When David MacIndoe was made redundant from his Course Manager role he became a Lawn & Sportsground Consultant – and one of his first challenges was a role as grow-in consultant for Belarus’s first ever golf course. It’s a nation where temperatures can drop to minus 20 with snow cover for a third of the year – and here he tells GI how he battled language barriers, snow mold and missing home.

April 28

After securing a visa I’ve started work on a three month grow-in the quite lovely city of Minsk. I checked out the course with Maris Gullans, owner of Modo Golf, who have built many courses in Eastern Europe, along with Head Greenkeeper Andrey and our interpreter.

It’s good to get an immediate feel for what appears to be a first-class project and golf course. Heather, pine and silver birch trees dominate the site, a real heathland piece of land that in time and with good management could be as good as the best heathland courses that we take for granted in the UK.

The back nine is under construction, but the front nine which was constructed last year and sown towards the latter part of the year look like a desert. I’ve got a feeling this is not going to be straightforward.

The greens sown with Jacklin bent grass did not survive the winter – how could they after having snow cover for 119 days? 30 days under snow can mean problems, 60 days under snow means you have to accept plant loss, after 90 days expect the worst. So 119 days with a one-week thaw in the middle of January means desiccation to 90% of plant cover.

Tees, fairways and roughs sown with a bent/fescue mix survived better, grass cover is around 70% although some areas are thin, weak and stressed but at least I have something to work with. Snow could sows cover all areas of the course, but it’s now actually lovely and sunny with temperatures of 20 to 25 degrees.

Day two features full overseeding of the front nine greens to be followed by the front nine tees. The fairways need tender loving care in the shape of plenty of irrigation and a quick application of the only fertiliser available - an agricultural balanced with a lovely prill of approximately 3mm. Great on fairways not quite so good on greens – but my first rule is be adaptable and get on with it.

May 13

My second week has been another marathon of 12 hour days, but very enjoyable and with temperatures now approaching 30 degrees, work on the irrigation system is the main focus. It’s quite a major system with extremely deep wells and three big Grundfos pumps. On the nine seeded holes, nine hole academy course and driving range they have constantly been putting out 800 cubic metres a day - I hope they can cope when 18 holes are up and running.

May 27

I saw my second snake on the course – black with yellow markings. I didn’t hang around to take a photo! The hot weather resulted in thunderstorms so it has taken a lot of pressure off the constant irrigation.

We are now cutting all the front nine greens and tees and will cut all the fairways on the front nine this week too.

May 30

I have secured a second visa until the end of June – via an interesting overnight train journey where I shared an open carriage with three ladies! I’d like to say to my wife Sharon that it was all totally innocent and they even shared some food with me…

It’s good to be back at the course – things are settling down well. We’ve established a better routine and I feel much more in control.

We now have 14 holes seeded and are cutting holes 1 to 13 plus the 18th hole and the 17th green.

We have received a consignment of 1.2 tonnes of green grade fertiliser - florinid 16-28-5 with iron and magnesium – not my first choice but hey, any port in a storm!

The greens have responded well compared to the agricultural products used previously so, for all you cynics out there, it really does pay to
From Belarus with love

When David MacIndoe was made redundant from his Course Manager role he became a Lawn & Sportsground Consultant – and one of his first challenges was a role as grow-in consultant for Belarus’s first ever golf course. It’s a nation where temperatures can drop to minus 20 with snow cover for a third of the year – and here he tells GI how he battled language barriers, snow mold and missing home.
use the best products... sometimes!

The last remaining holes have also been seeded. The construction crew are now concentrating on washout area so they remain very busy especially after a storm brought six inches of rain in 12 hours (although there is no official rain gauge, just a bottle of coke with the top cut off).

June 14

The whole golf course is now seeded and is all mine to grow-in, happy days!

There’s much excitement as the John Deer fleet of new machinery started to arrive. I believe my good friend Howard Storey, Product Marketing Manager for JD Europe and Middle East, put in a considerable amount of effort to break new ground for JD in this part of the world.

So construction is finished but of course there are still difficulties in the world of growing turf! The constructors are now driving all over the young grass to clean out, prepare and sand all 80 bunkers.

This is sadly typical in the life of a greenkeeper - we nurture and spoil the young grass and try to present it at the highest levels but as we are all too well aware, nothing ever goes as smoothly as it should.

June 24

We’re now cutting all eighteen greens. The snow mold scars have been eradicated and the reseeded greens are all performing well. As one problem is fixed, however, more arrive - this time in the shape of the construction crew and nature itself.

Temperatures have soared into the middle 30s alongside humidity of 90% resulting in some damping off and Rhictonia brown spot showing on several of the greens, particularly the newer back nine. Getting chemicals is a problem here. I asked that they be stocked in my first week on the course but I’m still waiting. It could be an interesting week ahead!

Only the fairways of 14 to 17 are still waiting to grow enough for cutting and then the whole course will progress as one entity.

The course is now progressing well, but not without a few expected and unexpected disasters!

I expected washouts, disease and a few minor problems, but I didn’t expect the pump house to be hit by lightning, destroying the phase box and 24 decoders.

A new box was found in Sweden and will be sent to us immediately. Fantastic – until we realised it was being sent by boat – and we’re 1000km from the sea!

Have you ever tried irrigating 700 plus heads by hand in 15 hours of 30C of heat?

It’s been a tough time. But as we

“I know most greenkeepers will understand the ethos of my course, my baby! However I miss my family and friends and Belarus is difficult to get to”

Keep an eye on an upcoming edition of GI as David updates us on the latest from Belarus…

Only the fairways of 14 to 17 are still waiting to grow enough for cutting and then the whole course will progress as one entity.

The Club have approached me to continue to advise them on a full time basis for the rest of the season and to prepare the course for the opening, expected in late August. They would also like me to help the Head Greenkeeper train and develop the new staff. I’m considering my options.

I like the people who are all friendly and helpful - although the language is very difficult. I like the terrain and the character of the course, my baby! However I miss my family and friends and Belarus is difficult to get to.

July 10

The course is now progressing well, but not without a few expected and unexpected disasters!

I expected washouts, disease and a few minor problems, but I didn’t expect the pump house to be hit by lightning, destroying the phase box and 24 decoders.

A new box was found in Sweden and will be sent to us immediately. Fantastic – until we realised it was being sent by boat – and we’re 1000km from the sea!

Have you ever tried irrigating 700 plus heads by hand in 15 hours of 30C of heat?

It’s been a tough time. but as we...
near the end of my contract there’s a great deal of satisfaction that despite major setbacks with irrigation, fertiliser, delays and washouts we are in a position to hand over the golf course from Modo and their partners GTP services and myself.

July 10

I’ve decided to continue as full-time advisor consultant, trainer, cook and bottle washer till the end of the season.

Sorry to all you guys who were seeking my experience - I am out of circulation till November!

Now I have to assemble a brand new greenskeeping team - no point in advertising for experienced greenskeepers in a country with zero golf courses! So it is back to the wall time once again.

July 16

Started training three new staff this morning. No time to waste as the contractor finishes in four days. So no raking bunkers, flymowing, divoting as normal for new staff – they’re straight in at the deep end cutting greens!

What fun we had, me with no Russian and them with no English - isn’t sign language a wonderful tool? We started at 9.25am and had all 18 greens cut by 5pm. I did have some minor problems getting the Health and Safety message across before cutting could begin.

But that evening I sent three very tired but (I think) satisfied budding course maintenance crew home happy that they had conquered and mastered that wild animal known as the greens mower!

Tees and greens surrounds quickly followed and in less than a week they are becoming quite proficient. Next task will be fairways and roughs and flymowing, but will leave that for the moment.

July 24

I am out of here! Contract with Modo Golf finished – I’m reasonably happy with how the grow-in has progressed although some of the last seeded fairways have suffered with the heavy rain showers and once again, the Modo Golf team are repairing severe washouts.

I am flying into London to meet my family. I think it is true absence does make the heart fonder, I’m looking forward to seeing them all.

I officially start with MGC on 1 August to get the course in top condition for opening on 1 September.
