background but the picture is actually made by the golfers on the green, who catch the eye," said Eric.

Eric and Alan were extremely impressed by the overall standard but had some advice for those whose pictures didn't make it to the winners' rostrum.

"Light is very important and the best time to take a picture is either very early in the morning as the sun rises or as the sun is beginning to set. That way you get more depth to the picture and can capture some lovely shadows," explained Eric.
"Also don’t place the main focus point of the photo in the middle of the frame. Use the rule of thirds and keep the main element of the picture a third in from one of the corners. If you look at some of the famous pictures painted by the great masters you will see them using the same technique."

Several pictures which might have made it to the final 12, and thus form the 2007 BIGGA calendar, were ruled out because they had been submitted digitally and were either too small, were not of a high enough resolution, or both.

Stephen will receive a choice of any framed picture from Eric Hepworth’s Collection and Golf Park Noulen will be profiled in the magazine in the forthcoming months, while Gary and Iain can choose from slightly smaller prints from Eric’s extensive collection.

Kubota

F80 Series - The team that works as hard as yours

Designed to make your job easier, Kubota's F80 Series high performance, out front ride-on mowers deliver outstanding durability and superior operator comfort for all professional mowing needs. Powered by Kubota's unique E-TVCS water-cooled diesel engine, the F80 series offer exceptional productivity and fuel economy whilst maximising power delivery for demanding day-long commercial mowing operations.
Modern cabs offer much improved all-round visibility. Think too about noise levels and the need for air conditioning. Are sealed cabs the way to go when carrying out spraying?

Tractors: Don’t let choice get in the way of the right decision

Match the correct combination of tyres, power, manoeuvrability and lift capacity correctly, and it is possible to buy a tractor today that could well still be in use some ten or more years into the future. Try doing that with any other item of equipment. James de Havilland discusses...

It is tempting to open any item on current ‘small’ tractors with something along the lines of ‘modern tractor designs pack more power and manoeuvrability into increasingly compact packages’. On the face of it, this certainly seems the case. The reality is somewhat different. Small tractors are harder to pigeon hole these days, the sub-compact, compact, small or even turf tags we used to hang on tractors having morphed into groups that are far less structured.

Without really trying, it is possible to come up with a list of well know tractor brands that, between them, should contain a model to suit most needs. In fact it is tempting to suggest the dealer who sold the Deere, Jacobsen or Toro kit used on the course could probably come up with a choice of Deere, Iseki, Mitsubishi or Kubota tractor for 90% of users without having to look any further.

But it is worth digging a bit deeper. Tractors from the agricultural sector ‘big boys’ also make a range of interesting smaller models. Massey Ferguson brand owners AGCO includes small Fendt models, for example. CNH, which has Case IH, New Holland and Steyr in its stables, also has some interesting kit on offer. Then there is McCormick, a company that, like Landini, can draw upon Italian flair to come up with some genuinely interesting tractors.

Then there are the smaller, specialist importers with some tempting kit. Goldoni, Carraro, BCS Volcan, Riko, TYM et al are a few examples. There really is a long list of available models, but not all are suited to work on a golf course.

To help establish what machines are worth having out on demonstration, set out the basic ground rules. A call to a couple of tyre specialists early on can also help. It is surprising how the tyre options they have specified for end users can help. A specialist who can specify a different wheel and tyre package can really start to open up the choices. Want to run a 75hp monster on your greens? With the right tyres and wheels, why not?

As an initial guide, remember the basics. Modern tractors should have fewer compromises, greater choice - making it less stressful to select a design that will do all the jobs asked of it. Put the intended tasks at the head of the selection process, and the right make and model will probably choose itself.
Tractors: Don't let choice get in the way of the right decision

• Transmission. This is where matters can get complex if you let them! In outline it has been established that hydrostatic drive is the way to go for variable speed applications such as mowing, but mechanical drive 'mid-range, gear 2 at 1,800rpm' is still the route most prefer for certain often repeated precision jobs such as spraying or top dressing. Where it gets complex is when semi-powershift, shuttle and creep speeds are added into the mechanical transmission mix. The key is having the right gear speed choices within the critical 0.5 to 10kph working range.

• 2WD or 4WD. Few courses will 'need' the extra traction afforded by 4WD. The key issue, however, is not the drive to the axle itself but the influence a driven front axle will have on standard tyre equipment offered, the ballast effect of a heavier front axle and its influence upon turn radius. A 4WD tractor in 2WD can have a perfectly acceptable lock, but does the inertia within the axle influence how the front tyres scuff during a turn?

• Engine power. Manufacturers will offer a range of essentially the same tractor with a choice of power outputs. It is always tempting and easy to suggest going for as much power from a given package as possible. This buys enough 'surplus' power to cope should larger equipment be purchased in the future. But think before going down this route, particularly when going up a class A 92hp ag tractor on turf tyres does not suddenly become ideally suited to the demands of golf, but it shows what can be achieved. All this good work will be undone by those rock hard trailer tyres!

A FEW BUYING CONSIDERATIONS:

• Rear linkage capacity. How much can be raised on the rear linkage is important, but lift capacity on its own is only part of the story. A critical factor is how much can be raised without having to add front ballast to exploit what it can potentially lift. A physically larger tractor with a longer wheelbase may end up as a 'lighter' package, on the right tyres, than a smaller tractor with ballast.

• Engine power. Manufactures will offer a range of essentially the same tractor with a choice of power outputs. It is always tempting and easy to suggest going for as much power from a given package as possible. This buys enough 'surplus' power to cope should larger equipment be purchased in the future. But think before going down this route, particularly when going up a class size to benefit from increased lift capacity.

• Cab, ROPS, Straddle or platform. The choice between a cab and ROPS tractor is pretty obvious, an air conditioned and heated cab having obvious attractions. Risk assessment needs taking into account in this decision, particularly on tractors that may be used for spraying. Some tractors may even have sealed cabs that, when fitted with active carbon filters, influencing the safety equipment that needs to be worn when applying certain materials. Traditional straddle tractors, with the transmission tunnel running between the operator's legs, and typically the gear levers too, are rivalled by platform designs with a flat floor and side mounted levers.

• Front linkage. A growing number of small tractors can be specified from new with an integral front linkage or retrofitted with one at a later date. The actual number of uses on a course for front linkages

• PTO. Most tractors will come with a single 540rpm PTO, but a more powerful model may benefit from a 750rpm 'economy' 540 rpm PTO speed choice. This allows 540 rpm to be delivered at the PTO at greatly reduced engine speeds. Tractors of 55hp plus may offer this. Ground speed PTO is another option. How the PTO is engaged is also a consideration. A simple lever and live PTO system is a good starting point, electronic selection not being the gimmick it was once seen to be; modern designs should modulate power uptake to the PTO, avoiding the harsh engagement associated with some early designs.

A simple tractor and loader combination is fantastically useful, but there is no reason why this same tractor, fitted with the right tyres and without its loader, cannot be used to top dress or spray the greens

A 92hp 'ag' tractor on turf tyres does not suddenly become ideally suited to the demands of golf, but it shows what can be achieved. All this good work will be undone by those rock hard trailer tyres!
Operator comfort. There is more to comfort than just choosing between a cab and ROPS model. The way the controls are laid out, levels of noise and vibration plus the type of seat fitted are all critical. On paper specifications are one thing, but actually jumping on a range of different tractors really can highlight just how they vary. In an ideal world, the trick is to draw up a shortlist of models and then try them side by side. A modern looking tractor may be hiding ancient 'oily bits'. The obvious first choice is not always the best choice.

Front loader. Even if a loader is not at the top of the wish list, it can pay to buy a tractor with a loader ready specification. A tractor that can be specified with mid-mount remote valves with a joystick control have a head start if a loader is purchased at a later date. A specification that can include a shuttle transmission for fast changes between forward and reverse, with or without the clutch, is also worth considering. There are also models that are offered with a choice of loader designs from the factory. These may come at a favourable 'package' price.

Tyres. It is really important to think laterally on the tyre issue. Turf pattern tyres are not necessarily low ground bearing pressure tyres. The standard tractor wheel rims are also not the only ones that can be fitted, offset rims allow far fatter and softer rubber to be fitted. Of equal importance there is no reason why a tractor should be shoed with just one set of wheels and tyres. Around 20 minutes with a jack and air wrench should be enough to swap between standard tyres for trailer, loader and hard surface duties and soft turf friendly rubber for top dressing, spraying or coring.

A modern tractor should is far less likely to leak oil, but accidents can happen. It is well worth using biodegradable oil in the hydraulics. This will not prevent hot split oil scorching the turf, but it will allow the damaged area to recover much faster.

Modern tractors can look pretty stylish but it is the bits you cannot see that really matter. Good ergonomics, the right range of gears and enough lift without too much ballast up front are more important.

A tractor with 4WD can be extremely manoeuvrable. A flat tread at full lock is a point to look at as it will help reduce turf damage during a really tight turn. A simple test is to do a few 'doughnuts' with a demo tractor.
Trilo vacuum, sweep, scarify, cut, spread and blow!

**The world’s No 1 in Vacuum Sweepers**

With 35 years’ experience and a range of quality machinery, it’s easy to see why Trilo is the world-leader in vacuum sweepers.

Built to an extremely high standard, the wide choice of models and numerous options available ensures you can trust Trilo to make your job easier and more efficient.

Trilo have a range of quality high specification groundcare equipment which offers the complete solution for scarifying, cutting, spreading, mowing and blowing.

Horne Park Wins Through to the USA

Horne Park GC from Surrey, has won the Great Britain National Final of the 2006 John Deere Team Championship, held for the first time at East Sussex National GC, Uckfield, in September. Steve Mitchell reports...

The winning team from Home Park - made up of Club Owner Neil Burke, Secretary Elaine Purton, Head Greenkeeper Danny O’Rourke and John Deere Dealer Salesman Andy Page of Palmer’s Turfcare at Hailsham, East Sussex - will be travelling to America in November to play in the 20th John Deere World Team Championship Final. This is being held at Reynolds Plantation Resort in Georgia, with the winners from Great Britain and Ireland playing against teams from Asia, Australia, Canada, Germany, Norway, Sweden and the USA.

Horne Park’s net score of 57 (15 under par) in the modified scramble event, was 1.7 shots ahead of Welwyn Garden City from Hertfordshire, and 2.1 ahead of the third place team from Tydd St Giles Golf and Leisure Centre in Cambridgeshire - whose greenkeeper Kevin Goude, won the prize for Longest Drive at the East Course’s 446 yard 9th hole. Nearest the Pin on the 137 yard 8th hole was won by Jim Fergusson, Secretary at Douglas Park GC in Glasgow.

“Going to the USA will be the experience of a lifetime for all of us,” said Home Park GC Club Secretary, Elaine Purton. “The way we played in both the regional and national finals, we thought we had a pretty good chance of winning. Over 36 holes we really couldn’t have done any more; the final was enormous fun, everyone played their part and it really was a team effort, right the way through.

“In a scramble format things have to happen for you, and they did - we chipped in three times, holed a wedge from 80 yards... about the only thing we didn’t manage was a hole in one, so we knew we’d take some beating on the day. We were all very impressed with East Sussex National, the course and the facilities were excellent all round, and now we’re really looking forward to representing Great Britain in the World Final in November.”

Altogether 21 John Deere dealerships organised Regional Qualifiers for this year’s tournament, the fourth held in Great Britain and Ireland, with a total of 362 teams competing across both countries. Adare Manor Hotel and Golf Resort from Co Limerick won the Irish National Final, also held in September for the first time at the PGA National Ireland and Palmerstown House golf resort near Dublin.

Donations are traditionally made to greenkeeping associations in all the countries which take part in the Team Championship, and this year John Deere Limited has contributed a total of £9050 to support the educational activities of BIGGA and GCSAI (Golf Course Superintendents’ Association of Ireland). Donations to BIGGA now total £34,475 since the Team Championship started in Great Britain and Ireland in 2002.
Greenkeeper International brings you ‘In the Shed’, a puzzle page to keep you entertained when the weather forces you in or for when times are slow.

A SAGA LAY ART

QUICK 'NINE HOLE' QUIZ
1. Who scored Scotland's only goal during Euro 96?
2. Who did Manchester Utd beat during the 2001/02 season 5-3 after being 0-3 down at half time?
3. What is Dom Perignon famous for producing?
4. Name the German born player who won three Wimbledon and four US Open titles and captained his county in the Davis Cup.
5. Newcastle failed to qualify for next season's Champions League after a 3-3 draw with Southampton. Who scored Newcastle's last minute equaliser?
6. Which sport is hoping to become an Olympic event in 2008?
7. Who in 1999 became the first teenager to take part in the Ryder Cup?
8. Which member of England's Rugby World Cup winning team became the latest player to retire?
9. Which boxer said Audrey Harrison had a 'powder-puff punch'?
