Northrup King introduced them 10 years ago and by 1973 they were keeping greens and tees green and healthy all winter long at over 250 Southern courses. Today, Medalist blends are still used at 90 percent of those courses. And another 215 Southern courses have discovered Medalist blends, too.

That's success.

All those golf courses use Medalist blends for plenty of hard-nosed reasons. Medalist blends establish rapidly. They mow beautifully. Their transition characteristics are excellent. And they're exceptionally reliable.

The latest Medalist blend is Medalist 6 and it's a standout. That's why it will help keep more and more greens in top shape all winter long.

Ask your Northrup King man how to make your course even better. He'll tell you about all the Medalist blends, including Medalist 6.

And he'll be more than happy to pour you some.

For more information, write:
Medalist Brand Formulas, Northrup King Co., P.O. Box 370, Richardson, Texas 75080.
Or 4801 Lewis Road, Stone Mountain, Georgia 30083.
LONG-LASTING
CHIPCO® 26019 IS
STRONG MEDICINE.

If you're serious about protecting your turf against diseases, give it your best shot. Spray Chipco 26019 fungicide. Thousands of superintendents have switched to Chipco 26019 in the past two years. And no wonder: Chipco 26019 gives you the longest residual. You can cut the number of sprays in your program, and that cuts your costs. And Chipco 26019 prevents the major turf diseases with unsurpassed effectiveness. You'll get good results with Chipco.

Please read label carefully, and use only as directed.
26019 against dollar spot (including benomyl-resistant dollar spot), Helminthosporium (leaf spot and melting out), brown patch, Fusarium blight and Fusarium patch (west of the Cascade Mountains). Chipco 26019 also suppresses grey and pink snow molds. Ask your Chipco distributor or Rhône Poulenc representative about effective, long-lasting Chipco 26019...the strong medicine in turf disease prevention. Rhône Poulenc Chemical Co., Agrochemical Div., Rhône Poulenc Inc. Monmouth Junction, NJ 08852.
No other golf utility vehicle on the market has a bigger carrying capacity than the GT-7. It'll haul a 1500 pound payload at up to 24 mph, without so much as a complaint. And its 19 cubic feet of cargo area can save you extra trips.

It’s also available with a full line-up of accessories for aerating, seeding and spreading, top dressing or spraying.

The GT-7 is easier to service, has undentable fenders and a diamond steel rear bumper. Yet it sells for about the same price as the leading competitor.

But don’t just believe our claims. For a demonstration on your course, just call your E-Z-GO Branch Office or Distributor. They’re in the Yellow Pages. Or call us at (612) 542-0516.

Something new and exciting has happened on Florida's west coast. It is a new St. Augustine grass "Seville". Seville is flourishing beautifully on Pursley's Sod Farm located on Florida's suncoast approximately 25 miles south of Tampa.

Seville is a semi-dwarf, vigorously growing perennial turfgrass with several outstanding attributes. It has a uniform texture, short internodes, shorter and narrower leaf blades as compared to other St. Augustine varieties like Floratine and Floratam, a tendency to grow horizontal, a rich dark green color, excellent tolerance to shade and cold, moderate seed head production ability and resistance to St. Augustine Decline Virus (SAD). It is not resistant to chinch-bugs but has shown strong tolerance to gray leafspot disease. Seville is somewhat easy to maintain and requires less frequent mowings than other cultivars, an obvious advantage from the standpoint of energy conservation. Moreover, because of shorter and narrower leaf blade, it does not produce excessive thatch. Color retention and spring green up rate are good under moderate fertilizer and cultural management. It has responded well to nitrogen fertilization and supplemental iron.

Seville was developed in 1968 by Dr. Terry Riordan, former turfgrass breeder at O.M. Scott & Sons Company in Marysville, Ohio. Parent lines used for this cross were originally grown at O.M. Scott's Research Station in Apopka, Florida. Dr. Riordan is currently employed at the University of Nebraska in Lincoln, Nebraska. Soon after the development of Seville, a plant patent was obtained by Dr. Terry Riordan and Jake T. Gruis of O.M. Scott & Co., but now the patent and the exclusive propagation and marketing rights have been acquired by Pursley Sod Farms.

Over the last eight years, Seville's performance has been tested in field at various locations in Florida, Texas and California. Pursley Sod Farm has established several test plots at various locations in Florida and Georgia. Among them are Walt Disney World Tree Farm in Orlando, University of Florida Campus in Gainesville, Maclay Garden State Park in Tallahassee. Deerwood Country Club in Jacksonville and University of Georgia Campus in Athens. Seville is also being grown on a few home lawns in Apopka.

**Cost of Federal Regulations**

OMB now estimates that the annual cost of federal regulations affecting U.S. industry costs $135 billion. These regulations add 10% across the board to business expenditures. EPA is responsible for 77% of these costs while the Equal Opportunity Administration ranks second with 7% and the Department of Energy at 5%. Federal regulatory costs are now equivalent to 5% of the entire gross national product and costs every American $500 a year, personally, or $2,000 per family. (Burt Bohmont, CSU)
Superintendents Aid Turf Fund

By VINCE SMITH

The Everglades Chapter of the Florida Golf Course Superintendents Association is one of the most active and intense organizations of its kind in the nation.

The Everglades Chapter contains, as its members, the men who are in charge of maintaining the playing surfaces of all golf courses in Southwest Florida.

The association meets monthly and during these sessions, a wide variety of subjects are discussed, the superintendents listen to talks from key figures in the turf management field and then they get to play a round of golf themselves.

Last month's meeting at Myerlee Country Club produced a good cross-sample of the activities members become involved in and foremost, the continuing new problems each of them face in their daily efforts to keep Southwest Florida's golf courses green.

At the Myerlee gathering a research donation of $400 was presented to Dan Jones, vice president of the Florida Turf-Grass Association.

To the casual golf club member, this small grant does not reflect the full impact of the reason for the gift. But for golf course superintendents, the $400 was a gesture of intense purpose which is a portion of a head-to-head confrontation with the increasing crises facing these professional workers.

The money chipped in by the Everglades Chapter will be pooled with donations from the state's seven other chapters. The total fund will be used for specific golf turf research at the University of Florida.

The almost frightening problems golf course superintendents are facing today because of environmental regulations, possible water shortages and the banning of proven pesticides are forcing research into new areas of turf management.

Some of these new territories include biological control of pests and grasses more resistant to wear with less water and fertilizer.

To maintain the quality playing surface that today's golfer demands research is going to play a vital role in the future.

And no one is more aware of this than the members of the Everglades Chapter of the Florida Golf Course Superintendents Association.

Although the superintendents' prime concern right now is research, the Everglades Chapter also concerns itself with the continuing education of young people seeking careers in the turf management field. (Continued on Page 17)
Two scholarships were presented by the Everglades Chapter during its meeting at Myerlee.

Dick McCandless received the Jesse Medhurst Memorial Scholarship. He will be graduating from Lake City Community College in May with an A.S. degree in Golf Course Operations.

McCandless' on-the-job training experiences came at Jekyll Island, Ga., and Arnold Palmer's Bay Hill Club near Orlando. He worked at Lely County Club in Naples under Superintendent Chuck Belyea before attending Lake City.

Brad Walters was recipient of the Ken Willis Memorial Scholarship. He is currently in his second year of the turf management curriculum at Lake City.

A graduate of Cypress Lake High School, Walters has worked at several Lee County courses including Myerlee and last summer took on-the-job training at Palmetto-Pine Country Club in Cape Coral under Superintendent Mark Selby.

Both McCandless and Walters received checks of $250 from the Everglades Chapter to help in their schooling.

Meanwhile, the chapter is looking forward to its seventh annual Poa Annua Classic, its No. 1 golf outing each year.

Strictly a fun-type day, the Poa Annua Classic will be held at Mirror Lakes Country Club in Lehigh Acres, April 28. Rick Cook is host superintendent and expects his fellow maintenance technicians and turf suppliers to quickly fill the 144 openings for the 11 a.m. shotgun start.

But up until that one-day, 18-hole picnic, members of the Everglades Chapter will be hard at work, applying all their knowledge and skill to further combat the daily annoyances that constantly disrupt the tee-boxes, fairways and greens of the golf courses we all love to play.

Everybody, Somebody, Anybody, Nobody

By CLINT SMALLRIDGE, C.G.C.S.
Royal Ponciana Golf Club

This is a story about four people:

Everybody, Somebody, Anybody and Nobody. There was an important job to be done and Everybody was asked to do it. Everybody was sure Somebody would do it. Anybody could have done it, but Nobody did it. Somebody got angry about that because it was Everybody's job. Everybody though Anybody could do it, but Nobody realized that Everybody wouldn't do it. It ended up that Everybody blamed Somebody when actually Nobody asked Anybody.
Ethylene Dibromide (also known as Soilbrom 90, Dowfume W-85 and Royal Fume 85) presents a hazard when used with aluminum and the heat from the reaction can result in explosion and fire. There has been one report of a fire when the applicator used a pump with aluminum parts and an aluminum suction pipe which extended into the pesticide.

This compound also reacts vigorously with other metals such as magnesium, sodium and potassium, strong alkalies and oxidizing agents.

If a fire should occur, use water spray, dry chemical, foam or carbon dioxide in areas where ethylene dibromide is stored. Use water to keep fire-exposed containers cool.

When using any of the products containing ethylene dibromide, avoid using any aluminum equipment for storage, application or transfer.

Peach Update, June, 1980

The official Florida Golf Course Superintendents Association plaque is now for sale. The plaque has the state logo, your name, your chapter. The location of your chapter is marked on a 3-D wood carving which is the shape of Florida.

The plaque can be purchased by mail. The delivered price is $17.50 plus $.70 tax, $18.20 total. The address is Manhattan Trophies, 13 South Dixie Highway, P.O. Box 1169, Lake Worth, Florida 33460. On your request please PRINT your name and chapter.

Make your office a showplace! Have a state plaque showing your local chapter hanging next to your national plaque!
If your pumping station has left you high and dry, call AquaTurf.

AquaTurf irrigation and pumping systems are custom designed to keep golf courses green, from the sun-baked fairways of the South and Southwest to tees and greens from Maine to Washington.

AquaTurf's unique "brain" tells you exactly what your system is doing at all times. You set the program. It waters your course, exactly the way you want it watered.

To find out more about how AquaTurf can solve your irrigation problem, call or write today.

This year, even though the financial outlook nationwide is unsteady, many superintendents in Southwest Florida are planning some extensive renovation for their golf courses. Most of the work will center around new golf cart paths, rebuilding tees and adding to existing irrigation.

Randy Vaughn (Jacaranda West) has a work order made up to build 3000 feet of cart path around the greens and tees of his new nine holes. The work is scheduled for June and will cost about $8,500. Also, he is planning to put in about 500 feet of drainage tile which will run more than $2500. Jim Lindsay (The Plantation Golf Course), though his course only opened March 14, still plans to spend much of the summer filling and sodding washouts, adding more drainage tile, and possibly adding a few more sand traps. Bob Shaffer (Count Club of North Port) is going to add a little length to two tees during June, and in the meantime he will be reshaping many of his sand traps and continuing the use of asphalt coverings for the swale bottoms already built into the golf course design. His black top cost has more than doubled in the past two years. During this time, he has spent about 400 hours preparing and laying the black top and has covered about 27,000 square feet of drainage area. He used about a ton of material per thousand square feet. In the Port Charlotte area, Bob Sanderson (Port Charlotte Golf Course) will be black topping five or six thousand feet of cart path on the first nine holes during March. He plans to spend under $10,000. During May, he will be installing TORO automatic heads and controllers on the first nine fairways. The control tubing is already in place having been put there when the first twelve greens and tees were automated two years ago. Meanwhile, Ken Shakeshaft (Rotunda-Oakland Hills Golf Course) hopes to put in cart paths around all 18 greens and tees. His estimate for this work runs close to $75,000. Dick Bessire (Burnt Store Golf Course) has already started using rip-rap around head walls and bad washout areas in his lakes and swales. Since the entire perimeter area of his golf course has been cleared for new homes, there is an unlimited amount of small rock which can be used for this purpose. Just down the road a few miles, Marc Tallmadge (The Mariner Golf Course) plans to finish the construction of the second nine of his executive course in order to open 18 completed holes by next fall.

Mark Selby (Palmetto Pines Golf Course) will be building a practice area with a green for his members to practice their wedge shots and/or chipping. Also, he is planning to strip the sod off several tees, then level that area and replace the sod. During the rainy season, his plans also call for the course to be closed one day, so Mike Cook can come in and inject all his fairways with EDB at a cost of more than $7000. Buddy Carmouche (Cypress Lake Golf Course) will also be leveling several existing tees on his golf course just after the “Poa Annua Tournament”. Rick Cook (Mirror Lakes Golf Course) also hopes to build a new tee for the 18th hole during the early summer. Don Bessire (Burnt Store Golf Course) has already started using rip-rap around head walls and bad washout areas in his lakes and swales. Since the entire perimeter area of his golf course has been cleared for new homes, there is an unlimited amount of small rock which can be used for this purpose. Just down the road a few miles, Marc Tallmadge (The Mariner Golf Course) plans to finish the construction of the second nine of his executive course in order to open 18 completed holes by next fall.

Stan Norton (Naples Beach and Golf Club) after extensive greens rebuilding the past two years, now plans to rebuild several tees to complete the reconstruction of one of the oldest golf courses on the west coast of Florida. Architect Ron Garl redesigned all the greens.

Paul Nevers (The Country Club of Naples) is undertaking an ambitious program of reshaping 75% of his sand traps, He will be cutting away in some areas and adding sod to new tongues in other locations in order to achieve the new appearance. He will also be adding new sand traps to clear the entire perimeter area of his golf course. The Pelican Bay Golf Course has been asked to add several sand traps to his new facility and hopes at the same time to add a few ladies tees. Bill Flippin (The Hole-in-the-Wall Golf Course) will be starting a program to build a few ladies tees each year for the next couple of years. He is going to replace his four ice cooled water coolers with electric coolers that have filters on them to improve the taste of local water. Bill's largest project is the replacement of all his Griswald Controllers with Toro Controllers and at the
