adds to the experience and we thank everyone involved for their hospitality.

The 10, who for the second time include an overseas member - on this occasion from Switzerland - will be encouraged to spread the word when they return and give talks to their own golf clubs, BIGGA Section and Region. That way what is learned during the trip can be spread more widely. Each delegate will have extensive homework to do before leaving for California but it will be rewarding and fulfilling as he develops long term relationships with his fellow delegates and other and like-minded colleagues in the States.

I am proud to be part of the enthusiastic team at Bernhard and Company who sponsor the group to San Diego and I hope everyone enjoys a fun filled and informative trip.

DELEGATION MEMBERS

<table>

</table>

Peter is looking forward to the opportunity to mix with greenkeepers from different backgrounds and share and discuss education and greenkeeping practices. He is hoping, then, to pass on his knowledge to his work colleagues and the wider BIGGA membership.

Leslie feels the benefits he will derive from the trip are almost impossible to calculate but is sure they will last for many years to come. He is particularly looking forward to meeting people from the USA and Canada and learning about course management in different parts of the world.
Sid is keen to speak with Superintendents and exchange views on course management with them. He has never attended the GCSAA Conference and Show and he feels it will give him a good insight into how the industry in America is run compared with the UK.

Philip feels that it must be everyone’s dream to be selected for the trip and he is getting a tremendous buzz from the thought of meeting some of the top greenkeepers and seeing some of the world’s top courses. It all adds up to giving him an in-depth insight into the whole greenkeeping industry.

Brian is looking to the trip to broaden his horizons on all greenkeeping issues. Having been out of college for five years he feels the next five years are critical in forming sound principals in greenkeeping and management. He is keen to discuss these matters with American counterparts.

Will is determined to make the very most from the trip and gain as much information and knowledge as possible. He is relishing the opportunity to meet both British and American greenkeepers. A keen part-time journalist, photographer and artist Will will be the delegation’s magazine correspondent.

Paul hopes to return with as many ideas and procedures as possible then incorporate them into his own regimes. As a BIGGA Board of Management member he is also hoping to return with useful information which might assist the running of BIGGA.

Terry is looking at gaining a much deeper technical knowledge, being able to discuss theories used in America and learning more about season grasses and their problems. He is sure the opportunity to increase his own confidence and make him a better Course Manager.

Powerful Toro Workman utility vehicles will bend to your every need, whether you're transporting equipment and materials out to the roughs or working in bunkers or wooded areas.

With Toro's Active In-Frame suspension, these highly manoeuvrable and productive units literally twist over your terrain to provide incredible traction and an unequalled smooth and stable ride.

The range comprises 1100, 2100 and 2110 petrol models. The 2100E is an electric version that's quiet, environmentally friendly and features automatic braking that slows the machine on downward slopes.

Paying a little more up front for technologically-advanced features and greater productivity will reap long term savings. For a ride without the shake, rattle and roll, call Toro on 01480 226800.

Workman 3000/4000 Series
With high payload and big productivity, the Toro Workman 3000/4000 Series utility vehicles are the toughest, highest capacity, most versatile vehicles in the world.

A Purposeful Approach

Roland Taylor investigates what is available to the Course Manager who is looking at a Utility Vehicle you sit in.

"Useful with some purpose", defines the word utility and vehicles under this category are somewhere between ATV and tractors. Their role as far as golf courses are concerned seems to fall in the area of transporting people, top dressings, fertiliser and mowers around a course. As such they could be a very useful addition to any fleet.

There are several advantages in this type of vehicle compared to a tractor and trailer. They are highly manoeuvrable and have similar characteristics to the ATVs, in that they will travel over terrain where other units will not. In addition, their ground weight is light enough not to damage the turf, even in the wettest of conditions.

Petrol, diesel, LPG and electric models are available with a wide variety of configurations and specifications.

Here in the UK there are a number of suppliers who offer a utility vehicle in their range.

**BSG TRACTORS & MACHINERY**

From this Essex based company come the Carons. The Runner series has a load capacity of one tonne and four-wheel drive. Their 26hp version has a basic driver platform and cargo carrier, whilst its larger 35hp cousin comes with three-way tipping body.

For those looking for a larger unit there is the 700 series, with a choice of 30hp, 35hp or 50hp diesel-powered models. These have 16-forward and 8-reverse synchro speeds, plus power steering and a 540/1000rpm PTO. Three-point-linkage comes as an optional extra.

Hull Golf Club purchased a 40hp Caron 747 in 2000. This parkland course underwent an Eco study and following the report, one of the recommendations is now well under way. This is a long-term programme to replant the course with native trees. The soil is a clay base and although the Caron is a relatively large vehicle, Head Greenkeeper, Stephen Thackeray, says he has had no problems with the unit damaging the turf or getting stuck.

The cargo bed often carries three tonne loads and its three-way tipping facility makes it ideal for filling bunkers. In addition to transporting equipment and materials the Caron is also used to operate a Sisis Veemo.

Hull GC also has two Gators, which they largely use for the lighter carrying work. Stephen says all his utilities have proved to be a highly cost effective method of quickly and easily transporting staff between sites. There has been a considerable reduction in non-productive travelling time and labour costs.

**JOHN DEERE**

John Deere's GATOR stands for General All purpose Turf Off Road vehicles, which are designed to have a low centre of gravity, stability and safety. Low ground pressure is also a priority; they say that their 6x4 model, when fully loaded, delivers just 7 psi.

There is a 4x2 10hp or an18hp 6x4 petrol engine model and a larger unit is also available with a diesel engine. All have large capacity tipping cargo boxes and differential lock, plus variable speeds up to 15mph. A turf version, which was introduced for golf courses, has a top speed of 18mph.

The Royal West Norfolk Golf Course uses two Gators. This links course, which was opened on 1 January 1892, is built with the sea on one side and a marsh on the other. At certain times of the day the clubhouse and course are cut off from the mainland by the tide, making access virtually impossible. There is no landmass between this area of England and the northern ice flows so it is often bitterly cold and bleak in winter.

Gavin Playford became Head Greenkeeper in 1993 and has a staff of six including one member who is responsible for all the machinery maintenance. He purchased his first Gator, a diesel, in 1999 and was so impressed with this unit that he bought an electric version two years ago. This was followed a year later with a 6x4 diesel and another is scheduled for delivery in 2004.

Why an electric? Gavin said it fitted our requirements exactly; we were looking for a quiet utility that could be used to transport staff, tools and materials around the course with minimal disturbance to the player.

Following the purchase of the larger 6x4 the E-Gator is now used for light transporting work.

Trailers are fitted to both machines and as the mowing regime, from October to March, entails using pedestrian mowers on both tees and greens, the utilities are kept busy. Gavin has found that the units easily cope with the steep dunes without damaging the turf. The course is on pure sand with fescues and bents the dominant grass species.

The Gator that is on order is being modified to take a three gang ball collector for the practice area.

Gavin likes his Gators, but has one plea. "A factory fitted cab would be nice." Standing in the cold wind that was blowing across the course one could well understand this request.

At the Royal West Norfolk GC Head Greenkeeper, Gavin Playford, John Deere Gators are ideal for transporting staff and materials plus mowers around this links course.
A Purposeful Approach

Jim Read at Hunstanton Golf Club likes his Ransomes Jacobsen E-Z-GO because it is fast, light and highly manoeuvrable.

RANSOMES JACOBSEN

For 2004 Ransomes Jacobsen are launching their E-Z-Go ST, 4x4 turf utility vehicle. This latest introduction has a load carrying capacity of about 500kg and a top speed of 25mph.

The possibility of corrosion has been taken into account by using a wax dipped, galvanised steel frame, onto which is mounted a polythylene cargo bed.

A combination of articulating front axle, McPherson struts and self adjusting hydraulic brakes are said to add up to a vehicle that can be used safely over a relatively steep terrain.

Under the covers is an 18hp Honda engine, which is easily accessible. Other features include front and rear differential locks, rear leaf springs and hydraulic shock absorbers and the unit has a ground clearance of 24cm.

There is bench style seating for two people and the console has a host of instrumentation that tell you what is doing this and that, plus somewhere to park your drinks and mobile telephone.

Hunstanton Golf Club overlooks The Wash and is very much open to the elements. In fact the wind, together with the rough, can make many of the holes very challenging. Hunstanton's choice of utility vehicle is a petrol engine Ransomes Jacobsen E-Z-GO.

A nine-hole course was built in 1891 and five years later the second nine was added for the princely total sum of £25.

The Club has a reputation for some of the fastest greens in the country thanks to the Course Manager, Jim Reid, whose magic formula for consistently obtaining readings of 11"+ (using a Stimpmeter) includes a weekly light dust of sand on each green.

A golfing record was also achieved on this course. During the Eastern Counties Foursome in 1974 Robert John Taylor from Leicestershire achieved a hole-in-one, three consecutive days on the 189-yard, 16th green. The first time was using a one iron and the other two were with a six iron, downwind.

Hunstanton's E-Z-GO is used for a variety of jobs around the course, including transporting staff mowers and materials between greens and ball picking up on the practice area.

Jim Reid said, "It is fast light and highly manoeuvrable. Some parts of the course flood during the year and the E-Z-Go travels over these areas without getting stuck or damage the turf. We have found there is very little maintenance to worry about and although we would prefer a diesel version this unit represents good value for money.

TORO

During 2003 the Workman 3300 and 4300 were introduced with a number of upgrades.

A more powerful and reliable Briggs & Stratton Vanguard, 26.5hp diesel engine, that complies with the 2003 EPA/CARB Regulations on emission and noise levels, has been fitted. This unit replaces the previous Mitsubishi 23hp engine.

For increased comfort and safety, bucket style seats have been introduced in addition to front mounted progressive suspension springs, to give a smoother ride and to absorb heavy loads.

Other improvements include easier access for maintenance and cleaning, plus a newly designed rear stub axles and high traction tyres.

A high flow heavy-duty hydraulic kit is now available and this comes with oil cooler fan, 15-litre reservoir, 30.2litre pump and quick release...
couplings to the rear of the unit. Toro say that all the present attachments can be fitted to these new units.

For anyone looking for a smaller vehicle, there is the Workman110. The unit has the company’s ‘twister’ Active In Frame suspension that is said to provide better traction, plenty of manoeuvrability and comfort in addition to improved operator control.

The unit has independent front suspension, which is claimed to give an almost zero turning radius and 70-degree steering, when working in confined areas.

The unit has a carrying capacity of 454kg with tipping facility and optional electric tipping kit. Other features include, pedal operated start accelerator and a stop brake.

Girton Golf Club is situated on the outskirts of Cambridge and they have a Toro Workman300D. Ian Hankin has been greenkeeping at this parkland course for 23 years.

The site is on a clay base soil, so good drainage is a top priority and to this end a full programme of slitting and vertidraining is carried out during the year.

Their Workman, in addition to transporting is used for spraying, top dressing and spiking. Ian says he likes the unit’s good ground clearance and how it closely follows the ground contour.

They have also found the ground weight has not damaged the turf, even when the cargo box is fully loaded.

When looking for a utility, a good payload was near the top of the list of requirements and the Workman has proved to come up to their expectation. One minus point is the length of the vehicle, when fitted with a rear attachment. At Girton this is not a major problem, but it could be if there were confined areas to work in.

KAWASAKI

The new 3010 diesel Mule was launched at the back end of 2003. This latest utility is said to be the best yet produced by Kawasaki.

So, what have they done to substantiate this claim? A 23hp liquid cooled three-cylinder diesel has been used to provide a low rpm torque and the transmission system has high capacity and includes an automatic torque converter. In addition there is selectable two or four-wheel drive. Load carrying capacity is rated at a total of 740kg and this includes the cargo bed that is capable of handling 499kg.

The dual mode differential to the rear axles is claimed to give a minimum turning radius of 3.4 metres. The bodywork is of a pick up truck styling and the bench type seat is capable of carrying two or possibly three people at a push.

From the courses that were contacted it is clear that utilities have a place in the fleet, largely for transporting operations. They do save time and money when it comes to moving bodies, material and equipment around a course, especially where there is some difficult terrain to transverse. Utilities appear to be an addition rather than a replacement for the compact or medium size tractors, even where they are used to operate equipment such as top dressers and sprayers. Certainly, all those we spoke to were very happy with their utilities and find them a very useful addition to their fleets.

*Next month it will be vehicles you sit on.*
IT'S A CASH MACHINE. BUT DON'T BUY IT.

We will lease you one.

OnCourse

The powerful organiser keeping your golf course green!

Golf Club members and owners are continually demanding better quality playing conditions, which brings the role of Golf Course Managers into sharp focus. Not only are they expected to keep the course in excellent condition they also have to be skilled administrators and personnel managers. Additionally, Golf Club Managers need detailed and well-structured reports on golf course operations, which can be a time consuming task. OnCourse™ has been developed to make all of these things easier.

For more detailed information and a free demonstration CD, please contact ken@bigga.co.uk 01347 833800 or from Stand Q8 BTME & ClubHouse

NEW HARDI SWIFT 12v sprayers

- Active Bulging
- Base tank designed to reduce residues
- Reliable diaphragm pump
- Built-in carry handles plus recessed pump and control unit

There are many sceptical people out there who say you cannot eradicate poa annua from your greens so I wish to contradict that statement and offer hope to all those greenkeepers young and old who still believe that you can grow fescue and bent turf on a green today at the expense of poa.

It is just over three years since I started the work on Rungsteds greens (which were 100% poa when I started). At that time we had 1cm of root and 5cm of thatch. The greens are 66 years old and made up mainly of clay soil but some are made entirely of peat. Today there is a complete ban on fungicides for golf courses in Denmark and a Nitrogen tax levied by the government for every kilo used.

The sward composition today on the greens is starting to take on another look. On some greens when you look at them in the morning dew you can see pale green patches half a metre in diameter. These are patches of pure fescue that have established mainly in the last year. The rest of the sward is a mix of poa and bent. I would estimate that we have 40% fescue/bent on some of the drier greens now established and on the wetter greens 20 to 30% of mainly bent grass.

This is a huge transformation from the wet boggy poa greens I inherited back in 2000. The 5cm of thatch is history as we have hollow tined with 16cm tines 12 times throughout the playing season and applied 900 tonnes of top dressing. What was once thatch has now been replaced by a layer of top dressing 7cm deep. You could say that we are actually building a new green on top of the old soil one. We now have firm dry surfaces on most of the greens but have four greens that need some extra work on them to help dry them out. Recently we had 33mm of rain a few hours before a competition. Members turned up expecting to find the course unplayable but the only areas not waterlogged were the greens that we managed to cut with a triplex. We may still have slow internal drainage but now the surface water can get away from the surface thanks to the top dressing in the top of the green profile.

The first phase of our programme is now complete but the next is the hardest part - the establishment of the new seed. The success of this procedure is dependent on the fescue and bent being able to grow in dry conditions. When I started overseeding the greens three seasons ago the new seed was not surviving because of the wet surface due to the thatch holding the water. As the greens became drier I was getting more seed to establish but was still losing a fair percentage. I then read Henry Blechelet's, of the STRI, article (March 2003) on overseeding greens and contacted him to discuss my situation. Henry was marvellous and came back with some sound advice that I have followed with great success. The main advice was not to disturb the new seed once it had germinated. I asked what he meant by disturb? Did it mean do not aerate? What he meant was mechanical removal of the leaf blade and aggravating and bruising the plant. So no verti-cutting or top dressing for six weeks following germination. In my situation, however, I had to top dress after overseeding but if you must during this establishment period, be sensible about it. We pull a drag mat with the bunker machine very slowly, just once across the green surface then off and let the grass grow through the top dressing. This way we eliminate the bruising and aggravation that a mat can cause to the new seedling.

Now we all know what a difficult start to the season we had last year. We also had a severe winter –18 degrees interspersed with mild periods and some snow cover that resulted in on some greens 50% of the poa being hit by fusarium brought on by the huge swings in temperature. As we have no fungicide we took a different view on this damage to the greens than you might take in the UK. For us this was a really positive situation to be in. We had lost 50% of our problem in one go. The poa was hit and we sowed 500kg of BAR 2 seed in March and April into the greens. The cold spring held the poa back but the new seed still germinated then we waited as the scars started to fill in, not with poa but fescue. It would have been so easy to reach for the fertiliser spreader and hit the irrigation switch to on and hey presto no more scars and a nice crop of poa.
I have 1100 members who like some of yours were not over impressed by their playing surface this spring but by communicating they understood what our aims for the greens were and that we were looking to the long term not a quick fix. (If you want a member to read a report leave a few copies in the bar area as well as on the information board). We could never have achieved so much without the understanding and support of the membership. If you do not communicate you would probably never get past your first season doing a renovation of your greens on the scale that we have done.

So how do you stress out the poa without losing your playing surface altogether? The one thing that poa loves is fertiliser and water and lots of it so this is were you take control. Water is only applied just before the greens start to show signs of wilting. Our greens used to receive 200kg of N/Ha per year. The first year we were down to 120Kg of N/Ha, last year 90Kg of N/Ha and this year I am looking at 70Kg of N/Ha. This is probably still a lot of fertiliser in some people’s eyes but you cannot just shut off the nutrient and water supply and expect fescue and bent to take over.

I am the first to admit that we still have a lot of poa but this is a long term process and you have to try and push the balance in favour of the finer grasses and let the poa struggle and at these levels of nutrient it struggles. When the poa gets anthracnose you know that the nutrient level is on the limit and a small application of Sulphate of Ammonia, (which the poa hates), will keep it ticking along but, because it is so weak, the fescue and bent dominates. It is at this stage that management of the anthracnose situation is critical. If you let it run too far you will end up with thin, possible bare, areas. What is really interesting is that on three greens we have developed Take-All. After discussing this with Chris Haspell, who has already gone through this process at Falster GC, he informed me that in his third season of changing the grass type his greens also developed Take-All. I can only put it down to the 900 tonnes of topdressing applied during the last three seasons and that we have now, in effect, a sterile growing medium and not a soil green anymore, therefore very little bacteria to counteract the disease.

Regular applications of seaweed helps with the rooting and establishment of the young fine grass plants. We aerate with 8mm solid tines every two weeks throughout the playing season to keep the surface open and allow the new grasses maximum chance for establishment. If anyone should follow a similar programme you will have challenging periods as you try to keep the nutrient balance in favour of the fine grasses and will have to be very patient as it will take at least five years before you will start to see a dominant of fescue/bent in the sward. It is a slow process and we are so dependent on the weather that the process may take even longer if we have wet seasons. The important thing is to keep focused and believe in what you are doing and the results will follow.

I would also like to comment on the issue of green speed. The greens at Rungsted never go below 5mm. Obviously the new generation of A4, L93. Bents are a different story that demand being mown at 3mm and lower. The speed on our greens comes by producing a firm dry surface and the more top dressing you apply the more the surface will give good pace. Add to that as the sward composition changes and the poa starts to be in the minority so there are less seed heads therefore less resistance on the roll of the ball. A fescue green cut at 5mm will give as fast a surface as a poa green mown and groomed at 3mm. If you are attempting to alter the botanical composition of the sward as in our case you have to give the new seedlings chance to mature and compete and they need as much leaf surface area as possible to help with photosynthesis and root development. Attempting to establish fescue and mowing below 5mm will be a waste of time and effort.

While all the work has been going on with the greens we have also been renovating other areas on the course. In my last article I talked about the permission to start the bunker renovation programme. This has been a very satisfying project for my relatively inexperienced team as they learned a great deal about bunkers, drainage and shaping using our new 3.5T excavator with a 4 in 1 bucket. We have tried very hard to put the bunkers back as C.A. MacKenzie designed them back in 1937. The biggest shock was to discover 50cm to 60cm of bunker sand in most bunkers so the members soon commented that the new bunkers were difficult to exit now that they were deeper. Ron Kirby, Golf Architect drew up plans to redesign the 12th green by replacing the two existing green side bunkers which had collapsed by five pot bunkers and adding an extension to the back left side of the green. All this work was carried out in-house by the staff and to date we have rebuilt 30 bunkers with the remainder been tackled this autumn/winter. We are also in the planning stage to redevelop the maintenance facility over a three year period to improve the storage area for the machines, a new Waste2Water washing down facility to comply with environmental laws and a new covered area to store top dressing materials etc. At the time of writing this article we also have contractors working to a Ron Kirby/Paolo Gueltrini design to improve the driving range facility. We are having five target greens, a 75m par 3 hole, a new 375m2 pitching green, 4 covered driving bays and a new practice base for a further 10 golfers built. My staff shall complete the remainder of the design changes to include the landscaping of the whole clubhouse area this autumn.

Thomas Bjorn, Soren Hansen, Anders Hansen, Saren Kjeldsen and Steen Tinning are five Danish golfers now competing with the best on the European Tour with great success. That is creating an enormous influx of keen young golfers wishing to follow in their hero’s footsteps. This can only be good for the future game of golf in Denmark and as for us greenkeepers, we shall try to give them natural golf courses maintained by traditional greenkeeping methods for them to perfect their game upon.
THE HEDGEHOG FAIRWAY PROTECTOR

The Safest way to cross the Fairway!

Greenkeepers...
...get on the right track!
Imagine a world where the club golfer could help you preserve your course in the winter. Think! NO MORE ROPING OFF MUDDY AREAS OR BANNING TROLLEY’S IN WET AND FROSTY CONDITIONS. Realms of fantasy? Not any more...

THE HEDGEHOG FAIRWAY PROTECTOR HAS BEEN SPECIFICALLY DESIGNED FOR 3 MAIN REASONS.
1. To protect and preserve your course in all but the most severe winter conditions.
2. To continue to allow all golfers to pull hand golf trolleys throughout the winter months.
3. Allows your Club to maintain revenue throughout the winter period, not just for summer!

A Better Breed of Seed
Gerard van 't Klooster looks at the breeding of disease resistant turfgrass varieties

The Greeks and the Romans talked about 'pratulum' or the little meadow in the garden (source Lawns and Playing Fields by F. J. Reed). Later, people started to play golf, bowls, cricket and football on this turf and from then on there was a greater need to keep grass short.

After the invention of the rotary mower in 1830 by Edwin Budding, grass could be mowed more regularly and that gave rise to a denser sward. The grass mixtures of a 100 years ago contained more species than they do today. Although this meant less disease, people wanted to see a more even result, without too many patches of different grass species. These days we can make a cultivar selection within a few species and these are normally well adapted for golf and sports turf.

There are many breeding programmes all over the world which are aiming to find the best of the best. Programmes can start with a selection of collected plants, or with cross-breeding between existing varieties. The whole selection process can take from 9-12 years and after that the official testing process starts. There are many different ways of breeding and selection and this varies between different grass seed companies.

End-users can see the improvements that have been made over the years when they use Pacey — one of the first perennial ryegrasses for turf. Persistency, sward density, colour, winter hardness, drought tolerance and of course disease resistance are all improved. But denser swards, or longer active turf, contains more diseases than it did 20 years ago. And because people travel more, and seed and turf are imported, some 'new' diseases are more of a problem for the greenkeeper, groundsman or home-owner.

The use of pesticides is restricted and the pressures to reduce usage are growing all the time. This is why the use of more disease resistant cultivars or mixtures is the best choice for healthy turf. And think about the fact that we have to co-operate with Mother Nature. Turf is a society of many plants which, together, form your fairway or green. Sometimes all the plants are the same species, so they are very closely related, but when mixtures are used the plants are from different species. There is always competition and co-operation between the plants — many plants together are stronger than just one plant. But there is also competition for water, fertiliser, light and, of course, room to grow.

Initially germination of seed can be excellent, but within three months the survival of the fittest comes into play. Plants will die and make room for other, stronger plants.

Diseases can create space, but to fill the space you need strong healthy plants. So the use of disease resistant cultivars is vital.

Since 1994 Barenbrug Research has started to include more disease tests in its breeding programmes. As a breeder we are always pleased when there is a disease in the field — like a doctor who sees an interesting disease as a challenge — but sometimes we have to wait for the optimum conditions to study the disease.

At the moment the Barenbrug research lab can screen under laboratory conditions for red thread, fusarium, dollar spot, leaf spot and brownpatch. It took some years to find the best method of doing this and the various methods required for each disease. All these diseases are spread by spores, but each one behaves in a different way. Optimum temperature, humidity and day-length also vary.

Initially we did a lot of work to find the best testing method for each disease, and we worked closely with many experts all over the world. As a breeder, we need to be sure that the test is as close as possible to natural conditions, so with the introduction of a fungus, such as dollar spot, we have to accurately create what could happen on a golf green or fairway. The test should give more resistant material to help the end-user achieve turf which is free of dollar-spot.

DOLLAR SPOT
This disease can cause big problems in a very short time. Turf management can help to reduce the effects of the disease, but a strong attack is very difficult to treat. Dollar spot will appear when days are hot, nights are cool and when fertiliser levels are low in nitrogen. Dew is a very important transport medium. The construction of a room with more or less important for the age of the tested plants.

Under these controlled conditions Barenbrug tests new populations of species like fine fescue and perennial ryegrass. The tests can be done in the winter or synchronised with outside turf trials. There is also a possibility of testing plants to find more resistant plants and start new crossings.

Like most diseases, dollar spot can change its habits. A resistant cultivar could lose its resistance in 10-15 years. This is not only a disease found in the United States and more warmer countries, there are more strains and for the test a mix is used to get the best overall result.

RED THREAD
This is a common disease in fine fescue and perennial ryegrass lawns. It will turn the leaf colour from green to yellowish brown and the red thread mycelium can be seen as red needles.

Many tests are themselves tested to develop a working test. Sometimes the disease fungus grows better on the plastic of a small greenhouse than on the plastic. When we start a test like this the conditions for the fungus should be so good that it will attack the plant and not stay in its medium, or on the plastic.
There is a huge variation in red thread resistance between cultivars within the species. In red fescue this is more visually obvious than in perennial ryegrass. More resistant cultivars show a better turf quality. The present test we use shows the same results as on the trial field.

After six days under the most ideal conditions, the disease is visible on the plants and on the mini sward. The leaves are still green, but after a few days they turn brown.

Parts of the fungus are connected to special medium which spreads it around the plants or on the mini swards.

Normally we will wait a few more days for a screening. In that period the fungus has had a chance to kill the leaves. Red thread will normally not kill the whole plant, but just parts of the leaves.

Our reputation has grown over the years.

Just what has made Barenbrug the best seed under the sun? Well, 100 years of experience for one thing. That's plenty of time to develop the quality and breeding of our own varieties – like Bargold, Barkoel and Barcampsia. Cultivars produced after listening to our clients' needs. No wonder we're still growing strong. So, if you want your reputation to grow too, call us on 01359 272000 for our new 2004 centenary seed catalogue.

40% less clippings would make anybody happy

Did you know that you can significantly reduce the amount you pay to dispose of grass clippings, just by the choice of the right grass seed mixture and varieties?
A Better Breed of Seed

The resistant plants will be used as parents for new varieties or for new crossings.

BROWNPATCH

This is another disease which is becoming more and more common in Europe. Warm nights with enough water can be enough to destroy turf over just a few days.

The next stage is large patches of dead plants. The screening will take place when the first plants are dying. With these tests you can't wait too long, or all the material can die. Normally there are many more screenings in a trial, so the researcher can trace back to the best discriminated observation.

Brownpatch propagates via a mycelium. A different laboratory test is conducted for this disease. First the leaves show some brown areas, not spots like leaf spot.

All the different disease screening tests will be a great help in developing more resistant varieties which are less risk for the end-user. In this fast changing world we always make sure that everything is kept up-to-date. The Barenbrug R&D laboratory staff are always pleased when a new diseased piece of turf arrives. Firstly a screening for the disease is carried out, then the fungus is isolated and the disease propagated.

The laboratory is also a gene bank for turf diseases. The material is stored in a specially conditioned room and used when necessary. This process is becoming an increasingly important part of the whole grass breeding programme and will increase still further as we put more pressures on our turf.

The search for higher levels of disease resistance plays a significant part at Barenbrug Research. We are continually learning and improving our methods to develop more resistant cultivars.

Gerard van 't Klooster is Barenbrug Product Development Manager for Europe.
Introducing the New Golf-Tee Markers from Fisher Plastics

At last - a safe, practical low profile golf-tee marker that not only meets the latest safety concerns, but is extremely durable and low cost. Precision moulded, they are supplied in all four colours, complete with your club logo. In fact, the price is so competitive, they can be used for individual club or company events with the appropriate promotional motifs.

cost effective, safe & individual

The markers are available in yellow, red, white and blue, and are supplied in packs of 40 (minimum) in any combination of colours required.

Thanks to Sierrablen
I needn’t feed my turf again for the season.

No wonder Sierrablen* is the leading controlled release fertilizer. It puts you in control and keeps you there, because it feeds your turf with the specific nutrients it needs, for up to nine months. The result is hard wearing, durable turf with a consistent colour.

There’s great product choice and flexibility with just one application lasting 2 to 3, 5 to 6 or 8 to 9 months - a complete growing season. This saves you both time and money and avoids potentially damaging wastage.

So, when life’s as busy as yours, it’s good to know you can relax and rely on Scotts, the company that brought you the original CRF and still gives you the best results, whatever your turf needs.

Why not give us a call on 0871 2205353. We promise that we’ll keep your turf well fed.

Andrew Wood of the STRI’s Ecology Unit outlines the initiatives of the four runners up in the New Initiative Category of the BIGGA Golf Environment Competition followed by that of the winner, Notts Golf Club.

With the presentation of the 2003 BIGGA Golf Environment Competition prizes at BTME & ClubHouse fast approaching, it is time to announce the results of the Best New Initiative Award. The majority of clubs that entered the 2003 competition had undertaken at least one initiative within the last year. From bat box erection to guided ecology walks for members, each initiative was a credit to the club that put it forward. Yet there could only be one winner and after much deliberation the judges decided it should go to a club that has recently introduced Hebridean Sheep to the course, as part of its heathland restoration programme.

MINCHINHAMPTON GOLF CLUB'S WIND-ASSISTED COMPOSTING

Several clubs in the competition this year had composting programmes in place to recycle their organic waste. On many courses, the composting takes the form of a large heap that breaks down over many years in a hidden-away part of the course. However Paul Worster, Courses Manager at Minchinhampton, has addressed the issue of composting in a totally different way and the result has gained a place in our top five new initiatives.

The first clever move on Paul’s part was to seek advice from the Compost Association who made a visit to the club and suggested creating a system that would speed up the composting process. The base of the composting area has been specially constructed so that a fan can draw air through a perforated plastic pipe located beneath the heap. The fan, which is operated for just a few hours each day, greatly increases air movement within the heap and this has two positive effects. The first is that the extra oxygen moving through the pile is utilised by the microbes, which break down the organic waste into soil. The second is that the air movement prevents the pile from getting over wet, enabling it to be left uncovered without fear of nutrient run off or leaching.

Due to the increased rate of organic breakdown, the composting process has been found to now only take a matter of months rather than years. Therefore all the club’s organic waste can be dealt with in a relatively small area. This even includes the club’s waste cardboard from the clubhouse and pro-shop. Previously, this cardboard was costing the club £1,500 per year to dispose of. Now it is stored in a cage next to the heap and periodically the contents are fed into the Amazone Groundkeeper, which shreds the cardboard before it is mixed into the pile. The end product is of good quality and the club uses it as mulch on flower beds and around shrubs and trees. However, this uses just a fraction of the output and so the compost has been made available to the members at 50p per bag with proceeds going back into the greenkeeping budget. In addition to this, the £1500 saved in waste disposal more than pays for the small amount of electricity needed to power the fan.
Great Golf Course Experience

The sector's most professional platform for information in continental Europe: FAIRWAY

This is where greenkeepers, golf course planners, operators, managers and initiators make contacts and acquire the know-how they need to ensure that the golf course business has a bright future.

COTTESMORE GOLF AND COUNTRY CLUB’S HABITAT CREATION

This golf club did not figure as a regional winner in this year’s traditional Environment Competition, yet by no means did this rule it out from figuring in the best new initiative section. In terms of habitat creation, the Cottesmore course is like a showroom for ‘Boxes-R-Us’ as there are man made homes for many different wildlife species on this course. Bats, birds of all sizes, hedgehogs and harvest mice are just a few of the wildlife species encouraged on the course. All boxes are thoughtfully positioned with careful consideration given to feeding grounds, climatic and human influences and potential predators. That said, there are a few bird boxes in positions, which are highly visible to the membership. This is a good method of publicising the greenkeeping team’s commitment to the nature on the course. Another aspect of this initiative that the judges admired was the value for money of the initiative. An old corrugated tin sheet placed in a copse for use by reptiles costs nothing, as does an old tennis ball on a stick which makes a perfect nest for a harvest mouse. A great deal of ingenuity was evident at Cottesmore which has proven that it is not just golf clubs with big budgets that are in the reckoning for this prize.

LOCH LOMOND GOLF CLUB’S RHODODENDRON CLEARANCE

The first of two splendid initiatives in Scotland was at Loch Lomond Golf Club, where a large scale project to clear an area of woodland of the non-native rhododendron has commenced. Historically, the unwanted rhododendron has been removed physically by chainsaw and operator. This process was followed by herbicide applications of either Imazapyr or Glyphosate over two seasons to prevent re-growth.

The aim of the Loch Lomond’s initiative was to investigate whether the rhododendron could be cleared in a way which was less labour intensive, less physically demanding and less dependent on the use of follow up chemicals. Therefore research commenced on finding a rapid technique to remove as much of the rhododendron as possible, including roots, in order to eradicate the plants and avoid the need for follow-up spraying.

In 2002, the Club located a contract team who possessed a flail chipper and mulching machine, which could be utilised to extremely good effect to eradicate rhododendrons. The machine was brought on to the site during September 2002 and June 2003 and a total area of between four and five hectares was cleared. This work will continue over the next two seasons or so, where it is envisaged a further seven hectares will be cleared. A major benefit of this equipment is the extent of work that can be carried out during any one operation and the reduction in the large amount of aftercare work that would otherwise be involved. The Club, however, are not sure as to the effect of leaving chippings over the surface and are setting up a series of trials to look at the benefits of leaving chippings and waste as compared with clearing and re-scraping back to the underlying humus layer.

Unfortunately, even though the areas of woodland have been cleared of the rhododendrons their legacy is a high level of toxicity in the soil that will inhibit the ability of native grasses, trees and flowers to regenerate. However, over time, a large-scale improvement in the ecological value of this woodland will occur due to both the research and practical work that the Loch Lomond Club have carried out.

ST ANDREWS LINKS TRUST’S DRIVE FOR SUSTAINABILITY

St Andrews Links Trust has undertaken not one but many special initiatives within the last year. For this part of the competition they have been grouped collectively as initiatives which promote the Trust’s drive towards greater sustainability.

Only a few years ago the Trust was, dare I say, playing catch-up in this area. Yet, perhaps due to the self-evaluation required to enter this competition and the Committed to Green programme, the Trust has turned this weakness into a real strength. In 2002 the Trust requested an energy efficiency audit, which was subsequently carried out by the Scottish Energy Efficiency Office. By 2003, 95% of the recommendations published in the audit were completed. The work had involved using more energy efficient lighting, improving gas regulation and use, and improving the way in which the irrigation-pumping stations operate. Out on the course, sprinkler heads were changed from 360° to 180°C, the petrol/diesel buggies have been replaced with Yamaha electric buggies and a free shuttle bus is now in place to transport golfers between the clubhouse and different site facilities. This will not only ease congestion but will significantly reduce pollution.
Take a closer look...

Heritage moves outwards and upwards within the leaf blade.

Heritage stops the spread of disease that exists prior to spraying.

Lasting residual activity keeps Heritage working longer.

Heritage is absorbed readily into the leaf and moves both systemically and translaminarily.

Heritage protects against fungi invasion by inhibiting spore germination, disease penetration and sporulation.

Heritage moves into emerging leaves that were not present during the initial application.

Turf roots absorb Heritage and move it throughout the plant.

...only Heritage protects from the inside, so your turf looks good on the outside.

The turf fungicide that will control Take-All patch and Fusarium.

- Proven and unparalleled preventative and early curative action
- Protects each and every blade of grass including the roots and new growth
- Enters turfgrass through the leaf, stem and root system
- Low risk environmental and toxicological profile
- For use on all grass species

Scotts
Bringing quality to play
The administration side of the Trust is turning green at a rapid rate thanks to the influence of Gordon Moir, the Links Superintendent, and his Secretary, Lorna Marroney. The Links Trust has this year made a concerted effort to contact as many companies as is practically possible to request that no junk mail is forwarded without prior consent. This, although still in its infancy, is already reducing the amount of waste, which would otherwise be accumulated. Everyone involved within the St Andrews Links Trust now recycles and members (seasonal ticket holders) are even bringing their own cardboard and paper for recycling. Even the Links News is now printed on chlorine free 100% recycled paper and there are regular articles explaining how the environmental credentials of the course are improving.

Grass clippings from greens tees and aprons are collected at all times, while those produced from fairway cutting are collected 80% of the time. These clipping are stored briefly on the course before being transported to central storage sites. There they are mixed with other organic materials and composted, to be used again as divot mix, top dressing or construction material.

The cardboard recycling station at St. Andrews Links Trust

Notts Golf Club's Sheep Grazing Scheme

The course at the Notts Golf Club (Hollinwell) forms an ecologically valuable oasis of heathland habitat within a landscape now dominated by intensive agriculture. However, until recently, the heathland character of the course was in gradual decline as large areas of land out of play had been allowed to revert to scrub woodland. In 1997 Course Manager, Philip Stain, introduced the club to The Sherwood Forest Trust, an organisation able to provide advice and finance towards the restoration of this important habitat. The Trust provided the club with information and support sufficient to convince the members that it was time to act. The Club heeded the message and entered into a 10 year long Countryside Stewardship Scheme, putting into place a radical management plan. The plan has been created with the aims of preventing further decline and restoring vast tracts of heathland back to their former glory.

Philip is well aware that the benefits of this work are two fold. "From an ecological viewpoint the work is very important, Nottinghamshire has lost 95% of its heathland and it is therefore vital that the club acts as a competent custodian of this important habitat." Yet he has also noted the benefit to the club, both from a greenkeeping and a playing point of view. "The removal of dense, ecologically poor woodland from areas close to play has resulted in increased light and air movement throughout the course, which in turn has lead to an improvement in the quality of playing surfaces." In addition, the course has re-captured much of the former heathland character with spectacular views appearing from where before there were only dense stands of spindly birch trees. Ian McLachlan, Chairman of the Greens Committee, is pleased with the recent increase in prestige of the Course, which he feels can be attributed to the heathland restoration work. "In the past five years the Club's Golf World ranking has risen from 47th to 25th and the assessors stated this rise was largely due to the improved character of the course."

The fact that the restoration work has been ongoing for a number of years makes this project as a whole ineligible for the New Initiative award. However, one new initiative introduced this year as part of the scheme did catch the judges' eye. This was the introduction of sheep grazing.

The club has cleared land on such a large scale that it has simply not got the resources to prevent scrub regeneration, especially the growth of self-set birch saplings. When discussing this problem with a representative from the Sherwood Forrest Trust, Ian McLachlan flippantly mentioned the prospect of using Hebridean sheep and the initiative was born. Any doubts that the membership had regarding the idea were allayed through an explanation of the benefits of sheep grazing and a description of the support that the Club had managed to gain for the project. Adam Goodall, of the Sherwood Forest Trust, took on the role of Project Organiser. He secured matched-funding from the Heritage Lottery Fund for the 2.5 Km of fencing required to keep the sheep within two grazing areas on the course. These areas were out-of-play and combined covered approximately 12 ha.

The Nottinghamshire Wildlife Trust provided the 55 sheep, (known as the flying flock) which were introduced to the course in September. The Hebridean breed was specially selected as they will graze woody vegetation such as birch saplings, thus preventing scrub regeneration. In addition, this breed will selectively eliminate problematic grass species from the heathland sward, such as Purple Moor Grass. The current plan is that the sheep will remain on the course for several years until the heathland has re-established and stabilised. They may then be moved to another section of the course or indeed another forward thinking golf club such as Notts that has the vision, the contacts and the drive to undertake such a superb initiative.

The New Initiatives Award has been a highly successful new category within the BiGGA competition and though it has been won by a large scale, well supported project this year, there is nothing to say that a small, self financed, well thought out and well executed initiative won't take the award next year. What the judges are looking for is ingenuity and inspiration, so if you have a cunning plan that you intend to execute next year, make sure you get the 2004 BiGGA entry form filled in!

Does your club have an environmental/ecological management plan?

- Yes, we are committed to Green and were the seventh club in Scotland and 16th in Europe to be recognised.
- We are in the process of putting one together and are very keen to move forward on this.
- We do, backed up by English Nature and STRI. We are one of 70 clubs visited by an environmental official each year.
- Not at the moment, but with one of our members being chairman of the Glamorgan Wildlife Trust and arranging a visit from an ecologist, we are in the process of getting one. We tried to get some wild flowers growing but sheep on our common land soon got rid of those.
- Not at the moment, but we are working on recommendations from English Nature and STRI and have felled 300 trees so that we can establish heath grasses and heather on the 5th, 6th, 7th, 8th, 9th and 11th holes.
- Not at present, but we are aware of the factors surrounding these issues. We have conservation volunteers, who make recommendations on the woodland etc.

<tr>
<td>Are you aware of the variety of wildlife using the course?</td>
<td>Are the membership concerned with the ecological enhancement of the course?</td>
<td>Do you have an organic waste policy?</td>
<td>Is the current environmental legislation regarding waste management, chemical usage and protected species/habitats to be effective?</td>
</tr>
<tr>
<td>Very much so. We have a big population of skylarks and also starlings, linnets, greenfinches, thrushes and yellow hammers among others, in addition to some rabbits.</td>
<td>We have their full backing. Over the last six or seven years we have done course reports and the management plan for winter is always announced in September or October. We also have a page on our web site.</td>
<td>Because we are a links course we have very little organic waste. What few clippings we have we feed back on to course pathways.</td>
<td>I think it is effective. We make minimal use of chemicals and fertilisers. Some courses have to rely on them at the moment, but I believe everyone will need to alter their ways sometime in the not too distant future because of the changes that are taking place.</td>
</tr>
<tr>
<td>Yes, we certainly are. In fact we have identified and listed the wildlife which includes rabbits, deer, voles, birds, foxes and squirrels, We also have a badger sett.</td>
<td>We are making our members more aware of this and are trying to educate them by highlighting issues and showing them the broad band of an ecological plan.</td>
<td>Not as yet, but we are trying to implement one.</td>
<td>Very much so. Legislation and government bodies are helping us to become aware of ecological issues in general.</td>
</tr>
<tr>
<td>Very much so. We have a wide range including rabbits, goshawks, buzzards, which are looking for nesting places in nearby woodland, green finches, nuthatches and goldcrest and many others. We work hard with nest boxes for owls and bats.</td>
<td>A certain percentage are aware of it. I let members know via the notice board about planned winter work.</td>
<td>We have just started to develop one with compost boxes on the cards at some point this winter.</td>
<td>I do, very much so as far as greenkeepers are concerned, but then are a few niggles from other members of the public who can buy chemicals over the counter. There has been a good education promotion by BIGGA over the last five to ten years.</td>
</tr>
<tr>
<td>We have Dartford warblers, sparrowhawks, yellowhammers, green woodpeckers, buzzards, jackdaws, skylarks, crows, foxes, rabbits voles shrews, stoats, adders and many more.</td>
<td>They are and we are doing as much as possible, but members are well aware that we are very restricted because we are on common land. We have 40 commoners who have the rights to graze anything from goats to sheep and horses, although only two of them are active, grazing sheep.</td>
<td>We collect grass clippings, turn it constantly and use it for top dressing. We collect bottles, cans etc in containers and these are recycled.</td>
<td>I don’t think there are enough people going round golf course enforcing this. We don’t use anything harmful to sheep and don’t use fungicides. We haven’t any disease problems and spray only once a year when the sheep are taken off the course.</td>
</tr>
<tr>
<td>We had a report done by the local council and have a record of all wild life, examples being rabbits, roe deer, foxes, moles, birds, including kestrels and woodpeckers.</td>
<td>Our chairman has done seminars for our members, making them aware of work done on the course and explaining why we are taking trees down. This provides a better environment for the development of turf because shade has caused us problems.</td>
<td>We have discussed with English Nature and the STRI about recycling and the cutting and collection of grass. Also the areas we cut once or twice a year enabling us to develop plant life over a period of time.</td>
<td>Yes I do. This is very important because of the safety of individuals in chemicals and waste collection. We don’t have any protected species on our course, but obviously we would look after them carefully if we did.</td>
</tr>
<tr>
<td>We are indeed. We have a lot of rabbits and some badgers and foxes, the odd pheasant and squirrel.</td>
<td>Yes they certainly are. If we are planning work on the course we inform members via the club notice board and they are very quick to give us their views.</td>
<td>Not as yet, although it has been discussed. There are bottle banks nearby.</td>
<td>Yes, it certainly is in this neck of the woods. We have had a waste disposal company coming for the past two years. We have a skip and we shoot rabbits which cause us a few problems. We are keen to protect virtually everything else and don’t allow people on to the course who may give us problems.</td>
</tr>
</tbody>
</table>
FIRST FIVE DECK

John Deere's new 3245C four wheel drive mower, is the company's first five deck rotary machine for semi-rough amenity grass.

The 3245C features a powerful 'clean and quiet' John Deere Series 220 liquid cooled and turbocharged diesel engine, with a maximum power rating of 48.5hp. The engine is contained within a new, aerodynamic hood made of a composite material for extra durability and reduced noise levels.

Combining the ability to follow ground contours very closely with optimum cutting performance, at mowing speeds of up to 8mph, the 3245C has five 53cm (21in) independent rotary rear discharge decks, made of heavy duty 10 gauge steel. These provide a total cutting width of 228cm (90in), while height of cut is quick and easy to change, without tools, from 25 to 102mm in 6mm increments.

Individual turn assist brakes work in conjunction with the newly designed hydrostatic foot controls to stop or slow the mower for tight turns and to provide additional traction when working on slopes.

A new Command Arm operator console, as featured on the John Deere 2500 greensmower, is designed for maximum driver comfort and convenience. This provides fingertip control of the throttle, deck drive and raising and lowering of the cutting decks - it even has a built in drink holder, which can also be used to hold a two-way radio or mobile phone if required.

Further operator benefits include a high capacity 68 litre (15gal) fuel tank for all day mowing, power steering, adjustable deluxe seat and steering column, and 50W halogen headlights for increased visibility. Options include cruise control and a mulching kit.

For further information Tel: 01949 860491.

NEW FROM JCB GROUNDcare

JCB Groundcare has teamed up with Countax to produce a new tractor with unrivalled performance.

Available through both JCB Groundcare and Countax dealers, the JCB branded D20-50 is built to class leading specifications in terms of power, versatility and efficiency.

Powered by a direct injection, V-twin 20hp diesel engine, the tractor is highly economic with increased cutting between fills. Ideally suited for coverage of up to 10 acres, the JCB model has a grass collecting capacity of 380 litres.

In addition to power assisted steering, a series of automated functions make the D20-50 simple and convenient to use. The electronic 'dial-a-height' control adjusts the level of the cutter deck depending on the application. Electrically operated raising and lowering of the powered grass collector, push button emptying and easy interchanging of cutting decks combine to reduce manual effort to a minimum.

The interactive blade system utilises three contra-rotating blades for efficient cutting while the rear roller control allows the operator to set the perfect height for creating immaculate striped lawns. The high grass mulching deck uses chains fore and aft to cut long grass and scrub.

The JCB D20-50 has a dash-mounted fuel gauge, an operating management system which logs operating hours and service intervals, as well as several warning facilities which regulate the rev count and appropriate speeds for cutting. The result is optimum performance from the industry's most advanced cutting system.

In addition to its mowing capabilities, the D20-50 is a highly versatile piece of grounds maintenance machinery suited to a variety of further applications. The tractor has been designed to allow quick change between attachments and is compatible with Countax's range of accessories - including trailers, cutters, scarifiers, shredders and chippers. The PTO provides extra power when undertaking these activities.

The final feature prominent on the D20-50 is the inclusion of integral safety measures. The tractor cannot be started unless the handbrake is engaged and the tractor also boasts hydrostatic transmission with differential lock giving control on slopes and maximum traction in difficult conditions.

Telephone: 01889 561000.

NEW RANGE OF SPRAY PACKAGES

Spray Equipment Supplier, Kelland's Agricultural, has recently been appointed as a Suzuki dealer and introduced a new range of ATV based spray system packages which complement the company's range of self propelled sprayers.

Managing Director, Chris Kelland had identified both ATVs and ATV based spray systems as growing markets and sees the Suzuki appointment as an opportunity to enter a new sector which will assist sales of sprayers and other equipment.

The Suzuki Eiger 400 has been selected as the most suitable packaging partner for the range of spot sprayers and can be supplied with three or four metre boom kits.

For further information Tel: 01293766000
SOAK UP WITH A NEW MINI

With the vast amount of revenue now being paid for many sporting features and the need to keep people playing regardless of the results of a downpour or flooding; the last words any sporting organisation wants to hear are "rain stopped play". This is no longer the case with the new Mini Blotter from Contract Maintenance Services. This latest introduction has been designed as the answer to a majority of these situations. Within a short space of time this machine can make most saturated surfaces playable.

The Mini Blotter has a one metre working width and is capable of removing approximately 3,410 litres (750 imperial gallons) of water per hour. Special attention has been paid to the machines ground pressure and its balance; this ensures minimal compaction even when the drum is full.

This machine is ideal for a host of turf and artificial playing surfaces and is particular good for removing water from covers, so that play can be restarted quicker.

The stainless steel drum is bonded with a well proven foam covering and the squeeze pressure is applied by an easy to adjust top mounted roller.

A 5.5hp OHV engine provides power to the transmission through an Eaton hydrostatic unit with final chain drives to the drum.

A lever on the handlebars gives instant forward or reverse travel, which makes the machine easy to operate even in relatively confined areas.

There are two models available, the Standard Mini which has gravity fed water discharge system or the Super Mini with a pump to empty the drum and the facility to connect a hose for removing deep puddles or water build-up in channels and other areas.

The main frame is constructed from powered-coated steel and mounted on two wheels which are fitted with 4ply tyres or a roller.

Sealed bearings are used throughout for longevity and the machine has a twelve-month warranty. Service exchange drums are available and the operation of removing and refitting these takes under 30 minutes. There is a system available for towing the unit between golf greens using an ATV, Truckster or Compact tractor. A specially designed stand takes the pressure off the foam covering when the machine is in storage.

The new Mini Blotters from CMS can keep outdoor sports on schedule and during a wet season repays the investment and earns it keep very quickly.

For further information Tel: 07740 483175

BUNKER SOLUTIONS

The Mantis BunkerMaster provides the ideal partner for general bunker dressing and management.

When used as a rake, the machine aerates the top 4cm of sand leaving a texture that simply needs final dressing using a traditional bunker rake. Dressing sand is however not the only benefit that the new BunkerMaster offers. The ability of the machine to aerate only the top layer of sand allows the easy redistribution of sand in a bunker that has been over-played. The extra depth that builds up at the bunker exit point, where players rake the sand as they leave the hazard, can easily be moved back into the base of the bunker.

The same rake attachment is a very effective professional steel spring dethatcher. Due to its light weight and manoeuvrability, it can remove moss and thatch build up from the previously inaccessible areas of the course such as bunker banks, surrounds, and the undulating fringes of greens.

By removing the Rake/Dethatcher attachment, a pair of tilling tines can be attached allowing the simple preparation and maintenance of flower beds around the clubhouse. With a working width of 9” / 23cm and the ability to work down to 25cm, the Mantis produces a fine tilth ready for planting.

Using the same tines the Mantis can be used to weed to a depth of 5cm between plants in existing borders. By removing the engine from the Mantis BunkerMaster and attaching it to the optional 76cm professional hedge cutter bar, routine trimming and maintenance of shrubs and hedges is easily accomplished.

For further information: Tel: 01614741525

OUT FRONT FLAIL

Ryetec has introduced the PF1600 out-front flail, which combines high quality finish with durable build and cost effective price.

Following years of development in the field the all new PF1600 provides a reliable alternative to rotary mowing units, able to cut grass from short and dry to long and wet with equal ease. The cut grass is then spread evenly across the full width of the mower. A static mulching blade reduces the volume of cuttings to a minimum while front and rear rubber flaps allow material in, but stop stones and projections from flying out.

Ryetecs PF1600 is available for most popular makes of out-front mowing tractors.

A full width easily adjustable rear roller and solid puncture proof front castor wheels control cutting height and combined with a centre mounted front roller a prevent scalping. Choice of flails including Rytec's AERO flail allow the cutting of all types of grass in all conditions with a very high quality of finish. Heavy duty gearbox and oil immersed drive shaft reduce running temperature and therefore increase reliability while remote greasers keep maintenance time to a minimum.

To add to all these features and benefits the PF1600 has a retail price of £2934 + Vat.

For further information: Tel: 01944 768232.
The unique Jupiter 2000 grinder has it all.

The Jupiter 2000 has the exceptional accuracy of relief grinding and fully automatic spin. It grinds cylinders 'in and out of situ' and sharpens both edges of the bottom blades. Unlike other machines, coolant is used on cylinders and bottom blades.

Only the Jupiter 2000 is capable of returning both cylinders and bottom blades to the original manufacturers specification.

Save time, money and workshop space without compromising on performance!

Annual Conference, Business Learning Centre, Lauder College, Dunfermline.

On Tuesday March 2, 2004 BigGA Scottish Region will again present their Annual Conference at the Business Learning Centre, Lauder College, Dunfermline.

For 2004 we have speakers from all sides of the industry coming to Dunfermline to provide topics relevant to everyone.

The speakers include Neil Baldwin, Omega Sciences; David Briggs, Campsey Sports; David McLay Kidd, a Golf Course Architect; Rex Kimberly, Terralift and Richard Minton, of Complete Weed Control. From the ranks of the greenkeepers we are delighted to have Ian McMillan MG, Course Manager, Murrayshall Golf Club, and Duncan McGilvray, from Potter's Bar Golf Club. All these speakers will provide interesting and varied talks that are relevant to all in greenkeeping.

The Conference Centre at Lauder College is centrally located and has easy access from the motorway. The Centre with its first class facilities is the ideal location for this event. It is hoped that greenkeepers, greens convenors and secretaries will attend.

Application forms will be available in the early part of January 2004 and will be posted to all members in the Scottish Region.

Peter J. Boyd
Regional Administrator.

Central

It seems a bit strange as I am writing this report in early December, it's supposed to be winter time and we are still cutting grass! Are the courses going to get any rest before opening day? I hope all this report reaches you this time as with my skills, my dyslexic computer and a faulty fax I sometimes have problems communicating with HQ.

I know they are not all my problems but that's another story.

Elmwood College in Cupar was the place to be on November 11 when a very successful workshop/seminar was held. Over 40 members took the time to attend and participated in a very interactive meeting with four excellent speakers in Douglas Shearer, from Elmwood College; George Murray, an Employment Consultant; Ian MacMillan, Course Manager at Murrayshall Hotel and Golf Courses, and Stuart Cruickshank, Course Manager at Dee Park Golf and Country Club. Our sincere thanks go to everyone who helped to make this a very successful event, which hopefully we can build on for future events.

Congratulations from everyone in the Section go to committee member Ian MacMillan on becoming a grandfather, Ian's daughter, Gaynor, presented him with a lovely granddaughter, Isobel, on November 11. All are doing well and I don't think Ian has come down from Cloud 9 yet.

Congratulations also go to Jimmy Kidd who is leaving Gleneagles after many years and taking up a new position in Barbados. I hope all goes well with you and your family in your new venture. Scotland won't be the same without you Jimmy!

Club 2000 winners in the second half of 2003 were D. Peddie, L. Kennedy, T. Comerford, G. Smith, J. Wallace, G. Butter, B. Irving, B. Cruickshank, M. Baxter and K. Thomson and everyone should have received their cheques by now. At the time of writing I am still waiting for 225 members to purchase or return their tickets. I sent tickets out to 283 members so you can plainly see how many give support to the Section.

Next month I will include the names of everyone who has still to purchase/return their tickets and the following month I will include those who supported this venture.

Annual Conference, Business Learning Centre, Lauder College, Dunfermline.

On Tuesday March 2, 2004 BigGA Scottish Region will again present their Annual Conference at the Business Learning Centre, Lauder College, Dunfermline.

For 2004 we have speakers from all sides of the industry coming to Dunfermline to provide topics relevant to everyone.

The speakers include Neil Baldwin, Omega Sciences; David Briggs, Campsey Sports; David McLay Kidd, a Golf Course Architect; Rex Kimberly, Terralift and Richard Minton, of Complete Weed Control. From the ranks of the greenkeepers we are delighted to have Ian McMillan MG, Course Manager, Murrayshall Golf Club, and Duncan McGilvray, from Potter's Bar Golf Club. All these speakers will provide interesting and varied talks that are relevant to all in greenkeeping.

The Conference Centre at Lauder College is centrally located and has easy access from the motorway. The Centre with its first class facilities is the ideal location for this event. It is hoped that greenkeepers, greens convenors and secretaries will attend.

Application forms will be available in the early part of January 2004 and will be posted to all members in the Scottish Region.

Peter J. Boyd
Regional Administrator.

Central

It seems a bit strange as I am writing this report in early December, it's supposed to be winter time and we are still cutting grass! Are the courses going to get any rest before opening day? I hope all this report reaches you this time as with my skills, my dyslexic computer and a faulty fax I sometimes have problems communicating with HQ.

I know they are not all my problems but that's another story.

Elmwood College in Cupar was the place to be on November 11 when a very successful workshop/seminar was held. Over 40 members took the time to attend and participated in a very interactive meeting with four excellent speakers in Douglas Shearer, from Elmwood College; George Murray, an Employment Consultant; Ian MacMillan, Course Manager at Murrayshall Hotel and Golf Courses, and Stuart Cruickshank, Course Manager at Deer Park Golf and Country Club. Our sincere thanks go to everyone who helped to make this a very successful event, which hopefully we can build on for future events.

Congratulations from everyone in the Section go to committee member Ian MacMillan on becoming a grandfather, Ian's daughter, Gaynor, presented him with a lovely granddaughter, Isobel, on November 11. All are doing well and I don't think Ian has come down from Cloud 9 yet.

Congratulations also go to Jimmy Kidd who is leaving Gleneagles after many years and taking up a new position in Barbados. I hope all goes well with you and your family in your new venture. Scotland won't be the same without you Jimmy!

Club 2000 winners in the second half of 2003 were D. Peddie, L. Kennedy, T. Comerford, G. Smith, J. Wallace, G. Butter, B. Irving, B. Cruickshank, M. Baxter and K. Thomson and everyone should have received their cheques by now. At the time of writing I am still waiting for 225 members to purchase or return their tickets. I sent tickets out to 283 members so you can plainly see how many give support to the Section.

Next month I will include the names of everyone who has still to purchase/return their tickets and the following month I will include those who supported this venture.

We extend a warm welcome to one new member this month in Jonathan Pendry from Gleneagles. As usual, hopefully Jonathan will manage to attend some of our future events where he will get the opportunity to meet some of his fellow members. The dates for this year's golf tournaments at Elie and Downfield have yet to be confirmed, but I will get in touch with you all as soon as I have them.

John Crawford
North East
In October at Seahouses GC we had our annual match against the East of Scotland. The match was a closely fought one once again as it turned out the game ended in a draw so the North East Section retained the trophy.

On behalf of both Sections we would like to thank the sponsors, Stewart's of Edinburgh for sponsoring the day and look forward to the return match next year.

Whitcham GC played in the John Deere Team Classic in November and finished 20 under par. Quite a good score you would think but the winners were a staggering 39 under. However, I'm sure the lads had a memorable time and enjoyed every bit of the challenge.

Well, that's time of the year again when everyone will be doing their winter jobs spare a thought for those who are doing major jobs with the likes of Tynedale GC and Hexham GC. For those of you who know Tynedale well, next time you drive over the ravine at the 15th hole, notice the difference as they have partially filled it in making it easier to maintain and nowhere near as deep as it was.

Next it's Hexham GC as they are in the process of a redesign on the 18th hole, by dropping the ridge across the latter half of the fairway by a metre to make a flatter landing area plus reshaping the existing bunkers to grass faces. Work in the area is approx. 2500 square metres. Well they might be finished that job around January if they are lucky with the weather.

Anyone else with any news on their winter programme that they want mentioned give me a ring

North Wales
Happy New Year and a warm welcome to North Wales 2004. This month sees our Section Secretary, Andy Campbell, take up his post as Chairman of BIGGA from the current Chairman, George Brown. It will be a busy year for Andy attending all the shows in San Diego, Canada, Norway, Ireland, Italy the list goes on. Not to mention all the Dinner functions. It's going to be tough but I am sure he will cope and do a sterling job promoting the organisation.

Wendy O'Brien, also from Carden Park, has excelled in her newly chosen venture as a guest speaker at educational seminars. Wendy first compiled a revue of her Augusta experience in last year's North Wales seminar (featured in Greenkeeper International) and has since spoken at Cannington and The National Turf grass Conference in Southport. So be quick if you wish to book Wendy for your event as her diary is filling up.

Darren Anderson has attained his HNC in greenkeeping and Peter Sproston will be handing a Bravery award in February at the Hanover International Hotel from the Fire Brigade for his heroics in saving a motorist from a crash last year.

Dougie Neilson has had a baby boy of 11lb 8oz, which is quite an achievement for a man, and Paul Lowe from Rhuddlan (with his wife) has had a baby girl. Congratulations to you both.

Our Spring seminar will be held once again February 24, at Carden Park, along with training courses in March and April – please contact the committee for details.

Forms for inclusion on to the coach for Harrogate will be in the post second week of January. Please return them ASAP so as not to miss out.

Our Christmas tournament was held at Abergele in December and a big thankyou to all those who took part and made the day a great success. We had just over 60 entrants and we thank Darren Anderson and his team for the fine presentation of the course. The new USGA greens had a good speed on them and the putting took all the breaks. Thanks also to the caterers for the turkey dinner and to the club for the courtesy of the course.

The results are as follows: Members: 1. Allen Lewis, 37pts; 2. John Evans, 36pts; 3. Hayden Jones, 36pts; 4. Rob Myatt, 35pts; 5. Kevin Lewis, 35pts. Guests: 1. Ilyon Luke, 35pts; 2. Karl Ashley, 35pts. Trade: 1. Yours Truly, 36pts. The Aggregate Cup for the year was Jeremy Hughes. There were 2 Nearest the Pin Prizes, sponsored by BATgolf.com, and both were won by Rob Myatt, AbergeleGC, and Nearest the Pin, sponsored by Major Owen, won at 5' by Peter Sproston. Thanks also to all the trade Patrons of North Wales for their sponsorship.

I finish with a note to my old friend Bill Lawson. Bill, please note I haven’t mentioned pubs or darts this month – Any news or views give me a call.

It is the inner values that count – and the external ones.

The inner value of an Aebi product is created through the long-term, assured customer service. Even the very best of machines can sometimes fail. Then it is a question of how quickly the spare parts are available and the problem is solved.

The external value, the timeless design, the ergonomics, the carefully designed operating convenience and the safety – these are all major concerns for Aebi. This is confirmed not least by the many design and innovation awards. Aebi Burgdorf is a leading company for all-wheel-drive transporters, (steep-slope) implement carriers and multi-purpose single-axle tractors, and is right amongst the leaders in terms of quality and innovation.

Aebi Burgdorf. One for all.

North West
How lucky can we get? Each year we have the AGM in December and we also play for the President’s Cup and each year we have been blessed with good weather as we did once again on December 4. A turnout of 39 members and trade members enjoyed an excellent day at Wilslow GC where we had the tee from 10am after a breakfast of bacon baps and coffee. As mentioned, the weather was good, and the course was in great condition as usual, with the greens as fast as during the summer month’s. All credit for this goes to Steve Oultram and his dedicated team.

We played a Stableford round and although it is not an easy course (it is a qualifier course for The Open) the scores were good, with Peter Hogan winning the Presidents Cup with 39 points. Peter has picked up most of the prizes from this year’s tournaments, so I think somebody will have to nobile him next year.

The golf was followed by the AGM which was also attended by Peter Larre, the Northern Region Administrator. Mike Davie, the Section Chairman, stepped down this year after serving for four years as Chairman, and Paul Eddleston took over as Chairman for the coming year. Mike was presented with a beautiful engraved hip flask to show the Section’s appreciation, and I am sure it will be put to good use. The committee opted to carry on for a further year, with the addition of Alan Donlevy making a total of 10 committee members. The committee comprises: Chairman, Paul Eddleston; Secretary, Bert Cross; Treasurer, Bill Merritt; Mike Davie, Steve Oultram, Chris Sheehan, Paul Walker, Clive Poole, Aidie Holt and Alan Donlevy.

As the meeting was about to close, the Chairman sprung a surprise on me, and I was presented with a magnificent framed picture of the Old Course St Andrews. This was because I have completed 25 plus years on the N/W Section committee. I had not realised I had done that long, but somebody had been doing their homework. I can assure everybody that it is greatly appreciated and is now displayed in pride of place in my home. Many thanks to everybody. I will close now but I am always available for any news or views on:
0151 7245412 or 07761 583387.

Bert Cross

Northern
Too much eating, drinking and merry making? Never mind as BTME is almost here yes. Here is a list of the members who joined us at the seminars or in the bars in Harrogate making the week another success for our Association.

As normal, I am writing these notes weeks ahead of the publishing date. In fact I am writing it before the Christmas golf at Elland Golf Club, (you think you’re premature!). So, I am unable to report on the goings on at the event but I will tell you all the gory details in January’s issue.

In the next month or so I am hoping you will all be receiving the new Fixture and Events list for the coming year. This will include details of our spring lecture and possible dinner dance.

Again can I plead with you all, as you can see, I am struggling for content so any news or views would be appreciated or am I writing this for my own enjoyment?

Please note my new address at the end of these ramblings. I have moved much nearer your Chairman, Vice Chairman, Treasurer and President and hope I can now do more drinking of the Black stuff or some Timmy Taylor’s with them.

Last, but far from least, I must thank all at BIGGA House, and especially Ken Richardson, on the informative computer training three others and myself received through the Regional Training at a bargain price of £60 for the two days. Again and again I hear people say, “What do I get for my annual subscription?” Well, I am sure if you just took up one of the many days put on by the Association in Autumn and Spring you will have recouped the cost of it. So, if you would like to benefit from the training get in touch with headquarters and ask them if they can run a course in your desired field.

Talk to you all again next month, hope the heads are not too sore after BTME.

BB&O
Another year bites the dust, Christmas is over, new resolutions begun, the Atkins diet going strong coupled with the latest nicotine patch fix and we are all ready to rock and roll for 2004.

The final of the Regional Rigby Taylor Team Knockout has now been played with a 3 and 2 win favouring the Tartan duo Ross Wilson, Colin Hutt, Paramanga GC and magnanimous in defeat Simon Robinson, Alistair Higgs, Calcott Park GC. This event was greatly enjoyed by all who participated and a vote of thanks must go to the organisers.

On a mild, wintry morning in November, the BB&O gathered for its annual Turkey Trot at Frilford Heath GC. Sixteen teams of three with best two counting was the format, which was well represented from the three counties, after a low calorie bacon roll and coffee, a close fought battle commenced on the red course (a fine example in a Heathland setting). The course was very well prepared and in excellent condition due to Course Manager, Sid Arrowsmith, at the helm with his band of merry men, working wonders over the last year in maintaining such a fine golf course. A very big thank you to Sid and all the lads. The results were as follows: 1. Team Henley, Mitch Stewart, Dave Parish, Mike Johnson, 84 pts; 2. Team Flackwell Heath, Steve Gardner, Tony Simpson, John Rouse, 83 pts; 3. Team Hinkey Heights, Dave Shepard, Adam Thompson, Craig Marsh, 81 pts.

Thank you to Frilford Heath GC and Peter Dier, Vice Captain, for making us all very welcome and also for the delicious greet and facilities available to us on the day.

Sponsors for the day were Avoncrop Amenity with Colin White in attendance dishing out the well-earned prizes between the 3 teams. We thank you for your continued support. It was nice to see a few new faces on the day and we hope to see many more of you at our events in 2004.

Shot of the day must go to Jason Payne, Burnham Beeches, whose tee shot on the 9th, hit the trees, ricochet out, bounced on the roof of Carl Small’s buggy putting his pacemaker on red alert, and landing in Nathan Bond’s (the group in front) golf bag, never to see the light of day again.

Congratulations to Leon Brant, from Datchet GC, who is suffering from sleep deprivation with a big smile on his face as his wife has just given birth to a new baby boy, Jack. We all wish him and his new-born family the very best.

Finally a special mention to David Haskell Craig who has been our Section Secretary and stalwart at our golf days over the last few years, organising and making sure we all had a superb day out, David is leaving Maidenhead GC in the capable hands of Chris Mitchell, his Deputy, and emigrating to Australia. As you are reading this, he will probably be sunning himself and sticking another shrimp on the barbecue in Sydney Harbour, just as we prepare ourselves for the whirlwind of activity at Harrogate. We wish the “Pommie David” (his new nickname) and family the very best success for the future down under.

Happy New Year to you all.

Mark Day

Midland
Hope all had an excellent Christmas, and trust too much drink was not taken. A respected University Professor recently reminded me that: “One knows when one has drank too much, as one shall be found lying on the floor holding on for dear life, as if one lets go, one should surely fall off!”. What a delicious quote.

Last month I was fortunate enough to have been selected for interview with mind to a position as a Head Greenkeeper. I consider myself knowledgeable and experienced within greenkeeping, and other related fields. However, at interview I found myself somewhat nervous and indeed unable to string together a coherent sentence despite the greatest efforts of the kind interviewers. Thankfully, Andy Smith has organised an “Effective Communication” two day course to be held at Shirley Golf Club on 16 & 17 March at a cost of £60 plus VAT. This will obviously be specifically dealing with the many differing aspects of communication from the greenkeepers’ point of view. To book your place please call either Andy on: 07977 145091, or myself

on: 07816 410552. Trust me, time and money well spent.

Now for something a little lighter. Ray Wise, First Assistant, has knocked-up 25 years excellent service at Great Barr Golf Club. From both the Section and your work colleagues, congratulations and keep up the good work Ray.

Wishing you well for the next 20 in our fine profession.

We have two new members to welcome to our fine Section this month, Mr C. P. Jones and Mr R. Wakefield, both being from The Worcestershire Golf Club.

We look forward to seeing you at our golf tournaments gentlemen. I hope that your handicaps are not as kind to your game as our Regional Chairman’s, Gavin Robson. At a recent Regional Committee Stableford match he scored 41 points, of which contained two blobs. Great golf, Gavin, particularly off 21. What’s the name of that Chinese soup?

Rhy has once again secured four superb venues for this year’s golfing fixtures. These being: Spring, Olton; Summer, Moor Hall; Autumn, Hawkstone Park, and Christmas, Trentham Park.

For many years now, Mr A. Smith has served our Section as a diligent and knowledgeable committee member. Due to other commitments he has decided to stand down. I, the committee, and I am sure the members, would like to thank Andy for his input and commitment to the Section. Your counsel will be sorely missed Sir.

Looking forward to seeing you at BTME 19-22/1/04. Wishing us all a happy and prosperous New Year.

Sean McDade

Mid Anglia

Firstly, I must apologise to Nigel Phelan and his club. I wrote in last month’s issue that he was from St Johns Hospital, but he in fact works at St Andrews Hospital. (How many of you noticed that one?). Sorry Nigel. I hope everyone has had a good Christmas and welcome to 2004.

On December 4, we took part in our final competition of the year at the well renowned Brocket Hall. With nearly 100 participants this was certainly a venue to be appreciated.

Our thanks go to John Moorhouse and his team for the excellent condition of the Melbourn course. Thanks also to the caterers for the traditional Christmas fare. With the format being Texas Scramble in teams of four the results were as follows:
- 1. Berkhamsted, 59.2; 2. Boughton Loam, 59.4; 3. Mid Herts, 60.0. Longest Drive, Alan Grew, Berkhamsted. Nearest the Pin, Rob Robson. At a recent Regional Committee Stableford match he scored 41 points, of which contained two blobs. Great golf, Gavin, particularly off 21. What’s the name of that Chinese soup?

Thanks should go to Kibworth Golf Club for courtesy of their fine course, Rival Catering for a truly grand meal, and Chris Butlin and his staff for a well presented golf course.

Once again could I please remind all members to enclose their entry form and cheque before the closing date. Next years Spring Tournament will be held at Kirby Muxloe Golf Club on May 12.

Finally there are two places going spare for a Chainsaw course at Beedles Lake Golf Club on March 2 & 3 if anybody is interested please give me a ring.

Antony Bindley

Devon and Cornwall

Our second Autumn meeting was held at Bigbury Golf Club on Wednesday 19th November. The day started with Rob Guntrip of Devon Garden Machinery starting our golfing members on the 1st tee. Thirty-four members were competing for the DGM sponsored Toro Trophy. The remaining 25 members were escorted on the customary course walk with Head Greenkeeper, Graham Davis.

After some light refreshments, we were treated to a superb three course lunch so a big thank you to the catering team. I would like to thank Bigbury Golf Club and their staff for the use of their excellent facilities and the warm welcome extended to us. I would also like to thank Graham and his staff for presenting his golf course in fantastic condition. Graham has always been an ardent supporter of our Section and the golf course is a credit to him. Another big thank you has to go to our sponsor for the day, Alan Domett of Devon Garden Machinery, for his continued sponsorship. Alan has supported our Section for more years than I can remember and it was great to see him looking so well after his recent illness. After lunch, we held our AGM and everything went quite smoothly. There was little change to the committee apart from Martin Samuel, of Sheriff Amenity, who was voted on as new Trade Member replacing Billy Spratt who has left the industry.

Unfortunately, I will be standing down as Secretary in January 2004 due to personal reasons and a successor is currently being sought. It has been an honour and a privilege to be the Secretary of the Devon and Cornwall Section. A truly fantastic bunch of lads (and lady Katie Walks) with the friendship and comradary second to none. And after all that, anybody wishing to fill my boots, please give me a ring!

After the AGM, we held the prize giving. Winners of the Toro Trophy were Simon Coombes, from Dainton Park, and Dave Harding, from Exeter, with a staggering 49 pts. Second with 48 pts were Simon Saunders and Scott McKay from Woodbury Park, and third were Simon Clarke and Justin Woods, from St M Mellon, with 47 pts. Bill Mitchell, from Perranporth, won the Course Walk prize, Jim Arthur’s book Practical Greenkeeping 2nd Edition. Bill also won the Course Walk prize last month, which was Jim Arthur’s book Practical Greenkeeping 1st Edition! Guess who isn’t getting a raffle ticket next month, Bill? Although I have to say, he did give back his last month’s prize and after a redraw, Richard Wisdom, of Okehampton, won the first edition.

Dates for your diary: Our meeting at Royal North Devon on January 14, with
The world's No1 in Vacuum Sweepers

With 35 years' experience and a range of quality machinery, it's easy to see why Trilo is the world-leader in vacuum sweepers.

Built to an extremely high standard, the wide choice of models and numerous options available ensures you can trust Trilo to make your job easier and more efficient.

Now incorporating a range of quality, high specification groundcare equipment which offers the complete solution for scarifying, cutting, collecting and spreading.
South West

So Christmas is over. There are more needles on the floor than on the tree. Holiday and diet adverts are on the telly and guess what? I am writing this article the day after another successful golf day (it’s like back to the future doing these articles). Our Christmas tournament was at Lansdown Golf Club. Dare I say a few problems were apparent with certain aspects of the course but I am sure things will improve in the near future. Thanks for your superb hospitality. Results as follows: In first place, local talent, Richard Carter along with A. Matthews with a score of 68 bh. 2nd place. Paul Godwin, now with Kendleshire Golf Club, after 15 long hard years at Tracey, sorry the Gloucestershire, and playing partner, John Batchelor, 68. Third, more local talent, Rob Lane, of Lansdown, and partner Wayne Vincent, 64.

Nearest the Pins. John Keenaghan and Allister Turner, a rare sight on the golf course, but accurate. A total of 40 on the day. Nobby would like to thank all helpers and participants for their continued support and not forgetting our fabulous patronage sponsors, BS Mowers, Irritech, Amtec, Abbots, Rigby Taylor, Avoncrop, Biosseeds, ALS, Roffeys, and Symbolo.

I personally haven’t witnessed the Dave Baugen makeover myself and I have it on good authority that it was real and not a ‘syrup’. But was it really a purple perm or just a trick of the light? Apparently Robin Greaves was seen later trying to sell a copy of Jim Arthur’s, Practical Greenkeeping on the streets of Bristol mumbleing something about needing a bed for the night.

On a slightly more serious note, as a Section we are hoping to run a follow up course held here at Bath, sometime in late February early March. It’s a fantastic course so please contact me if you are interested, I should have some prices soon. Don’t forget the training express risk assessment day again here at Bath Golf Club, January 27.

Good luck for the forthcoming year and may the Spring be kind to us all.

See you soon

Guy Woods

South Wales

Hello folks and welcome to another episode of Around the Green, the section, where nosy parkers, yes that’s you, read what’s going on in the Regions across the Country.

Firstly, I would like to wish Adrian Panks (Strimmer boy from Dudley) all the best and a quick recovery after a recent illness. Any excuse to get out of writing this article.

Secondly, the Lord was looking down on one Andy Roach, when Andy teed off on a par 3 in the recent Welsh Amateur Championships and accidentally hit it straight into the hole for a one. Well done and although we where not there we will all gladly accept a drink at the next meeting.

Thirdly, I hope the New Heads and their families from Langland and Neath are settling down and are enjoying working and living in Wales.

Overall Winners. Lee Davies and Daryl Bray, both Morriston, beat Fescue Pete Lacey, Pennard, and Steve “Smooth Talk” Mills, Gower.

Education.

Now is the time to start organising and enrolling onto course for the next year – our Section college, Pencoed are running excellent courses for all abilities and are pro active in the development of greenkeeping so if you would like to or you know of any one that would benefit from their services then give Paul Discombe a call for a chat and a prospectus on 01656 302600 or email enquiries@brigend.ac.uk

The BIGGA website has been running a discussion forum covering all issues that greenkeepers come up against all the time and I would encourage all to participate as it is useful resource for information.

The BTME Exhibition fast is approaching and hopefully you will have take the opportunity to visit this excellent exhibition and get updated on the modern techniques and machinery.

Question - Do you think these shows work and how many of you will benefit from your visit or is it pointless? Your feedback is much appreciated.

You can contact me on email kerryjojones@yahoo.co.uk

I have been prompted by PL to post the score by which they beat me and my partner by in the Rigby Taylor Matchplay - Kerry Jones & Darryl Jones lost to Peter Lacey & Steve Mills 6 & 5 & 5. Fluke

Cofion cynnes/Best wishes.

Kerry Jones

Surrey

Sorry about the lack of input into last month’s Around The Green but news was either nil or too late for the magazine deadline. I trust you all had a Merry Christmas and are looking forward to a New Year that will bring the ideal weather for whatever course you require.

My seaweed indicates that the weather in 2004 will bring joy to your hearts but remember it is more probable that your greens committee will bring a pain to another part of your anatomy. November 24, 2003 was the date of the annual England vs Scotland battle at Hankley Common Golf Club and due to some misunderstanding, which in the opinion of all the other team members was due entirely to my age and gradual loss of brain cells. If true I offer my sincere apologies to both team Captains. Perhaps next year to avoid embarrassment and confusion they should both assume I am playing for the other team and let me sit quietly in the clubhouse while trying to remember who and where I am. The result was a draw and therefore England retain the Cup.

Surrey Section had its Turkey Trot and AGM at Royal Epsom Golf Club on December 4 and as expected the course was, in Mark Harvey’s opinion, excellent and the best it’s been since the defection to Essex of that humble and abstemious Scotsman, Mr Douglas Ignatius Ferne. We all enjoyed a wind-swept game a few beers in the bar and a most enjoyable traditional Christmas dinner. The result was: 1. Chris (Sharkie) Hartnett, 40pts, Addington Palace Golf Club; 2. Derek Cunliffe, 37pts, Old Thorns Golf Club; 3. Tony Bremer, 37pts, Dorking Golf Club.

The AGM had an attendance of over 60 members and was conducted and concluded in a very efficient manner. Billy McMillan confirmed that Bert Watson retires this month from Tyrrells Wood Golf Club and requested that he should be made a life member of BIGGA, Derek Farrington has put the necessary wheels in motion and I hope soon to report that this has been agreed. Good luck, Bert and have a great retirement.

It was also announced by Anthony Freeman that, sadly, Ted Stiles died on Monday November 10. Ted was a most enthusiastic member of the Surrey Section and served for many years on the committee. He was a keen swimmer and played water polo for the county. Ted was also an engineer in the Merchant Navy before joining the Drift Golf Club as a Mechanic/Greenkeeper. Several members attended the cremation service at Walton and a floral tribute was presented on behalf of you all. Paul Weston has been sent a card from Sheila, Ted’s wife, thanking Surrey Section for fond memories of golf, snooker and a few friendly pints.
Your committee had its latest meeting on December 1, at Epsom Golf Club. The venues for 2004 events are almost complete and include the following golf clubs, Cuddington, Coombe Wood, Clandon Regis, Laleham and Sunningdale. The Gentleman’s Dinner at Walton Heath will be on March 12. Details of this year’s Bioseed Bowl will be sent soon but please remember that all competitors must have an official BIGGA, golf club or golf handicap to enter.

Brian Willmott

NORTHERN IRELAND

Well, did you get to the show in Dublin? I stayed in a really posh hotel with the boys from Raddison Roe Park Golf Club. I arrived first and sat in the bar, while sipping my pint. I looked around, the bar/restaurant was packed full of very smartly dressed people. I certainly would sooner keep the women for a week than a fortnight. Then, all of a sudden, four boys from Limavady walked in. Priceless!

I don’t know who phoned me in the middle of the night but I found myself talking to someone on a ‘big white telephone’. I remember my mummy used to hold my forehead but Lawrence couldn’t have cared less. He asked: ‘Were you talking to someone?’ Some folks need it spelling out, don’t they?

John Nolan, from Edmonds Town GC, Dublin, was looking very well indeed. Maybe his honeymoon in South Africa contributed to that. Congratulations, John.

Mr President. I first met the Pres 40 years ago. He came down from Scotland and joined the police SVC (scratch golfer by the way). He was our local rural Bobby. He represented the British Police at Golf and played at Royal Portrush, a long time ago. He said the only thing he can remember was looking out of his hotel window in the morning and seeing someone coming down the road on his bike. The only thing keeping him on the road was he of his hotel window in the morning and seeing someone coming down the road on his bike. The only thing keeping him on the road was he

Mr President. I first met the Pres 40 years ago. He came down from Scotland and joined the police SVC (scratch golfer by the way). He was our local rural Bobby. He represented the British Police at Golf and played at Royal Portrush, a long time ago. He said the only thing he can remember was looking out of his hotel window in the morning and seeing someone coming down the road on his bike. The only thing keeping him on the road was he of his hotel window in the morning and seeing someone coming down the road on his bike. The only thing keeping him on the road was he

New Serious.

At the AGM on December 3, officers were elected. Ken Henderson, Chairman; Emmett Curran, Secretary; Micky O’Neill, Treasurer and comps and Andrew Kerr, Education.

A special thanks was conveyed again to sponsors of the year. I, in error, forgot to thank Karl Vesher, of Vesta Irrigation, for the sponsorship at the golf day at Portstewart Golf Club and Caborns for sending two players to England. Please accept my apologies. Once again thank you to all the companies who have contributed this year.

Very Serious.

The AGM was poorly attended. Your committee works very hard to provide you with golf days, education events, conferences etc. So, it was very disappointing that you couldn’t turn up for one evening either just to express your dissatisfaction or your compliments, or to provide some input into what is, after all, your group. I’m sorry if I have touched a nerve but then I hope I have.

Mickey O’Neill and Ken Henderson won the quiz. Not surprising as Jonathan said he

Entry could not be simpler! Listed below are a series of clues relating to ONE company featured in the ever popular Buyers’ Guide. Take care to look through all the products and services shown and write down the name of the company which you think the following clues refer to.

WHO ARE WE?

1. The telephone number ends 321.
2. Based in Lancashire.
3. The postcode begins WN6.

Write down your name, address and answer on a postcard and send your entries to: Turtfine Teaser, Greenkeeper International, BIGGA HOUSE, Adwait, Ahs, York Y061 1UF. Entries to arrive no later than January 26th 2004. So hurry, because that doesn’t leave you much time! The first correct entry drawn will receive a digital, Sony hand-held ‘Voice Memo’. This competition is not open to BIGGA Staff or non-members.

1. The postcode begins WN6.
2. Based in Lancashire.
3. The telephone number ends 321.

Prestigious Events Require Volunteers

The Open Championship
Troon, July 15-18 2004

The BIGGA Greenkeeping Support Team at The Open Championship will be involved in early morning course preparation, bunker raking while matches are in play and evening course repair. You must be available from Wednesday evening 14 July, through to the close of play on Sunday 18 July. Full BIGGA members only may apply to be considered for the Team, and must apply to: John Pemberton, BIGGA HOUSE, Aldwark, Alne, Troon, July 15-18 2004

Volvo PGA Championship
The Wentworth Club, May 29-30 2004

The Association will again be providing a support team for the final two days of this prestigious event which this year are Saturday 29 May and Sunday 30 May. Each member usually all those who apply are given the chance to participate on at least one day. You will be responsible for your own transport arrangements to the course and there is no provision for overnight accommodation. You may apply to help on either or both days and assisting at this event will not prejudice your chance of a place on The Open Championship Support Team.

Applications to Derek Farrington, BIGGA Regional Administrator, 35 Cleveland Road, Worthing, Sussex BN13 2ES Tel: 01903 260956 Email: derek.farrington@tesco.net

Cropwise Amenity - Specialist Supplier to the Professional Sports and Amenity Markets
One for the Road!

Almost caught up with things and I will be just about be back to normality in time to hand over the reins to my Vice Chairman, Andy Campbell, who I am confident that with his enthusiasm and drive will take the Association forward.

I have had a most enjoyable year but it has not all been plain sailing as we have had to face several unforeseen challenges, sadly one of those being the sudden illness of our Executive Director, Neil Thomas, who has had to face the toughest challenge of all and at this time is still unable to return to his duties. We have been inundated with well wishes for Neil and on behalf of all members and friends we wish him and his family the very best. I must say has risen to the challenge with the sterling help of all the staff at Headquarters, and for that we are most thankful.

Having recently returned from attending the John Deere World Team Championship being played over The Grey Hawk Golf Courses in Scottsdale, Arizona, it makes one appreciate how fortunate those that qualified to play in the finals and officials such as myself were to get away from our winter weather for a week or so. Having said that the first day's practice round was virtually washed out as most of the region had one inch and three quarters of rain in one day (one half of their annual rain fall)!! The only difference from home was that the rain came straight down and was warm rather than cold! My 16th. They may have done better if Cactus Jack spent more time on the fairways instead of exploring the desert where an amazing variety of birds and animals could be easily viewed.

Apart from being generously entertained by John Deere (a report will follow in the magazine next month) additional evening's entertainment was bolstered by the Irish team with their professional singer and guitarist, Kevin Dwyer who entertained until the early hours. One of the highlights of the week must be the Friday dinner at Turnberry for helping to make my year stress free and happy memories to reflect on in my twilight years, I would like to thank the Board members, who give up many days of their valuable time to attend meetings and make decisions on the members behalf, their wisdom has been invaluable and it is not by accident that BIGGA is where it is today.

I am also indebted to my Greenkeeping team at Harrogate for helping to make my year stress free and keeping our Golf Courses and Property in good shape during my time away on BIGGA business. Not forgetting of course my employers, most of all my General Manager, Stewart Selbie, for his continued encouragement and support during my role as BIGGA Chairman.

BTME & ClubHouse at Harrogate it is always a great start to the New Year, and I look forward to seeing as many of you as possible throughout the week in the meantime may all your grasses stay healthy.

George Brown
Chairman
There's nothing Mild about Mildothane

Nothing likes to chase away your casting worms more than Mildothane® Turf Liquid.

And when it's done that, it'll go after any lurking turf diseases like Fusarium, Dollar Spot and Red Thread, and see them off too.

You can even tank mix it with Crossfire® 480 for simultaneous control of leatherjackets.

Mildothane - there's nothing Mild about it.

See us at BTME - Stand C44
Snap - Click - Done!

Replacing worn or damaged bottom blades has never been so simple with MagKnife™. Exclusively available from Ransomes Jacobsen, it's a revolutionary new system using powerful magnets to attach bottom blades to greens and fairway cylinder mowers, eliminating the need for screws.

Replacement is reduced from hours to minutes with this new patented screwless system. And there are additional benefits too! Debris passes through the bottom blade minimising damage to the cylinder. It's so quick and simple to use, changing blades for mowing after top dressing or for a tournament finish takes minutes! And it's retro fit, so the system will fit older machines as well.

Save time, money and improve the finish of your course. Call today on +44 (0) 1473 270000 for a (very quick!) demonstration or more information.
