Regulator Reality Check

Twelve years ago, the Florida GCSA joined the allied group of agriculture and green industries in sponsoring a Spring Regulator Tour that brought EPA regulators from Washington and Atlanta, and Florida regulators from the Florida Depts. of Environmental Protection and Agriculture, Water Management Districts, Mosquito Control Districts and some local county officials.

The annual event takes place each March as the Florida Fruit and Vegetable Association coordinates the tour which includes golf, nursery, sod, citrus, row crop, sugar cane, dairy and beef cattle operations. The regulators meet in Ft. Myers and, after an afternoon tour of the Old Collier Golf Club in Naples, they head east on SR 80 for a weeklong visit to facilities related to all those commodities mentioned above.

The FGCSA rents multi-passenger, golf-cart-powered trams for the golf course tour and host Tim Hiers CGCS takes advantage of that rental to also conduct an eco-tour for 5th graders from a nearby elementary school.

This is classic outreach and education. It is something we need to do more of on some scale at more golf courses throughout the state. Building working relationships and sharing information with regulators at all levels local, state and federal will reap benefits when it comes to discussing issues that crop up. We can also help our cause by educating the public and we can easily start with maintenance and eco-tours with our golfing customers, members, neighborhood school kids and bird watching groups.

Over the years I have watched the reaction of these regulators on the tour of Old Collier. When the facts of actual acreage under maintenance and the amounts of pesticides applied, the light begins to come on. And there is nothing better than the wildlife sightings as we ride the course. Given that mid-afternoon is not the best time for sightings, we still manage to find gopher tortoises, gators,
songbirds, wading birds and best of all ospreys and bald eagles in mid-air battles over a fish the osprey has captured.

Course design, irrigation management and the use of brackish water with seashore paspalum are also discussed. Finally, a putting contest and a tour of the maintenance facility followed by a barbecue dinner and Q&A session in the break room wrap up the day.

There are always other superintendents and speakers to share information and answer questions one on one. This year thanks to tight travel budgets there were only 20 regulators. My estimate is that 19 of them learned something new, while one remained adamant that water quality had to be compromised during the summer rainy season.

Helping Tim this year with tour hosting duties were Old Collier Superintendent Ricardo Uriarte, Sanctuary GC superintendent Kyle Sweet and his IPM Manager Jason Craft, local ornithologist George McBride and myself. Thanks also to Dan Botts and Mike Aerts of the FFVA for organizing these tours.

The FFVA has been doing a version of regulator tours for a long time. Every local superintendent chapter and/or course needs to do the same thing as regulators and politicians change all the time. The late Sen. Daniel Patrick Moynihan (D-NY) summed it all up when he said, “You are entitled to your own opinion, but you are not entitled to your own facts!” If we openly share the facts with the public, maybe they will view those negative media stories with more skepticism.

Regulators get a little “hands on” time by participating in a putting contest on the practice green. Earlier they witnessed hand mowing, aerifying and spray hawk demonstrations on the green. Photo by Joel Jackson.
After a lot of hard work, the Florida GCSA is prepared to roll out its Certification Program for the Best Management Practices for Golf. This program, designed to build upon the BMP manual published in 2007, is intended to educate superintendents, golf course employees and vendors on the best ways to manage golf course agronomics while minimizing any negative environmental impacts.

University professors and industry professionals will teach the program. The program will be delivered as a six-hour seminar immediately followed by an exam. Passing the exam will certify an individual for four years with recertification simply requiring attendance of another FGCSA BMP Seminar to learn the latest changes and updates to the BMPs. In addition to certification, the program will count toward CEUs for your state pesticide license and GCSAA PDI/CGCS points. This program does not currently replace any local Green Industry BMP (GIBMP) class requirements.

While current law does not require this program, it is a valuable tool for education and awareness of superintendents and affiliated golf industry personnel on the most current BMPs for golf course maintenance. It is important that Florida superintendents demonstrate their dedication toward understanding and following the Golf BMPs. By developing a successful and well-participated program, the superintendents around the state can strengthen their credibility and science-based position when faced with fertilizer, chemical and water restrictions.

The program will send a strong message to lawmakers and the public showing that the state’s golf courses are committed to doing what is in the best interest of the environment while maintaining their facilities, which are small businesses, using the best resources available.

Without your participation, the program falls short in its intent to better educate turf professionals and show lawmakers and regulators the industry’s dedication to preserving the environment. Please be on the lookout for more information to come on the regional scheduling of the BMP Programs.

Editor’s Note: The FGCSA Board and the BMP Committee are finalizing dates and locations to hold a series of statewide regional BMP programs. Speakers and venues have to be arranged. More information on registration and testing and any required re-testing procedures will be announced when the schedule is set.
