Yorkshire’s true links

Scott MacCallum visits Cleveland Golf Club and meets a man who leaves no stone unturned in making his home-town course as good as it can be.
Yorkshire’s true links

Scott MacCallum visits Cleveland Golf Club and meets a man who leaves no stone unturned in making his home-town course as good as it can be.
It is an interesting fact, well it certainly was to me, that Cleveland Golf Club, in Redcar, is the only true links course in Yorkshire. That piece of information was one of many which emerged from a meeting with Course Manager, Ian Pemberton, whose enthusiasm for the job is quite infectious. Ian moved to his home-town club four years ago, from the inland Bedale Golf Club, and since then he has rarely taken a backward step in ensuring that the course develops.

“The club has a great history. It was founded in 1887 and really is a sleeping giant,” said Ian, “I think we zapped that in about two and a half.”

Looking around the course you could find no reason to suggest that Ian was exaggerating. His first task on arrival was to make improvements to the rough, an area which had been causing problems for some time. “The rough had become unmanageable over a number of years. It was overgrown and unkempt, too many balls were being lost and as a result play had slowed and green fee revenue had fallen off. Aesthetically, it looked unsightly and, from a wildlife point of view, it was stifling the fresh growth because it couldn’t get through,” he explained.

Ian and the team brought in an Amazone flail mower and got to work. “It was a laborious task and it took two years to get it where we wanted, but it was very worthwhile. We now have improved the native flora and fauna and turned it back into proper links rough,” explained Ian. While this work was being carried they had worked hard on improving the club’s practice ground and also looked at the 16th and 10th fairways, which were, by his own admission, “wall to wall chickweed”.

“I would say that I have managed to get a lot further forward than I could ever have hoped in the four years I’ve been here, I told them that piece of information was his own admission, “wall to wall chickweed”.

“We had some samples taken and the potash levels were non-existent – there just wasn’t any potash in them at all – and the balance was never going to allow anything to grow.”

“We corrected that with a potash feed, very low in nitrogen, and then over-seeded with pure fescue and turf to now we’ve been very pleased with the results.”

But the biggest project Ian and the team have undertaken over the last three years has seen a significant change to the look of Cleveland Golf Club, while also seeing the development of an innovative project which has brought additional revenue into the club. It originated in 2002 when Persimmon Homes purchased land from the local authority, on which three of the holes were laid out, with a view to building luxury houses with spectacular views of the North Sea.

In anticipation of the work going ahead three new holes were built out on the dunes, the 14th, 15th and 16th, which certainly haven’t taken anything away from the quality of the course and in the case of the 15th, a par-3 over water, provided a hole which would grace many courses. “The planning process for the houses took a long time during which time I arrived. I felt that would could take advantage of the material to create character, and detail to an area of the course around the 3rd and 4th holes which was fairly featureless and full of small peaks and hollows, making it very difficult to maintain.”

Ian’s aim was to create an inland dune and build new tees with the material with the added bonus that the club would generate income from the material brought in. “It’s a win-win situation for us,” said Ian, who admits to being the driving force behind the project.

“The Chairman of Green, Dave Atfield, has been extremely supportive during this process, but he sometimes hides when he sees me coming at him with another idea,” joked Ian. “Keith Rutherford was looking for an area in which to dispose of soil and brick and we were looking for the material to create character and differentiation to an area of the course around the 3rd and 4th holes which was fairly featureless.”

“When this work was being carried out I sometimes hide when I see Keith Rutherford, who together with Henry Boreelet, were extremely helpful in advising me how best to go about it – I would have needed a minimum of two feet of sand to be able to grow the desired grasses.”

It seemed the perfect plan with the golf course being able to develop using rootzone which couldn’t be any more perfect for the job. However, local objections saw the Persimmon housing development fail to win planning approval and Ian was forced to abandon his plans for the course or find an alternative solution. Not a man to be beaten down and showing a resourcefulness that is common among many greenskeepers he tracked down a local recycling contractor.

Keith Rutherford was looking for an area in which to dispose of soil and brick and we were looking for the material to create character and differentiation to an area of the course around the 3rd and 4th holes which was fairly featureless. We corrected that with a potash feed, very low in nitrogen, and then over-seeded with pure fescue turf. It’s a win-win situation for us,” said Ian, who admits to being the driving force behind the project.

The Jacobsen Eclipse 322

the only 100% hydraulic-free greens mower available ... anywhere!

Other ‘hybrids’ still use hydraulic motors for propulsion, so when we say no hydraulics, we mean it. Traction, reel drive and lift/lower operations are all electrically driven using either a small petrol or diesel engine running a 48 volt generator. And now there’s an all-electric version using a battery pack. It’s stealth quiet and ideal for greens close to housing or hotel rooms.

For greener operation on your greens, less maintenance and lower operating costs, it has to be the Jacobsen Eclipse 322.

By the way, did we mention ... no hydraulics.

7th green to ensure that there is no distraction to people putting of those playing off the nearby 12th tee.

“The great thing is that the digger operator, the digger and its diesel is paid for by the contractor so we don’t have any outgoings at all,” said Ian, who admits he has been very lucky that the operator has shown a real flare for the work and a desire to do it as well as he can.

“He is outstanding – a craftsman!” is Ian’s assessment.

It is an on-going programme and the current Club Captain, Keith Cooper, has also identified an area behind the 4th green which he feels would benefit from a mound.

“That would be purely for aesthetics, to shield the hole from the Steel Works, which borders the course, but we are aware that too much would be as damaging as nothing at all as it could alter the character of the place beyond all recognition.”

However, the work so far has received great acclaim from the membership and improved that particular area of the golf course no end.

“We can have as many as 20 wagons a day while other days we may only have three and others none at all but we looked at the situation and got in touch with the council to identify the shortest possible route over the course for access.

“All the drivers are informed that the golfers’ safety takes priority and we don’t have any problems.”

Ian is very much an advocate of good traditional sustainable golf.

“We’ve just applied Rescue to a couple of greens and achieved a successful outcome, but it’s minimal feed – we just do a 3-0-8 to start them off and then go on to liquids while we will put on a half rate 4-0-24 application at the back end of the year just to ensure they are healthy going into the winter.”

He was particularly pleased a couple of years ago when the club hosted an R&A Sustainable Golf Seminar when Nick Park, a member of the Golf Course Committee and a great advocate of Sustainable Golf, complimented him on the quality and quantity of fescue in the greens.

In his four years at the club, Ian and the team have continued to build trees and now the vast majority of the project, designed to add length to the course, has been done.

“We can have as many as 20 wagons a day, so we got in touch with the council to identify the shortest possible route over the course for access”

"We can have as many as 20 wagons a day, so we got in touch with the council to identify the shortest possible route over the course for access"

Ian Pemberton, Course Manager
A multi-component biostimulant that increases root development and general plant health

**Activate R**
- Contains Enhanced Root Developer (ERD) to improve root development
- Root length shown to be increased by up to 32%
- Improves nutrient retention in the rootzone
- Contains humic acid and plant growth hormones
- Chelated trace element package also present
- Leaf penetrant system ensures rapid movement of product into rootzone
- Unique tank mixing compatibilities

**GDC FROM TORO. THE INTELLIGENT CHOICE.**
- LESS DECODERS
- LESS CABLING
- LESS EXPENSE

Cooling less to install and run, and giving pin-point accuracy out on the course, Toro GDC irrigation is the best choice for both club managers and greenkeepers alike. Now proven in use on over 200 courses worldwide. Contact us today to find out more.

Call 01480 226800 or visit www.toro.com

“We totally amended the 1st; done the 2nd, built two on the 3rd; 4th not yet; 5th – we’ve plans for that incorporating the ing 6th, we’ve extended and recontoured; extended the 7th, added extra length to the 8th; done the 9th; extended the 10th at the back and levelled it off and built a path by the side; 11th nothing yet; 12th nothing yet; 13, 14, 15 and 16 yes; 17 not yet, and 18 yes,” he reeled off, showing that he is as adept when it comes to memory as he is with course construction.

“We do it all in-house and I’ve got a great team here – Deputy Les Hunt, who has been here 20 years, Jamie Chester, who has been here 18 years; Kevin Bartram, who has been here 12 years and Aiden Coates, who has been here three,” said Ian, who added that Kevin and Aiden have proven particularly careful to steer clear of anything which might have been perceived of bringing parkland to the seaside.

“That said, I’m not a big advocate of the great divide between links greenkeepers and parkland greenkeepers. I class myself as a greenkeeper as simple as that. I love my job passionately and it is about grass be it on links or parkland.”

“Always be proactive not reactive.”

As I was leaving Ian pointed out another member who was repairing one of the outside lights on the clubhouse wall. Ian was always aware of the fact that he had arrived at a links from an inland course and that he was particularly careful to steer clear of anything which might have been perceived of bringing parkland to the seaside.

“That said, I’m not a big advocate of the great divide between links greenkeepers and parkland greenkeepers. I class myself as a greenkeeper as simple as that. I love my job passionately and it is about grass be it on links or parkland.”

The only difference is that we can be a lot drier at times, reaction times to implement any required maintenance has to be immediate. Always be proactive not reactive.”

Having achieved so much in his first four years Ian now has his sights set on becoming an Open Qualifying venue and has already been in touch with the R&A to set up a visit of the course in 2011.

It would be a fitting reward for the only true links in the largest county in the country.
