Modern top dresser units have enough design variation within them to make selecting the right one more involved than it may at first appear. We look at the all-new Rink SP950 pedestrian and Rink DS800 trailed models from Charterhouse Turf Machinery.

Charterhouse Turf Machinery Rink top dressers

Rink DS top dresser model numbers helpfully indicate the unit’s level load hopper capacity in cubic metres. So the DS800 has a capacity of 0.80m³, the DS1200 offering 1.2 m³ and so on. The DS800 is offered in capacities of up to 3.8 m³, with the DS3000 coming in both trailed or mounted versions, fitting kits for the latter enabling them to bolt directly to turf trucks such as a John Deere ProGator or Toro HD Workman. Trailing model Prices range from £9,000 for the trailed DS800, the extra high capacity DS3000 listing at £26,778. Mounted DS800 units are £8,800 plus a mounting kit specific to a given turf truck costing £938.

Rink direct discharge machines are offered in mounted and trailed versions with spread widths from 1005mm through to 2020mm – as indicated by the model number. Prices start at £8,000 for the Rink 1000. New for 2011, the pedestrian SP950 is a direct discharge design with a capacity of 0.33 m³ and a spread width of 950mm. It is ideally suited to top dressing bowling greens and any turf with restricted access. Priced £7,600, the SP950 is powered by a 6.5hp Vanguard petrol engine and features a hydrostatically driven triplex undercarriage. This is designed to enable the unit to turn within its own length.

With a broadcast design you can vary the spread width, with some models spreading up to 16.0m dependent upon material and the capacity of the unit in question. A Rink DS800 has a spread width range of between 2.0 to 12.0m. If the aim is to discharge in a ‘window’, the discs of a broadcast machine can either be slowed right down to narrow the spread width, or, as is the case with the Rink DS models, removed completely for a direct discharge to the conveyor width.

A ‘drop’ discharge top dresser works at a fixed width. Once the desired application rate has been determined by the rate of flow from the hopper and the forward speed of the unit, it should be relatively easy to match each bout pass for an even application of top dressing material. Direct discharge machines are ideal where the spread material needs to be tightly contained.

Where wide areas need to be covered productivity will typically increase using a broadcast machine. For some jobs, such as top dressing a golf green, some users will set the unit to dress the total area in a single or dual pass. This can save a great deal of time. The appeal of a machine that can spread material wide needs to be countered by the requirement or ability to accurately match bouts at those widths.

Once the type of machine has been selected, other top dresser points that may need to be considered will include versatility. As an example, several higher capacity trailed machines can be readily converted into a bulk loader, the addition of a rear conveyor allowing them to discharge directly into a smaller spreader, trailer, a bunker or even into a heap or windrow on the ground.

On trailed models, the variety of wheel and tyre options to choose from varies too; choices can include a relatively narrow track but with four wheels across the width of the dresser body. A conventional axle with wide flotation rubber may also be offered.

On smaller models, both mounted and trailed, there may
The anatomy of... Top dressers

James de Havilland takes a closer look at the intricacies of current machinery

Charterhouse Turf Machinery Rink top dressers

Rink DS top dresser model numbers helpfully indicate the unit’s level load hopper capacity in cubic metres. So the DS800 has a capacity of 0.80m³, the DS1200 offering 1.25 m³ and so on. The DS range is offered in capacities of up to 3.8 m³, with the DS3800 coming in both trailed or mounted versions, fitting kits for the latter enabling them to bolt directly to turf trucks such as a John Deere ProGator or Toro HD Workman. Trailing model Prices range from £7,600 for the trailed DS800, the extra high capacity DS3800 listing at £20,778. Mounted DS800 units are £8,800 plus a mounting kit specific to a given turf truck costing £938.

New to the UK, the pedestrian controlled Rink SP950 has a capacity of 0.33 m³ and a spread width of 950mm. Powered by a 6.5hp Vanguard petrol engine and follows the same design as existing Rink top dressers.

The appeal of a machine that can spread material wide needs to be covered productivity will typically increase using a broadcast machine. For some jobs, such as top dressing a golf green, some users will set the unit to dress the total area in a single or dual pass. This can save a great deal of time. The appeal of a machine that can spread material wide needs to be countered by the requirement or ability to accurately match bouts at those widths.

Once the type of machine has been selected, other top dresser points that may need to be considered will include versatility. As an example, several higher capacity trailed machines can be readily converted into a bulk loader, the addition of a rear conveyor allowing them to discharge directly into a smaller spreader, trailer, a bunker or even into a heap or windrow on the ground.

On trailed models, the variety of wheel and tyre options to consider varies too; choices can include a relatively narrow track but with four wheels across the width of the dresser body. A conventional axle with wide flotation rubber may also be offered.

On smaller models, both mounted and trailed, there may...
be a choice of an integrated power unit. These ‘self-contained’ models can often be used in conjunction with equipment that would otherwise not have the power, hydraulic flow or PTO to drive a spreader but are otherwise ideally suited to top dressing and spreading duties.

Next up are hopper capacities. It is all too easy to assume that a large trailed top dresser will be too heavy, but it is always worth remembering a nominal 3.0m³ capacity machine can be partially loaded when working on sensitive turf.

In fact a ‘big’ top dresser filled with 1.0m³ of material may offer have a footprint that is less than a smaller machine on narrower tyres with the same load on board.

This leads on to the issue of tyre types and inflation pressures. Without getting into the complex territory of how much load a tyre can take at a given inflation pressure, a simple guide is that a tyre will impart the same ground pressure as its inflation pressure. This is perhaps a bit of an oversimplification, but a big trailed spreader and tractor combination running on tyres inflated to 0.8bar may well exert less pressure on the ground than a turf truck with its rear tyres blown up to 1.0 bar to enable it to take a fully loaded mounted spreader.

So, if you are looking for a new top dresser, you have a few pointers to consider beyond the spreader type.

Entry-level direct drop tractor mounted models with a 3.5m³ body and a nominal spread width of 1.5m will retail from under £5,000, utility vehicle equivalents listing between £6,500 and £7,500.

Spinning disc broadcast spreaders occupy a diverse range, those designed to fit a utility vehicle retailing from £7,500 for a top specification machine. When it comes to trailed models, prices may well start at under £5,000, large trailed units costing over £20K.

To help whittle down your options, it can be useful to set out a few requirements and preferences. These can include:
- Mounted or trailed. Consider units designed to fit to a tractor.
- Vehicle driven or fitted with own power pack.
- Direct drop or broadcast.
- Ability to spread range of top dressings.
- Application rates and hopper capacity.
- Versatility. Will you want to spread solid fertiliser?
- Tyres sizes and inflation pressures.
- Compatibility with existing equipment.
- Projected workload and capacity.
- Type and area of turf to be dressed.
- Additional options offered to improve versatility.
- Ease of operation and setting up.
- Fitting and removal from tractor or vehicle.
- Local support and budget.
- Electric and remote control options.

The Jacobsen Eclipse 322

the only 100% hydraulic-free greens mower available ... anywhere!

Other ‘hybrids’ still use hydraulic motors for propulsion, so when we say no hydraulics, we mean it. Traction, real drive and lift/lower operations are all electrically driven using either a small petrol or diesel engine running a 48 volt generator. And now there’s an all-electric version using a battery pack. It’s stealth quiet and ideal for greens close to housing or hotel rooms.

For greener operation on your greens, less maintenance and lower operating costs, it has to be the Jacobsen Eclipse 322.

By the way, did we mention ... no hydraulics.
