THE MAJOR GROUNDSMAN ROLLERMOWERS

- No V-belts - fully gear driven through shock absorbing couplings
- Opposite rotating blade eliminates any windrow ing and evenly spreads cutting
- Cutting heights from 1\(\frac{1}{2}\)" - 4"
- Ideal for parks, amenity areas, golf courses, playing pitches and sports grounds
- Various sizes available
- Patented easy skid adjustment
- 3" blade overlap
- Full width rollers front & rear

Supertox 30 dismisses over 22 different turf weeds

SUPERTOX 30 is the U.K.'s number one selective turf herbicide with an established reputation for reliable broad-spectrum weed control.

SUPERTOX 30 may be used on all established turf types, and a flexible dosage allows you to choose the most effective rate for your weed problem. It's available in a 5 litre Tip 'n Pour container or a 25 litre drum.

CDA SUPERTOX 30 has been formulated for use through the LANCELOT Controlled Droplet Applicator. With no water to add and no mixing, weeds are dismissed with ease.

Supertox 30 & CDA Supertox 30 Contain 2, 4-D and Mecoprop. Read the label before you buy: Use Pesticides Safely.
It’s time for the programmed approach to disease control in turf.

‘Greenshield’ is the ideal product for use when the turf is growing strongly, as the combination of the contact chlorothalonil and the systemic carbendazim controls disease for up to six weeks.

‘Greenshield’ is recommended for all turf areas and should be applied any time during the year when there is active grass growth. Dependent upon the season this will be any time from late March through to late September.

‘Daconil’ Turf is one of the most popular contact fungicides on the market with a well proven track record for turf disease control during the cooler, slow growing months. Chlorothalonils’ multi-site activity means fungal disease resistance has never been a threat, making ‘Daconil’ Turf the ideal cornerstone for any chemical programme.

Empty containers of both products can be collected and disposed of FREE OF CHARGE using the Zeneca service on (0345) 125398.
The greens are always scarred in the autumn, being variable growth rates of the different grasses you know. The greens are always bumpy in the spring, it's the variable growth rates of the different grasses you know.
