Keeping heather on course

For West Hill Course Manager, Ben Edwards, heather regeneration is a passion and golf greenkeeping a way of life, as MIKE BEARDALL reports.

BEN EDWARDS is one of those individuals you immediately empathise with as a sportsturf professional. As Course Manager at West Hill Golf Club, a Surrey heathland course near Woking, he has very rigid criteria for maintaining the course “to the very highest standards possible.”

At the age of only 31 he has certainly fast-tracked in greenkeeping, becoming a course manager when he was only 23 at Sand Martins Golf Club in Berkshire.

West Hill, an 18-hole course founded in 1909, is kept looking incredibly smart. “It has to be at its best, as a good advertisement for the club and for the greenkeeping staff,” says Ben, who has been at the club for a year and a half.

His current demanding job is a far cry from his original plan as a teenager to join his father in his printing company in London.

“After three hours of driving every day I just decided there had to be more to life,” says Ben, who now lives only 20 minutes away from work at Binfield in Berkshire. “I went off to America at 18 to work with a friend running a pool-cleaning business and started playing golf most days. That’s when I developed a deep affection for the world of golf. When I came back to Britain I saw a job advertised for a trainee greenkeeper at Sand Martins Golf Club and applied for it.”

I have never looked back. After 18 months I was made deputy course manager and at 23 became course manager. I know I was young but I took it very seriously and went on training courses at Merriot Wood College in Surrey and joined BIGGA. I was fortunate to be given the opportunity at such a young age and owe a great deal to Andrew Hall, the owner of Sand Martins Golf Club.

“I think I have only missed one Harrogate show in all that time and I have been to the US shows for the last six.”

West Hill Golf Club is a typical Surrey heathland course with the lucky advantage, in times of drought, of having two boreholes from which the club is allowed to extract water for irrigation.

“The Environment Agency simply asked us to cut down a little during the drought period,” says Ben, who says the club is planning to build a reservoir to further help with irrigation and sensible water use.

A sprinkler system is controlled from a central computer which Ben can operate from his mobile phone, using data supplied from the on-course weather station. The course is on typical clay-soil for the area and, ironically, suffers from wet greens which Ben is tackling through a programme of severe scarification and double core aeraising. This is to make the greens playable the whole year round.

“We used a Koro on the greens and we were quite amazed at the amount of thatch we lifted,” he says. “The greens are of original construction, but we are gradually going to introduce more sand to change the profile.”

With 82 bunkers on the course, most remodelled about 12 years ago, Ben is keen that they retain the look and shape suitable for a heathland course.

His major work is on heather regeneration, which has been paying dividends. Vast swathes of vanishing heather have been revived through a process of rotavating, scarifying and turf cutting to bring heather seeds to the surface.

The main problem with heather is that if it spends any length of time under leaves it will die off as the leaves release nutrients – which heather hates.

“We spend a great deal of our time from autumn to spring clearing leaves from the heather with blowers,” says Ben. “Because we are surrounded by trees we also do a lot of thinning in the woodland, removing as many of the oaks and silver birches as possible to reduce leaf drop damage to the heather.”

This thinning also promotes air movement across the course and helps to allow light through to greens and other areas of the course.

“This area was once called New Copse,” says Ben, “so it is not surprising that we have good tree coverage. They do act as a windbreak and certainly add to the look of the course.”

West Hill is keen to encourage wildlife on the course and in the woodland there are owl boxes, with some tiny owls currently nesting. Hawks and deer are regular visitors and the diverse habitats encourage butterflies and smaller birds.

The 450 members of West Hill are anxious to keep the heather regenerating. “It is the one thing that crops up in most conversations, because some of the members have been here for many years and have seen the heather go through various stages,” says Ben. “When it is all in flower it is a beautiful purple that looks spectacular against the moons grass areas.”

Ben has eight staff, including a mechanic, and his deputy, Matt Foster, was also previously at Sand Martins. “He is also my best friend, which helps when you are in the same profession,” he says.

“We have a very young staff here, all members of BIGGA, some of whom have very good single figure handicaps and our latest recruit, Chris, is only 20, plays off three.”

“I don’t play as much as I should but my handicap is about 16 – I play football three times a week, but when my legs tell me to stop I will certainly play more golf. I really believe you have to play golf to appreciate what a golf course is all about.

“I know there are many greenkeepers who don’t play golf, and that’s understandable – but golfers who are greenkeepers look at the course from a different perspective.”

Ben believes that golf is all about people. “This is one of the nicest sports to work in and I have a very good relationship with the members and the staff,” says Ben.

Chairman of the greens is David Haungeovers, who has been a member of West Hill for about 30 years. “We have a major meeting about twice a year to make a plan of action,” says Ben. “But David and the club secretary, Gina Rivett, rely on my experience to keep the course running smoothly.

“This is an incredibly busy club

“Keep up the good work. The greens are a work of art. That’s what makes it a joy to play”

“This is an incredibly busy club
and we host so many society events that there is never a week when there is not a tournament of some sort.

“Our biggest event of the year is a famous father-and-son tournament which takes the best part of a week and has been running since the Thirties, with 156 pairs starting off on the first day.”

West Hill has a strong artisan membership – members who help with divotting and tidying.

Ben is not short of equipment at West Hill having a fleet of Toro mowers and Workmans, including pedestrian mowers for the greens including Triplexes and Toro five-unit Reelmaster 55-10s for the fairways.

He also has a John Deere tractor and two New Hollands. In the workshop there are three Bernhard grinders including an Express Dual and an AngleMaster.

“We have been tied in with Toro equipment for five years through John Shaw machinery and we do review the situation from time to time,” says Ben. “The service from David Cole and his team has been fantastic since I have been at West Hill.”

Grass seed suppliers for the course are Rigby Taylor using their Mascot brand mixes from Top Green.

“I went to Las Vegas with Murray Long from Sunningdale and Chris Lomas from Woodlesford Golf Club, and we had a good week catching up with all the latest news. “I usually attend a few seminars at the US show and visit a few of the local golf courses. It is important to see what greenkeepers are doing in other parts of the world.”

“The one thing about greenkeeping is that you are always learning and that is a very important lesson in itself.

“Greenkeeping is about doing your homework, knowing what works best on your course and seeing problems before they happen – if you are able to see them.

“Being in BIGGA has been a major advantage for all our staff because they go on training courses, get the qualifications and can use them to develop their careers.

“Working outside in fantastic surroundings is a privilege and I never dread going to work. I always look forward to reaching the course.

“Very few jobs which you can say that you look forward to doing every day.”

The next year will be busy because the club hopes to get planning permission for a new practice range.

“We are always looking forward and the members know that we have their interests at heart,” says Ben. “This is a superb course and we work hard to keep it that way.

“The greenkeeping staff are dedicated and passionate about golf. It makes all the difference.”

Ben has a busy year planned for himself – he is getting married in September to Alice.

“She’s not really into golf so we won’t be arguing on any golf courses,” laughs Ben.

Water restrictions

Water, H2O, wasser, agua, l’eau, call it what you will it has been the main topic of conversation for greenkeepers for the last few weeks and months.

We either have too much of it dropping from the skies – some of the rainfall statistics for the West of Scotland amongst other areas are eye watering (excuse the pun) – or far too little, resulting in Temporary Use Bans/Hosepipe Bans and potentially Drought Orders.

Meanwhile, courses are closed due to flooding, but we’re assured that even if it rains all summer, and let’s hope it doesn’t, that won’t be enough to make up for two very dry winters.

As ever, BIGGA members will adapt to the varying challenges and continue to strive to produce the best course conditions possible. Many have already taken steps to harvest, store or abstract water, reduce usage and recycle, but there are still golf clubs out there that face the possibility of a long-term ban on irrigation.

Water shortages are clearly a serious issue and it ill behoves the golf industry to try and claim that it’s need is more important than many other deserving areas. But, it is clear that if irrigation is banned then those clubs affected will almost certainly suffer significantly as a result, and jobs are very much at stake, not just those of greenkeepers but across the golf employment sector and beyond.

Later in these pages we feature some examples of good practice and forward thinking that have taken place but the problem is one that the golf industry needs to address in a united way.

We Need You!

If your facility is affected by the Temporary Use Bans and you do not have an exemption, please email info@bigga.co.uk with your details and the potential impact on your course to enable us to build a comprehensive picture of the overall effect on the golf industry.

Temporary Bans are not a new thing. Back in 2006 (the last time bans and drought orders were in effect) England Golf ran water management workshops in the Midlands and South, at which experts such as Dr Jerry Knox from Cranfield University and the Environment Agency, pressed home historical data that this has happened every five or six years, even before golf courses were considered. At the workshops, advice on measures clubs should implement to protect themselves for the future were disseminated.

But here we are in 2012, so what is England Golf doing? In anticipation of temporary bans, England Golf has made representa-
tion to the seven water companies with bases in place, advising of the restrictions that will have to be placed on golf club BUSINESSES, highlighting that an inability to maintain the biggest business asset (the greens) to a usable standard could result in repair and replacement costs of tens of thousands of pounds alongside a significant loss of income for clubs. This will naturally have a knock on effect to secondary spend within clubhouses and professional’s shops, ancillary supplier businesses could also be severely affected and employment will be jeopardised. At the date of writing this article, one water company, Veolia, has provided a response: What does England Golf suggest?

We would encourage each club affected by the ban to make individual representation to their water company, and to back up our representation, I would congratulate Patrick Dawson, General Manager at Burnham Beeches Golf Club, who has also asked the question of the Thames Water Public Consultation Department and received the following reply, an irrigation system is not classed as a hosepipe. Plus utility supporting information to strengthen your case:

Visitor Income - calculate the income to the Club and the impact it would have on the business if this dropped off due to poor green conditions.

Justification of Water Use - It is important to show that current water use is efficient (irrigation replacement and necessary to maintain the playing surfaces and that water is not being wasted through carrying out the following).

Irrigation System Audit - Check efficiency and adequacy of your systems/water storage measures.

Reductions made to Current Demands - Records on reductions made to irrigation inputs e.g. watering greens only.

Agronomic Advice - Specialist advice to help strengthen your case in proving what water use is essential to keeping your turf alive and showing the Club are taking all possible measures to take to reduce drought susceptibility. Also, budget costs associated with remedial work in the event of loss of grass cover.

England Golf working with the Associations, BIGGA, PGA, OCGA etc, will continue to represent golf and support our affiliate clubs in securing access to the ever more valuable resource - WATER.

The water restrictions imposed throughout much of the south of England in April have caused much confusion amongst greenkeepers in the affected areas. Whilst water shortages were not unexpected, some of the sudden and varying messages from water companies were. The news that some golf courses are now categorised as ‘gardens’ and subject to the same restrictions was a prime example.

This article hopes to highlight the varying experiences of course managers in dealing with increasingly adverse weather conditions as well as rapidly regulations from authorities.

Ian Streeter, Course Manager at West Sussex Golf Club, has a limited amount of water in a borehole. He said readings taken from this borehole indicated the aquifer that they pump from was at the same level as last year and therefore had not recharged through winter. Ian then is in the position of having to water his greens only and that is only to maintain them, to keep the grass alive. So that is their take: greens only to keep them alive.

Some golf clubs that draw all of their water from the mains have fallen into the unenviable position of being unable to use their irrigation systems.

In the past weeks, though, a number have already successfully lobbied their water authorities into granting them an exemption from the ban. One example was a club that did not want to be named, in the Thames Water region, and was given an exemption up until June.

The course manager from this club said: “My problem is, is that the exemption we’ve got currently is right and in place, but if they sud-
denly come to us and say ‘no it’s not’ then things become difficult. I think it’s a very grey area at the moment.”

As the exemption is only up to June, the course manager was thinking about how to water their greens after this time.

“At the moment we’ve started to collect rainfall, but I would require a minimum of 20 cubic metres per day through the hot weather just to keep the greens alive. After that they would deteriorate and prob-
ably quite rapidly,” he continued.

Alan Pierce MG, Course Manager at Ham Manor GC, in West Sussex, is in Southern Water’s region. Alan has an abstraction license from the Environment Agency for 1.6 million gallons per year, for what they determine as their grass area. Alan then is in the position of having to water his greens only.

At the moment we’ve started to collect rainfall, but I would require a minimum of 25 cubic metres per day through the hot weather just to keep the greens alive. After that they would deteriorate and probably quite rapidly,” he continued.

BIGPEPE BAN FOR MILLIONS

By Tamara Cohen

Water pressure

How do BIGGA members cope with the mounting pressure from Water Authorities to limit irrigation on the course? Jim Cook interviews four Course Managers from areas affected by the recent hosepipe ban.

Ten million people will be hit with hosepipe bans tomorrow to cope with the worsening drought, the Daily Mail can reveal.

Water companies in the south and east of England, where reservoirs have been too low for nearly two years, will announce restrictions affecting 20 million people this week.

The final round of hosepipe bans, aimed at protecting the environment, comes amid growing fears that sources of water could soon go dry.

The Mail has obtained documents covering the hosepipe bans which have been imposed throughout much of the Thames Water region, and was able to pinpoint the problem areas.

In the Thames Water region, and was able to pinpoint the problem areas.

Temporary Bans are not a new thing. Back in 2006 (the last time bans and drought orders were in effect) England Golf ran water management workshops in the Midlands and South, which experts such as Dr Jerry Knox from Cranfield University and the Environment Agency, presented historical data that this has happened every five or six years, even before golf was a sport being considered. At the workshops, advice on measures clubs should implement to protect themselves for the future were disseminated.

But here we are in 2012, so what are England Golf doing?

In anticipation of temporary bans, England Golf has made representa- tion to the seven water companies with bans in place, advising of the restrictions which will have to be put in place by golf clubs.

Hosepipe bans are not a new phenomenon, and England Golf has been working with the Golf Club Managers Association to ensure clubs are aware of the risks and are prepared.

Temporary Bans can cause significant damage to golf courses, and England Golf is supporting BIGGA in its efforts to put forward a coherent case for golf clubs to be considered for exemptions.

We Need You!

Hosepipe bans are not a new phenomenon, and England Golf has been working with the Golf Club Managers Association to ensure clubs are aware of the risks and are prepared.
He said: “As it stands at the moment it is slightly lower than it has been previous years but not so much so that it’s causing me any great concern at the minute.”

Alan explained that because his club has an older abstraction licence, the Environment Agency’s Hands Off Flow Restrictions do not affect his allowance of water.

“In terms of the position that people are in the one we’ve in here it rather be in than any other because of the older license and being able to physically see how high or low the water level in the ditch is just by going down and having a look,” he continued.

Alan gave some figures for how much rainfall had fallen at his course between January 1 and April 1 for the previous three years. In 2009 there was 240mm, in 2010, 249mm, in 2011, 186mm and in 2012 just 54 mm.

Les Howkins MG, Course Manager at Richmond Golf Club, in Surrey, is under Thames Water and said: “They’re currently saying that if you don’t water your greens it’s going to be an unsafe playing surface because of the dangerous bounce.”

The Environment Agency has sent out questionnaires to all of its license holders, including farmers, golf clubs and sports grounds, asking if they would be willing to reduce the amount of water they extract.

Les extracts water from bore-holes for irrigation and has offered to voluntarily reduce his extraction by 25%.

“We’ll just have to be more careful. Use wetting agents and ensure aeration is completed regularly so water gets in there. As it happens, since they’ve imposed the hosepipe ban, it’s rained every day. I think for some golf courses it could be a long summer if they’re not allowed to water,” he said.

Billy McMillan, Course Manager at Tyrells Wood Golf Club, in Surrey, is under Thames Water and said: “They’re currently saying that if you’re not allowed to water gardens then their description of a garden now includes any sports or amenity surface and the only exemption is for national or international sporting events. The only other exemption is on health and safety grounds so you could possibly argue that if you don’t water your greens it’s going to be an unsafe playing surface because of the dangerous bounce.”

The Environment Agency has sent out questionnaires to all of its license holders, including farmers, golf clubs and sports grounds, asking if they would be willing to reduce the amount of water they extract.

As it happens, since they’ve imposed the hosepipe ban, it’s rained every day. I think for some golf courses it could be a long summer if they’re not allowed to water,” he said.

Billy McMillan, Course Manager at Tyrells Wood Golf Club, in Surrey, is under Thames Water and said: “They’re currently saying that if you don’t water your greens it’s going to be an unsafe playing surface because of the dangerous bounce.”

The Environment Agency has sent out questionnaires to all of its license holders, including farmers, golf clubs and sports grounds, asking if they would be willing to reduce the amount of water they extract.

Les extracts water from bore-holes for irrigation and has offered to voluntarily reduce his extraction by 25%.

“We’ll just have to be more careful. Use wetting agents and ensure aeration is completed regularly so water gets in there. As it happens, since they’ve imposed the hosepipe ban, it’s rained every day. I think for some golf courses it could be a long summer if they’re not allowed to water,” he said.

He said: “As it stands at the moment it is slightly lower than it has been previous years but not so much so that it’s causing me any great concern at the minute.”

Alan explained that because his club has an older abstraction licence, the Environment Agency’s “Hands Off Flow Restrictions” do not affect his allowance of water.

“In terms of the position that people are in the one we’re in here I’d rather be in than any other because of the older license and being able to physically see how high or low the water level in the ditch is just by going down and having a look,” he continued.

Alan gave some figures for how much rainfall had fallen at his course between January 1 and April 1 for the previous three years. In 2009 there was 240mm, in 2010, 249mm, in 2011, 186mm and in 2012 just 54 mm.

Les Howkins MG, Course Manager at Richmond Golf Club, in Surrey, is under Thames Water and said: “They’re currently saying that if you don’t water your greens it’s going to be an unsafe playing surface because of the dangerous bounce.”

The Environment Agency has sent out questionnaires to all of its license holders, including farmers, golf clubs and sports grounds, asking if they would be willing to reduce the amount of water they extract.

Billy McMillan, Course Manager at Tyrrells Wood Golf Club, in Surrey, recalled previous drought orders in 2006. He said: “It was probably one of the toughest golfing years of my career. One of the toughest things to overcome was explaining to my membership why our course wasn’t in as good a condition as they expected.”

With a hosepipe ban in place and unable to draw from the mains supply, the club successfully bided for a limited, yet valuable, supply from their water company. He went on to explain how lessons learnt from that experience could now be applied to the current situation with regards best practice.

“All those days of deep aeriation, organic matter reduction and it has to be said, sometimes painful, operations in the eyes of the golfer will result in a kinder transition through a drought situation. Additionally under drought conditions we wouldn’t want to make for ourselves any additional problems by introducing further stress to the grass plant. Therefore at our club we follow a fairly simple philosophy to include a reduction in mowing heights than would be deemed normal in the main playing season. Sometimes we let clippings fly and use them as a mulching on some areas.”

Another interesting point he highlighted was that of public perception. He mentioned that when their newly-commissioned irrigation system was being tested during March 2006, it had been raining at the same time.

The club received a letter from an irate passer-by who was disillusioned to see irrigation on during rainfall. Billy continued:

“So it is important what the general public perceive and can show us in a bad light, so we always have to be mindful of these things in tough times.”

Continuing good practice was something other course managers believed important to prepare for environmental stresses.

Alan Pierce said: “We use wetting agents every month and we’re trying to be as pro-active as we can. We’ve made a conscious effort to go round and check that every sprinkler is only doing the area intended and no more. We do monthly aeriation with 8mm solid tines to keep the surface open and the water penetrating through. A big thing for us is that we don’t let anyone play in adverse conditions, such as frost, throughout the winter, so we’re not asking the surfaces to cope with more than they can handle.”

Alan had written a letter to his local water authority highlighting how pro-active and efficient the club was at managing their water, with no unnecessary irrigation. It also stated that irrigation equipment was monitored to ensure its fully working order.

He said: “I’m sure they’re aware that golf courses aren’t just throwing water at our surfaces can be detrimental to what we want to achieve anyway.”

“We all know that a staggering amount of water is lost by water companies through leakages, so it is important for golf courses not to be tarred with the same brush.

Ensuring sprinklers are not worn, sprinklers are spaced properly and water is distributed efficiently has never been more important. Being sure that irrigation pipes are not leaking is also key to good practice. New Water Regulations Advisory Scheme (WRAS) guidelines have been published relating to marking systems used to convey non-drinkable or non-potable water.

“Coping with the drought in 2006 was difficult. One of the toughest things to overcome was explaining to my membership why our course wasn’t in as good a condition as they expected.”

Billy McMillan, Tyrrells Wood GC
Some water companies are already stipulating that pipework used for these purposes should have WRAS recommended markings. Currently the SportsPro PE100 pipes, by Revaho, are the only PE pipes to come with this mark as standard. Because drought problems are not going to go away, it is becoming increasingly more important to store water and also to use efficient systems to prevent water being wasted.

One of the main causes of contention is how the water companies have dealt with the situation. Les Howkins said: “The water companies have gone into more consultation with sports grounds, golf clubs and bowling greens. At the end of the day, they are businesses employing a lot of people and if clubs, in the worst case scenario, had, there will be people out of jobs. They said that our washers are still allowed to use hosepipes, well for the golf course is a commercial business and if you can’t maintain the quality of your surfaces, you’re not providing the service to your customers.”

A course manager said: “The water company has now come up and said that you can still use water if you’re cleaning patios down or cleaning cars for a business. So they’re effectively choosing which businesses can use water. This is the problem I have, but they’re not actually writing this down. If all these ways of getting water are taken away from us and we do have a big heat wave, will the clubs who have switched on their irrigation systems regardless because they’re going to lose customers?”

Another course manager echoed this idea and said: “The maximum fine for breaching the restriction is £1,000 so it could almost be worth doing that instead of buying it in.”

The extreme likelihood of mains water being unavailable in the coming months means preparation and action is now the key. Lobby your water authority, from a business perspective, with the reasons why golf courses need water to operate and highlight your responsible usage.

As examples in this article have shown, lobbying does work and will continue to yield results, which may provide a lifeline for clubs through the summer months.

Because drought problems are not going to go away, it is becoming increasingly more important to store water and also to use efficient systems to prevent water being wasted.

Some water companies are already stipulating that pipework used for these purposes should have WRAS recommended markings. Currently the SportsPro PE100 pipes, by Revaho, are the only PE pipes to come with this mark as standard.

As drawing water becomes less reliable, clubs were looking at contingency plans for the future. Ian Streeter said his club had installed two 74,000 gallon holds, which are full, there will be people out of jobs.

If clubs, in the worst case scenario, have to store water and a self sufficient club with its own supply would provide a lifeline for clubs through the summer months.

Because drought problems are not going to go away, it is becoming increasingly more important to store water and also to use efficient systems to prevent water being wasted.
