Robert Laycock calls for a simple approach to golf green nutrition.

It was interesting to note that because he was not a keen golfer, the great Jim Arthur was sacked many years ago as the club agronomist by one of my client golf clubs - but that might have been an excuse! Think about what you are doing, and retain a balance between supplying too little and too much. For example, most soils contain adequate amounts of phosphorus for plant growth. If you feel this is the case, drop it from your fertiliser programme, though you may have to shop around to find a fertiliser without phosphorus these days. Just apply what is necessary.

The healthiest greens need to receive nitrogen as the only major nutrient and retain a balance between providing too little and too much. For example, most soils contain adequate amounts of phosphorus for plant growth. If you feel this is the case, drop it from your fertiliser programme, though you may have to shop around to find a fertiliser without phosphorus these days. Just apply what is necessary.
