

house. I've gotten several calls about the wild pigs running down the boulevard and stopping traffic."

What???

That's right, folks. It's a jungle out there and you can add "game warden" to the list of responsibilities I hold.

The pig escapade is one of the latest of our wildlife adventures. Although I found the pigs to be most interesting creatures, they also were causing some serious damage by rooting up areas with their destructive little snouts.

After enticing them into an area with some corn and apple pie from the chef at the clubhouse, I was able to capture them and give them to a friend who raises hogs.

Explaining to Mrs. Smith that her Indian hawthorne shrubs and those pansies in her landscape are a delectable treat for the deer, and that's why she has no foliage or flowers left in front of her house, is not uncommon at all.

Nor is telling the foursome on the tenth hole that those birds in the fairway aren't buzzards, but actually wild turkeys making their way around the back nine.

One of my fondest sightings was when an eagle was sitting in a tree watching an osprey fish over a nearby pond. When the osprey caught a fish, the eagle tried to take it away in mid-air.

The osprey's mate came to the aid of his partner and kept the eagle busy while the bird with the fish made a getaway. Later on while talking to some Audubon people, I came to find out that eagles often let the other birds of prey do their work for them.

Coexisting with all of these wonderful creatures is not a burden in any way. It is truly a blessing, and everyone who has the privilege of seeing such wonders should feel fortunate.

I've learned a lot about nature while working on the golf course. I know I'll never get tired of seeing animals and birds, too numerous to name, in this great habitat that we share.

## A Day in the Life of

BY JOE ONDO, CGCS

*Winter Pines G.C.*

**W**ebster's definition of normal is "usual, ordinary, or typical, or the expected or usual condition." I think most superintendents, as they are driving to work, are expecting a normal day's routine, but as we all know sometimes that is not the case.

Our usual daily start and ending times are 6:30 a.m. and 3 p.m. but that changes during the longer days and other cultural practices.

Being a public golf course, the first group will usually follow the greensmower and cup setter around unless told to wait. My usual routine is to ride the course first thing to look for anything out of the ordinary, check progress on things being done, or create a list of jobs for future work.

Having a small crew, some days I will change cups, spray (spot or boom) or do the work of an employee who is sick or on vacation.

Until about four years ago I used to do all the grinding of reels and bedknives and some mechanical work. At that time my mechanic was part-time inside and part outside when needed. When he retired and went part time, we hired a full-time mechanic to take care of everything.

Having worked on equipment in the winter in Pennsylvania it came in handy for me here, but I'm glad that's done now that we have a full-time person.

The daily work schedule is posted on the bulletin board for the next day with any special instructions. We do not have many crew meetings since I am able to work with and communicate one-on-one with all my employees. After the morning schedule, special instructions are given for a certain job to be done, if need be, or a note on the board.

We try to schedule any major renovation a few days after any special men's or ladies' association tournaments. Being public, our schedule is pretty flexible and usually nine holes are open so

we can work on the other and have it back in play as soon as possible.

If bad weather is predicted, the pro shop will usually need two days advance notice to schedule tee times or we will wait another week to do our work.

I usually go over prices and verification of items purchased at least once a week with the owner, who is also the manager. We also discuss anything he would like to see done or future projects I have in mind for the course.

We have been rebuilding number one green for a year to convert the contaminated 328 to Tifdwarf. We have rebuilt six greens on the course and one putting green, with one on the course and one putting green left to do.

I attend as many monthly chapter meetings as I can, and pick and choose seminars so I can keep my CEUs up to date for recertification.

I am fortunate in that three of my six employees have been here over 17 years, so when I'm gone things usually don't miss a beat.

When I attend a conference or am on vacation, each employee has a list of job assignments to do and an alternate list if

bad weather or an equipment problem occurs. Everyone is pretty careful because they know if something breaks, it is usually flymo work or hand labor of some sort as their next job.

I play in as many amateur golf tournaments as my schedule and money allow. Most are on weekends but sometimes one will be during the week, so I have to watch how much I am gone from work.

We have had our share of irrigation blowouts, sprinklers that run all night when and where you least need it, hydraulic leaks and other incidents that give you a little more gray hair — or no

hair at all. There have been some days more stressful than others but no really bad nightmare days so far.

Winter Pines is unique in that we do most projects in-house. They include the rebuilding of greens, levelling and enlarging twelve tee tops, installing eleven holes with automatic irrigation, replacing blacktop cartpaths with over 6,000 feet of concrete paths, and adding on to the maintenance building and extending the parking lot by pouring 250 yards of concrete.

All of these projects were completed while still maintaining the golf course for play. With our weather sometimes these projects take longer than planned, but in the long run all have made Winter Pines a little better. People can see the improvements over the years.

As you can see, some days are more challenging than others, but I enjoy this line of work and the different problems each day brings.

## You want to go where?

BY MICHAEL J. PERHAM, CGCS  
*Director of Golf Course Maintenance  
The Fountains Country Club*

**T**hese were the exact words my wife Marcy said to me when I told her the job at The Fountains Country Club in Lake Worth had come open in February of 1995, and I was considering applying for it.

If chosen for the job, it meant relocating our family back to Palm Beach County, which we had left in 1984 to move to Vero Beach and employment at The Moorings Club.

Professionally for me, it was the most dramatic change I had ever contemplated undertaking. It meant leaving the confines of a 75-acre golf course with a staff of 12 and a property that I truly loved,

and taking on the challenge of 54 sprawling holes and a staff of 53.

### About the Fountains:

The Fountains is an 825-acre gated community, with approximately 1400 residential units. There are three 18-hole championship golf courses designed by Von Hagge and Devlin.

The golf courses were built in several phases. Twenty-seven holes were built in the late 60s, 18 more holes were added in 1975, and an additional nine holes were integrated into the 18 built in 1975, with the completion of all construction occurring in 1981.

These comprise what are now the North, West, and South Golf Courses.

The community is bordered on three sides by major roads, and split by a large drainage canal belonging to the Lake Worth Drainage District. The membership at The Fountains is served out of two clubhouses.

## Predictable Results.

In managing golf course turf, it's what matters most. As specialists in turf care, we look long and hard for products that are truly superior before we present them to you. We insist manufacturers prove their claims in the lab *and* the field, because we're committed to your results - on your course and for your bottom line. Call. Let us demonstrate the terrific results you'll get with these technically superior products.

**AXIS™**

*Amends soil to give you more leeway managing the crucial air/water balance in root zones. Aerify, rototill, topdress. More porous than clay-based amendments. Does not compact. Proven effective in USGA greens.*

**BREAK-THRU™**

*The most effective wetting agent known to science (that you can afford). Proven safe. Decrease pesticide use while increasing effect. Save 40% or more on soil conditioning. Affordable dew control.*
