

### South Florida: Royal Poinciana Club

*Matt Taylor, CGCS*

When I first arrived we had Tifdwarf. It was good but, with many clubs in the area installing ultradwarfs greens, it was hard to keep up.

We had pretty good dwarf greens with basically the same management as for ultradwarfs with grooming, vertical mowing, topdressing and fertility. We just could not really get much below .156 inches for a long period, so we had to work our tails off to get green speeds of 10.

We had a TifEagle putting green here at Royal Poinciana when I arrived in 2000. It was nice and the members loved it. I had grown Champion at Bonita Bay East for three years previously and I was very comfortable with how it could perform. Not many guys had figured out how to manage it back then. Honestly, in my opinion most greens at that time could not compare to Champion. So we decided to go with Champion at RP and have never looked back. We changed out 18 greens and the putting green the summer of 2000, and the other 18 and practice greens in 2003.

Today in 2011 many guys have figured out all of the varieties and the condition of greens no matter what variety, which are, for the most part, all excellent.

None of them has great color retention when it gets really cold. One type goes off color at 55 degrees and one goes off at 57 degrees. Really?

I think the biggest game changers are fertility and Primo. The fertility programs have changed so much, much lower N rates today maybe half – or less than half – of what we used to apply for dwarf. But the real breakthrough has been guys getting on and staying on Primo programs. The rates are all around 3 - 4 oz./A on a weekly basis. This produces speeds well above 10 with zero stress on the plants. Heights of cut seem to be ranging .110 - .135 inches.

### South Florida: The CC of Naples

*Bill Davidson*

When the ultradwarfs came out, everyone got the fever that “lower is better” since we all were struggling to provide “fast” green speeds. To think that you could mow a grass at .100 inch compared to the standard .140 inch was crazy. So the old philosophy of “if one is good, two are better” kicked in and guys headed for the basement trying to outdo themselves and their buddies. I think now guys are wising up and are instead figuring out how to mow at “.110”-.150” and still have speed and healthier turf.

I’ve grown TifEagle and Mini-Verde and I can say that the management of each under my care is essentially the same. The Mini-Verde has the best root system by far. It is not uncommon to have roots 4-5 inches deep

## New Distributor - Upstart Products, Inc.

Specialty Formulations

## Driving Plant Health

The Specialty Formulations Division of *BRANDT* has changed directions in the turf market and will be marketing its products exclusively through distributors and dealers worldwide. **Upstart Products, Inc.** is a respected presence in the Florida market and will be adding *BRANDT* products to its extensive portfolio. We welcome them to the *BRANDT* team.

*BRANDT* is at the forefront of nutrient delivery systems and environmentally friendly technologies to enhance the sustainability and quality of turfgrass.

- **Manni-Plex® Foliar Nutritional**s
- **Noculate® Greens Grade Fertilizers**
- **Adjuvants and Wetting Agents**
- **Pesticides, Fungicides and Nematicides**
- **Specialized Nutritional Formulas**
- **Colorants and Markers**
