RECRUITMENT

BROCTON HALL GOLF CLUB
ONE OF STAFFORDSHIRE'S PREMIER GOLF CLUBS

HEAD GREENKEEPER
Suitable applicants should have a good all-round experience in the methods and techniques required to maintain and present a golf course and ancillary areas to the highest standard.
They should possess a recognised greenkeeping qualification and be conversant with the use of up-to-date methods and use of resources.
This is an ideal opportunity for an ambitious and dedicated Greenkeeper to utilise his or her skills across the broad remit of course maintenance.
This will include the management and motivation of the Greenstaff and the scope to improve and enhance this vital area of a Members' Club.
Accommodation will not initially be available but an attractive package will be offered. The vacancy arises due to the retirement of the present incumbent after 44 years service with the Club.
Please apply in writing, enclosing a C.V. to:
G. Ashley, Manager, Brocton Hall Golf Club, Brocton Hall, Brocton, Stafford, ST17 0TR

HARPENDEN GOLF CLUB
EST 1894

DEPUTY COURSE MANAGER
Harpenden Golf club (Estd. 1894) is a private members’ club based on an attractive 18 hole Hawtree & Taylor parkland course in one of Hertfordshire’s most sought after locations.
As a result of promotion, the club is seeking to recruit a Deputy Course Manager to work directly with the Course Manager in the full range of managerial, practical and improvement areas.
This is a learning opportunity for an ambitious, forward thinking professional greenkeeper to join a club committed to medium/long term development and a high standard of maintenance.
You will have a proven track record in golf course maintenance and qualified to a minimum of NVQ Level 2. Above all, you will be enthusiastic, hard-working and committed to improving both our course and your career.
Salary and pension commensurate with position
no accommodation available.
Please forward a brief C.V. to:
John Newton, General Manager, Harpenden Golf Club, Hammonds End, Redbourn Lane, Harpenden, Herts. AL5 2AX

January 1999 Greenkeeper International 51
Recruitment

Kingsbarns Golf Links is a recently constructed 18 hole course situated along the beautiful east coast of Fife, with a target date for opening in July of 2000. We are a small, newly formed team who are extremely motivated and excited about this challenge ahead, but we still have vacancies for the above positions.

The requirements for the position of Deputy Course Manager are:-
• Minimum of 10 years links course experience
• Holder of relevant qualifications
• Ability to work alongside junior staff, coaching and training to our set objectives
• To be able to produce work of a high standard
• Be an excellent team player
• Ability to deputise in the Course Manager’s absence

The requirements for the Mechanics position are:-
• Able to maintain and service a large fleet of course maintenance equipment
• Able to work to strict servicing schedules
• Able to work unsupervised applying at all times current health & safety regulations
• Ability to work within set budgets
• Be an excellent team player
• Have a full understanding of Toro Automatic Irrigation System

If you think you have got these and more to offer and you are up for this exciting challenge, write to me enclosing your CV and a brief resume as to why you are the person for these positions. Send to:-
The Course Manager, Kingsbarns Golf Links, Kingsbarns, Fife, KY16 8QD

Closing date for applications 31 January 1999

WESTERN GAILES GOLF CLUB

Applications are invited for the post of
HEAD GREENKEEPER

at one of the foremost links courses (Open final qualifying venue) in the West of Scotland.

The successful applicant must have the appropriate greenkeeping qualifications together with a thorough knowledge of modern greenkeeping practices with a wide experience of equipment, machinery and computer controlled irrigation system.

All applications will be treated in the strictest confidence.

Applications in writing with full CV by 21st January to:
Andrew McBean C.A.
Alexander Sloan & Co. C.A.
144 West George Street
Glasgow G2 2HG

NATIONAL SALES MANAGER

Lely (UK) Limited is the distributor of ‘Toro Commercial Products’ for the UK and Ireland.

Located at St Neots, Cambridgeshire, Lely distributes Turf Maintenance equipment to a wide range of users who include Golf Courses, Local Authorities, Contractors and Sports & Leisure facilities.

We are seeking to recruit for the position of ‘National Sales Manager’ for our ‘Turf Products Division’.

Candidates will be highly motivated, self driven sales professionals with a history of responsibilities ranging from management of sales personnel to control of customer accounts on a national basis.

The ability to communicate at senior level with key account customers and business channel partners is essential.

Experience in ‘fine turf equipment’ would be an advantage.

If you feel this role is suited to you and you would like more details, please apply in confidence to:
Peter Mansfield, General Manager, Turf Division Lely (UK) Limited
Phone 01480 476971 or E-mail: peter.mansfield@lely.co.uk

Greenkeeper

Applicants are invited for the above post. The successful applicant will be responsible for developing and maintaining a 9 hole pay as you play golf course scheduled to open in the year 2000.

Applicants must be qualified and have extensive practical experience in the maintenance and presentation of a golf course and be interested in training young people.

For further details and an application form contact;
Personnel Officer, Oatridge Agricultural College, Broxburn, West Lothian Tel (01506) 854387

OATRIDGE AGRICULTURAL COLLEGE

EAST SUSSEX NATIONAL GOLF CLUB

requires an

January 1999 Greenkeeper International 53
Recruitment

HEAD GREENKEEPER

Stockwood Vale Golf Club
BRISTOL, SOMERSET

A top quality candidate with a proven track record as a Head Greenkeeper is required to manage this busy and successful Golf Club. The selected candidate will be responsible for maintaining the golf course in pristine condition. We are looking for a strong team leader with a thorough understanding of golf course maintenance and the ability to produce good putting surfaces. Full spraying certification and NVQ or City and Guilds to at least level 3 is required.

The Championship length, golf course is superbly located on the edge of Bristol and is just three miles from the City centre. The Club is also only 8 miles from the beautiful and historic City of Bath. The golf course is full of interest; the fairways cross streams and stunning natural features and no two holes are alike. The majority of the course has been built to full USGA specification and is complemented with a computerised irrigation system. The course has been fully and successfully drained. The greenkeeping budgets are substantial and the club has recently purchased all the latest quality green keeping machinery.

The majority of the course has been built to full USGA specification and is complemented with a computerised irrigation system. The course has been fully and successfully drained. The greenkeeping budgets are substantial and the club has recently purchased all the latest quality green keeping machinery.

The existing five greenkeepers are all enthusiastic and have between two and ten years experience each.

The Golf Club is privately owned and, therefore, there are no Committees. The Head Greenkeeper will report to the Club's General Manager.

The salary package will be between £22,000 and £24,000.

Reply with full CV and any reference to: Mr M Ramsay, Managing Director, Stockwood Vale Golf Club, Stockwood Lane, Bristol, BS18 2ER

Dukinfield Golf Club

Dukinfield Golf Club invite applications for the position of

COMING UP NEXT MONTH...

FULL DETAILS OF THE EXCLUSIVE BAYCO SPRING OFFER
This month I would like to turn my attention to a greenkeeping matter. This is something I have always endeavoured to stay clear of. After all what do I know about greenkeeping? In fact what do any of us know about greenkeeping?

I still wince at a memory I have of once playing golf at a course with the most perfect fescue greens the world has ever known. Desperate to meet the genius responsible for these greens I located him and started the interrogation. “What fertiliser do you use?” I asked. “Is the N source derived from aerobi-cally composted organic matter?” “Oh I don’t know much about that,” came the reply. “I’m sure we used some back in the spring but I’m not sure which.” “But what about your aeration technique? Do you deploy the high pressure water injection method?” I enquired. “The what?” came the reply.

As my questions became more and more fevered in a desperate attempt to learn the secrets in his possession, so his answers became shorter and shorter until I was confronted with a series of incoherent grunting noises. At this point the truth dawned on me. Here I was attempting some sort of communication with the man that I was sure had information on the most advanced and detailed turf manage-ment methods in the known universe and yet in reality he was a couple of chromosomes from being the village idiot. Depressing, is it not?

But to get back to the greenkeeping matter in question, I recently played a course in my area, which had 17 excellent healthy greens and one green that looked close to giving up its battle with life. This green although dominated with fine fescue grass was weak, patchy, full of pitch and spike marks, slow to put on and generally not too well. It was the only green on the course, which was built to a sand based USGA specification method, and this brings me to the greenkeeping matter I would like to discuss.

After decades of initial research, experimentation, fine tuning and quite literally thousands of working examples we have evolved a method of greens construction that one would expect to be about perfect. Having worked with such greens for several years now at Sludgecombe Pay and Play I have come to the conclusion that the people who invented them are hav-ing a laugh. Either that or I am a bigger idiot than I thought.

To start with, USGA spec greens perform brilliantly. The grass is quick to establish and drainage is incredible. You get a rapid poa annua free sward and the members believe you to be God. The problems start when golfers feel the time is right to start playing on them. I should have had my suspicions when the first ball landed on the 1st green and left a huge splat of a pitch mark that required several minutes of delicate surgery in which to repair. Then to my horror I noticed a mass of spike marks appearing around the hole. I was not used to this on my previous clubs 100 year old greens. But never mind I thought, recovery would be quick and complete. How naive I was. Recovery came only after the application of what I con-sidered to be obscene quantities of fertiliser and as we were now com-ing into the autumn this was against everything I had previously been taught.

So I was now left with the dilemma, do I feed those suckers as all the reps were telling me to do, or do I leave them to die under the mass of overweight golfers desperate to destroy my once beautiful greens. The problem was the speed in which all colour and growth disa-ppears from them. One minute you have Florida in England, then the next it looks as though someone’s gone out and sprayed growth retar-dant at quadruple rate. Eventually I bowed under the pressure coming at me from every angle and resorted to the fertiliser bag and the inevitable fusarium attack, which followed. So then I was out there spraying copious quantities of hugely expensive fungicides while still desperately trying to keep something resembling grass on the surface.

But there must be a plus side I hear you say. What about aeration, surely that is not required in such intensity? Don’t you believe it. When do you come across black layer on those old established soil greens? You have got to do as much if not more of that operation that annoys golfers than any established greens. If you do not, they puddle...
up, turn a horrible brown colour and exude noxious fumes when ever you attempt a hole change which should be after every other fourball given the spike mark problems.

Now you may call me a whinging old git but I have not finished yet, not by a long shot. Further problems arise when you are forced to close the course due to the wear received on them. “But we have spent all this money on getting the very best construction so as to keep them open,” say the owners. But grass does not grow in the winter whatever the soil underneath. To keep the course open, temporaries are hastily built so the seniors can get their daily inoculation of golf. Then the ladies complain to you through the February blizzard saying “Don’t you know we’ve got our second mid week medal on today?” when you are forced to bring into play a temporary green or two.

When I got this disease all over my greens I immediately buried myself in the textbooks and they all said the same thing; I was stuffed. Sure you could think about a huge-ly expensive acid injection system, or you could add phosphate, which encourages the poa, or you can throw on vast quantities of manganese which probably won’t make any differ-ence but basically you are well and truly stuffed. The only thing to do is wait the two or three years for it to go on its own. In the mean time the members think you are deliberately doing nothing about what they believe to be a virulent form of ringworm on their greens. Actually between you and me there is something you can do if you have Take All Patch. Go to one of those old clubs that still has a store of that highly illegal mercury based fungicide.

Having obtained some, don’t bother spraying it on your greens, just drink it neat. At least it will put you out of your misery quickly. Either that or resort to that tradi-tional old remedy - the bottle. Then when the disease goes by itself, you will only have chronic alcohol dependency to cure, which should be an absolute doddl, compared to Take All Patch.

You may say that I am a whinging old git but wait, let’s look at how to cure some of these problems. Firstly there is the spike mark problem. (Are the perpetrators of sand based greens in collusion with the soft spike manufacturers?) Do not think that this problem is just asso-ciated with creeping bent grass greens because mine are bent/fes-cue and I still have greens that are ridden with ruinous spiked up areas following the first swathe of daily fourballs.

In an effort to solve this problem of global proportions I rang up the STRI. What has their extensive research on the subject revealed? Well actually it appeared that no such research was being done (please correct me if I am wrong STRI). “It could be verticutting,” they said to me. “Are you doing enough?” “Well I used to double verticut every other week and the spike marks were deplorable” I told them. “Are you doing too much they enquired?” “Well I now do no verticutting whatsoever and the spike marks are deplorable” I replied. So there is no answer there. But how about soft spikes, that will solve the problem. Well maybe, but I want to solve the prob-lem on the surface of the green. After all links greens are effectively built on sand and they do not spike up so why do mine.

The question of soft spikes has even come up on TV’s “Watchdog” programme; clubs are now banning people from their course without them. Well I don’t
know about you but I would not like to be charged £6 for a round of golf and have all my spikes changed over. After all I'm a greenkeeper! No, it seems to me this whole matter is getting totally out of hand. Surely there is an answer.

In recent months we had a golf course on the telly with limited golf, highly expensive sand based greens, a very intelligent Course Manager that had access to the best information and he had greens that looked like they had been in a war zone. A short while later we went to The Open at Royal Birkdale only to be confronted with greens that were as perfect at the end of the day as at the beginning. Yes the greens were sand based and fairly newly constructed but the turf was re-laid from the old greens.

Perhaps that was the answer; it is the grass on top that counts. If that is the case, then why are seed companies not collecting this elixir of the turf world at our best courses and growing it on ready for wholesale distribution? I know a great deal of it was poa annua but at other heavily played links and even parkland courses the grass is dominated by bent and fescue species and spiking up is not a problem. Then look at Birkdale's Chris Whittle's account of his own greens in this magazine. He recognised that his new greens are a real headache compared to his old ones at Muirfield. It can't be that we are all idiots. Even Augusta with its frightening budget and its colossal expertise at its disposal has greens that at the end of the day, to be quite frank can look a bit spiked up, especially when they are compared to some of our better links and heathland tracks.

McDivot, you whining old git you may well like to say, but wait, I have one other point to make. One of greenkeeping's greatest mysteries must be the STRI's handbook on turfgrass seed. Why on earth do they assess grass cultivars for such things as summer and winter colour or freedom from dollar spot, which nobody gets or freedom from red thread, which is never a problem? Who cares if it's free of red thread? Freedom of being totally knackered after the first 50,000 hackers have dragged their spiked clodhoppers over them would be a bit more appropriate.

No, no, there are times when I can sometimes believe the best sand based greens come when they have been massively overplayed from day one and the man in charge has then responded to his rapidly dying fescue and bent by applying fertiliser with a size nine shovel. The consequence of this is a rapid take over from our old friend poa annua. Then within a couple of years all you have is uniform poa that still manages to drain pretty well. At that point, fertiliser levels are reduced dramatically and the bent and fescue is reintroduced at its own rate to create something similar to those old established greens that can produce such excellent all round surfaces.

At Sludgecombe I have members, bless them, that have excitedly told me about a relatively new course with the most superb surfaces. "It's all fine grass," they say. So I have paid a visit only to find a uniform 100% perennial poa surface that I have to admit does look good even though I know it isn't right. Then who am I to argue?

Now before I get publicly flogged to death by Jim Arthur's pen, I would like to point out that at Sludgecombe I have attempted to keep them lean and hungry as the books tell us. But you should see my greens after a full day's golf has been through them. Somewhere between ghastly and hideous would sum them up. I am hoping that one day they will settle down and have a vague resemblance to those superb links greens that are fed just once a year. Sometimes in the morning just after they have been cut, in certain lights and if you squint slightly and lower your line of sight so as you can't see the pitch marks and use your imagination, they can look quite good. But I fear I could be in for a long wait before I reach my goal.

So, if you are looking to take on a new, heavily played course with sand based greens then all I can say is, I hope you like a challenge. There, I've got it off my chest, now you can call me a whining old git.

Sandy McDivot.
Head Greenkeeper:
Sludgecombe Pay and Play
Starting this month's notes I realise just how much time I have spent in the company of one or other of the McMillan family. But then as you go round the seminar circuit it's hard not to see at least one.

First I had just come back from the FECCA Conference with Ian two days before the Midland seminar, and the very first speaker of the day was Billy. His paper was one of the best of a very good day of learning, well organised by Peter Larter and chaired by David Walden. The only disappointment was that more members did not support this excellent event. However, thanks must go to Newberry, and that is not taking anything away from the other speakers, but Frank will always be the star of the show.

Then it was on to Carrington for the South West & South Wales seminar, and once again Ian McMillan was a speaker and how nice to see Jack and Rita there in support. The highlight of the seminar was Frank Newberry, and that is not taking anything away from the other speakers, but Frank is so good, and entertaining with it, that he will always be the star of the show.

The day was well run by Paula and Ivor, and once again I thank the members of the Region for their support. I believe 130 attended. The sponsors were Supaturf and Roffey Bros to whom we are all indebted for their efforts. I was only sorry I had to leave a little early to catch a train to York for the GTC meeting.

My next trip is by invitation of the PGA, European Tour to Dubai for the 1998 Greenkeeper Conference, which will be held in the Jebel Ali Hotel from 9th to 12th December. There are three days of lectures and practical demonstrations including a visit to the Emirates and Creek golf courses, hosts to the Dubai Desert Classic, so I am looking forward to that.

This year has passed by so quickly we are already looking at the BTME 99 in the face. I have been to so many greenkeeper events over many years and particularly in my year as your Chairman, but I can honestly say that I look forward to the greenkeepers week in Harrogate more than any other on our calendar. The BTME has got better and better over the years.

The week begins with the National Conference and workshops, followed by the Exhibition and seminars, with the BIGGA AGM early evening on Wednesday, and the BIGGA Banquet on Thursday evening. The week takes in an educational experience you will not find anywhere else, an Exhibition which is the premier indoor show in Europe, and on top of that, it's in Harrogate where you will find a warm welcome wherever you go. Harrogate is also blessed with its elegant architecture offers a variety of night clubs for your entertainment. Wherever you choose to go you will meet greenkeepers and tradesmen to chat and socialise with, in fact even if you arrive on your own it won't be long before you will make lots of friends, and I can guarantee once you have been to Harrogate for the BTME, you will return time and again.

With Christmas and New Year gone we all tend to feel a bit flat and there is no better pick me up than the BIGGA Turf Management Exhibition from the 20th to 22nd January. Make the time and come along. I'll see you there.

With 1998 at an end I would just like to thank you all for the warm welcome you have given me wherever I have been. I have tried to attend as many events as I could, but it's impossible to be at them all, so on a few occasions I have had to rely on Board members to help me out. Their support throughout the year has been great. I would also like to thank the staff who have given me and you excellent help and service all year, and I am sure they will continue to do so.

Last but not least to my wife, Marion, who has given me support and encouragement throughout a year in which she has had her own difficulties to cope with. I wish you all a happy New Year for 1999.
The Articulator

"Quality rotary mowers for a world that isn't flat"

72" low HP requirement

High output 124" precise height of cut

Three 25" articulating cutting decks duplicate the cut quality of three individual push mowers

Deck will fit a wide range of cut front tractor units

Powerful 38hp diesel 96" cut. Height of cut from seat.
