CHOOSE YOUR WEAPON!

- Labeled for use on golf courses and sod farms only
- Proven effective on thousands of courses and in numerous university trials
- Apply at 60 to 80 lbs. per acre for insect control
- Concentrated 5% granular formulation

- For use on all turfgrass areas
- 4 to 6 week residual control
- Apply at 100 to 200 lbs. per acre to control insects
- Distributes evenly through standard rotary spreaders
- Larger particle size makes calibration easier

CRUSADE 5G
Granular Insecticide

Mainstay™ 2G
insecticide
Mainstay™ 2G Joins the Ranks!
New formulation to help win the Battle of the Bugs!

Superintendents now have a choice about what to use to control mole crickets, grubs, chinchbugs, and other important turfgrass pests: LESCO Mainstay 2G and Crusade 5G Granular Insecticides. Both provide excellent control of soil- and surface-feeding insects. Both have the active ingredient fonofos, a proven performer on thousands of warm-season courses and in numerous university trials. And both come in an easy-to-spread granule formulation that demonstrates superior efficacy from tee to green.

Your Choice

Crusade at 60-80 lbs./acre or Mainstay at 100-200 lbs./acre

Both provide four to six weeks residual control, making them among the most cost-effective insecticides on the market today.

Ask your LESCO Sales Representative about your new choice in insect control:

Mainstay 2G
or Crusade 5G Granular Insecticides.

SPRING 1994

FOREWORDS GROWING GRASS IS THE EASIEST PART ........................................... 6
President Paul Crawford calls for more emphasis on communication skills in
superintendent training. Editor Tom Benefield suggests some changes to the
GCSAA golf championship.

AUDUBON PROGRAM PUBLIC INVOLVEMENT IS TOUGH CATEGORY .... 12
In the first of a seven-part series to help superintendents participating in the
Audubon Cooperative Sanctuary Program for golf courses, "public involvement" is
de-mystified. Shelley Foy, of the USGA Green Section’s Florida Office, will coordi-
nate the series.

COVER STORY DEER CREEK GOLF CLUB ..................................................... 20

while renovating the drainage system. Photos by Daniel Zelazek.

HANDS ON: TRANSITION BOOM OR BUST? .................................................. 32
Every superintendent has his own system for coping with that dreaded period when
he must coax his warm-season grass back to life while helping the overseeded cool-
season turf commit hari-kari.

TECH REPORT: UST BLUES THEY DIDN'T TEACH THIS IN TURF SCHOOL! 48
Scott Bell reports that one way not to have fun is to remediate a site contaminated
by a leaking underground storage tank.

RESEARCH REPORT ENHANCEMENT PRODUCTS TESTED .......................... 54
How well do they work? Monica Elliott at the University of Florida’s Research and
Education Center in Fort Lauderdale has been testing 14 different products on the
FGCSA’s Otto Schmeisser Research Green.

SPOTLIGHT TWO AWARDS, GREAT SHOW .............................................. 70
Ed Mattson, who began working on a golf course at age 9, has been honored for 78
years of contributions to the game by the North Florida GCSA. Hugh Bebout, the
FGCSA’s ‘Papa Bear’ is the final 1993 President’s Award winner to be profiled. Tom
Benefield recalls the 1994 GCSAA Show in words and photos.

AFTERWORDS: WAHLIN, JARRELL, JACKSON ......................................... 80
Scott Wahlin says superintendents must master a more difficult transition than
switching from one kind of turf to another. Mark Jarrell takes radio commentator
Paul Harvey to task for an inaccurate report of the GCSAA mortality study. Joel
Jackson interviews Mother Nature.

You didn’t read it in the sports section. But Fore fungicide recently wowed course superintendents in 17 states.

Put to the test, Fore showed it was one of the hardest-hitting broad-spectrum fungicides in commercial turf care today. And probably the most economical.

**Beats more diseases for the money.**

On tees, greens, and fairways, Fore proved it was more than a match for 14 major diseases. Including such well known names as Brown patch, Dollar spot, and Helminthosporium melting-out.

And as superintendents in 17 states discovered, a treatment of Fore costs far less than the leading competitive fungicides.

**No resistance after 25 years.**

A multi-site enzyme inhibitor, Fore has been defeating turf diseases for over 25 years. And in all that time, not one of those diseases has mustered even the least resistance.

Holler Fore! Even for Pythium.

Spray a reduced rate mixture of Fore and Subdue (or Banol) – and you can also gain improved control of Pythium blight.

So if you’re looking for a proven broad-spectrum fungicide to strengthen your program this year – holler Fore! And duck some of the high cost of turf care at the same time.

*For information on trials and warranty, write: Rohm and Haas, c/o Bob Gordon, Independence Mall West, Philadelphia, PA 19105

**Limited warranty: Fore fungicide is guaranteed to control labeled turf diseases or your purchase price will be refunded.
Carefully monitored trials* in these 17 states showed Fore controlled 14 major turf diseases.

NOW AVAILABLE IN WET FLOWABLE

GUARANTEED TO TEE OFF ON MAJOR TURF DISEASES OR YOUR MONEY BACK**
I received a lot of comments on my last column in the Florida Green. I must say, it was great to hear from you.

Many were concerned how others would interpret my comments.

Let me ask you something: If you were in charge of hiring the superintendent at a club, how many do you think you would seriously consider out of those 75 applicants for the job?

I was involved in the hiring process at a club and narrowed the choices down to eight candidates for the board to consider.

Ironically, only a small percentage of the criteria for selection involved the candidate’s ability to grow grass.

I tell many people that “growing grass is the easiest part of my job.” I will not go through the litany — we have all seen the list of duties we must perform.

I think the one duty that we often overlook is the ability to communicate with our members and with the board. As a friend says, “We are in the people business.”

If you cannot effectively communicate with your members and your greens chairman, you will be in that long line of 75 candidates seeking to fill one vacancy.

Have you ever had a friend leave his job and go to another club where you think he has found the perfect fit? Why do we say the “fit” is perfect?

Is it because of his ability to grow grass or is it his ability to straighten out the members and re-educate them?

Is this ability to communicate innate, or is it something we learn as we go along… or is it both?

I know of a superintendent who went into a club that nobody wanted to work for because the club never put money back into the golf course, didn’t pay decent salaries and generally had all the other qualities that turn professional superintendents off.

Two years later, the club is spending all kinds of money to fix up the course, is paying the superintendent an attractive salary. The job is one of the best in town.

Did this just happen? How many of those 75 candidates are staying current with all the latest environmental information? How many are taking seminars and keeping themselves on top of the latest science and technology in agronomy? How many have taken courses in personnel management or budgeting and fiscal management?

If you were to lay out an educational program for superintendents, do you think we should start emphasizing communication more?

Some of you complained that my last column did not offer any solutions to the problems I raised. I realize that defining the problem is only the first step but it is the first step. At least we are thinking and talking about the issues.

If you are talking about our problems among yourselves, communicating your ideas to the board through your external vice president, together we will come up with much better solutions than I could have dreamed up by myself.

Nobody anointed me with special wisdom when you elected me to this office; but you did give me a special vantage point that brings the “big picture” more sharply into focus.

And from where I stand, growing grass is the easiest part of my job… and yours.
WE'RE DEVELOPING A GREAT LINE OF PRODUCTS.

CAPTAN Turf and Ornamental Fungicide  Proven control of more than 15 major plant diseases in a variety of fruit, turf and ornamentals.

CRUSADE® 5G Insecticide  Superior efficacy against a broad spectrum of economically draining pests on golf course and sod farm turf.

DEVRINOL® Ornamental Herbicide  Dependable, season-long control of grass and broadleaf weeds in newly planted and established turf and ornamentals.

EPTAM® Herbicide  Preemerge control of problem grass and broadleaf weeds in flowers and ornamentals.

FUSILADE® Turf and Ornamental Herbicide  Fast-acting, postemergence control of perennial and annual grasses in ornamentals, nurseries, and landscaping.

REWARD® Aquatic and Non-Crop Herbicide  Non-selective, highly active weed control in aquatic and non-crop areas.

SCIMITAR® Insecticide  Fast insect control at low rates in turf and ornamentals.

ZENECA Professional Products

Delivering the Promise
Perhaps one of the most relished times of the year for GCSAA members is the GCSAA Show & Conference.

It’s a time to learn the newest and best turf information and to network with many friends... a time to recharge the batteries, so to speak, and take back to their clubs fresh ideas to old problems.

The GCSAA puts on a truly progressive conference which sets new attendance levels each year.

An aspect of the annual event is the GCSAA Golf Tournament.

From around the world aspiring golf enthusiasts spend good money to participate and showcase their golfing expertise. It is a well-attended and well-run event which offers not only golf but also a social program and atmosphere that is appealing to the golfing superintendent.

As my friend Ned said, however, “If what you say is true, why are so many of our members wanting a change?”

You see Ned and I go way back and he is the type of person to tell you what’s really on his mind. And after you take into account that Ned has played in the last 10 GCSAA tournaments with varying degrees of success, you have to lend some credence to what he’s got to say.

“So what’s wrong with the tournament?” I ask Ned.

In his deep, Georgian drawl he answered, “It’s at the wrong time of the year. It should be held in the summer or early fall.”

He went on to explain his reasoning. The winter time is a very “iffy” proposition for having decent weather. The conditions, weatherwise, are normally fairly miserable... especially this year in Dallas.

“I mean, why do we have to play the tournament at the worst time of the year?” He asked. “We have great golf courses all over the country which we can play most any time of the year other than winter. We are unfairly limiting our course selections because of the way we do our planning and scheduling.”

“Whoa there partner,” I said to Ned. “I’ll grant you that it is held at the wrong time of the year as far as weather is concerned. Is there anything else?” I asked.

“Yes, as a matter of fact, there is.” he replied.

“As far as selecting the best golfer of our association, we also have missed the boat,” he continued, offering a lengthy dissertation on the reality of golfing and practicing golf during the months preceding the tournament.

“None of this time period is a period when a superintendent can practice and hone his skills to his best level for competition. Only during the summer and fall months are superintendents actually playing decent golf.”

By this time Ned was really starting to open up.

“However, I think the entire tournament format should be changed,” he said.

“Well pray tell, Ned, what should we change it to?” I asked.
Kills Weeds without spraying...

The new Weed/Sweep is a must for every golf course. You achieve precision control of weeds by using new dripless chemical wiping technology. The system can be easily mounted on an ATV or pulled behind a golf cart or small tractor. FREE brochure by mail or ask for a demo at your course. Don’t put it off - Call today.

This was just what Ned had been waiting on as he charged straight ahead with his new ideas on the tournament format.

The heart of his proposal is to run competitions around the country in chapter or local events. The next step was to take local winners — both teams and individuals — to regional events for qualifying to the nationals. There was an insistence that the regional events would send (x) number of teams as well as (x) number of individuals to the nationals. It was stated that Ned is talking about events that would potentially allow people like himself to be a part of this event.

The complement of courses available for the tournament, from the first round to the championship, would be tenfold. The format and qualifying rounds would bring out the best in our member golfers. By the time of the championship, we would have participants who exemplify the best golfers: more lung cancer, more cancer causing chemicals. A statistical mortality study found among golf course superintendents, more lung cancer, more brain cancer, more cancers of the large intestine and the prostate, especially however, lung cancer.

Doctor Burton Kross, University of Iowa, one of the researchers on this project, recommends further studies and recommends, meanwhile, that golf course workers mitigate, however possible, their exposure to pesticides.

There’s a moral here which demands to be underscored, “We and the beautiful wild things live in harmony together or we perish together.”
