

greens that came back with the best soil tests. Some of the thin areas were problematic since they were on shady greens to begin with. Others thin spots tended to occur in hydrophobic areas. To address this we are going to aerify with 3/4" hollow tines and topdress with a sand and Profile mix for more uniform moisture control along with a program of using Cascade and other wetting agent materials."

Central-Northeast Programs Haven't Responded to Milder Winters

"This year reminded me of the winters of the 70s and 80s."

- Butch Singo, Harrell's, Inc.

Butch Singo is a sales representative for the Harrell's Fertilizer Company, and his territory runs from Kissimmee to

Jacksonville. I asked Butch his take on this year's overseeding challenges.

"Overseeding programs have not changed much in my territory in response to the mild winters," he said. "As usual, some courses experienced rougher transitions than others. Most of my customers know that the weather can be unpredictable and cause havoc to playing conditions in the winter without the insurance of overseeding."

"Successful establishment was very weather dependent as usual. Those who tended to go early in the fall had better luck than those who were scheduled later and got caught when the rainy weather hit and washed a lot of seed away. Mild weather early belied the density of the overseeding and when the severe cold weather hit and the bermudagrass went dormant, people found out much or how little seed they really had established."

This year really reminded me of the winters I experienced as a superintendent in the 70s and 80s when we would typically have 20-30 frosts a year. A lot of superintendents and golfers haven't seen those kinds of winters in a long time and golfers often have short memories. Now since the second week in May, we've had high temperatures and low humidity, causing the overseeding to check

out too quickly and everyone is scrambling to push the bermudagrass to fill in as quickly as possible."

West-Northwest Down Time is Nice; Preparation is Real Key To Success

"Preparation is the key to success."

- John Cunningham, GCS

John Cunningham, GCS at Black Diamond Ranch in Lecanto had the luxury of closing his course for two weeks to prepare and

overseed his courses. Black Diamond isn't the only club to recognize the importance of providing proper agronomic conditions to manage the turf, but it is rare. Some public-access courses and resorts simply can't shut down for more than a day or two, but clubs need to take a hard look at short-term convenience versus

THE HAVERLAND COMPANIES

HAVERLAND BLACKROCK CORPORATION

The innovators in Golf Course Construction We can rebuild & recontour your greens and have them back in play immediately

INSTALLATION:

TEES, GREENS, FAIRWAYS & ATHLETIC FACILITIES

CONSTRUCTION SERVICES:

USGA GREENS CONSTRUCTION
LASER GRADING, EARTHWORK,
BERMUDA SOD INSTALLATION,
SHAPING, DRAINAGE, CLAY WORK,
BUNKERWORK, ETC.
