BUCTRIL® HERBICIDE LABELED FOR TURF

According to Rhone-Poulenc Inc., Agrochemical Division Marketing Manager Lionel Wells, BUCTRIL® herbicide may now be used on established turf to control a wide variety of broadleaf weeds.

The recently approved addition to the existing BUCTRIL herbicide label permits turfgrass managers to apply BUCTRIL herbicide to established bentgrasses, Kentucky bluegrass, fescues, ryegrass, Bermudagrass and St. Augustinegrass to control seedling broadleaf weeds.

“BUCTRIL herbicide is a contact weed killer that controls weeds more quickly than most other available selective turf herbicides, and is very effective against prostrate spurge, a hard-to-control turf weed,” says Wells.

To control a wider spectrum of weeds in established turf (except bentgrass greens), BUCTRIL herbicide may be tank mixed with MCPP, dicamba, MCPP and dicamba, or 2,4-D and MCPP.

Other uses for BUCTRIL herbicide, previously labeled, include broadleaf weed control in barley, oats, wheat, rye, flax, garlic, newly planted grasses for sod or seed production and non-crop areas.

NEW LESCO SPREADER

Lakeshore Equipment & Supply Co., Elyria, OH, has produced a new, high-quality rotary spreader designed for professional, multi-use spreading of dry materials such as seed, fertilizer and granular pesticides.

The push-type rotary LESCO Spreader is virtually corrosion-resistant with a polyethylene hopper; stainless steel on/off assembly, impeller shaft and axle; Delrin gears and impeller and powder-coat epoxy frame coating; 4.10/350-4 pneumatic tires and ball bearings and zerk fitted wheels. The material capacity of the LESCO Spreader is about 2,700 cubic inches. The weight capacity varies from 50 to 80 pounds depending upon bulk density of material. The full hopper contents can cover from a few thousand to more than 80,000 square feet depending on factors such as particle size and bulk density. The material is metered through the stainless steel on/off assembly and dropped onto the spinning impeller.

An electric power attachment with battery kit to make units self-propelled is in the prototype stage and will be introduced in 1983.
Standard . . . the only name you need to know in golf course accessories!

Ball washers, Tee Consoles, sand bunker rakes, regular and personalized flags, tee markers, putting cups, flag poles . . . you name it, Standard Golf Co. has it. Every item built to give you long service and beautiful course decor! Call or write today. Our distributors can give you instant service.

The fall Board meeting was held in Orlando, Florida on the 30th of October thru November 3rd and many items were discussed and reviewed. The most important and critical being the dues structure of your national association over the next few years. As you know, I, and your state association, favored giving the Executive Board the authority to set the dues for the membership in the coming years but this was defeated and a one year dues structure of $105.00 was adopted.

After reviewing the budget and the programs that GCSAA will be giving the membership in the next few years it became obvious to me and the rest of the Board that for good fiscal planning a dues structure should be adopted that we could live with in the coming years. It was therefore unanimously adopted that we present to the membership for their approval a rate of $145.00 for 83, 84 and a $20.00 rate increase for each year thereafter for 2 years.

I feel this is a sound dues structure and if you add up all the +'s you receive from your national association (I.E.: Insurance, National Trade Shows, Continuing Education) you receive greater benefits than you pay for under the present dues collected.

The other item your Board worked on while in Florida was the proposed move of headquarters from Kansas to Florida. On Monday afternoon we met with the committee of 100 from Tampa. This city wants the association very badly and showed us some sites that we might consider. They also presented us a plan for financing such a move.

On Tuesday we met with the Orlando Orange County Convention Bureau and toured their new facility where we are tentatively booked for the 1988 convention. While this is a very nice facility it appears to me to be somewhat small for our convention and show. Hopefully by 1988 their 2nd phase will be completed and we can hold our show in Orlando as planned as this is a most desirable, family oriented city for our meeting.

It has been almost a year since I took office and it has become more obvious to me each day how critical it is to have a dedicated and professional staff at national headquarters representing us and giving us the programs that will make us more professional in our every day workplace.

If I can be of any help to you or if you have any ideas to benefit our association do not hesitate to call.
What moves from job to job as easily as it moves about the job?

Our Reelmastertm Transport Frame.
INTRODUCING THE TRANSPORT FR FEATURING HYDRAULIC MANEUVERABILITY COMBINED

Just hitch it to a tractor and this professional is ready to take on your biggest mowing tasks. It has a gang of 7 reel mowers that can be raised in various combinations for cutting widths of 6'9" to 14'4". Plus, amazing maneuverability in tight spots as well as easy transportability down roads, over bridges, through gateways, wherever you want high capacity formal cutting. Up to 9.4 acres an hour at 5.5 mph.* And it allows you the freedom to use your tractor for other jobs.

WE ENGINEERED IT TO KEEP YOU CUTTING. WITH AN EXCELLENT QUALITY OF CUT.

1 WE STARTED WITH 7 MOWERS THAT LIFT ON COMMAND.

The operator simply pulls the hydraulic levers to lift mowers 1, 2 and 3 as a unit, or mowers, 4, 5, 6 and 7 separately.

2 WE PUT ON HIGH FLOTATION TIRES, to reduce marking of turf, create more stability on hillsides.

3 WE MINIMIZED "STREAKING" OF TURF with a frame design that allows sufficient overlapping of the mowers during turns.

4 WE "FLOATED" THE FRAME ARMS to allow mowers to hug the ground, avoid mismatching.

5 WE TRANSFERRED A PORTION OF ITS WEIGHT to the tractor in the mowing mode, to increase traction and minimize compaction.

6 WE ADDED LOCKUP DEVICES to prevent lowering of mowers during transport.
NEW REELMASTER ™

AME FROM TORO:
LIFT ARMS FOR AMAZING
WITH EASY TRANSPORTABILITY.

WE GAVE YOU A
CHOICE OF THREE
MOWERS.
The best. Our
Spartan® 5 or 7 blade, or our new
Reelmaster 11 blade.

WE INCORPORATED
TORO QUALITY
THROUGHOUT. Proven design
and components to keep you
cutting day in, day out.

AND FOR
HIGH ACREAGE CUTTING WITH
LOW TRANSPORT REQUIREMENTS,
NOTHING BEATS OUR
REELMASTER UNIVERSAL FRAME.

This rugged professional, which
utilizes Spartan 5 or 7 blade, or
Reelmaster 11 blade reel mowers,
offers you four cutting widths:

- **3 Gang: 7' Wide**
  - 4.7 acres an hour*

- **5 Gang: 11' Wide**
  - 7.2 acres an hour*

- **7 Gang: 16' Wide**
  - 10.5 acres an hour*

- **9 Gang: 21' Wide**
  - 14.1 acres an hour*

The heart of our Reelmaster Uni-
versal Frame is a durable 3
gang unit with a 7' width of cut. You can
easily and inexpensively expand
this to a 5 or 7 gang configuration.

*Assumes no reduction in total area mowed due to overlaps, turns, stops, etc., with a ground speed of 5.5 mph.

PLUS, A WORLD OF SERVICE.
FROM YOUR FULL SERVICE TORO DISTRIBUTOR.

Wherever you are, you can turn to your full service Toro distributor for
reliable maintenance and repairs. He has highly trained people ready
to serve you fast. A complete inventory of replacement parts. Plus other
valuable services, like technical training for your operators. Whatever
your needs, call your full service Toro distributor.

**THE PROFESSIONALS THAT KEEP YOU CUTTING.**

Form No. 83-50-T Printed in U.S.A.
When I arrived at San Jose Country Club in March of 1977 the basics of a good maintenance building existed. Namely a building that contained approximately 5,500 square feet under one roof. As we worked that first few years we cleaned and generally tried to organize the building into a workable situation.

It was very difficult to work in the wire caged shop with poor lighting surrounded by the varied collection of outdated parts and used turf equipment that had accumulated over the years. Searching for something, stumbling around in the dark while it was either hot, or cold, best exemplifies our old work area. Maintenance productivity was not on an even keel throughout the year.

As I got to know my club officials better we presented them with plans for a more efficient and modern work area and shop. In the spring of 1980 they gave the go ahead to proceed on renovation of our maintenance facility. One of the first and best things we did was to hire a local architect to work with myself, my assistant Eddie Snipes and my service manager Bob Houser. With the four of us each putting in our ideas a workable set of plans were drawn up and put out for bids in the early fall of 1980. Work commenced in November, 1980 and was completed in the spring of 1981. The first two areas of renovation was our staff lounge and the enclosed shop area. Prior to the lounge completion our men ate lunch while sitting on the equipment, combating flies and extremes in temperatures. This was bad for good employee relations and did not produce a good working attitude to begin their afternoon jobs. Both the lounge and the shop area were totally redone with heating and air conditioning included in the original bid of approximately $35,000. Also included was new wiring, new lights, new lockers, eyewash and drench shower for chemical use and the painting of the new areas.

In the winter of 81/82 we completed the rest of the renovation which included painting the outside and the inside of the maintenance facility. The enlargement of my office and the addition, in the rear of the building, of more covered space for storage of large equipment was also done during this period.

With a total renovation cost of just a bit over $40,000 I feel that San Jose Country Club has as modern and efficient maintenance building as those costing $20 to $30 per square foot that are bring built today.

For those of you considering renovation or the building of a new maintenance facility I can truthfully say that the pride and morale of all employees is greatly enhanced with the knowledge that their employers DO CARE and want the best for them.
It takes a blending of skill, experience and attention to the fine points to become a great golfer. The same qualities are needed to develop and maintain a great golf course. We have been a part of the sprigging, sodding and renovations of golf courses and other athletic fields for over 30 years.

Give us a call for all your turf needs. We want to be a part of your excellence.

Traffic Control

Golfers everywhere, on greens, in lakes, climbing trees, and so thick on the first tee that you can't even see the grass. The only way to herd this kind of traffic is to give clear directions on where to point their golf carts.

Florida golf course superintendents have become the experts on traffic control. There are several tricks of the trade presently being used. Each one has advantages and disadvantages.

The old white line trick has been very successful at private country clubs. This involves painting a white line across the fairway near the apron of the green. The objective is to let the golf carts travel up to but not beyond the white line. After the paint wears and can no longer be seen, a new line is painted in a different area. This system works well but is often weakened by lack of communications between the golfers and the clubhouse. During the time the paint is disappearing; so is the turfgrass on the fairway side of the white line.

A more movable line involving the use of a rope line has been successfully used by one superintendent. The rope is stretched between two cart directional signs along the ground. This kind of line is extremely mobile but it does become an object of interference for those one in a million golf balls. For this reason, use a small nylon rope, and the mobility will probably outweigh any golf ball interference. Whenever lines are used, the use of directional signs should always accompany them.

The most obvious traffic patterns will be visible near greens and tees. Golf cart trails should be wisely placed during construction to be accessible to foot traffic onto and off greens and tees. Installation of curbing whether concrete, railroad ties, or fallen tree trunks have saved many acres of turfgrass from being bruised by tires at parking spaces next to tees. The use of railroad ties has even been used as the stair stepped slope on the number one tee on a local golf course. At times, there are as many as twenty people seen standing on this railroad tie slope.

Of course bruising the turfgrass shoots isn't the only type of wear stress by golf traffic. The other is compaction of the root system. The use of above ground ropes will still be necessary on wet areas to avoid compaction and tire tracking. When ropes and stakes are used, select yellow for high visibility. Ropes and stakes become a golf club liability and are subject to rare cases of golf player injury. Sun roof supports on golf carts can act as bumpers against ropes and stakes.

Golf course rangers can be used very effectively to monitor golf traffic patterns. Keep communications open for daily conference on where golf cart problems are visibly seen. Communications are a two way street, so educate the marshalls on some turf physiology involving wear stress.

Appreciation for traffic management tools should also be shared with the club members and guests as well. Explain that bermudagrass selections of Ormond, Tifway and Texturf 10 have been evaluated in wear stress studies among the southern universities and have ranked highest for wear tolerance among 25 other selections. Let them realize that perennial ryegrasses are the most wear tolerant species of cool season turfgrasses commonly used for winter overseeding. Of these, there are several selections which have shown more wear tolerance than others. Your selection of an overseeding surface might have been based on wear tolerance after studying progress reports among the universities, so let your membership or management team know this.

As our northern guests play golf on putting surfaces slower than those on their home courses, they often wonder why they don't have ball roll speeds similar to those of the U.S. Open. Again, from the golf pro to the shine boy, they need to know that raising the mowing height of the putting greens can have a statistical difference in wear tolerance.

So you don't have to have bright colored signs to direct traffic and manage turfgrass under high traffic conditions, all you have to have is common sense and the gift of communications.

CHIPCO: “The Right Approach”
End User Program

Rhone-Poulenc Inc. announces their Chipco “The Right Approach” to quality Turf and Ornamentals End User program. This program was designed exclusively for Turf Managers, including Golf Course Superintendents, Lawn Care Companies, Landscape Companies and Ornamental Growers. As the program is written, Turf Managers who purchase Chipco products will be awarded valuable points which can be redeemed for business related items.

To qualify for the program points, Turf Managers must place an initial order of $500, or more (there is no minimum on subsequent orders). Then, based on their purchases of Chipco products, they will earn points as follows:

- 26019: 32 points/lb.
- Ronstar G: 2 points/lb.
- Buctril: 62 points/gal.
- Turf Kleen: 18 points/gal.
- Turf Herbicide D: 22 points/gal.
- MCPP: 22 points/gal.
- Mocap: 2 points/lb.
- Microgreen: 20 points/gal.

In order to claim points, when Chipco products are ordered, the Distributor Sales Representative will complete a special Chipco awards point claim form and forward it to award headquarters. Periodically during the program, award headquarters will report back on total Chipco purchase, and the number of points earned to date. This program will include all purchases made between November 1, 1982 and September 30, 1983. All claims must be submitted and received at award headquarters by October 10, 1983.

At the special request of the Florida Golf Course Superintendents Association, Rhone-Poulenc has agreed to allow the Turf Managers to donate all or part of their award points to the Florida Turf Grass Association Scholarship and Research Fund. By pooling the award points, this will allow the FGSA and FTGA to purchase much needed equipment to assist in Turf Grass research. Rhone-Poulenc is very excited to participate in such a worthwhile cause, and feels that the Florida Golf Course Superintendents have demonstrated once again their dedication to quality Turf Grass management.

"THE FLORIDA GREEN"
Receives National Recognition

In December 1982, The Editorial and Awards Committee of The Golf Course Superintendents’ Association announced that our publication had been judged one of the 10 overall best newsletters in The National Association. In addition, “The Florida Green” was judged to be #1 in cover and editorial content.

Our editor is proud to share the news of this prestigious award with our reporters, photographer and readers. Once again we say “Thank You” to our advertising family for making “The Florida Green” available to our readers.

Jacobsen Introduces…

This extensively redesigned mid-size three-reel riding mower, introduced by DeBra Equipment Co., mows up to 33 ares of turf in one shift. The new Jacobsen Turf King II is available in either 76-in. or 84-in. cutting widths. Low-maintenance features include a 14 hp electric-start air-cooled engine, a large air filter with precleaner and a cooler operating hydrostatic transmission.

There are three words in the golf course language that are often poorly stated and downgrade a professionally oriented turf industry. They are: "Greenskeeper," "Dirt," and "The Barn." The "Golf Course Superintendent," "Soil," and "The Golf Course Maintenance Building Complex," are far more appropriate and specifically define their true definitions.

When was the last time you went down to "the barn" and found some cows and chickens roaming around? Instead, one finds a building that often has been designed by an architect with much thought and input also designed by the course superintendent. Buildings nowadays are encompassing clean organized offices with secretarial quarters, employee lounges complete with microwaves, mens and ladies restroom facilities with showers and locker rooms, not to mention the aspects of the function of maintaining and storing of golf course maintenance equipment. The shop areas are usually wide open with high rising garage doors to allow easy access and good cross air ventilation. Interior floors are designed with concave slopes with drains to allow thorough hosing down of the shop floor. Shop repair areas are much reminiscent of an auto dealership, complete with hydraulic lifts and parts inventory to self sufficiently operate nearly all major repairs. Irrigation rooms are ever so increasing, with the storage of all the needed parts and tools for repairs and they are kept within a designated work bench area. Storage of much respected and restricted chemicals are contained behind metal, locked doors. Fertilizer storage rooms are common sights with designed soil bins to accommodate various sands and soils. A central location of the building from throughout the project allows more efficient travel time. Buildings should be well marked for easy service and deliveries, and yes, since the maintenance building is what supports the great looking golf course—why not make "the barn" look great too!

The old barn out back! "Darn Jed, I'm sure the things was over there yesterday, it must be over by them weeds."

It is ideal for maintenance building to be well marked for easy delivery access along with proper landscaping.

No, it is not the Taj Mahal. It's Steve Pearson in front of superintendents office at Boca Groves.

East Pointe Maint. Bldg. is well landscaped with high perimeter fence to harmoniously blend with environment.
Boca Greens interior reveals office, lunch room, time clock area along with unique practice putting green.

Boca Greens soil bins individually partitioned with roof overhand and high rising garage doors for easy entry.

Atlantis C.C. Supt. Office with golf pictures and golf artifacts that depicts a clean organized office.

Jim Watkins of C.C. of FL. possesses an elaborate inhouse soil laboratory capable of many useful tests.

Boca Groves Lunch Room: everything from the kitchen sink to microwave oven, magazine rack, and full length window.

Boca Groves shop repair area utilizes a hydraulic lift to the max, as fairway unit access is greatly increased.
