SPOTTED: APOLOGY BRINGS DOWN THE HOUSE
Sportscaster Jim Nantz brought down the house at the GCSSA Conference with a better job of telling the golf maintenance story during golf broadcasts.

COVER STORY: COURSE SCORES A COUPLE OF EAGLES
Having an eight-acre eagle preserve in the middle of your golf course is like having a board game on your office desk. But for some, it’s a pledge to do a better job of telling the golf maintenance story during golf broadcasts.

INDUSTRY: HAT’S OFF TO SUPER SAVERS!
Bill Stine, president of the Florida Golf Course Owners Association, praises superintendents who do their homework before asking him to invest in new equipment. Do a cost analysis, investigate options and get bids before you ask him to buy a new toy, he says.

OFFICIAL BUSINESS: LAWMAKERS STILL DON’T GET IT
On a visit to the Capitol during “Committee Week,” FGCSA officials discovered that legislators understand that golf is “out there,” but they didn’t always understand how our industry fits into the big picture. Or simply that golf in the big picture.

AFTERWORDS: SHOW AND TELL
Joel Jackson begins a series of tips on how to improve your photos; Mark Jarrell suggests that Florida should not replace the foundation of its economy; Jim Walker connects the dots between better turf conditions and safer working environments for golf course employees; Joel Jackson plays a round of birdies and boggies.

About the use of trade names: The use of trade names in this magazine is solely for the purpose of providing specific information and does not imply endorsement or disapproval of similar unnamed products. It is the responsibility of the user to determine when product use is consistent with the directions on the label.
SPOTLIGHT: APOLOGY BRINGS DOWN THE HOUSE

Sportscaster Jim Nantz brought down the house at the GCSAA Conference with his apology to legislators for not understanding that golf is “out there,” but they didn’t always understand how our industry fits into the big picture. Or that golf in and of itself is not on their radar screens as having issues that need addressing.

OFFICIAL BUSINESS: LAWMAKERS STILL DON’T GET IT

On a visit to the Capitol during “Committee Week,” FOCSA officials discovered that legislators understand that golf is “out there,” but they didn’t always understand how our industry fits into the big picture. Or that golf in and of itself is not on their radar screens as having issues that need addressing.

52 AFTERWORDS: SHOW AND TELL

Joel Jarrell begins a series of tips on how to improve your photos; Mark Jarrell suggests that Florida should not replace the foundation of its economy; Jim Walker connects the dots between better turf conditions today and safer working environments for golf course employees; Joel Jarrell plays a round of birds and bogeys.

When it comes to your turf, quality matters. And at Howard Fertilizer, we handpicked the industry’s top experts to enable us to provide the highest quality products and first-class service to our clients. Our team of committed experts will provide you with top quality, free-flowing specialty mixes, coupled with on-time delivery to your door.

Call Howard Fertilizer today at 352-429-0024 to learn how we can keep your turf strong and healthy-looking all year long. Because quality matters.
FOREWORDS

By Greg Pheneger

A long, hard winter has passed with many memories. I always sit down in the early spring to examine the operations in my department. Once I have checked my facilities it is time to get out and see others and determine how they survived our “busy” season.

Congratulations to Mike Perham who is the 2003 Distinguished Service Award winner. Mike is currently the superintendent at Jonathan’s Landing in Jupiter. Mike has loosely served the state association over the years and continues to work for the state as the Florida Green business manager and chairman of the state reception every year. Congratulations Mike for a well deserved award.

At our winter board meeting the board approved the retention of a reputable financial management company to manage our reserve funds. Companies used and recommended by several allied industry associations (FFAA, FFVA and Citrus Mutual) were interviewed. With professional management, our money can be invested in low-risk, accessible funds that will earn more interest than our current simple bank certificates of deposit. A key part of this action will be to draft a board-approved investment policy that will dictate the strategy and percentages of recommended investments. The policy will also create investment discipline and protect our funds from wild market swings in certain sectors. No change in allocation or investments can be made with the approval of the full board. The financial advisors will report to the board at each quarterly board meeting.

The objectives of our investment policy will be to preserve capital liquidity and optimize the investment return within the constraints of the investment policy. Preserving capital is very obvious in that we do not want to lose money. Nobody wants to lose money. By saying we will “preserve capital,” we are stating that we will be conservative in our investing. We want all of our assets to be available to us. Last but not least, we want to make money so operating funds do not have to be used to help maintain the reserve account at proper levels.

The Poa Annua Classic at the Naples Beach and Golf Club is just around the corner (May 13-15). The Everglades Chapter always puts on a wonderful family event. The setting offers events for the whole family while the spouse is working hard in the classroom and toiling on the golf course. If you have never made the Poa you have missed out on one of the highlights of the year.

The weekend begins on Thursday afternoon with our FGCSA spring board meeting. All members of the association are invited to attend the board meeting. Many Past presidents have attended the spring board meeting and have been very helpful. Results of the members-needs survey should be tabulated by that time for review. I hope the results of the survey will lead future boards in the direction that will best serve our membership. Feedback from membership, even negative, is needed for an association to function effectively.

On Thursday evening the board will host the Past President’s Dinner. All past Presidents are invited for dinner with the current board. This is only the second year for the dinner and last year I had the pleasure of talking with past Presidents Scott Bell and Darren Davis. That conversation helped generate ideas for this year’s agenda.

I strongly believe that discussing actions and decisions from previous boards can help future boards to make intelligent decisions. Ideas from previous boards can be examined to determine what worked and what didn’t and why. Ideas and projects discounted before do not necessarily mean that they should be discounted now. Times change and good ideas should be reexamined for relevance. I look forward to another enjoyable evening and hope I can soak up even more information.

Friday the formal educational aspect of the Poa event swings into action with a GCSAA Superintendent Leadership Series seminar secured by Buddy Keene, our education chairman. This year’s speaker is Pat Schwab and her topic is “Dealing with Jerks.” I have not had the pleasure of attending one of Pat’s seminars but those who have speak very highly of the presentation.

We all have our “war stories” of dealing with people who might fit the “jerk” description. I know I have often wondered if I could have handled things better. Hopefully after taking this class, I will come away better equipped to handle a “jerk” should he appear during any given day.

Friday afternoon and Saturday morning bring golf and camaraderie. These two tournaments fill up very quickly and sandbaggers are lining up to take home the trophies. These days can also be used to play on the beach or just relax by the pool if you so desire. More relaxation and networking is in store for all on Saturday evening at the Luau where adults can have as much fun as the kids as they nosh on the traditional roasted pig and other culinary delectables.

On May 24, the Treasure Coast Blue Pearl Tournament is scheduled back at its original home, Loblolly Pines in Hobe Sound. The proceeds are earmarked for area youth and environmental organizations in an attempt to help our Blue Pearl, the planet Earth.

After a long winter hibernation at your course, come on out and live a little.
Aquatrols® Announces

Chapter Round Up

**Education, Golf, Fundraisers Top Winter Events**

**Calusa**

USGA Agronomist Todd Lowe was the speaker at our January meeting at the Coral Oaks GC hosted by Joe Boe. Todd’s topic was “Cultural Practices and Overseeding.” We didn’t have a meeting in February due to the GCSAA Conference. Art McCoy, GCS will host our March “Yellow Ball” golf outing at the Deep Creek G.C. in Port Charlotte.

**Central Florida**

Guest speaker Tim Hiers’ talk on the Future of Golf gave the 60-person audience at the Interlachen C.C. in Winter Park a take-home list of improvements that any club can make to their facility to make it more economical and environmentally friendly. The occasion was the 16th Annual Central Florida/FTGA Turf Research Tournament. Host superintendent Stuart Leventhal, CGCS reported that not counting this event’s proceeds, the tournament had contributed over $60,000 to the FTGA. After a sumptuous buffet lunch, the 30 two-man teams made up of a superintendent and either golf pro, general manager or other club official battled stormy skies and one rain shower and the always-testy tournament set up, but the round was completed. The Winter Pines GC team of Joe Ondo, CGCS and head pro John Pohira took low gross honors in the First Flight with a 67. Last year’s winners Pat Murphy and Tom Dirschel from Orlando’s Northshore G.C. took the low net prize. The Second Flight prizes went to Barry Shuman and Tony Johnson (low gross) of the Timacuan C.C. in Longwood and host Stu Leventhal and his GM Tom Powell took low net. In the Third Flight Gene Stys and John Raycroft from the Indian River C.C. won low gross and John Kress and Mike Dunnington from the Alaqua C.C. took low net honors.

Bay Hill Superintendent John Anderson has the course ready for the Bay Hill Invitational PGA tour event. Meanwhile chapter members are eagerly awaiting the chance to “Hike the Hill” inside the tournament ropes as spotters for NBC Sports as the Florida swing of the PGA Tour continues.

**Everglades**

The FTGA Southwest Florida Regional Seminar in conjunction with EGCSA had more than 200 golf course and landscape attendees at the January 22nd TECO Arena event. Congratulations to the following members: Jason Brod, Raptor Bay Golf Club, Bonita Springs for being recognized as a Merit Winner by GCSAA for the 2004 Environmental Leaders in Golf Awards and Greg Maze, CGCS and Twin Eagles Golf & CC for once again hosting the ACE Group Classic Champions Tour Event in early February. Congratulations are also in order for Hal Akins, Bonita Bay Club and Tim Larson, Stonebridge G.C. for recently achieving Certified Golf Course Superintendent status.

The chapter is hosting a sunset cruise aboard the “Naples Princess” in March. Thanks to our generous event sponsors, all guests attend the event at no cost and enjoy a beautiful social atmosphere along the Naples waterways. Our Annual Spring Symposium is scheduled for April 8 at the Naples Beach & Golf Club in Naples. Guest speakers from around...
the country will be presenting at the event as well as two of Southwest Florida’s leading superintendents, Mark Black, CGCS, and Darren Davis.

North Florida

March will be busy for us as we hold our 12th Annual Mike Richards Memorial Tournament hosted by Greg Tharp at the Jacksonville G&CC. The proceeds from this event, also supported by the family of PGA Tour agronomist Alan McCurrach, helps to fund scholarships for turf students each year. A week after that event several of our chapter members will get to slip inside the ropes at the TPC Championship and work with NBC Sports as spotters for the TV broadcast. Superintendent Fred Klauk and his staff do an outstanding job of preparing the PGA Tour’s home course for this “fifth major” each year.

Palm Beach

Mike Perham, CGCS was presented his Presidents Award for Lifetime Service during the FGCSA Reception in San Diego. Congratulations and thanks for your service to our associations. Bob Randquist, CGCS of the Boca Rio C.C. served as chairman of a “Current Issues in Golf” Forum at the GCSAA Conference in San Diego. As the PGA Tour moves north from Miami, Superintendent Ted Altman is getting his Mirasol Club ready for their second Honda Classic and the chapter is ready to pitch in once again as spotters for NBC Sports coverage of the event.

Ridge

Joe Ondo, CGCS won our Jack Harrell, Sr. Memorial Ridge Invitational at the Grasslands C.C. in Lakeland. Thanks to host superintendent Roy Wilshire, CGCS for a job well done. The course should have been called the Glasslands, since the greens putted like glass. During the awards dinner after the tournament, Tim Orton, representing David Pursell of Pursell Technologies, presented Jack Harrell, Jr. with an original pencil sketch of his father Jack Harrell, Sr. in honor of all that “Senior” stood for as a family, community and industry leader. Our chapter also has founded a scholarship in Mr. Harrell’s name for turf students attending Florida Southern College in Lakeland.

Seven Rivers

Congratulations to John Cunningham, CGCS, at Black Diamond Ranch and Barry Greenwalt, CGCS of One Source at The Villages. Both gentlemen just became certified recently. By the time you read this, we will have hosted another annual Jeff Hayden Envirotroon Classic at the World Woods G.C. where we hope to have another successful event for raising funds for the University of Florida’s turf research programs.

South Florida

Congratulations to Carlos McKeon, the host superintendent for the Royal Caribbean PGA Champions Tour event held in January at his Key Biscayne course. As Sam Urso, GCS at Doral prepares for the 2004 Ford Championship at Doral in March, our chapter has been asked to provide 18 spotters and scorers for four days of the NBC telecast of the PGA Tour’s Doral Tournament. Superintendents Jim and Suzi Walker have volunteered to coordinate with the network production crew.

We are looking forward to joining with UF/IFAS to host the 17th Annual South Florida Turf Expo at the Ft. Lauderdale Research Center on March 18th. The event has been approved for .5 GCSAA education points and consists of research updates, equipment demonstrations and a mini trade show and turf education workshops. The funds raised at this event are used to support a technician to maintain the turf plots to actual golf course conditions to make the research more meaningful in the real world.
Suncost

Congratulations to recently certified Mark Johnson, CGCS at the TPC at Prestancia. Thanks to Gary Smither and the Misty Creek CC for hosting the 22nd Annual Suncoast Scramble. The purpose of this event is to inform, educate and promote a strong professional bond among the members of the golf industry in our area. The tournament format is a four-man scramble. Each team is made up of a superintendent, golf professional, club manager or official and a supplier.

Treasure Coast

Great golf by our chapter defeated “The Boys from Palm Beach” at our December joint-chapter meeting at Rob Kloska’s Jupiter Island Club. Thanks for hosting this event for the third time in the past five years. We brought home the Cavanaugh & Wagner Trophy in the Ryder-Cup format match. In January Dr. Bob Carrow from UGA was our speaker on “Nutrient Uptake From Root Absorption.” Chapter President Roy McDonald hosted the meeting at the Hobe Sound GC. We will have a golf outing in March and then gear up for another joint meeting with the Palm Beach GC SA on April 12th with our annual meeting of superintendents, pros and managers at the PGA Golf Club. And our big fundraiser, The Blue Pearl, will be held at Lobolly Pines May 24.

West Coast

Congratulations to Tom DeChant at Hunters Green CC for passing the requirements to become a Certified Golf Course Superintendent.

Florida GCSA

Florida’s golf team of Bob Harper, Seth Strickland, Steve Bernard, and Joe Pantaleo placed second at the GCSAA Golf Championship in San Diego. The guys report that reading the breaks and putting on the greens at Maderas and Del Mar National was their undoing. Wait til next year!

Joel Jackson, CGCS Retired was a presenter at a “Current Issues in Golf” session in San Diego titled “Proactive Approaches to Dealing with Drought.” The panel presentation dealt not only with turf stresses but also how to work with regulators and legislators during water shortages and restrictions. FGCSA-sponsored research projects at the University of Florida by Dr. Billy Crow, nematologist and Dr. Lawrence Datnoff, plant pathologist received matching funds from the GCSAA’s Environmental Institute for Golf. The announcement was made at the conference and show in San Diego.

Check out the Official Business section for a report on FGCSA’s 2004 Capitol Hill visit with state legislators.

2003 Presidents Award

North Florida Honors Clayton Estes for Service

By Tom Cowan

The recipient of the President’s Award for 2003 from the North Florida GCSA is Clayton Estes, CGCS. Estes is a past president of the North Florida Chapter and is currently serving as external vice president rep-

Snowman
Du Cor International
Everglades GCSA
representing the NFGCSA on the Florida GCSA board of directors. Over the years he has donated many volunteer hours on behalf of his local chapter.

If you have ever had the pleasure of meeting Estes, you’ll quickly be put at ease by his broad smile, slow-talking, easy-going demeanor. It is his genuine concern for others that has put him at the top of the list with many of his professional peers. He is a loyal and faithful friend to many.

As an employer, Estes takes the time to get to know each of his employees. He is very visible to his club members at San Jose Club, where he has served as superintendent for 24 years. He is an active church member, and currently an elder at the Lakewood Presbyterian Church.

Husband to Joanne and father to Jimmy, Clayton has always been a dedicated family man. Jimmy is a former member of the Army’s 82nd Airborne and soon to be firefighter/EMT in Tampa. He was scheduled to be married in March, as the Florida Green went to press.

You might say that the primary reason for his selection as the recipient of the President’s Award is his strong sense of commitment to his community. Estes was instrumental in establishing the annual “Keeper of the Green Award” that honors a member of the North Florida turf community at the Mike Richards Memorial Tournament held each spring.

He was also one of the organizers of the annual past presidents’ golf outing and dinner. He has hosted this event every year since its inception, and this past Christmas he also hosted the chapter’s annual Christmas tournament, which was dedicated in honor of one of his veteran crew members Scott Strickland.

Scott died tragically in an automobile accident and the chapter made the event a fundraiser for a college scholarship for Scott’s son, Brian.

In an age when every eye is turned towards our nation’s President and every spoken word and action is reported and analyzed - one’s individual integrity is paramount to the day-to-day operation of our country. Because of his enduring commitment to the community which he serves every day, and the unselfish manner in which he does it, the members of the North Florida GCSA are proud to honor Clayton Estes for his devotion to family, friends, profession and community.

2003 Presidents Award
Suncoast Founder
Jim Svabek Retires with Honors

By Renee Berg

There is so much to say about Jim Svabek. After serving as the president of the West Coast GCSA, he helped found the Suncoast Golf Course Superintendents Association in 1976. He is a past president and the only newsletter editor we have ever had. Svabek was the superintendent at the Bradenton C.C. from 1967 until his retirement in October. He has probably hosted more meetings and events such as our annual Superintendent/Vendor Day than any other Suncoast member.

Jim has been a great mentor for me over the past six years. He has taught me everything I know about being a superintendent. He has also been an inspiration to me in life and has been the type of superintendent I am hoping to become. I know Svabek will stay busy, because he can’t sit still for too long. That’s why he’s working part-time for Bob Gwodz at the Sara Bay C.C. where he can continue to share his knowledge with others.

We are going to miss Jim
Reduce thatch and unlock soil nutrients

A unique blend of amino acids and 18 beneficial microorganisms, ENLIVEN SOIL TREAT works as an antagonist against pathogenic bacteria and fungi that may be present in native soils. Applied as a foliar spray Enliven reduces thatch, helps unlock tied up nutrients and assists in nutrient uptake.

While many products containing amino acids and microorganisms lose their effectiveness over time, ENLIVEN SOIL TREAT was developed to withstand the heat and light of storage. Microorganism are also know to cannibalize each other, thus destroying the effectiveness of the product. ENLIVEN SOIL TREAT’S special blend of microorganisms were specifically designed to work together for you and your greens.

The specific species include Actinomycetes, Ectomycorrhizae, Endomycorrhizae, Aspergillum, Bacillus Subtilis, Bacillus Cereus, Bacillus Thuringiensis, Lactobaclillus, Trichoderma, and yeast extracts.

Svabek in our day-to-day routine, but we will see him from time to time since he lives across the street from our golf course. Jim, enjoy yourself and have a great retirement. This 2003 President’s Award is just our way of saying thanks again for more than three decades of service to your local chapters and your profession.

The North Florida Chapter held another successful Mike Richards/Alan MacCurrach Memorial Tournament at the Jacksonville Golf & Country Club in March. Host Superintendent Greg Tharp and staff had the greens rolling tournament speed and the blooming azaleas made for a Masters-like feeling.

This year Lake City students Roger Hale and Tim Lyons each picked up a $2,000 scholarship to help with their education expenses. Roger is working at The Slammer and The

On the occasion of his retirement, Jim Svabek (center) received a 2003 FGCSA Presidents Award for Lifetime Service from Suncoast Past President John VanVranken, left, and President Bob Gwodz at the annual Superintendent/Vendor Meeting held at the Bradenton Country Club.
Squire course in St. Augustine and will graduate this May. Tim works at Marsh Landing and is a second-year student.

The NFGCSA also donated funds to the Audubon Cooperative Sanctuary Program and to the First Tee Program of St. Johns County. First Tee Coordinator Elliot Levercombe and one of the First Tee participants, Andrew Taylor, were on hand to receive the donation. Young Andrew gave a poignant thank you speech highlighting what the First Tee has meant to him and the others in the program. He especially cited the mentoring and positive influence the program has had on his education and outlook on life.

Long-time NFGCSA member and super volunteer, Paul Hamrick, was presented with the Alan MacCurren Lifetime Achievement Award for his consistent and persistent service to the chapter, as he jumped in and helped to run so many of the association’s events.
This was perhaps the most idyllic setting the conference and show has ever had. The weather was perfect. The harbor views were spectacular. The location and transportation was flawless and there was even a PGA Tour event going on at the same time to visit if you could find a spare moment in the jam-packed week of activities.

The week-long schedule of activities concluded with the presentation of the association’s highest honor, the Old Tom Morris Award, to highly regarded golf-course architect Rees Jones. But the real surprise was at the Opening Session as CBS Sports announcer Jim Nantz brought down the house with a pledge to do a better job of telling the golf maintenance story during golf broadcasts. He promptly followed up that promise with praiseworthy comments during the Saturday and Sunday broadcasts of the Buick Invitational at Torrey Pines.

In addition, Mark J. Woodward, certified golf course superintendent at Dobson Ranch and Riverview golf courses in Mesa, Ariz., was elected GCSAA president. Overall attendance for the Conference and Show was 19,317, up 1,153 from last year’s total of 18,164 in Atlanta. There were approximately 6,200 qualified buyers (those who make purchase decisions at a golf facility), up from the 6,045 in Atlanta. Education seminar attendance reached 6,780, again surpassing the 6,295 figure of last year. A total of 684 exhibitors covered 240,000 square feet of floor space, down slightly from the 701 exhibitors and 245,200 square feet of floor space last year.

From left: IGM’s Greg Plotner and Scott Zakany presented GCSAA CEO Steve Mona with a check for $7,500 for the Environmental Institute for Golf. The money was the proceeds from the 2003 IGM Hole-in-One Shoot Out.

GCSAA’s 75th International Golf Course Conference & Show in San Diego

This was perhaps the most idyllic setting the conference and show has ever had. The weather was perfect. The harbor views were spectacular. The location and transportation was flawless and there was even a PGA Tour event going on at the same time to visit if you could find a spare moment in the jam-packed week of activities.

The week-long schedule of activities concluded with the presentation of the association’s highest honor, the Old Tom Morris Award, to highly regarded golf-course architect Rees Jones. But the real surprise was at the Opening Session as CBS Sports announcer Jim Nantz brought down the house with a pledge to do a better job of telling the story of golf maintenance during tournament broadcasts during his presentation at the Opening Session in San Diego. Photo by Bruce Mathews.

He promptly followed up that promise with praiseworthy comments during the Saturday and Sunday broadcasts of the Buick Invitational at Torrey Pines.

GCSAA’s International Golf Course Conference and Show is the world’s largest golf course management conference/trade show, with attendance averaging more than 20,000 per year over the past nine events. Last year, according to Tradeshow Week magazine, GCSAA’s trade show ranked...
The Blenders Choice

Why do blenders of premium fertilizer depend on Nitroform® and Nutralene® nitrogen...

...They are the effective, safe, environmentally sound nitrogen.

Nitroform and Nutralene nitrogen offers these many features and benefits.

- Nitrogen availability closely parallels the plants’ nitrogen needs.
- Non-burning.
- No growth flushes after heavy rains or due to granule breakage during handling or application.
- Vigorous, controlled growth and color with less grass clippings.
- Balanced growth of roots and leafy parts of plants, increasing plant vigor.
- Very little nitrogen escapes to surface water or groundwater.

The next time you buy fertilizer, remember to look for blends that display the original Nitroform or Nutralene logo, it’s your assurance of quality nitrogen.

For the name of a blender in your region contact us at 1-888-370-1874.

Nu-Gro Technologies, Inc. 2680 Horizon Drive SE, Suite F5, Grand Rapids, MI 49546

84th among the top 200 tradeshows (there are more than 4,500 trade shows in the U.S. annually).

GCSAA’s 76th International Golf Course Conference and Show will take on a new format, appearing next year as the Golf Industry Show. It will combine the trade shows hosted by GCSAA and the National Golf Course Owners Association. Both associations will operate separate education conferences that will run concurrently with the trade show. The 2005 Golf Industry Show is set for Feb. 10-12 in Orlando, with the GCSAA education conference Feb. 7 - 12 and the NGCOA education conference Feb. 8 - 12. I think this union will help get owners more involved in the issues facing the golf business.

My good friend, Monroe S. Miller, golf course superintendent at Blackhawk Country Club in Madison, Wis., for the past 30 years, was presented the Green Section Award from the United States Golf Association at its education session. The award is given annually by a panel of experts in the turfgrass field and recognizes distinguished contributions to golf through work with turfgrass.

Gordon LaFontaine, Danny H. Quant, CGCS, and Gordon C. Witteveen were selected as recipients of the GCSAA’s Distinguished Service Award. LaFontaine, known for his leadership in Michigan turfgrass affairs has worked with the Florida Turfgrass Association during an independent review of the IFAS program at the University of Florida and Gordon Witteveen, a well known author, columnist and Canadian superintend-ent, is a member of the Florida West Coast GCSA. He winters in Tarpon Springs and visits area courses and

I flagged down Steve Ciardullo, Mountain Lake CC, for a snapshot while he cruised the show.

A lot of us were away from home on Valentines Day. Hey, I got lonely.

Kim Shine, Windsor Parke GC in Jacksonville was checking out tee signs at the trade show.

From left: Jay McCord, John Foy and Greg Pheneger catch up with each other at the FGCSA Reception. Around 400 Floridians got together at the Wyndham Emerald Plaza to nosh on shrimp cocktail, see old friends and meet new ones.

Scott Bell, Red Stick GC, left, and Gary Morgan of UHS agree on weed control.

A Course That Scores a Couple of Eagles

By Joel Jackson

Every course has a story to tell and Lemon Bay is a book with several chapters. In many ways it could be called a rags-to-riches story. There’s the course-history chapter that takes an 1890s lemon grove and transforms it into a public golf course in 1981 only to fall into disrepair and be rescued by the members in 1989. The member-owners became so successful that they had to expand and incorporate the Long Marsh Golf Club at Rotunda to serve the long waiting list for membership.

There’s a chapter on the superintendent Chip Copeman, who guided the transformation of the golf course from a weed-infested wreck to a beautifully manicured gem of a golf course. Copeman graduated from the school of hard knocks and is a throwback to the days of the apprentice learning his trade at the side of a master craftsman. Now he’s the vice president of the Suncoast Chapter and is a firm supporter of continuing education. His annual trips to the Masters Tournament in Augusta were part of his inspiration to excel in his profession.

Lemon Bay is a Certified Audubon Cooperative Sanctuary. Certainly another tale worth telling, filled with creative ideas on how to accomplish that goal and be a better steward of the area’s natural resources. When there’s a pair of bald eagles living in an eight-acre preserve in the middle of your golf course, it pays to be a good environmental steward because first, it’s the right...

Chip Copeman

Originally from: Orlando
Family: Married to wife Lisa for 11 years. Son Kevin, daughter Lindsay
Education: Practical experience in the early years. Accredited turf management seminars and continuing education at GCSAA, FTGA and FGCSA events.
Professional affiliations and awards: Member of GCSAA and FTGA. Currently vice president of the Suncoast GCSA chapter. Served on the board since 2000.
How did you get into the business?: My dad got me started in golf at the age of 9 at the Winter Pines GC in Winter Park. My mother worked in the snack bar and we got to play golf for free. At age 12 I was a range rat and picked up range balls after school. I was in and around golf for most of my life and I knew I had a passion for the game and industry.
Mentors: My dad obviously who got me started playing the game. Pat McClain, superintendent at Myakka Pines, who gave me my first maintenance job and the opportunity to learn all the jobs on a golf course to begin my steps to becoming a superintendent some day. In 1987 I went to work for Eddie Fatica at the Plantation G&CC and within 30 days he promoted me to assistant superintendent.
Goals: Maintain the natural integrity of the golf course and continue my education and the crew’s education on environmental issues. Create and maintain a close relationship with the surrounding community, with regard to their environmental concerns.
Accomplishments: Getting Lemon Bay and Long Marsh certified in the Audubon Cooperative Sanctuary Program. Lemon Bay was the 25th course in the state and 115th in the world to be certified. In May 2003, Long Marsh became the 60th in Florida and 438th in the world to attain certification.
Work philosophy: Choose goals. Prepare plans to achieve those goals. Have the discipline to follow your plan and your goals will be met. Always remember, there’s more than one way to get downtown. Some roads just take a little longer to get there.
Advice: Be involved in your local, state and GCSAA associations. Stay informed and have the right answers. Never guess or pretend to know the answer.
Memorable moments: (1) My wedding day, 12-12-92, beautiful blue sky and cool weather on Boca Grande Island. (2) The death of my good friend Tom Crawford. (3) When I started at Lemon Bay we didn’t have power in the maintenance building. We had to run a small generator, but it was so small we would first brew a pot of coffee and then turn on the lights to check the fuel and oil levels on the equipment after the coffee was made.
Hobbies/Interests, community, church involvement: (1) Golf, hunting, fishing, and wood working; (2) Consult and help with Lemon Bay High School sports fields; (3) Christian faith believer.

Chapter One: History

The Lemon Bay Golf Club is located just off State Road 775, which snakes its way south on the mainland from Englewood to Placida on Florida’s southwest coast. West of the course lie mangroves, Lemon Bay and Don Pedro Island. To the east lie the Rotunda and Port Charlotte communities and the pine and palmetto scrubland flats of southwest Florida.

In 1981 the course rose from the overgrown acres of a pioneer lemon grove. It was designed by Jim Petrides, who had also designed the nearby Rotunda community golf course. It opened and operated as a public golf course for many years but, for whatever reason, the course conditions declined and it became an eyesore. The irrigation system was in a shambles. Smutgrass grew everywhere and nematodes devoured the turf, creating large bare areas on the course. In 1989 a group of members bought the course and began to turn it around.

It took man working with nature and some good agronomy from three to five years to get the course looking respectable, but at the end of the five years they had been so successful they had to cap the membership. A seven-to-ten-year waiting list ensued. The nearby Long Marsh Golf Club, located two miles away in Rotunda, came on the market and the Lemon Bay members group bought it to serve the waiting list.

Chapter Two: The Superintendent

Born in Orlando, Chip Copeman was around golf courses and landscaping for most of his childhood and early adult life. His mother Pat worked in school and in return had the run of the golf course. Copeman became a “range rat” who worked picking up range balls after playing the game at the age of nine. Copeman became an eyesore. The irrigation system was in a shambles. Smutgrass grew everywhere and nematodes devoured the turf, creating large bare areas on the course. In 1989 a group of members bought the course and began to turn it around.

After working at a variety of landscape jobs, Copeman knew golf was his passion. In 1982 he...
took a job on the crew at the Myakka Pines G.C. in Englewood under superintendent Pat McClain. Copeman was a sponge as he soaked up all he could learn under McClain’s tutelage, and in turn McClain let him learn all the jobs on the course. Copeman set his sights on becoming a superintendent. After five years at Myakka Pines, he went to work for Eddie Fatica at the Plantation Golf and Country Club. Copeman’s apprenticeship was about to get a big boost. After only 30 days of watching Copeman in action, Fatica promoted him to assistant superintendent.

Copeman says, “Eddie took all the course management skills I had learned on the job and molded me into the kind of superintendent it takes to be successful in this business.” Four years later, Copeman assumed his first superintendent’s job at Lemon Bay. He’s been here for 13 years, a testament not only to his agronomy skills but to his character as a manager and a leader. Copeman’s responsibilities include overseeing both the Lemon Bay and Long Marsh courses.

Copeman acknowledges that he couldn’t be successful without two critical elements at Lemon Bay.

“I’m a firm believer that you’re only as good as your resources, but I’m also a believer in not having excuses like ‘our budget is too small’ or ‘I don’t have enough people or the right kind of equipment.’ I try to do the best we can with what we have. In this age of technology and new products, I don’t forget about the old ways of doing things. We’re not too proud to hand-pull a weed or hand-rake pine needles or roll up our sleeves to do whatever it takes to get the job done. I don’t want to hear why you can’t get a job done. I want you to tell me how you got it done. That kind of attitude takes a supportive staff and we have a good one at both of our locations.

“The other element of course is the people who provide those needed resources… the owners and members. This can be a fickle business, as you know. I never thought I’d be here for 13 years, based on the way it goes at some clubs. I have to publicly thank our membership. They have shown the greatest respect for me and my knowledge of the golf course. I can tell you the respect is mutual. I can go to them about anything and I do go well in advance to discuss issues, situations and needs so they know what to expect. This relationship wouldn’t be as solid as it is without the guidance and mentoring I have received from Peter Hodson, the general manager. Peter has been involved with the club since 1989, first as a consultant and now full time since 1999.

“Some superintendents fail two or three years after a big effort because the club doesn’t match the resources to their demands or expectations. The superintendent has to be able to clearly identify and present and defend what it takes to provide the desired
results. All you can do is give the best you can for the size of the budget. To do that you need to surround yourself with good people. They don’t always walk through the door. Sometimes you have to mold them from the people you have and those you can hire to work in this business. Then you have to motivate them.

“I believe in teaching employees something new as often as possible. It makes them more effective and it shows you have an interest in them. They may leave and take that skill with them, but they know who made them more valuable. I always encourage my superintendents to share what’s been given to them, the tricks of the trade, to pass it on to others. My journey through the ranks has been a great learning experience from being on the bottom rung and working my way up. I know what I can expect from others. I’ve learned to assess their strengths and weaknesses and harness them to be productive employees. Like I always say, ‘There’s more than one way to get downtown. Some roads just take longer to get there.’”

Copeman also believes that his golfing ability gives him an edge when it comes to evaluating playing conditions and credibility when he explains what needs to be done to achieve those conditions.

Chapter Three: The Sanctuary

One of the roads followed at Lemon Bay was the path of becoming a certified Audubon Cooperative Sanctuary, which they accomplished in 1998 and renewed in 2003. Their sister course, Long Marsh, is also certified, becoming the 60th course in Florida to achieve that distinction.

Having an eight-acre eagle preserve in the middle of your golf course is like hanging out a sign saying, “Hey Look At Me!” and the eagle watchers do watch. Copeman is mindful of nesting season and keeps projects to a minimum in the area to avoid disturbing the eagles. His diligence has paid off as eagle watchers report seeing eaglets fledged each spring. Mother Nature unfortunately disturbed them more when a recent storm damaged their primary nest. The eagles have been constructing a temporary home in a pine tree on one of the fairways. Everyone is anxious to see if they will repair the old nest.

The Florida Golf Course Superintendents Association is supporting Audubon International’s five-year campaign (50-in-5) to get 50 percent of the nation’s courses enrolled in the Cooperative Sanctuary Program. It is a natural fit for courses to work with an environmentally focused organization that recognizes golf courses can be a tremendous asset to wildlife and natural resources. More members are joining all the time, but why the slow pace? It can’t be the dues; they’re only $150 a year. The biggest fear is that it will take more time. Time that superintend-
Syngenta never stops working
to keep your course green.

Sure, we have an unmatched portfolio of products. From Subdue MAXX™, the industry leader against Pythium, to Barricade®, the longest-lasting pre-emergent against crabgrass. But we’re never content. Keeping turf healthy means constantly refining our formulations. And developing new ones, to ensure we always have the best products. Making sure you have the tools you need, that’s what we do.

also maintain a 20-foot no-spray buffer around our water hazards.

“We carefully select sites for new trees so they don’t create a future shade problem. We are experiencing some pine-tree-decline problems, so we have hired Emerald Green to use their injection program to save them. We also expanded the pine straw areas around the trees to restore their native habitat and avoid competition with the turf.”

Chapter Four: Maintaining the Course

In 1991 USGA Agronomist John Foy rode the course with the newly hired Copeman and declared, “This is the worst golf course in the state.” A year later his comment was, “This is the probably the fastest turn around of conditions I’ve ever seen.” Copeman took it as a great compliment.

Copeman began his renovation of the course by photo documentation of the problems and provided a historical record of how the course improved over time. One of the early problems was eradicating the prolific smutgrass. A household sponge mop with a wringer proved to be more useful than the rope-wick-type applicators. It took persistence but it paid off. The next obstacle was to improve the single-row irrigation system so grass could be grown on the huge bare areas in the roughs.

Nematodes plagued the course for many years and they were fought with the usual array of products. Copeman says the results of the Curfew application last year were excellent. Overseeding is the only other challenge of consequence. Lemon Bay is not overseeded; the Long Marsh course is. Copeman says, “Our location next to the bay helps to moderate the winter temperatures and we can get away with not having to overseed. Certainly it helps in the spring when transition takes place. We don’t have to worry about balancing the overseeding with the native bermudagrass, like we do at Long Marsh. When we do get a prolonged cold, gloomy spell in the winter, we have to watch our traffic during the poor growing conditions.”

So we come to the end of the story. There are no magic potions or silver bullets at Lemon Bay. It is just hard-working people going about their jobs conscientiously in harmony with each other and with nature. Wouldn’t it be great if this story could be told over and over at more golf courses?
Multiply the number below by 12,000 and you’ll get an idea of how many quality holes per hour our Aercore® Aerator 2000 can punch.

100

thanks to our patented “flexi-link” design. Which is almost as impressive as that divot you just took. Just make sure you fill it.

Of course, the only holes they care about on your course are one through eighteen. But you’ll see the difference in your aeration program once you try our Aercore® Aerator. From our 800 walk-behind to our tractor-mounted 1000, 1500, and 2000 models, no other aeration unit matches a John Deere Aercore for hole quality and productivity. Why? Easily accessible belts, instead of chains, power the systems, making them quieter and more durable. And the patented “flexi-link” supporting arm ensures that the tines stay perpendicular to the ground longer. To witness aeration at its finest, call your local John Deere Golf & Turf One Source distributor or 1-800-537-8233.

The Other 70 Percent of the Golf Course

According to GCSAA’s figures for land use at an 18-hole course, roughs, woods and water hazards make up about 70 percent of a course’s total area that is “under maintenance.” That’s a fact that escapes most people when they talk about the inputs of chemicals, fertilizer, water and labor on a golf course. We spend the most time and money on the greens, tee, and fairways which comprise about 27 percent of the golf course area.

As environmental concerns heighten and budgets tighten, the roughs have become the place of choice to make changes in how we view them. More and more designers are treating rough areas between greens and tees as natural areas with minimal maintenance requirements, and existing courses are finding areas where they can convert previously mowed, fertilized and irrigated turf into native plantings to reduce costs and create more habitat.

For the roughs in play, the trend toward rotary mowers is gaining favor as a labor saver. Two of your peers, Chuck Calhoun and Buddy Keene share their thoughts on roughs from a trend perspective to practical operations.

The Evolution of Rough Maintenance

In the ongoing quest to provide the best possible playing conditions for today’s golfers, throughout the course there have been many changes. In addition to new types of turf, advances in equipment technology may in fact influence how we manage one area of the golf course that not long ago received little or no attention: “the rough.”

There are significant contrasts in today’s maintenance practices versus the practices of just a few years ago. I can only relay my own experiences. However, I do recall in the early 70s that the “rough” was just that.

Webster’s Dictionary describes “rough” as “jagged, scratchy, crude, incomplete, severe, unpolished, uneven, irregular, and bumpy” and many other terms that, if they were to exist today at any golf course, would surely send the superintendent packing.

Prior to the practice of wall-to-wall irrigation, in most instances with only rainfall for irrigation, the “rough” consisted of whatever would grow and could sustain itself. In the tropics of Florida, that could be almost anything since pre-emergent treatments were new and unreliable and might leave you with a less-than-desirable playing surface.

The gear-driven reel units of this era worked excellently on turf, but unless the reels were kept extremely sharp, they would not cut the varied grasses that nature produced. Even then, the rugged terrain and native growth would dull the units very quickly.

The gear-driven reel units of this era worked excellently on turf, but unless the reels were kept extremely sharp, they would not cut the varied grasses that nature produced. Even then, the rugged terrain and native growth would dull the units very quickly.

We had to use pull-behind rotary units that were generally designed for pasture and roadsides which didn’t really matter, as most often the “rough” had a more-than-passing resemblance to the aforementioned areas. These mowers were usually single-deck units, PTO driven with maybe two

Chuck Calhoun, Superintendent
Johns Island South Course. Photo by Joel Jackson.

Roughing It

A lot of superintendents like the mulching aspect of the rotary mowers which chops up leaves and even pine cones saving labor. They also wade through tall roughs after missing a couple of mowings due to wet conditions. Photo by Joel Jackson.

Multi-gang rotary rough mower used at the Johns Island Club. Photo by Joel Jackson.
would cut anything, it was very time-consuming and often took more than a week to get around the course just once.

With the 80s and 90s, the practice of wall-to-wall irrigation became much more common and with it the areas of turf to be maintained increased dramatically. The large, gang-reel mower, with gear drive and hydraulic power, could not only cut these expanded areas of fine turf, but could get the job done in a timely fashion.

By now the investment in these areas once considered to be “rough,” became merely an area of fairway with a slightly higher cut. Such high visibility and attention now needed the same management approach used on other areas of the course, aerification, fertilization and pest control in the “rough” had become the norm.

Now in the early 21st century has come the introduction of the new age of the rotary mower. These units, now with multi-gang capabilities, ease of maintenance, and superior cutting abilities have started many of us to rethink some of our options in maintaining the “rough.”

The tremendous success of programs such as the Audubon International Signature Cooperative Sanctuary Program have propelled many courses to take a strong look at alternative grasses and plantings in the “rough,” as well as other areas of the course. With the advent of our new equipment options and the abilities they have we may indeed be going “Back to the Future” in maintaining the “rough.”

By Chuck Calhoon

Roughing It at the Gainesville Golf & Country Club

We use a combination of reel and rotary mowers to cut our 70 acres of rough. Our arsenal consists of two Toro five-gang reel mowers, one John Deere three-reel trim mower, one Progressive Trideck rotary mower and one Jacobsen 72-inch, out-front rotary mower.

Historically we used the five-gang units to mow the bulk of the roughs and it took about a week. In 1998 we began hosting a Nike and later Buy.com Tour events and we were required to overseed the course wall to wall. Because the overseeded roughs needed to be maintained at four-plus inches we purchased the TriDeck Rotary to achieve that height requirement specified by the PGA Tour.

Today we no longer host the tour event and we needed to justify having this mower in our inventory.

We began mowing our bermuda roughs with the TriDeck and found that it was very efficient...
We began mowing our bermuda roughs with the TriDeck and found that it was very efficient and productive cutting our previous mowing time in half. It comes in very handy during the rainy season because we have very heavy soils and it may not be possible to mow for several days and it’s easy to get behind. When the course dries out, we go out with the rotary and gradually take the grass back down without scalping.

It is also very efficient at mulching up pine cones, pine needles and leaves. Wow, what a labor saver that is, and the rotary costs less to maintain mechanically than the reel mowers.

The only negative thing we have experienced with the rotary is a higher noise level because of the high-speed blades. Scalping is not an issue because we still use the five-gang and three-gang mowers to mow and trim around the greens and tee slopes, bunker mounds and landscape beds. The reel-type mowers are also used to mow out the walk paths from tee to fairway and the intermediate cut around the fairways.

Last but not least, the 72-inch, out-front rotary is used to trim around the trees to put a finishing touch on the rough-mowing program. We maintain a height of cut about 1.5” inches because that’s the height preferred by most of the members.

All of the rough we maintain now is in play so there are no plans to eliminate any of it. We have numerous native and natural areas on our course, which are enhanced by our proximity to the Paynes Prairie State Preserve.

We fertilize the rough two or three times annually depending on rainfall. If we fertilize too much, we could wind up in the hay business pretty quickly. While heavy clay soils can become too wet to mow sometimes, the slow-percolating soil helps prevent leaching of nutrients and our fertilizer applications last longer and can result in savings.

Our biggest insect problem in the roughs are mole crickets and sod webworms. Our budget is more adequate than it used to be, which allows for more control options like Chipco Choice, Merit and some mole cricket baits for spot-treating hot spots. These products work very well for us. Fire ants used to be a problem but we broadcast fire ant bait products twice a year at label rates and we have pretty much put out their fire.

The course is over 40 years old and the shade from our grand old trees and compaction in high-traffic areas can create some weed problems. We found by applying Ronstar and Barricade pre-emergent herbicides in the spring and fall, we can get effective control of goosegrass, crabgrass, Poa annua, and volunteer ryegrass. All post-emergent work is done by spot-treating large weed patches with a boom sprayer and small scattered clumps with 2-gallon and 14-gallon portable sprayers.

Our Roughs consist mostly of Ormond bermudagrass, which is dinosaur by today’s standards. We have to be careful with the herbicide rates because the Ormond is more sensitive to some of the products. It is also slow to come out of dormancy in the spring and slower to recover from cultural practices like aerification and verticutting, so we are careful not to beat it up too badly. However, once the weather warms up, it grows aggressively like any other bermuda and keeps us “roughing it” all summer.
What is all the hype about?
The Thatch-Away® SUPA-SYSTEM®

Shedding Some Light on Several Situations

Darren J. Davis

When James P. Whalen, golf course superintendent at Calusa Pines Golf Club in Naples, accepted his current position at this nationally ranked club, he quickly realized he was “in the dark”... in the dark on some of his greens that is. Whalen, a graduate of Lake City Community College, has been employed at Calusa Pines since July of 2003. His prior employment includes stints at a few other well known clubs - Olde Florida Golf Club and Augusta National Golf Club.

When Whalen was hired, he was informed of a few greens that had been a challenge the previous season. After analyzing the situation he swiftly came to the conclusion that excessive shade created by several very tall, stately pines was the culprit, and the specimen trees would continue to pose a problem in the future.

Since removal was not an option, he went in search of other possible solutions. That’s when Whalen turned to his equipment manager, John Patterson. According to Whalen, Patterson, an employee of the club since 2001, is his “go-to” guy. With their two heads put together, it did not take long for a light bulb to go on. The solution was grow lights mounted on portable towers.

The grow lights were purchased from Precision for just under $600 and are attached to an aluminum pole that can be raised up to 12 feet. The pole assembly is affixed to a 4x4 trailer, also constructed by Patterson. On the bed of the trailer is mounted a 2700-watt generator purchased from Northern Tool and Equipment Company for approximately $500. The fuel for the generator is supplied by a 6-gallon marine fuel tank, both mounted on the bed of the trailer.

For one-person transfer, Patterson also installed hitches to the back of the trailers so that they can be towed in tandem. Whalen preferred the portable, trailer mounted units to “fixed” units as they provide flexibility to move if other areas develop the need for additional artificial sunlight.

Whalen said he anticipates using the light towers from mid-November until March 1 each year. The light towers are placed near the shaded greens after golf play is finished and just prior to sundown each day. Although pleased with the results to date, he is the first to point out that the grow lights are not a cure-all; they are just one of the tools in his arsenal. He also credits his success this year on the trouble areas to an intensive hand-watering regimen, limiting overhead irrigation use to an occasional deep irrigation associated with a granular fertilizer application. He feels that his foliar spoon-feeding program also played a role in keeping those shady areas healthy.

Whalen found additional uses for the lights that helped justify the expense. In winter - his busiest golfing period - the trailers can be pulled behind a utility vehicle with a greens mower trailer towed behind the light tower, allowing employees to get a jump on play by mowing a few greens before the sun rises. The towers have also been used to provide light for repairing late-night irrigation blow-outs. Whalen says he’s sure other uses will arise.

The lights are powered by a 2700-watt generator with fuel supplied by a 6-gallon marine fuel tank, both mounted on the bed of the trailer.
For a long time, Florida was known for oranges—but not bermudagrass. The best bermudagrass came from Georgia. But that’s changed. Through a unique program, the Florida Sod Growers Cooperative and leading turfgrass developer Sod Solutions have released Celebration Bermudagrass, a turfgrass of unrivalled quality. It’s beautiful, easy to handle and maintain; and it’s readily available throughout our state. Finally, there’s a new bermudagrass for Florida, from Florida.

A Unique Improvement. From a deeper blue-green color to easier handling, Celebration trumps other bermudagrasses.

Certified Purity. No other turfgrass quality control program involves checks by three independent organizations. Celebration is inspected and certified by the Southern Seed Certification Association, the Florida Sod Growers Cooperative, and Sod Solutions.

Readily Available. With 16 licensed growers throughout Florida, you can count on ample local supply.

Superior Handling. Celebration’s tight, dense root system means that it harvests in thinner, well-blocked slabs, resulting in easier handling and a smooth, consistent finish when laid.

Maximizes Resources. Reduced mowing requirements and improved shade tolerance decrease maintenance and eliminate costly renovation.

For more information about Celebration Bermudagrass, including where to buy, photos, and best management practices, visit www.celebrationforflorida.com or contact Sod Solutions 843.849.1288.
Hats off to the Super Savers

Over the past twenty-something years, I have had the pleasure of working with some great superintendents and suffered the frustration of working with some bad ones. Like any profession, there are bad apples who can leave a bad taste in the mouth of the owner. You know the ones... come in at 8 a.m., work until 4 p.m., spend most of that time complaining about lousy equipment and yelling at their staffs. I call them the Blamers.

Whenever there is a problem, they blame their staff, me, the weather, customers, course construction, their dog and anything but themselves. These are the guys who make me very nervous when they say, “WE need some new equipment.” All of a sudden it’s “WE.” The problem is the person is never straight with me about their operation so it is hard to take his or her word for it. So the inquiry begins. Why do WE need it? How old is the machine? Do a productivity analysis on a new machine (that one kills them). Can we get by with repairing the old one? If you don’t have confidence in your superintendent, then Cap X (Capital Expense) becomes a much bigger problem than usual. The usual problem is where to get the money to buy it.

Then on the flip side of the coin is the superintendent who bears the weight of the world on his shoulders. There’s no bull. When these people need something done, they guide and direct their staffs thru the processes. They solve problems rather than create them. Their staff respects them and they have little turnover.

This individual comes to the owner like this: “You know we’ve talked about it before and we have nursed that piece of equipment along, but looking forward we are going to spend more money piecing the thing together.

“What a relief! He or she has done the productivity analysis, meaning the cost to repair vs. the cost to replace... obtained quotes from sales persons who are not their relatives, and even looked at financing and used equipment as an alternative.

Combined with our down time while it is being fixed, it will cost more money than replacing it this year. I have looked at replacements and have three quotes from Orange, Green and Red. They all have financing available. I have also looked at used equipment and have found a piece in good shape with only “x” amount of hours on it. I will piece the current equipment along until you let me know what you want me to do.”

What a relief! He or she has done the productivity analysis, meaning the cost to repair vs. the cost to replace, combined with the increase in work the crew will be able to do with the new machine. They have obtained quotes from sales persons who are not their relatives and they have even looked at financing and used equipment as an alternative.
In an on-going effort to promote the production, sale and use of superior Florida-grown plants, the Florida Nurserymen & Growers Association is pleased to announce the 2004 selections of the Florida Plants of the Year. This program was launched to promote under-utilized, but proven Florida plant material. These proven ornamentals are selected on an annual basis by a group of growers, horticulturists, retailers, landscape professionals and University of Florida faculty.

For a plant to be considered a Plant of the Year, set criteria must be met. Selected plants have good pest resistance, require reasonable care and are fairly easy to propagate and grow. The award winning plants must also exhibit some superior quality, improved performance or unique characteristic that sets it apart from others in its class. Here are two 2004 selections for your consideration:

**Common Name:** Needle Palm  
**Botanical Name:** Rhapidophyllum bystrix  
**Hardiness:** Zones 7-11  
**Mature Height and Spread:** 5’ - 8’ Tall x 6’ wide  
**Classification:** Native Palm  
**Landscape Use:** Understory, specimen, border, erosion control, foundation or massing  
**Characteristics:** Slow-growing cluster palm makes a dark green mound of palmate leaves growing in sun or shade. Long dark needle-like spines develop at base and cover trunk.

**Common Name:** Red Russelia  
**Botanical Name:** Russelia sarmentosa  
**Hardiness:** Zones 8b-11  
**Mature Height and Spread:** 5’ Tall x 5’ Wide  
**Classification:** Flowering shrub/Perennial  
**Landscape Use:** Specimen plant or border  
**Characteristics:** Covered with bright red tubular flowers for all the warm months and is a butterfly attractant. Masses of splendor arching stems create a mounding appearance.

equipment as an alternative. The only thing for me to do is to figure out where to get the money to pay for it.

The superintendent who approaches all capital repairs with this attitude is valuable at any time but most importantly at this time in the industry when more courses are being built and fighting over sales, which is decreasing the average course’s revenues. With the superintendent having this approach to all Cap X, in the end you have a better product for less money.

Thank you Super Savers.

Bill Stine

Editor’s note: This Owners Outlook column is a semi-regular feature and part of a cooperative communications-exchange effort between the FGCSA and FGCOA to share information and concerns. In February 2005, at the national level, the GCSAA and NGCOA will hold a joint Golf Industry Show in Orlando and our worlds will move closer together, as they should.

Hopefully, we are getting a little head start.

USGA Green Section Florida Regional Update
Recovering From Mid-Winter Course Conditions

We have passed the halfway point of the 2004 Florida winter season. After a slightly rough start for some during the late fall and early winter, typical mid-winter conditions are being found during TAS visits around the state.

Normal winter season wear-and-tear is evident, but appropriate and acceptable course conditioning is being provided. On a positive note, temperatures and day length are increasing and becoming more favorable to the resumption of sustained bermudagrass growth, and with this it should be possible to produce some recovery and improvement in course conditions.

Along with direct turf injury and wear, another consequence of heavy winter season traffic is soil compaction. As compaction increases, moisture and oxygen infiltration are restricted, which in turn limits growth and recovery. Aeration of high traffic areas and putting surfaces is encouraged to help relieve compaction and promote a faster recovery response. Water injection cultivation or aeration with small diameter solid tines causes very minimal surface disruption and provides two to three weeks of relief.

The biggest obstacle to winter aeration is often scheduling needed maintenance practices when peak play is occurring. At a growing number of facilities, course closures for maintenance are being allowed during the winter season, which is very beneficial in providing top quality conditions.

The winter and spring months also are the Florida dry season, and below-average rainfall (3-inch deficit as of March 15) has been recorded throughout the central to southern portion of the peninsula. While far from the drought conditions of a few years ago, limited rainfall is starting to present some management challenges. The combination of increasing temperatures,
AN EARLY MORNING RIDE DOWN YOUR FAVORITE FAIRWAY MAKES YOU APPRECIATE YOUR HARD WORK AND LONG HOURS.

Some days everything seems just right. Other days are less than perfect. But one thing is for sure. Building, growing-in or maintaining a golf course presents many challenges. And it’s up to you to turn the challenges into opportunities. The problems into solutions.

A business relationship with a company focused on your needs helps. Someone offering service, convenience, technical expertise and value. Someone who understands what you’re up against.

Someone like LESCO.

SERVICE. LESCO is there with the most complete line of products available anywhere.

Everything from seed, fertilizer, control products and application equipment to flags, cups and markers. Plus so many additional services. Like custom blending, soil testing, grassing specifications and agronomic program development... just to mention a few.

CONVENIENCE. LESCO is there with 69 LESCO Store-on-Wheels®, 235 LESCO Service Centers® and a variety of direct delivery options. No one makes it easier and more convenient to obtain the products you need...when you need them.

TECHNICAL EXPERTISE. LESCO is there with turf professionals who appreciate the challenges you face and are fully prepared to answer your questions. Turf management and product use recommendations are all part of the job...part of the convenience and service.

VALUE. Put it all together and what you get is an overall commitment from a company dedicated to meeting your needs. That’s called value. And value is what that ride down the fairway is all about. Call 800-321-5325. LESCO is there.
bright blue skies, and windy conditions result in rapid soil moisture loss and high evapotranspiration (ET) rates.

Additional care must be exercised with supplemental irrigation to avoid the onset of drought stress, especially at courses where winter overseeding is practiced. Juvenile overseeding, lack drought tolerance and can be thinned quickly by drought stress. Through the spring, closely monitor for drought stress. Daytime irrigation may be necessary to prevent a fast transition of the overseeding cover.

Until rainfall occurs on a regular basis, salt accumulation in the upper rootzone can be a problem. Even with irrigation sources that have low to medium salt content, a progressive build-up in concentration levels can occur. Thus, it is a good idea to monitor with soil sampling and, if needed, schedule flushing or leaching irrigation cycles.

This regional update, and others written by the Green Section staff, may be found on the USGA Web site at www.usga.org/green.

John Foy, Director

GCSAA News

New Governance Model Will Save Officers’ Time and Jobs

I’ll be anxious to see how the new governance model works out as the GCSAA board members turn over the details of running things to the staff under the direction of Steve Mona our CEO. It’s a worthwhile idea since the travel time away from work for a sitting officer or board member ranges between 30 and 100 days a year. That’s too long to be away from work and keep your job. Just look at the job changes of former officers. This just makes sense, and might get more people involved.

The 2004 budget and strategic initiatives

• Good news for superintendents looking for a job. The GCSAA’s online Employment Referral Service is now free.
• The association is budgeting $175,000 for television exposure for continuing its national outreach campaign.
• The association will be developing plans for more diversity within the organization’s membership and improving international opportunities.
• Florida had two research projects approved in the Chapter Cooperative Research Program. Dr. Lawrence Datnoff will be looking at management of Bipolaris and Curvularia on ultradwarf greens, and Dr. Billy Crow will be studying the best timing for nematicide applications based on soil temperatures, nematode...
Most Superintendents Rely on Rubigan® as a Herbicide For Poa annua Control.

Some Rely on Rubigan as a Fungicide For Turf Disease.

We Just Want Your Turf to Look Great.

Rubigan® A.S. fungicide outperforms herbicides for Poa annua control and tackles tough turf diseases.

Rubigan provides excellent control of Poa annua without harming turf or impeding the germination of desirable grasses. That’s because it eliminates Poa plants as they germinate, much like a preemergence herbicide.

Plus, Rubigan is a locally systemic fungicide that controls tough turf diseases like spring dead spot, take-all patch, dollar spot and brown patch. Reach for the best Poa product on the market — Reach for Rubigan.

Rubigan A.S.

activity and root development.

**Environmental Management Program**

Congratulations to Bob Bittner, CGCS and 2003 FGCSA Presidents Award Winner. Bob has completed all areas of specialization in GCSAA’s Environmental Management Program (EMP). Fewer than 40 superintendents have accomplished that feat. There are six areas of specialization within the EMP:

- Employee safety and right-to-know
- Golf course development
- Habitat development and Management
- Integrated pest management
- Storage, disposal and recycling
- Water quality and application

Bob says that by taking seminar courses within these areas of specialization he could focus his continuing education for a specific purpose and goal. He says that the EMP program helped him achieve ACSP certification, designing his new chemical storage/mix load facility and IPM programs, and even in the remodeling of the golf course.

**Moving Up**

GCSAA has an online booklet available called “From Assistant Golf Course Superintendent to Superintendent: Making a Smooth Transition.” The booklet provides information on continuing education, professionalism, tips on ways to achieve career success and other information that will help move you forward in your career. The view is a little different when you are where the buck stops on everything that happens in maintenance.

**Compliance Corner**

One of best online tools for superintendents is GCSAA’s “Compliance Corner” in the Government Relations section at www.gcsaa.org. The section contains a comprehensive list of state and federal OSHA, EPA, DOL and general safety resources. It covers everything from safe handling of drinking water (a really big deal these days) to external defibrillators and child labor laws.

**Retirement**

With all the buzz about Alan Greenspan’s comments on Social Security, it pays all of us to take steps to secure our own retirement funds. This is especially true in our profession where retirement benefits are often non-existent as part of our compensation packages. The GCSAA has a program called Golf Retirement Plus, which provides the following benefits:

- Personalized retirement planning. Specialists work one-on-one with members to determine the best investment strategy.
- Affordability. There are no sales charges on contributions so every dollar contributed begins working immediately.
- Significant tax savings. Members can defer taxes on potential earnings.
- Portability. The plan can be taken from one job to the next.
- Family Protection. The program provides a death benefit that ensures loved ones will be taken care of after a member’s death.

For more information call Golf Retirement Plus toll free at (877) RET-PLUS.

DAKOTA GIVES “MULTI-PURPOSE” A NEW MEANING

FROM THE DAKOTA 410 TO THE 440 – WE CAN HANDLE THE JOB

Whatever your needs. Be it moving it, spreading it, filling it or leveling it.
DAKOTA has the right equipment at the right price. Check out our great line of Turf Tenders, Spreaders, Dethatchers, Blenders and Soil Movers at Disbrow Enterprises.

410 FEATURES:
• Spread Pattern Variable up to 30 Feet Wide
• Rear Unloading Hopper Conveyor
• Dual Spinner Discharge System
• Vehicle Mount Control Panel for Electric over Hydraulic Drive System
• Manual Rear Door Adjustable from 0° to 7°
• Detachable Parking Stand for Storage
• Mounts on John Deere ProGator or Toro Workman
• Hydraulic Lift Allows Easy Engine Servicing
• Hopper Built Long Enough to Accept 6 Foot Loader

440 FEATURES:
• 4.2 Yard Hopper Capacity
• Hydraulic Swing-Away Conveyor
• Dual Spinner Discharge System
• Fender Mount Control Panel for Remote Hydraulic Drive System
• 4 Softrac Turf Tires with Independent Walking Axes
• Belly Mount Box Scraper
• Electric Vibrator
• Hydraulic Rear Door
• Manual Front Door

Legislators Don’t Understand Golf’s Role in Economy, Environment

Encouraged by our reception and conversations with legislators in Tallahassee last year, the FGCSA officers asked our lobbyist Mike Goldie to schedule another round of visits this year. We went during the legislative session last year, so this year we explored going up during committee-work weeks prior to the session so their schedules wouldn’t be so tight.

This year we had a couple of items of concern that we explored with each legislator:

- Six water bills that were on the agenda.
- The upcoming budget and would IFAS again be affected after three years of cuts.
- Legislative funding of turf research. If North Carolina can do it, why can’t we?

We talked to the following people: Rep. Dudley Goodlette (R-76, Naples); Sen. Ken Pruitt (R-28, Port St. Lucie), chairman of the appropriations committee; Sen. Paula Dockery (R-15, Lakeland), member of the agriculture and natural resources committees; Sen. David Aronberg (D-27, Greenacres), whose district runs from Fort Myers to Palm Beach; and Sen. Skip Campbell (D-32, Tamarac) from Broward County.

What we discovered in our conversations was that these folks understood that golf was out there, but they didn’t always understand how our industry fit into the big picture. Or simply that golf in and of itself was not on their radar screens as having issues that needed addressing.

Rep. Goodlette. On Monday evening, we spent an hour with Rep. Goodlette. If you’ve ever been to Naples you have undoubtedly seen or passed Goodlette-Frank Road. So Mr. Goodlette is from pioneer family stock. He has seen Collier County grow and understands how important golf is to his part of the state. But like many legislators he doesn’t understand how turf research gets funded and when we gave him the examples of the North Carolina legislative support and how we used grass varieties developed exclusively in Georgia, he became very supportive of improving Florida’s efforts to become a leader in turf research.

On Tuesday morning we started the day with a meeting with Steve Rutz, Dennis Howard, Dale Dubberly and Leigh Humphrey of the Dept. of Agriculture and Consumer Services. The topic of chief concern was the status of the arsenic issue as it related to the use of MSMA. They reported that the state and the MAATF were negotiating an agreement on a prospective ground water study to try and determine the exact role, if any, that the application of MSMA is playing in releasing arsenic into the ground water. Our message was that we support decisions and policy based on sound science and that we would cooperate as much as we could in the process. After that session, we began our appointments with four senators.

Senator Pruitt is an advocate for IFAS, but he is frustrated that IFAS doesn’t do a better job of taking its message to the people. He encouraged the institution to publicize its contributions to health, wealth and food and environmental safety of the state. He suggested that IFAS hold more open-house tours of its research centers to tout their value to the citizens of the state.

We also broached the subject of direct legislative funding for turf research. We used the example of North Carolina’s funding of $650,000 a year to NC State’s turf program. He was supportive and offered some ideas that we will follow up on with Mike Goldie.

Senator Dockery had all sorts of nature photos and plaques on her walls from environmental groups. She was the sponsor of one of the water bills dealing with the mandatory use of effluent water for irrigation, and the first words out of her mouth were... “since golf is a big water user.” We quickly dispelled that misconception with our Economic and Environmental Information Kit that we left with each legislator.

Mike eased us into the discussion of the intent of her bill which had exempted golf courses from being forced to hook up to effluent unless it was...
Historically Proven: The One Reliable Mole Cricket Control.

No-dust, low-odor
Orthene® Turf, Tree & Ornamental Spray 97

- Smooth-flowing pellets improve handling and measuring accuracy
- Controls over 40 pests (more than Chipco® Choice™)
- Labeled for use on over 110 plant species
- Controls pests through both contact and local systemic activity
- One of the most cost-effective turf insecticides you can buy
- Wide range of tank mix flexibility

Learn more about Orthene 97 from your distributor or by visiting www.valentpro.com.
technically, practically and economically feasible. It was those interpretations that we zeroed in on. In the course of the conversation she also acknowledged that she couldn’t understand the knock against golf courses since she saw so much wildlife on the courses she played during those annual political fundraisers. She also confessed her contribution to her scramble team was as a putter and not much else.

Senator Aronberg is a young lawyer who helped the sugar industry negotiate the Everglades clean-up issue and sugar tax. He comes from a golfing family. He plays, but in truth it isn’t a passion right now. When we brought up research funding, he associated us with the recently approved PGA-sponsored license plate for junior golf and asked if we didn’t get money from that. We told him that IFAS researchers had to solicit the money for their projects and the private industry and non-profit associations like ours were the major source of funds. He was surprised. After hearing some facts about golf’s impact to the state and our long-term support, he said he would help us in any way he could. He was the lone legislator to respond to my thank-you letter that I sent to each of them. Again he pledged his support for our issues.

Senator Campbell is a golf nut. He loves the game. Before we even got down to the business of our visit, he challenged us to a putting contest in his office. It was a great ice breaker. I have to report that only Greg Pheneger, who hasn’t been able to play since his back operation, was the only one to sink a putt to challenge the senator, who holed both of his. Local knowledge I suspect. Senator Campbell was also a sponsor of one of the water bills, and we found out it was a shell bill kept in the wings in case private entities tried to take over water rights without due process. In an area of the state where golf is being heavily scrutinized in the arsenic issue, we have an advocate for golf.

When I attended the Florida Pesticide Review Council meeting the week before our Tallahassee trip, I had the opportunity to meet Rep. Roger Wishner (D-98, Plantation), who is also from the Broward County area. He was the legislative sponsor of the PGA’s junior golf license tag. Mike introduced us and filled him on our issues and concerns to give a different view of golf besides playing and growing the game. And a couple of weeks after our trip I attended a Florida Fertilizer and Agrichemical Association meeting in Crystal River. One of the speakers was Sen. Nancy Argenziano (R-3, Crystal River), chairman of the agriculture committee. She’s heard of the Envirotron Classic. She understands the importance of agriculture and arranged a tour for freshmen senators who came from urban areas and have no clue about the Number 2 industry in Florida (See Mark Jarrell’s column in this issue).

There is no doubt in my mind that the professional fact-based meetings that we are conducting on these annual trips to Tallahassee will help us gain support for the issues facing the golf industry. We aren’t asking for special treatment or favors. We are providing facts and pledging to work for solutions that will benefit our industry of course, but ones that make sense for everyone.

But Mike Goldie repeatedly tells us that the best way to deliver our message and earn legislative support is at the grass-roots level. Each chapter can work with Mike to arrange a meeting with the senators and representatives that serve their regions. It will carry more weight for a legislator to be among his or her constituents at the local level. Chapters should seriously consider allocating one of their monthly meetings to a meet-your-legislator session. It would be a great time to have a superintendant/manager or club official joint meeting. Find out from Mike the best time of year to hold such a gathering and do your part to improve government relations.
Have you booked your Curfew® yet?

73 Days after Application

- Curfew soil fumigant for nematode control is applied by certified applicators with approved equipment.
- Labeled for use on all established, actively growing golf course fairways, roughs, tees, and greens complexes; athletic fields, and polo fields.

Why You Should Join the ACSP Now!

By Joel Jackson

Can we agree that golf courses often get a bad rap in most news stories whenever pollution or water quality are mentioned? Can we also agree that we know golf courses really are positive environmental assets to a community? Would you or your club ever want the positives to be praised and the negatives debunked? If you answered “yes” to these questions, then I hope you already are a member of the Audubon Cooperative Sanctuary Program. If not, why not?

We are good for the environment and it’s way past time we tooted our own horn. The ACSP is best way we’ve got to demonstrate our environmental stewardship.

Reputation and Results

For $150 per year dues, you receive the services of an environmental consultant with a stellar reputation. The Audubon International (AI) has received numerous awards and recognition from the U.S. Environmental Protection Agency and the GCSAA for its proactive work, not only with golf courses, but also schools, commercial properties, residences and whole communities. They will help and guide you and encourage you, but they will never dictate what projects you must do at your club. Their suggestions and recommendations are just that and they are based on the information you supply about your particular site. Here are some examples of the high regard officials have of the ACSP program:

Programs such as Audubon International’s represent the types of positive partnerships that need to be created across the country. This type of an effort is the only way that we can positively deal with the many, serious environmental issues we face as a nation. - Christine Todd Whitman, former EPA Administrator

My observation has been that Audubon International provides a real service to, and sets up a real challenge to be met by, real environmental professionals, and in doing so, is responsible for significant voluntary environmental progress... I can attest that AI’s strategy is not just words, but represents genuine accomplishments. - Michael C. Farrar, Office of Pesticide Planning and Toxicity, EPA

Audubon International has stepped up and created a very practical and effective program that now serves as a model for other industries. It is one the few programs that can demonstrate clear, on-the-ground accomplishments that benefit the environment and that is also successfully changing people’s attitudes - Peter W. Stangel, Director, SE Partnership Office, National Fish & Wildlife Foundation

Why wouldn’t you want to be part of that effort for the good of your own property and the community? Not only is it the right thing to do, it makes good business sense.

Courses involved in the ACSP, and especially those who get certified, have realized genuine cost savings. In the time of tight budgets who doesn’t want to save money and direct efforts to maximizing customer satisfaction? I don’t know what dollar amount you can put on the public-relations value of holding school or environmental tours, annual bird counts or other community outreach, but it certainly can’t hurt. Here are just some of the benefits to clubs in the program tabulated from a recent survey:

- 82% reduced pesticide use
- 75% reduced pesticide costs
- 80% decreased managed turfgrass to increase wildlife habitat (less turf, less cost) Average increase of 22 acres per course for habitat
- 69% decreased water usage or 1.9 million gallons per year per course
- 99% report playing quality has been improved or remained the same
- 99% found golfer satisfaction improved or remained the same
- 99% of superintendents report job satisfaction improved or remained the same
- 85% did not track costs or benefits of ACSP.
- 100% of the certified courses that tracked costs noted a reduction in costs due to ACSP

So we’ve got a respected environmental association (Audubon International), with a highly regarded program (Audubon Cooperative Sanctuary System) that protects the environment, saves money and enhances your reputation as a good neighbor. Then I have to ask, “Why are only 13 percent of the nation’s courses participating in the plan?”

We know the annual dues are only $150, so it can’t be the money. Is it apathy or the assumption that it will take a lot of time? I can’t address your apathy. You have to look in the mirror each day. I know from personal experience that the “time excuse” is baloney. You have to invest a certain amount to get started, but help is available to do that from AI and the FGCSA.

Numerous articles have been written (see...
SeaIsle1 Keeps Your Irrigation Options Open

Option A
Streams, Canals, Rivers, Ponds, Lakes, Wells & Brackish Water

SeaIsle1 will produce high quality fairways and roughs with high quality water. It also thrives when irrigated with many medium-to-poor quality water sources. As with all turfgrass, management practices will vary depending on water quality, rainfall and season.

Option B
Recycled Water, Gray Water and Effluent Water Sources

Recycled water usually varies by location, season, quality and nutrient content. Depending on the uniformity of your source, you may need to monitor water quality daily, weekly or monthly. SeaIsle will do quite well with up to 4, 5, even 8 thousand TDS.

Option C
Use Blended Ocean Water with Aggressive Management

Fresh water is a must during the grow-in phase, but mature turf can be irrigated with ocean water/fresh water blends. This requires a comprehensive aeration and leaching program to move excess salts downward through the soil profile.

- Most Salt Tolerant Turfgrass
- Tolerates Gray Water & Effluent
- High Tolerance to Salt Spray, Water Logging and Periodic Inundations
- Low Fertilization and Minimal Pesticide Requirements
- Good Rooting in Sandy, Clay or Muck-Type Soils
- Darker Green Color Than Bermudagrass
- Excellent Low Light Intensity Tolerance
- Excellent Winter Hardiness
- Tree-leaflet Tolerance Similar to Bermuda
- Can be Overseeded with Bentgrass-Ryegrass-Alkaligrass
- Recommended pH Levels: 5.5-8.0

the ideas in the Lemon Bay cover story in this issue) and case studies published how superintendents have recruited help from the club members and others to do the legwork on the projects. There are lots of people who want to help the environment and they can be harnessed to do the work. It is a cooperative, sanctuary, not just yours.

50-in-5 Campaign
Currently the Audubon International is entering year three of its 50-in-5 campaign to get 50 percent of all golf courses into the ACSP. With a flat membership growth the last couple of years, frankly we’re all a little disappointed.

Each FGCSA local chapter was given a chart that showed the total number of FGCSA members and the number enrolled in the ACSP program. The chart also showed that if each chapter made a positive effort to enroll just a few courses each year that we could achieve that 50-percent goal easily. Now we only have three years to go until 2007.

As I said before, this is a cooperative effort and superintendents shouldn’t carry the burden alone. I call on the Florida State Golf Association, the Florida Golf Course Owners Association and the Florida Club Managers Association to step up and get their member courses enrolled in the ACSP. The United States Golf Association already supports the program. More people in the golf industry need to show their commitment to the environment by supporting this program.

We are already called to task for the misconceptions about golf. Won’t you join now to promote the game, your club and the industry to give golf its proper respect and place in the environment?

**Juvenile Owl Survives Eagle Attack**

Superintendent Mark Shoemake to find out what steps should be taken next. Joanna Fitzgerald of the Conservancy informed us that she would be right out to the course to identify the bird and take it for monitoring for any injuries that may need to be treated at the conservancy. In the meantime, we were instructed to find a lift that could get us to the nest, which the mother great horned owl was watching over closely.

We contacted NationsRent and representative Steve Acquafresca graciously donated the use of a 60-foot boom lift for replacing the owl in its nest. At 10:30 a.m. Tuesday, the owl was strategically placed in the nest by Naples Conservancy employee Amy Heller. She was accompanied in lift by Shoemake and myself.

During the course of the day we anxiously awaited the mother great horned to return the nest, which did not happen. Thanks to everyone’s efforts and much to our relief, the mother-and-child reunion occurred on the following day when we found the mother huddled next to the juvenile on a branch near the nest.

This was quite a rewarding experience for all and a token moment in the day-to-day routine of golf course and landscape maintenance. It will be added with pride and merit to our membership experiences in the Audubon Cooperative Sanctuary System for Golf Courses.

**Walk on the Wild Side**

By Brian Beckner

It was Monday, Feb. 16, at the LaPlaya Golf Club in Naples and our Landscape Superintendent Doug Fuller was making his routine, early-morning tour of the golf course. As he approached to the 13th green he noticed a bald eagle swooping close to the treetops of the nearby stand of slash pines. Next thing he saw was a juvenile great horned owl that could not yet fly, falling to the ground. The young owl scurried to safety in a nearby landscape bed hiding among the Mexican petunias. He was not attacked again.

The Conservancy of Southwest Florida was than called by Assistant Golf Course Superintendent Mark Shoemake to find out what steps should be taken next. Joanna Fitzgerald of the Conservancy informed us that she would be right out to the course to identify the bird and take it for monitoring for any injuries that may need to be treated at the conservancy. In the meantime, we were instructed to find a lift that could get us to the nest, which the mother great horned owl was watching over closely.

We contacted NationsRent and representative Steve Acquafresca graciously donated the use of a 60-foot boom lift for replacing the owl in its nest. Remember when “drive” was something you had... not something you did.

Harrell’s hasn’t forgotten.

Harrell’s reps will go the distance for you. That’s because – for Harrell’s – providing you with efficient, high performance service is a top priority. In addition, Harrell’s world-class, custom-blended fertilizers are formulated to give you optimum turf growth and health; state-of-the-art technology and quality ingredients guarantee it. Together we are all part of a fine-tuned team that assures you’ll get what you need, when you need it. It’s a winning combination.
The economic “down-turn,” if that is the appropriate word to describe what the country has experienced for the past few years, has not hit Florida as hard as it has most of the other states. One big reason is because the agriculture and natural resource sectors - those industries served by IFAS research and extension, which includes turf management - performed better than any other major sector of Florida’s $484 billion economy during this period.

Between 2001 and 2003 personal income in Florida increased by 7.6 percent compared to 4.8 percent for the rest of the country. Of 22 major industry sectors of Florida’s economy surveyed during this period, only management of companies and enterprises (27 percent), exceeded farms (26.2 percent) in personal income growth. I don’t know quite what to think about these numbers that were generated by a recent University of Florida/IFAS economic impact study.

My long history of working through FGGA and FGCSA committees with IFAS has been continuous frustration that our legislature cuts the IFAS budget year after year, failing to recognize that agriculture and natural resources are the heart and soul of Florida and its economy. No matter what a governor or a group of legislators would like Florida to become, ignoring what it is just never made any sense to me.

By Jim Walker

A couple of years ago, players on the PGA Tour, European Tour and Senior PGA Tour were asked what was the single most important advancement which has led to the superior quality of play today. Most people expected the answer to be new and better clubs and balls or the conditioning of the players who are stronger and in much better shape, or a combination of those factors. To everyone’s surprise, the answer almost to a man was the condition of the turf being so much better today than it was in the 50’s, 60’s or even the 70’s.

Each decade has brought new and better varieties of grass, safer and more effective pesticides and sophisticated mowers and supporting equipment.

As for tourism, am I just being simple-minded, or is it just common sense to think that people visit or move to Florida because of our great weather, water, beaches, fishing, golf courses, and green spaces? Yes, we have Disney World and other attractions, but so do other states. I love visiting San Francisco, but when I jump in the car I want to see Napa Valley, not Silicon Valley. Let’s hope that Mike Martin can find a way to make this message resonate with the powers in Tallahassee.

Mark My Words

Food for Thought...and the Economy

By Mark Jarrell, CGCS

The economic “down-turn,” if that is the appropriate word to describe what the country has experienced for the past few years, has not hit Florida as hard as it has most of the other states. One big reason is because the agriculture and natural resource sectors - those industries served by IFAS research and extension, which includes turf management - performed better than any other major sector of Florida’s $484 billion economy during this period.

As it Lies

The Times They Are a’ Changing

By Jim Walker

A couple of years ago, players on the PGA Tour, European Tour and Senior PGA Tour were asked what was the single most important advancement which has led to the superior quality of play today. Most people expected the answer to be new and better clubs and balls or the conditioning of the players who are stronger and in much better shape, or a combination of those factors. To everyone’s surprise, the answer almost to a man was the condition of the turf being so much better today than it was in the 50’s, 60’s or even the 70’s.

Each decade has
CONSISTENT CONTROL IN THE MOST INCONSISTENT CLIMATES.

Consistent performance, consistent results. When the humidity is up and the temperature is rising ConSyst® fungicide gives you turf disease control you can count on time after time, every time. ConSyst works on contact and it works systemically to prevent and cure even resistant diseases, so no product rotation is needed. Used in a regular program, ConSyst is even fungistatic to pythium diseases. ConSyst is one fungicide with such a broad spectrum of disease control, it’s become the “all-purpose fungicide” for turf and ornamentals. If you want consistent protection, you want ConSyst from Regal Chemical Company.

The all purpose fungicide for Healthier plants / 800.621.5208

Put More ‘Grin’ Than ‘Grip’ into Award Presentation Photos

From time to time in future issues, we will provide some writing and picture-taking tips to help you improve your communications skills whether it’s for your club newsletter or for articles for other publications.

Photos are a great way to capture memories and the history of your department at the club or your chapter, whether they’re the good old 35mm prints or slides or digital images. Maybe these pictures will go into an album or onto a CD for the archives, but then again they might be used in the Green Sheet, The Florida Green or even a national publication like GC or Golfdom.

The Grip and Grin Photo Op

One of most-often taken photos is the golf trophy, service award, or donation check presentation. They are often called “grip and grin” after the handshake and broad smile that go with the handing over of the hard cash or hardware. The most common mistake in this photo-op is the position of the subjects. Ninety-nine percent of the time, the subjects stand at arms length shaking hands and holding onto the plaque or whatever.

The other big mistake is keeping the camera too far away from the subjects. We don’t need to see their feet. We want to show their smiling faces. And since some of us are maturing nicely, we also don’t want our bellies prominently displayed either.

And whether indoors or outdoors, always use a flash to take the picture unless you know how to eliminate shadows from overhead lighting or bright sunlight in the darkroom or with your computer.

The key to these photos is to get the subjects close together, shoulders touching and plaque held high. Also get the subjects, especially if there are more than two, to stand angled toward the camera (45 degrees instead of square to the lens. It helps to minimize the girth of the person and saves column space in the magazine.

And if at all possible, try to create a different pose entirely. Of course it’s a good idea to take a “safe” pose as well, in case the bright idea doesn’t look so hot when you edit your photos.

One caution - especially for framed awards - is to be aware of reflections of lights and flash on any shiny, polished or glass surfaces. You may have to tilt the award down slightly to avoid reflections.

Typically subjects stand too far apart. Also watch for background objects “sticking” out of people’s heads. Photo by Joel Jackson.

Better composition. Subjects are closer. Blank wall space is minimal. This photo can be easily cropped to fit into the column space in a magazine. Photo by Joel Jackson.

A good suggestion is to eliminate the presenter altogether from the photo, unless it is someone famous or someone who rarely ever appears in chapter photos. The focus of the story is the recipient. Keep it dignified, but have fun with it too. Remember, when you have the camera, you’re the boss of the photo shoot. Above are examples of poor and better composition of the Grip & Grin photo.

Leadership - A Learned Behavior

By Bruce R. Williams, CGCS

Early in my career I learned from some great mentors.

continued on page 56 ...
2003 Photo Contest Results

This is part three of presenting the four category winners of the 2003 photo contest.

First Place - “Lake Bank Plantings” by Trevor Brinkmeyer, Shadow Wood CC, Naples

Second Place - “Fountain Grass along No. 4 Tee” by Tom Biggy, Bent Tree CC, Sarasota

Category 3 - Native Areas

Category 1 - Wildlife on the course: includes any critter on the course that walks, flies, swims, slithers or crawls.

Category 2 - Formal Landscaping: includes annuals and ornamental shrubs and trees planted in formal beds on the course or club entrance.

Category 3 - Native Areas: includes beds of native plants including trees, shrubs and grasses used in naturalized areas to reduce turf inputs and aquatic vegetation plantings used to create habitat and protect water quality.

Category 4 - Scenic Hole: includes any view of a golf hole (panoramic or close up) that demonstrates the scenic beauty of a golf course.

Easy Rules

1. Color prints or slides. Prefer prints. Only one entry per category. Digital images: Digital image entries must be taken at a resolution setting of 300 dpi or higher and saved as Jpeg or Tif format images. Images taken, saved and sent at lower resolutions will not qualify for the contest. If you're not sure, send a print instead.

2. Photo must be taken on an FGCSA member's course. Photo must be taken by an FGCSA member or a member of his staff.

3. Attach a label on the back of the print or slide which identifies the category, course and photographer. DO NOT WRITE DIRECTLY ON THE BACK OF THE PRINT. Each print shall be attached to an 8.5” x 11” sheet of paper using a loop of masking tape on the back of the print. Slides should be in plastic sleeves for easy access for viewing. Digital images must be accompanied by the same information in an email or document on a CD.

4. A caption identifying the category, course and photographer should be typed or printed on the sheet of paper below the mounted print.

5. Judging will be done by a panel of FGCSA members not participating in the contest.

6. Mail entries in a bend-proof package marked “PHOTOS DO NOT BEND” to Joel Jackson, 6780 Tamarind Circle, Orlando, 32819. Entries postmarked after August 1, 2003 will be automatically entered in the 2004 Photo Contest.
event in La Costa. They showed pictures of the flood which inundated the holes on the course, but the only mention I heard of the crew’s efforts was the typical “the superintendent and his staff did a nice job this week” uttered by Tim Finchem. Meanwhile, one doofus was praising the PGA Tour officials acting as referees for the matches as the nuts and bolts that make this thing happen. Say what? 

Birdies to the Georgia Golf Course Superintendents Association and the Cactus and Pines GCAS in Arizona for getting their golf course owners associations, club managers associations and state golf associations together to work on the issues facing golf. Awesome. 

Bogeys and Double Bogeys to the golf course owners in Florida who can’t even support their own Chapter of the NGCOA. Maybe when the GCSSA and NGCOA get together in Orlando in February 2005 for the new Golf Industry Conference and Show they will get the hint. 

Birdies to the North Carolina Legislature. It took the Turf Council of North Carolina and their supporters like the Carolinas GCSA awhile, but they got $650,000 budgeted to go to the turf-grass center at North Carolina State University annually. If they can respond to a $2.5 billion dollar turf industry like that, just think what Florida should get at $4.4 billion. 

Triple bogeys to the governor of South Carolina. Word is that his state budget proposal cuts out all funding to Clemson University’s turf and ornamental programs including extension. Has this guy ever heard of Myrtle Beach? Got to give a bogy to our Florida legislature with their annual budget cuts to IFAS. Agriculture has helped pull Florida through the slow economy, and for that they get sucker punched. 

Birdies to all certified Audubon Cooperative Sanctuary courses. Thanks for being proactive and a good example of golf’s environmental stewardship, and an eagle to the superintendents paying the ACSP dues out of their own pocket. 

Triple bogy to the club that won’t cough up the $150 annual dues. I’m embarrassed for you. What is it, one buck per golfer? And bogeys to the rest of the clubs that just don’t get it. We’re in tough environmental times and this program can help you and the whole industry. Get on board. 

Birdies to the Florida Department of Agriculture and Consumer Services (FDACS). They get it. They know agriculture is the state’s most reliable economic performer during good and bad times. They seek scientific answers to issues and don’t let rhetoric muddy the picture. Plus they work with all stakeholders on the issues. 

Bogey to the county health official spreading the story of a baby’s death in New England from trace amounts of arsenic in the tap water. Turns it out it was homicide and intentional poisoning. Arsenic is a serious issue, but let’s deal with facts and not misinformation. 

Birdies to all of you dedicated guys and gals out there in golf maintenance. Nobody really knows how much you care or how hard you try to give the people what they want. 

But I have to throw a bogy on your score card if you aren’t also making the case for your value to the club. If you aren’t following a business plan or communicating frequently with the movers and shakers then you are risking disqualification. 

In the real game of golf there are no mulligans.

---

There was Dr. Ken Payne at Michigan State University, Bob Williams at Bob O’Link Golf Club, and Bruce Sering at Glen View Club. All of these fellows were great leaders and I learned much from their leadership styles. It was evident that they had the skills to steer the ship in the right direction. 

5 Skills of Leaders 

Communicating 
Great leaders communicate their position well. All those around them know where you are coming from. You cannot overcommunicate. Keep all those around you informed. 

Interviewing 
Great leaders surround themselves with great people. They know how to ask the right questions and do the right background work to assemble a successful team. 

Observing 
This area of leadership skills would include being a superb listener. Listen to what the golfers, staff, and industry, etc. has to say. You must not only observe by listening but also by watching. Be visible on your golf course. Find people doing something right and let them know it. 

Negotiating 
Understand how to negotiate win-win situations. Work toward compromise when solving problems. Pick your battles and don’t win the battle and lose the war. 

Sharing Recognition 
The final skill is that of sharing rewards and recognition with your peers and staff. Celebrate successes! You wouldn’t be successful without those who surround you. Let them know how important a role they play. 

Great leaders share the common thread of being able to visualize and create a vision for the future. They communicate that vision to those around them. They are very capable of making good decisions and giving appropriate directions. They do the right things. They realize that those around them have contributed to their success and recognize them accordingly. 

When we think of leaders, it is easy to come up with names of coaches, CEOs, and political leaders. However, we must remember that each and every one of us is a leader in our own right. We lead our own teams (staff). All of the aforementioned skills are important to each and every superintendent. It may be true that these skills don’t come easy to all but they will if you work at them!
It’s hard to beat the performance of TMI turfgrass varieties!

VIP3
Turf Type Perennial Ryegrass

Compare test results of proven overseeding grasses and you’ll notice similarities. VIP3 Turf Type Perennial Blend is a combination of quality and performance...and at an amazingly affordable price. Contains #1 ranked varieties. Available in specific overseeding formulations. Varieties chosen for outstanding ease of transitioning, and genetic dark green color. Contains endophytes.

PIZZAZZ
Turf Type Perennial Ryegrass

PIZZAZZ promises to set the standard for the next decade. Its dark green color and dense turf make it an attractive choice for parks, home lawns and golf courses. Clonal selections contain high levels of endophytes, and this synthetic variety is lower growing than many older varieties.

Paragon is in a class all of its own. In fact, we are so certain that you will want Paragon in your turf program because of its superior turf qualities have taken measures to ensure that once you see Paragon for yourselves that you will be able to readily get seed for this coming fall season. It’s that good. Better color, finer texture, improved disease resistance. Paragon - the professionals choice.

BARACUDA
Redtop

Created to meet the specific needs for seeding athletic fields, lawns, and golf courses. Establishes quickly and performs well under moderate to low fertility. Barracuda will grow under a greater variety of conditions than other grass seed, even on soils very poor in lime. Barracuda is a perennial grass with a creeping habit of growth, darker green than common redtop. Drought tolerant, dense turf with excellent mowing qualities.

TMI has spent years developing StarDust to be more disease resistant and is one of the darkest commercial Poa trivis for better color matches with some of today’s darkest green ryegrasses. University overseeding trials in Florida and Arizona have shown StarDust is setting the next standard that other Poa trivis can only hope to achieve!

Private and university trials have shown Cypress to be a premier overseeding grass. Cypress Poa trivialis establishes fast and can be cut close immediately, even after overseeding. As your Bermudagrass goes dormant, Cypress will provide the finest dark green putting surface with no interruption in play. Cypress is tolerant to shade and damp soils. This unique prostrate growing variety thrives in cool weather and will survive cold weather that will damage Turf Type Ryegrasses. But most important, Cypress will maintain its dark green color all winter long. As the weather turns hot in the spring, Cypress will die out naturally so your Bermudagrass begins to grow. Cypress will not choke out your Bermudagrass in the spring as some heat tolerant Perennial Ryegrasses do.
