BUILT FOR TOTAL SAVINGS DAY AFTER DAY.

When it comes to total savings, there's no competition.

Count on fuel savings
Energy Savings Mode provides consistent reel speed at lower engine RPM to significantly reduce fuel consumption and noise without compromising productivity or cut quality.

Efficiency that's built-in
Friction-free stainless steel bearings are just one of the many built-in components that help maximize horsepower and minimize fuel consumption.

Do more with one machine
Toro's exclusive Tool-Free, Quick-Change™ cutting unit system allows you switch between reels and accessories in just a few minutes! Mow greens then switch to tees, surrounds, thatch, roll greens or spike...

Turn up productivity
Features such as Quick-Change™ cutting units, lift-gate footrest for easy access to the center cutting unit, no daily grease points, InfoCenter™ onboard display and automotive-style advanced diagnostics all help reduce labor costs.

**Biltmore Golf Club**

**Location:** Coral Gables  
**# of Holes:** 18 holes  
**Yardage:** 6,772 yards  
**Par:** 71  
**Slope & Rating:** 72.1/121  
**Ownership:** City of Coral Gables/Biltmore Hotel Management  
**Playing Policy:** Public/Resort/Memberships available  
**Average rounds per year:** 60,000  
**Designed by:** Donald Ross. Opened: 1925  

**Management Team:**  
- Managing General Matthias Kammerer, Director of Golf  
- Justin Bruton, Head Golf Professional  
- Lara Payloff, Golf Course Superintendent  
- Bryan Singleton  
  
**Special and Ongoing Projects:** In 2007, golf course architect Brian Silva did a complete renovation of the greens, tees, bunkers and greens irrigation. He also redesigned the "short game" and teaching areas.

**Total property acres under maintenance:** 145

**Greens:** TifDwarf. Average size: 6,000 sq.ft., total 3.1 acres; HOC: .125 to .135 inches. Overseeding: none. Green speed goals: 9.5 to 10.5

**Tees:** Celebration. 3.3 height of cut: .350 in. Overseeding: Ryegrass @ 15 lbs. per 1,000 sq.ft.

**Fairways:** Tifway 419 with some Bermuda off-types. Total acres: 40. HOC: .550 in. Overseeding: None.

**Roughs:** Bermuda and St. Augustine. Total acres: 40. HOC: 1.50 – 2.0 inches. Overseeding: None.

**Naturalized/Native areas/beds:** 2 acres. Pine straw under Australian Pine Trees left of No. 10 fairway.

**Waterways/Lakes/Ponds:** Acres: 10. The Coral Gables Waterway runs through the course.

**How maintained:** City of Coral Gables and Lake Masters

**Wildlife Inventory:** Bald eagles, hawks and songbirds of all varieties plus coyotes, red-tail fox, and gopher tortoise inhabit the uplands. Alligators, otters, turtles, waterfowl, shore birds and wading birds find food and shelter in the lakes.

**Irrigation:** Well water. Pumps: two 75-hp pumps and a 20-hp jockey pump with a Flowtronex control panel. Irrigation Controller: Rainbird Nimbus II. Number of heads: 752. Spacing: 90 ft.

**Water Restrictions:** None currently in effect.

**Water Management/Conservation practices:** Water greens, tees and fairways as needed. Water roughs when they show signs of stress.

**Staff:** Total including superintendent: 16 with 15 full time and 1 part time. Schedule: 40 hours straight time. Seasonal variation in labor: Very little. May back off some of the part-time hours in the winter.

**Key Staff:** Assistant Danilo Perez; Second Assistant Ryan Hackert; Head Equipment Tech Richard Ramos; Assistant Equipment Tech David Figueroa; Pest Control Tech Osman Escalante; Irrigation Tech Chris Lopez.

**Meetings/Communications:** Weekly meetings with hotel general manager. Monthly crew meeting or as needed for special occasions.

**Special Events:** Host Junior Orange Bowl Golf Tournament. Hosted the Miami Open back in the early 1930's.

Briggs Golf is proud to announce the acquisition of Spreadrite Inc.

Former owner, Lamar Sapp has earned a reputation of being the best in the industry, which is why Briggs Golf set its sights on acquiring Spreadrite.

Our specially designed trucks can spread sand and fertilizer with no damage to the playing surface. Spreadrite can complete most fairway top dressing projects in as little as two days, and fertilizer applications in one afternoon.

With real "Big Game" experience, we can make your next project a winner. Call us today to find out how.

We are industry leaders in golf course construction, renovation, restoration, and shaping.

We also provide sports and athletic field construction, installation, renovation and on-going seasonal services.

huge 700,000 gallon, 23,000 square-foot swimming pool was emptied and completely resurfaced with polished marble. In fact I saw that renovation in progress during a family outing to the hotel back in August 2012 when we visited our daughter who was on assignment in Miami.

At the 1926 gala opening on the Miami Biltmore Country Club, Dr. Frank Crane, a popular local writer and columnist of the era, predicted, "Many people will come and go, but this structure will remain a thing of lasting beauty." That prediction came true in 1996, when the National Register of Historic Places designated the Biltmore a National Historic Landmark, an elite title offered to only 3 percent of all historic structures.

The golf course came into existence in 1925 and, 14 years later, the South Florida Golf Course Superintendents Association was organized in 1939 near the end of the Jazz Era. The history of this unique property and how the golf course fits into this landscape is one of golf's great stories. Next, we venture out on the course with the superintendent Bryan Singleton.

**On the Course**

We know the southern half of the property was sold and became the Riviera Country Club back in 1945. Essentially, Bird Road is the dividing line between the two courses. Most all of the holes on the Biltmore course run east-west, while the holes on the Riviera course run north-south to fit the original property lines. Like the Biltmore course, the Riviera course is also a classic "parkland" layout of the 1920's with no holes running between home sites. There is a cluster of homes on Bird Road that also separates the two properties.

I mention the Riviera CC, because ironically before coming to the Biltmore, Singleton was the superintendent of the Riviera CC from 1991 to 2006. He came on board just in time for the major 2007 Ross restoration by Brian Silva. Also ironically, Singleton also worked with Silva at Riviera in the late 1990's to do the renovation to that part of the old original layout. Bryan has been tied to this historical landmark in one way or another for the past 26 years.

In light of the historic landmark status of the property prior the renovation of the golf course, Silva had some interesting comments.

"If the Biltmore were a private club, the course surely would have been changed dramatically through the years," he said. "As it happened, the course was treated as any other underfunded muni would have been treated in tough times - it was left alone. This neglect was a blessing because the property was not planted with intrusive trees, and some of the most spectacular fairway bunkering was allowed simply to grass over." Silva added, "These fairway bunkers were a real find.

**Vehicle:** 2006 GMC Canyon Pickup Truck
**I stay home to watch:** The Washington Redskins
**Last good movie I saw:** One of my favorites is “Saving Private Ryan”
**Favorite performers:** Jerry Garcia, Tom Hanks
**What I’ve been reading:** I recommend a good book by Wally Lamb *The Hour I First Believed.*
**Favorite meal:** Crab cakes, baked potato and coleslaw
**Prized possessions:** Family
**Personal heroes:** My parents
**I’m better than anyone else when it comes to:** Reliability
**Nobody knows that I:** Was a good chess player.
**If I could do it over:** I would have bought the house I was renting on Key Largo
**I’d give anything to meet:** Pope Francis
**My fantasy is:** Sail around the Caribbean
**The one thing I can’t stand:** Miami traffic
**If I could change one thing about myself:** Play better golf
**My most irrational act:** Doing a bungee jump
**Most humbling experience:** Having great greens one day and the next day I’m scrambling
**The words that best describe me:** Loyal
**My dream foursome would be:** Neil Armstrong, Buzz Aldrin and Mike Collins (the Apollo 11 crew)
**My best fish story:** Caught my first sailfish off Miami Beach with Craig and Jason Maret.
**My most memorable golf shot:** While playing Westview CC in Miami, I hit a driver into a pond. Took a drop and then holed out from 135 yards for a birdie.
Howard's service keeps your operations humming and your blood pressure down.

At Howard Fertilizer & Chemical, we know how important quality products and service are to your operations—and your peace of mind. As a Howard customer, you'll enjoy the industry's highest quality fertilizers and chemicals, along with outstanding service from its most experienced, knowledgeable sales force. We are a family-owned business and one of the leading providers of fertilizers and chemicals in the Southeast U.S. We got where we are by helping turf professionals meet their challenges and making life easier. Learn more by visiting us at www.howardfertilizer.com or calling 800-899-3141.

These cross-bunkers are a classic Ross feature with the high berms behind them they become deep menacing hazards, and since this is south Florida and relatively flat, they provide dramatic relief on the landscape. This sort of design feature doesn't usually survive. Once again because the Biltmore was a public course, they did."

Singleton told me that when they did just a greens surface/soil mix rehab in 1990-91 they found the center stakes of the original Ross greens. So all the elements were there for an authentic restoration.

Another feature of the course is the Coral Gables Waterway, a meandering canal that separates six holes on the back nine from the rest of the course. "Back in those early days the hotel actually had Venetian gondolas with authentic Italian gondoliers poling guest from the hotel to Biscayne Bay," Singleton said. During my visit I did see a couple of kayakers plying the waterway and sharing it with a few Egyptian geese and other typical Florida birdlife. Also in 2007 all the bridges that spanned the waterway on the course were upgraded.

Singleton's turf management challenges include goose grass and some St. Augustine issues. He tested Specticle herbicide on the driving range before applying it to the rest of the course and, while it did a pretty good job on the course, he still has someone continuously spot-treating goose grass as a second job pretty much every day. He says in Miami there's no let-up. The St. Augustine areas are mainly in the outer roughs, so it's not a real problem affecting playing conditions. His challenge is to make sure it doesn't spread, so he keeps a sharp eye on any encroachment.

The one pest that does keep him on his toes is the hunting billbug. In all my years, I've never heard of people saying they had a real billbug problem. Singleton said he thought only the grubs caused problems, but he swears he found chewed stem evidence from adults. The good news is that Acelyprin* does a good job on them. The bad news – most superintendents have a hard time identifying them. Singleton has become the go-to billbug guy in Miami, when others are having trouble identifying some mysterious damage on their greens. The Go-To guys in Brian's career were first and foremost his hard-working parents who taught him a good work ethic growing up. Upon moving to Florida in 1987, Lee Van Valkenberg CGCS at the Card Sound GC on Key Largo became his career mentor and southern turfgrass tutor. Singleton also credits others like Tom Burrows CGCS, John Foy and one of his club managers, Bill Wagner, for helping him along his career path.

The Biltmore Golf Club has golf members, but it also caters to resort guests and public play. So for Singleton, his maintenance goals are simple: keep the course in private-
Take a good look.
You may never see it again.

Specticle® from Bayer provides effective, long-lasting pre-emergent weed control. Specticle gives you superior control of *Poa annua*, crabgrass and goosegrass as well as 75 other troublesome grasses and broadleaf weeds. Get ready to achieve more with Specticle. For more information, visit www.BackedbyBayer.com/Specticle.

Specticle G is now available as a spreadable granule.
Legendary greens and bunkers have one thing in common... they both began with the best soil.

Beneath every meticulously groomed green is dirt. And, the best dirt doesn’t just happen. At Golf Agronomics Supply & Handling we’ve been perfecting golf course soil and sand for more than a decade. Our computerized soil blending equipment ensures that the mix you receive meets your exacting specifications—every order, every time. With production facilities located throughout the Southeast, Golf Agronomics offers volume orders and next day service.

club conditions and everybody should be happy. It is a rare combination of clientele, but then the Biltmore occupies a pretty rare place in the golf world.

Footnote
After doing my afternoon photo shoot that first day and wandering the hotel soaking up the historic architecture and furnishings, and viewing the endless photographs of all the visiting celebrities decorating the hallways and rooms, I enjoyed a quiet dinner and a few libations in the Biltmore Bar listening to the music of a piano and bass duo. I was reminded that this landmark was still a modern-day celebrity hangout when Goldie Hawn and Kurt Russell walked in and also sat down at the bar.

I love my job!

Mower scalping followed by aggressive verticutting is an excellent cultivation practice for bermudagrass fairways. Over the past week or so, golf facilities throughout southern Florida have begun cultivating and "working" the turf through a series of maintenance practices.

Bermudagrass and seashore paspalum produce an abundance of above-ground and below-ground stems that can accumulate to produce thatch. Cultivation practices are necessary to reduce this stem layer, dilute thatch and improve overall turf quality and playability.

In Florida, cultivation practices generally take place from late spring through late summer, as warmer temperatures improve turf recovery. Each practice provides a slightly different benefit and several of them may take place at the same time to produce the desired effect.

**Circle cutting** – Mowing turf in a circular pattern reduces grain that can develop from mowing repeatedly in the same direction. This practice usually takes place on tees and fairways in the spring. Circle cutting is the least aggressive cultivation practice discussed in this update because it only addresses the surface canopy and does not dilute thatch.

**Scalping** – Scalping includes aggressively lowering mowing heights to remove much of the turf canopy and it generally takes place on golf course roughs. Bermudagrass roughs are often maintained at 1.25 to 1.5 inches but are scalped to less than an inch for several weeks to improve turf uniformity. Scalping exposes the underlying stems and makes the turf appear yellow to tan for a week or two until new leaves are produced.

**Verticutting** – Verticutting, or vertical mowing, uses a series of vertically-oriented blades that thin the turf canopy and underlying thatch. Shallow penetration depths provide a light surface grooming effect, while deeper penetration dethatches putting greens, tees and fairways and requires a longer healing period.

**Core aeration** – Core aeration removes small plugs of thatch and soil. In addition to dethatching, core aeration reduces compaction and improves soil physical properties on each playing surface. This practice is quite aggressive and can require a week or more for recovery, depending upon tine size and spacing.

**Sand topdressing** – Sand topdressing is not necessarily considered a cultivation practice and sand is applied throughout the year on Florida golf courses. However, increased topdressing is applied throughout the summer months to dilute thatch and to backfill aeration holes. Budget constraints often limit its use to putting greens and tees, but sand topdressing dilutes thatch and improves surface firmness on fairways and approaches as well.

These practices are a bit messy and can temporarily produce unsightly playing surfaces, depending upon the intensity of each practice. Short-term inconvenience is certainly worth the long-term benefits that these practices provide.
