**Devon & Cornwall**

Dartmouth Golf & Country Club was the venue for the Rhone Poulenc & Supaturf March meeting held on Wednesday March 24. Unfortunately, on arrival, the rain started to fall which made playing conditions over Dartmouth’s excellently prepared course, very difficult. Our non-golfing members departed the clubhouse on the now customary tour of the course, but with the weather closing in, they headed for the greenkeeping compound before returning to the warm dry clubhouse. After a superb lunch Paul Clifton, Rhone Poulenc, and John Mullen Supaturf, representing our sponsors for the day, both gave a short presentation on their respective companies before presenting the golf prizes.

Congratulations to Gordon Taminby on his successful defence of the Supaturf Trophy after yet another strong challenge from Tony Ramsden who finished second again! Also, congratulations to Tony James on winning the Rhone Poulenc Trophy. It was nice to see so many Cornishmen in the prizes.

Our afternoon educational talk rounded off the day with Billy Spratt, of Phoenix Irrigation Services, presenting his excellent talk on “Starting your Irrigation System for the Season Ahead.”

The Section would like to thank Billy for his superb presentation. Also, the Section would like to thank the day’s sponsors, Supaturf and Rhone Poulenc for their continued support and to Dartmouth Golf and Country Club for allowing the Section use of their excellent facilities, and to all of Dartmouth’s staff who made our day run so smoothly with special thanks to our Chairman, Terry Farkins, and his crew who had the course presented in superb condition.

Your attention is drawn to the pesticide courses the Section will be holding over the forthcoming months as the grandfather’s clause for operators being withdrawn in the very near future. For more information please contact me on 01288 533438.  

**South West**

The hot and sunny month of May has now arrived and it’s time to rummage through the cupboards and wardrobe and grab those essential summer items of the modern greenkeeper. These include an ill-fitting pair of shorts and a cheap and dodgy looking pair of black sunglasses picked up on a day trip to Western-super-Mare.

Hopefully by now the post Augusta syndrome will have faded away and most of your members will be appreciating your efforts and hard work over the Winter and Spring months with a big improvement in the condition of the golf course.

The better weather should allow for some excellent golfing days this Summer. The next tournament is the Greenkeeper Amateurs event which will be held at Tall Pines GC on 18 May. All entries must be received by the 14 May. In June there is a match against the South West Secretaries which will take place on the 16 June at Emmore Park GC.

Congratulations go to Dave Bougen on his appointment as Head Greenkeeper at Gristhorpe Golf Club. Dave, who has moved from Bath GC, is also Team Captain for the South West Section. Anyone who needs to contact him about team affairs should telephone him on his new number which is 01285 720112.

Now, turning to Education and training, I am still building up a list of names for each course which BIGGA can run. Many of these courses just need a few more places to be filled before the course can actually be arranged and run. In February we ran a Fire Safety for Greenkeepers day at Gloucester Fire Station which was a big success. I am also hoping to run a one day First Aid course in June. If you would like to add your name to this list or to any other course we can run, then please contact me on 01249 783382.

On 25 March we had our Section qualifier for the National Championship on 3 to 5 October to be held at Carden Park, Chester. The qualifying was held at Royal Co. Down. We would like to thank all who turned up on what was a very enjoyable day. The course was in excellent condition with very fast greens. Our thanks to all at Royal Co. Down.

Finally, we would like to welcome our newest member Connor McLaughlin from Donegal who is currently working at Stakis Park. Congratulations to Mark Cassidy who is leaving Stakis Park to take up the job of Assistant Head Greenkeeper at Lurgan GC.

We wish you all the best in your new position. Mentioned twice in two months, Mark is this a sign of things to come?... Good Luck. Eamonn Farrell.

**Model 425D**

96" wide

Manoeuvrability, Safety and Accuracy

The 425D Articulator® features four articulating 25" cutting decks combined with a unique hydrostatic drive unit, and a Kubota 38hp water-cooled diesel engine. The result is a revolutionary, zero-turning radius, wide-area, continuous mower. The 425D has a wider wheel base and lower centre of gravity to provide greater sidehill stability and safer cutting on uneven terrain. A welding kit can be added to dispense of towers, and height adjustment can be changed in just 3 seconds, giving you the finest finish mower in the world.

Our unique patented bolt-driven articulating deck design gives you an unsurpassed quality and accuracy of cut.

**See you all next month!**
Arne van Amerongen, currently working as a Supervisor for Harradine Golf in Dubai, gives some advice on using the local environment to its best advantage.

Nature trek

Architects who try to impose their preconceived ideas on the tract of country on which they have been asked to design a new course, not only penalise their clients with exaggerated costs but frequently create huge unexpected problems.

Working with nature gives a natural acclimatised look to the new course. Trying to reshape the landscape results in an artificial contrived appearance.

This is clearly demonstrated by the construction of a new Golf Course Golf De Lavaux in Switzerland, situated between Lausanne and Montreux. The site was a very rocky hillside at 700 metres above sea level.

Massive rocks weighing 10 tonnes and more had to be ripped out by a D-9 Caterpillar before anything approaching a level fairway could be graded out, let alone green sites.

Burying the rocks was not feasible because of the lack of soil to provide adequate soil cover over the mounts. The problem of disposal of these huge rocks could have been very costly, but they were incorporated into the design both as features and to impart character to the course. One has to consider safety, of course, but when the rough is full of rocks a few massive specimens to penalise
wayward shots cannot be unduly criticised! The rock is behind the green - not in the approach area.

Another sensible use was to spread rocks in the beds of streams to prevent washout and to create attractive torrents as shown in Illustration 3. This prevents erosion, creates an attractive feature and finds a useful home for large numbers of excavated rocks.

Only rarely are courses built in ideal environments. With less than perfect conditions, improvisation and the intelligent use of local materials is far more effective than trying to create an entire new artificial landscape as well as costing much less.
BIGGA incorporates five Regions and 28 Sections, ensuring that there is a steady flow of information between grass roots level and the administrative headquarters.

Each Region has its own Board consisting of a representative from each of the Sections and is serviced by a Regional Administrator as follows:

Peter Boyd - Regional Administrator for Scotland.
Covering Ayrshire, Central, East, North and West.
Tel. 0141 616 3440

Douglas Bell - Regional Administrator for Northern England.
Covering North East, North West, Northern, Cleveland, Sheffield and North Wales.
Tel. 0151 431 0433

Peter Larner - Regional Administrator for the Midlands.
Covering East Midlands, Midland, East of England, Berks, Bucks and Oxon and Mid Anglia.
Tel. 01480 437507

Derek Farrington - Regional Administrator for the South East.
Tel. 01903 260956

Paula Humphries - Regional Administrator for the S West and S Wales.
Covering South West, South Coast, Devon and Cornwall and South Wales.
Tel. 01208 352194

BIGGA also has two sections in Northern Ireland

For more information on the many other benefits that BIGGA membership can offer you, and for an application form, contact your local Regional Administrator, or Tracey Maddison, Membership Services Officer, at BIGGA HQ on 01347 833800
Chelation
MAKES THE DIFFERENCE

Fe 8% is a unique, patented phosphate citrate chelate which provides an 8% concentration of fully chelated iron in a highly soluble form.

Guaranteed nutrient analysis:
Available Phosphoric Acid (P₂O₅) 5.0%
Soluble Potash (K₂O) 8.0%
Iron (Fe) 8.0%
8% Chelated Iron
Derived Iron Dipotassium Phosphate and Iron Phosphate Citrate

Contents 10 litres

Longest lasting green-up.

**The difference is Flowtronex**

Whether you want to keep your green green or your pitch perfect, Flowtronex makes the difference.

Flowtronex variable speed pump sets are the heart of any irrigation system, boosting flow and pressure wherever it is needed to make the most of your landscape.

Integrating the latest in variable speed technology with superior design, engineering and construction, Flowtronex brings you energy savings of up to 50% and reduced maintenance costs.

And when you order a Flowtronex pump set you can have every confidence that it has been designed to meet your specific requirements – from bowling greens to championship courses.

With a pump set from Flowtronex you can see the difference.
Bill Oliver gives a helpful look into sprayer safety and new European and HSE standards of compliance with a view to up-dating or buying new sprayers.

it with confidence
Spray

Does your sprayer need updating? Will the one you buy comply with the latest machinery safety regulations? What are these regulations? You may find that equipment bought in the last 12 months does not meet required standards. I'm afraid there is a need to constantly reassess and accordingly up-date all machinery, not just sprayers, and to introduce engineering controls that further reduce injury and exposure to operator and the environment.

Employers have a duty to supply equipment that is safe for use. The new provision and use of work equipment regulations came into effect on 1 January 1998 and state that it is the responsibility of the end user, where reasonably practicable, to up-grade existing equipment to conform to the latest standards.

OK - where do we start? First, for those making the best of what they have already got. If your sprayer is lying in the yard, is over three years old; is rusty, with cracking pipes and a well-used pump, then it's not so much “What can I do?” but “How can I safely and legally dispose of the contaminated unit?” If your sprayer is clean and has a good size pump it may be worth bringing it up to the latest standards. However, remember that paying out for the new add-on features for your old sprayer does not alter the fact that there is still the heart of an old unit underneath.

Second, for those looking at a new sprayer. There are lots of factors which you will have to consider in choosing the correct specifications which will work best for you and comply with all the latest recommendations and guidelines. Increased safety doesn't come without a price, but with this price you gain from higher work rates, a wider spray window and automation of essential functions from within the cab.
Contrary to popular belief size does matter. Larger capacities do save time, money and most importantly, reduce the amount of handling of concentrated chemicals.

What is right for you? With a larger tank you can maintain a higher work rate, although if the ground is soft or steep in some areas you don’t have to fill the tank right up. Think first and then ask our advice. We at Gambetti make a large range of truck-mounted units of 350/450/600 litres and 650/850 litres for longer wheel bases.

Tractor-mounted sprayers are available from 200 to 1000 litre. Trailing sprayers range from 630 to 1500 litre with special units designed with you, for you.

However, many other factors influence the chemical application and price of sprayer.

**Pumps**

The diaphragm pump is the best for reliability and the ability to handle abrasive substances and suspensions. Beware, there are a lot of sizes. Some manufacturers sell small pumps on small sprayers but a 3-diaphragm pump as standard gives excellent output without having to run at full throttle, thus relieving wear and tear on the pump and giving a smoother, quieter vehicle.

**Controls**

Pesticide regulations state that you must have a pressure balance unit such that if you turn off one section the others should not increase in pressure. I have yet to see the same in writing for sprayer legislation. This type of control will also allow for increase/decrease in forward speed as long as you do not change gear. Beware hydrostatics!

Hydraulic drive pumps have similar increase/decrease as direct drive units and usually are within plus or minus 2% of sprayer output but please check induction tank/chemical hopper.

Here’s where there are big changes under Supply of CO

**Great golf is built on**

**Top sport**

At Tarmac we take sport and leisure extremely seriously. Created to satisfy the most exacting professional requirements, Top sport is a tried and tested range of specialist products for use in the construction and maintenance of a vast array of sports and leisure surfaces, and has been used by some of the UK’s premier sporting venues.

Used extensively by golf courses throughout the UK, including Royal Birkdale, our impressive range of rootzones (up to USGA Standard), topdressings, bunker sands, pathway materials and drainage aggregates ensure maximum performance all year round.

Top sport products can be supplied nationwide and are matched by first-rate technical and sales support from Tarmac Quarry Products, the UK’s largest aggregate producer.

Not only determined to meet, but to exceed customer expectations, our aim is to ensure that whatever your particular needs, Top sport has the proven experience, quality and expertise to help you achieve perfect results.

Machinery (Safety) Regulations BS EN 907 Agricultural and Forestry Machinery Sprayers and Liquid Fertiliser Distributors.

**Chemical Induction Hopper**

The BS EN 907 standard states that sprayers shall be equipped with a transfer device and HSE takes this as a device complying with ISO 5681: 1992 and meeting the test standards of BS6356 parts 8 and 9. The EN 907 standard does go on to say that "if this is not possible" the filling hole on the sprayer shall be so positioned that the height from the ground or from a platform is not more than 1500 mm and the horizontal reach between the rim of the hole and the rim of the tank shall not be more than 300mm. The important words are "if not possible."

A manufacturer's technical file must show that it is not possible to fit a transfer device before they take advantage of the direct filling into a sprayer using the dimensions referred to. Examples of when the "not possible" derogation may be applicable would be if the induction hopper caused stability problems on the sprayer (eg if the system was very large in relation to the sprayer) or if there was no safety benefit from fitting it (eg the induction system could only be fitted in such a way that filling had to be carried out at a similar height as filling direct into the spray tank.)

HSE would look very critically at any claim that fitting any form of induction system was not possible. Certainly cost would not be a factor normally taken into account in such a decision and, for example, HSE would not consider claims that an induction system could not be used because the sprayer pump had too low an output for the syst...

Club Car UK Plc Dunmore Court, Wootton Road, Abingdon Oxfordshire OX13 6BH

**NEW CLUB CAR ALL-TERRAIN VEHICLE FEATURES**

**DIFF-LOCK TRACTION**

Club Car has launched the new XRT 272 rough terrain vehicle for construction, greenkeeping and general maintenance applications on golf courses. Based on extensive input from golf industry customers, the versatile XRT 272 model features a strong, durable design combining excellent load-pulling and hill climbing power with superior stopping ability, enhanced stability and increased traction via a differential lock system.

The XRT 272 model is a multi-purpose utility vehicle – it can easily be transformed from construction to maintenance mode simply by replacing its heavy-duty, all-terrain, four-ply rated tyres with turf tyres for working on grass. The XRT 272 vehicle is also fun to drive, providing versatile and tangible proof that utility vehicles can be tough and attractive at the same time. Users can customise the XRT 272 with accessories such as a light bar with halogen worklights; a 680 kg (1500lb) rated, remotely-operated front or rear-mounted winch; a hydraulic dump or electric lift bed; side step bars; a heavy-duty brush guard; a bed liner; a canopy top and windshield and beverage holders.

While competitive products have been engineered for other applications and then adapted for golf course use, the CLUB CAR XRT 272 vehicle was designed specifically for golf course professionals. “During golf course construction, tough ground conditions are often encountered. We have engineered a smarter, stronger, more versatile machine - one with power, stability, traction and stopping power to conquer trackless terrain and work harder in the field, where it counts,” said Jerry Hanss, Regional Manager for Club Car Europe. By combining these advanced features, Club Car has created a utility vehicle that is without doubt the best in its class.”
tem to work as a fair reason for not fitting an induction system - if this was the case it would suggest that the manufacturer had not met essential health and safety requirement 1.1.2 that relates to integrated design.

Overall HSE considers that in all but the most exceptional circumstances induction systems should be a standard fitting.

From a wear point of view I would also recommend a venturi type unit which puts the chemical into the tank without being taken through the pump in neat concentration, thus relieving clogging and wear on valves. This will not allow any neat chemical to be accidentally left in either the control or the pump. Concentrated chemical is thus never pressured over 0.5 bar.

Clean Water Containers
BS EN 907 is clear that all sprayers shall be equipped with a clean water tank with a minimum capacity of 15 litres. There is no exemption for small sprayers. HSE therefore considers that a clean water supply should be a standard feature of all sprayers.

Protective Clothing Lockers
BS EN 907 does not cover these nor, specifically, does the Supply of Machinery (Safety) Regulations. However, it is still the view of the HSE that to meet the duties imposed by Section 6 of the Health and Safety at Work Act 1974, they are an item which should be provided with any sprayer to help avoid the contamination which will be inevitable if contaminated gloves or clothing have to be kept in the cab.

Hose Pipe Holder
This holds the hose a safe distance from the contaminated tank to prevent suck back into the mains water supply but also stops the next user of the hose from being contaminated.

I would like to see the following safety features added to the above list.

Multi Turret Nozzles
These cut down on nozzle change contamination. They encourage operators to select the correct size of nozzle tip to give the correct droplet size on the spray target, thus cutting down drift and using expensive chemicals to full effect environmentally. It can now be considered an offence to the environment if spray drift is deposited other than on target.

Swath marking with foam marker and spray dyes also increases the accuracy of chemical application by minimising overlap and overdosing.

Low drift nozzles are very good and I hope to do an article very shortly on these.

Some of this article will seem very basic to trained end users but there are hundreds, probably thousands of sprayers in golf/amenity use that do not come close to these safety specifications from the HSE let alone the new legislation from the Environmental Protection Agency. Most sprayers are very poorly looked after but expected to be ready for use at any time and in an emergency.

I hope I’ve helped and look forward to seeing all of you at shows and on my travels. Have a good year.

Bill Oliver works as Technical Sales for Gambettibarre (UK) Ltd who also supply the Rogers Windfoil Booms which fit on any sprayer.
