

Birdies On Almost Every Hole!

The 2011 Christmas Bird Count

Members of the 2012 Sanctuary G.C. Christmas Bird Count teams were (l-r): Shirley Levine, Dr. John McCabe, Susan Cassell, Denise Carnell, Merry Lee Neil, Margaret Nelson, Dr. Wendy Kindig and Suzanne Springer. Photo by Kyle Sweet.

Thanks in part to Audubon International's Cooperative Sanctuary Program for golf courses and more avid birders turning to golf courses for their annual Christmas counts, people are learning that golf course truly are great wildlife habitats. Each year there are stories of skeptics who finally set foot on a golf course and see the reality for themselves, and there are fun reports of rare or unusual critter sightings. Several FGCSA members shared the stories below of the latest bird count. Space will not permit listing the species seen on each course. Needless to say, many familiar wading birds, waterfowl, songbirds and raptors are on everyone's list. We will highlight the number of birds and species and some of those rare sightings, which were special for the birders.

Sanctuary Golf Club

Kyle Sweet, CGCS, Superintendent

The Christmas Bird Count is organized by Susan Cassell each year and is well supported by our members. The club has two 6-seater carts that the members use to travel around the course in their groups. The results from The Sanctuary are provided to our local Sanibel-Captiva Audubon Society Chapter. We supply Audubon International with the Christmas Bird Count information with our Cooperative Sanctuary Program recertification application.

The island splits up into several sections, and for years The Sanctuary group has been doing the course. The way they did it this year was

four people riding the front nine and four people on the back nine. I typically do not join in on the Christmas Bird Count itself since I do all of the member activities throughout the year

Above: Black-Bellied-Whistling Duck. Right: White Ibis

and, as you know, the teams counted 36 different species and 338 total birds. As far as any rare sightings, this was the first year for the Red Head Duck and the Bufflehead Duck and one Yellow-Bellied Sapsucker. Oddly enough, we have only had a very few Yellow-Bellied Sapsuckers sighted over all the years of the counts.

Bufflehead Duck

Hole-in-the Wall Golf Club

Letter from Monica D. Higgins, Bird Count Coordinator

Hi, Russ. I wanted to thank you and all the members of Hole in the Wall Golf Club for allowing us to count birds on your course during the Audubon Christmas Bird Count on Saturday. We had a great time. I have attached a spreadsheet of all the birds we found with the ones found at your course in the last column. We found a total of 46 species and 328 birds there including several that we found nowhere else.

You can also compare the increase this year in bird species and numbers with those from last year when they didn't have the opportunity to include your

course in the count. I was also pleased to use the occasion to reach out to the non-golfers in my group. At first one of our group was concerned about birding a golf course. She thought it would be too sterile, too many pesticides. I was able to inform her about your work with Audubon International and the Audubon Cooperative Sanctuary Program.

By the time we left, the numbers of birds we had found amazed her along with the great habitats you have developed. She had a total change in her opinion. Perhaps the best moment though did not belong to the birds. Just off hole No. 5 we spied a bobcat! Everyone thought it was really great that you could have such great course in the middle of town that would attract and support not only birds but a bobcat too. All in all, a great day! We got to see lots of birds and met several golfers that were excited about what we doing. Thanks again for the opportunity and I hope we can do it again.

Submitted by Russ Geiger, CGCS.

Brandt Manni-Plex® and Neo-Tec S.O.®
High Performance Nematode Control

No other combination can knock down nematodes and improve plant health faster than Neo-Tec S.O. nematicide and Brandt Manni-Plex foliar nutrient technology.

Neo-Tec S.O. goes to work to attack, disorient and repel nematodes, as well as increase the number of beneficial microorganism populations. While Neo-Tec S.O. treats and prevents nematodes, Brandt Manni-Plex provides a boost of nutrition that helps heal damaged plants and restore health quickly.

- **Neo-Tec S.O. is a highly effective, sustainable and environmentally friendly nematicide that requires no REI down time**
- **Brandt Manni-Plex technology increases nutrient uptake and use, and delivers nutrients to the plant's active metabolic sinks**

Shell Point Golf Club

Submitted by Mark Jacobs,
Superintendent

Kyle Sweet and I were talking at my maintenance facility the other day and he reminded me that the *Florida Green* was looking for comments about the 2011 count. We were discussing our Audubon program that we are working on here

Roseate Spoonbill

at Shell Point. I will be conducting a course/maintenance facility tour here in two weeks, which Kyle and Shelly Foy will be attending.

Here are the results from our 2011 Christmas bird count. There are some residents here who have been doing a Christmas bird count on the course since 2002. They are residents of Shell Point Retirement Community and do the count for the Shell Point Golf Club. They toured the entire course. I'd like to recog-

nize Dr. Bill Saunders, Dr. Iver Brook and Ms. Dotty Morrison. These are the folks who organize and conduct the annual counts, and Dr. Saunders also works with us on our environmental programs.

This year the group logged 32 species and 309 birds. The rare sighting of a pair of Roseate Spoonbills was this year's highlight. The Roseate Spoonbill is our rare one. Below is a summary of the total of species and birds over the past nine years.

2002-2011 BIRD SUMMARY:			
Year	Species	Count	Most Frequent over the years
2002	32	177	63 Boat tailed Grackle
2003	18	88	25 Great Egret
2004	31	311	81 Mourning Dove
2005	29	650	249 Fish Crow
2006	35	364	126 Double Crested Cormorant
2007	33	871	453 Fish Crow
2008	23	478	310 Common Grackle
2009	33	521	239 Common Grackle
2010	32	257	75 Common Grackle
2011	32	309	46 White Ibis

Common Grackle

Legendary greens and bunkers have one thing in common...
they both began with the best soil.

Beneath every meticulously groomed green is dirt. And, the best dirt doesn't just happen. At **Golf Agronomics Supply & Handling** we've been perfecting golf course soil and sand for more than a decade. Our computerized soil blending equipment ensures that the mix you receive meets your exacting specifications – every order, every time. With production facilities located throughout the Southeast, Golf Agronomics offers volume orders and next day service.

STEWARDSHIP

Earlier in 2011 at the High Ridge course this Screech Owl was spotted in its nest just 30 feet from the 8th green. Submitted by Steve Kuhn

High Ridge Country Club

Submitted by Steve Kuhn, Superintendent

Our 2011 survey was conducted by Linda Barnes of The Audubon Society of the Everglades. It's the 12th straight year they have done it at High Ridge Country Club, representing our geographical area of Palm Beach County.

The counts were down slightly from years past, perhaps due to a major renovation we did in 2010 and the warm winter up north delaying normal migration patterns and timing. Over the years, our property has been privileged to become home to more than 75 different species of birds. This year, seen for the first time ever, were the Black Bellied Whistling Duck and the Parula. The 2011 Count results: 33 species with 261 total birds.

Christmas Bird Count at Heritage Oaks

Report by Frances and Peter Rice

Submitted by Andrew Bell, Superintendent

This year the Heritage Oaks count was 38 Species, 210 birds. Every year near the end of December, Christmas Bird Counts are conducted across North America. In northern Sarasota County, the Sarasota chapter of the Audubon Society coordinates these counts. As part of this effort, we performed a "backyard" Christmas Bird Count here at Heritage Oaks Golf & Country Club.

This year, we noticed fewer species and a smaller number of birds. We surmise that this lower bird count was due to milder weather for much of North America during the autumn and winter, prior to early January. This mild weather up north likely resulted in many birds delaying their migration south. Not found were a couple of Limpkins that we have spotted from time to time along the shores of our ponds. Also, for the first time, we did not find the usual House Sparrows congregating around one home near the north end of Chase Oaks Drive. An interesting bird we did see is a Great Horned Owl. Notably, during October and November, two of them spent many nights on top of our house, loudly hooting.

Our local specialty is the White-winged Doves. They usually are seen at dusk and dawn during the winter perched together in large numbers along Bee Ridge Road Extension on the wires or in a tree. For the rest of the year, they spread out, and some have been seen several miles away. In previous years, we have counted as many as 38, but this year we only saw 20. ■
