low-cost muni' courses

of legendary architect Pete Dye.

"The cost of the land is the big-ge. You can control the construction costs. Sure you can't build a $5 million course on a swamp for two feet below sea level in Jacksonville (Fla.), or on a rock pile for that amount. But given a fair piece of land, and by trying to keep your earth moving to a minimum, you can easily build a golf course for $3/2 million. And you can build a good, functional clubhouse for $90,000.

"Then, at $25 a clip, if you play 40,000 rounds a year, that's $1 million. You spend $400,000 or $500,000 on maintenance and the thing makes a half million per year. And you haven't sold your first sandwich or Budweiser, yet." Dye's $50,000 fee is modest compared to many architects (Jack Nicklaus charges $1 million for instance) and considering the family name and legendary status. "I think I can build a golf course cheaper than most people. And I can do it because I don't have plans. I don't do blueprints. I'll do conceptual routing plans. And I'll do whatever needs to be done for the county and local agencies. After that, the people I work with are all golfers. They all have degrees in agronomy. And we go out there and build a course that's easy to maintain. We're not trying to build a PGA West. But we're not out there building 18 bowing alloys either. We're out there to build 18 good golf holes."

With computers, high-tech equipment, specialized golf construction companies and a staff of various experts becoming the norm at many architectural firms, Dye is a throwback to another era. "Nobody enjoys building a course more than I do. Working with the builder operators, it's just great. The engineers and land planners are a pain-in-the-butt. But the people actually on site building them, we have fun. I'm taking 20 people over to Scotland this year, all builder operators, or golfers who happen to run builder courses I should say. All they'd do is come back with more ideas. It will bene-fite me."

"My talent lies with a builder. I was raised on a builder. I started on a builder when I was 8 and now I'm 34. And I really know how to work with the people running the heavy equipment. "Those are the people that get the work done. All the pencil push-ers in the world, and engineers and all that job site. When a guy isn't worth two beans unless you have the coop-eration of that guy with the diesel all over his shirt. That computer doesn't build that golf course. When the bulldozer guy out there in the woods comes up on a mag-nificent 150-year-old oak, he (hope-fully) says 'Maybe I should go around this thing and ask some-body.' Well if it's on a computer readout, that tree is gone. The human element is what makes the Dye difference."

Dye also keeps his costs low by maintaining a small staff and using mostly local rather than imported labor. "I don't have any payroll," said Dye, who shares an office with a part-time secretary. "I built eight courses last year at an average of $4 million each. That's $32 million and I didn't have any payroll."

"Whenever I go some place, whoever is building the course pays for everything. I charge a flat fee and the work just gets done. The main reason is we use local help. I don't have a construction company I take from Florida to North Carolina to Chicago. I just go out there, put one person on the job and hire local people. "The first thing I do is find a farmer who moves dirt and talk to him. I'm not going to bring up a person from Florida because he's going to have to sit there and learn something that someone who's been working up there 20 years already knows," Dye said.

"And you always end up some-how getting some great talent. The on-site supervisor is the whole key. Those are the people I had over to Scotland. Those are the people I need to the job site. When you just bring in one or two guys to do the shaping and hire the rest local, it just works out better. "But a lot of guys will sub the job to established golf course build- ers. Those guys will bring in 60 percent of the crew and hire just 40 percent, where I'll do 30 percent local and just two percent foreign- ers. It's kept me out of hock."

Land change

OK'd for course

The Harmony Township, Pa., Planning Board has approved an ordinance allowing land used for a public golf course to fulfill open-space requirements in a proposed 434-acre development.

Buttonwood Country Club Inc. of Harmony sought the ordinance. The board told Buttonwood it must build the development on a mini-mum of 250 acres, with a mini-mum of 110 acres for the 18-hole golf course.

The town's planner, John Mad-den, told officials the course would be an ideal way to preserve open space.

Columbus made another big discovery in the 1500s

It's been the same story for centuries—big discoveries generate a lot of excitement.

Today, the big discovery in Columbus, Ohio has been the John Deere 1500 Sprayer and Spreader, and the job they've done on some of the areas most prestigious golf courses.

Courses that have hosted such tournaments as the U.S. Open, U.S. Amateur, Ryder Cup, Memorial, PGA and NCAA championships.

"The accuracy of our 1500 Sprayer is amazing," says Mark Yoder of Scioto Country Club. "The Micro Trak monitor tells us exactly how much we're applying at any given time. It's one of the best equipment investments I made last year."

"The stability of the 1500 makes it perfect for our hills," says Mike McBride of Muirfield Village. "We started with one 1500 for top dressing and were so impressed with it, we purchased another for our fairways."

"The maneuverability is a big benefit for us," says Gary Raskar of The Ohio State University. "It allows us to spray in places where we couldn't get to otherwise."

"Versatility is the big plus for me," says David Hull of Columbus Country Club. "We use one 1500 for both spraying and top dressing. Having one unit to do both jobs saves us money."

The John Deere 1500 helps Columbus, Ohio area superintendents (l to r) David Hull, Mark Yoder, Mike McBride and Gary Raskar maintain their courses at world-recognized standards.

"September 1989 Golf Magazine rated the three best-conditioned courses in the world as Augusta National, Muirfield Village and Scioto."
