The President's Super
Secret Security proves a super's nightmare

If you think he had added headaches the past eight years, pity Gregory D. Searle the next four seasons.

Searle is golf course superintendent at Cape Arundel Golf Club in Kennebunkport, Maine—the summer headquarters for avid golfer and President George Bush.

Bush, once a left-handed-hitting first baseman at Yale University, has now been transformed into a right-handed golfer. It is Bush, after all, who takes in a certain amount of greens fees, just having (Bush) arriving to play golf causes a certain amount of amazement.

"The drive into the clubhouse crosses five golf holes. You can imagine the looks when an entourage of limousines, long station wagons and the like enter to them a sound of a gunshot is heard in your direction. Make sure your turf vehicle—your super's know which one—doesn't backfire!"

If you think he had added security arrangements. Cape Arundel, an 18-hole semi-private layout built around the turn of the century, boasts neither a bar nor restaurant. Its members mostly are summer residents in the Kennebunkport area. The Bushes and family have been members for years.

Searles says, "As Cape Arundel takes in their maintenance programs. The only holes in our country club are now using it successfully in their maintenance programs.

The result? Scatton TGR Poa Annu Control has lived up to its claims.

That's because Scatton patented TGR formulation contains paclobutrazol and is the only controlled-release, fertilizer-based Poa control product. The only product that halts the growth of Poa, then encourages the growth of desirable grasses to overtake it.

And since Scatton TGR Poa Annu Control is dry-applied, you get more even coverage, and less potential for volatility and chemical breakdown. So you can be assured of safe consistent results when used as directed.

Your Scatton Tech Rep can give you more facts and figures. Or you can just call us at 1-800-543-0006.

The only holes in our claims have flags in them.
