Fulfilling a promise, with thanks to all

It was just a year ago that I first had the opportunity to write this column. At that time I outlined what Golf Course News would offer during the coming months. Included with these plans was a promise to deliver a news publication, and I thank each one of our fine advertisers for their business, past and future.

A year ago, 5,000 copies of our premier issue were printed and most of them distributed at the Golf Course Superintendents Association of America conference and show inAnaheim. We’ve given away some 40 pages of advertising in that issue.

One year later, this issue will go to 20,000 qualified recipients, plus an additional 5,000 distribution at this year’s GCSSA show. There are 75 advertising pages in this issue—all of them paid for by advertising clients. The 20,000 controlled distribution will be assisted by Business Publications Audit (BPA) to assure our advertisers of the quality circulation that we have stated from the first issue that was mailed.

This year’s GCSSA show is bigger and better than ever. We salute this fine organization and its membership for putting on the conference and show for the golf course industry.

The GCSSA has been most cooperative in supplying Golf Course News with exhibit information so that we can help you enjoy the show weekend. In the middle of this issue (pages 35-38) we’ve printed a “pull-out” section which we suggest you pull out and take with you as a guide around the exhibit hall. Golf Course News advertisers are highlighted in the listing and on the floor plan for your convenience. We’re in booth 5801 and we’d like to hear your comments on Golf Course News. Please drop by to say hello.

Golf Course News has had a most successful first year thanks to the support of our readers and advertisers. We look forward to serving the industry for many years to come.

See you in Orlando.

Sincerely,
Charles E. von Brecht
Publisher

REIGNS WHEN IT’S DRY.

Country Club 18-4-10 with NAIAID

No other wetting agent comes through like NAIAID. It reduces soil’s resistance to water, allowing better absorbtion. And it’s especially effective in areas where the efficient use of water is a must. Now we’ve teamed NAIAID with today’s No. 1 greens-grade fertilizer. Country Club 18-4-10 has the highest organic content (90%) and the greatest amount of WIN (10 units) of any Country Club homogeneous granular fertilizer product. Together, deep-dropping Country Club 18-4-10 and NAIAID are ideal on golf courses or any areas where the highest quality turf is desired. It’s new from your source for premium quality turf products—your local Lebanon distributor.

GOLF COURSE

For Sales—Primeland—includes wetlands

BY BOB LOHMANN

In the not-too-distant past, many golf course architects looked on wetlands as a nuisance—mosquito-breeding, swampy, low-lying areas that would be scheduled for dirt fill.

Today wetlands and golf course construction have established a much different relationship. First, the land

Bob Lohmann
available for new courses is many times unsuited for farming or housing, and a major reason is that the site is partially wetlands. Second, architects now realize the environmental importance of wetlands. They help control flooding and reduce erosion. Also, a multitude of unique wildlife and vegetation is dependent on this swampy land in nature’s delicate balancing act, wetlands play a very important supporting role.

When you consider the staggering amount of wetland acreage that has been destroyed over the years—in Illinois, for example, more than 65 percent of the wetlands are gone—it is little wonder wetlands and the wetland environment are now protected under the Clean Water Act of 1977.

Golf course architects need to learn to work with wetland acreage, and to create new and better courses that are in harmony with nature.

A new site that includes wetlands not only offers unique design possibilities, but another element from which to create a memorable golf course.

One challenge in building on a wetland site is that wetland acreage cannot be reduced. For every inch of wetland altered or “taken away,” an equal area of wetland must be created. This process of wetland recovery is called mitigation.

Defining wetlands can also be a challenge. Any number of definitions are being used, and some developers simply pick the one that suits their immediate needs. But since the Army Corps of Engineers is the government agency in charge of verifying and protecting wetlands, architects and developers should follow the Corps’ definition of a wetland: “Those areas that are inundated or saturated by surface or ground water at a frequent and duration sufficient to support a prevalence of vegetation typically adapted for life in saturated soil conditions.”

Therefore, to ensure builders don’t destroy wetlands during construction, architects should always request a site analysis by the Army Corps of Engineers. With the Corps’ assistance, they can verify and outline the protected wetland acreage.

Once the wetland areas have been identified, the key is to make them part of the course’s character—to build a solid, fun-to-play golf course, and use the wetlands to enhance the beauty, definition and character of the individual holes.

We’ve faced this wetlands challenge on a number of golf courses that we’ve designed and built. The design of one wetland course, however, stands out: Oak Knoll Golf Course in Streamwood, Ill.

Oak Knoll is part of a residential development and borders the perimeter of the complex. The course covers a significant area of land unsuitable for homes and commercial use.
