USGA awards millions in research project grants
By Peter Blais
Pesticide and nutrient fate along with alternative pest management are the primary focus of the 15 research grants the United States Golf Association has decided to fund as part of its most ambitious research effort ever.

Certain projects, especially those involving pesticide and nutrient fate, will take three years to complete, he added. Some could continue farther into the future.

Requests for bid for another $300,000 in research money dealing with golf course benefits will be made this winter. The USGA's Environmental Research Committee will select the successful proposals at its March meeting, Snow said.

Japanese continue investments
By GCN staff
Landmark Land Co.'s anticipated sale of the bulk of its golf and resort assets for approximately $739 million is just the latest of dozens of Japanese golf facility acquisitions in the United States that have put that country's financiers at the forefront of U.S. golf ownership.

According to Mead Ventures, Inc., of Phoenix, Ariz., which provides information on international business, 120 golf course developments totaling about 160 courses in the United States were owned wholly or partly by Japanese companies or their U.S. subsidiaries before the Landmark purchase.

Beard urges: Speak out on benefits
By Peter Blais
Dr. James Beard exhorted superintendents and others at December's Ohio Turfgrass Conference and Show to speak out on the "unfounded" attacks against the turfgrass industry.

Although turf is beneficial in many ways, it is coming under severe pressure at local, state and national levels by special interest groups ranging from tree and ornamental organizations to water conservation interests to anti-pollution forces. "Trees, shrubs and turf go together," Beard said. "We've got enough problems from other groups without the tree and shrub people coming out against turf."

E-Z-GO HELPS 60 OF THE TOP 100 GOLF COURSES TURN A PROFIT.

The E-Z-GO Gas and Electric Marathons have an efficient, low maintenance design that keeps rental time up. Operating costs down. And shop maintenance to a minimum. When you consider their total purchase price and trade-in value, they make even more sense for your golf course. E-Z-GO offers the largest sales and service network with over 55 offices around the country. And they offer a full line of turf, industrial, commercial and individual vehicles as well. You can call, toll free, 1-800-241-5855 for more information.

60 of the top 100 golf courses, as defined by Golf Digest, did. Maybe that helped them become 60 of the top 100 golf courses.
2,4-D studies expected complete by mid-year

Results of two studies on the herbicide 2,4-D should be available by mid-year. With previous studies unable to establish a connection between 2,4-D and cancer, the Industry Task Force II on 2,4-D Research Data authorized $460,000 in funding for the new studies by independent researchers.

A recent report by the Harvard School of Public Health said the link between 2,4-D and cancer is "far from established." Public Health said the connection between 2,4-D and cancer is "far from established." Researchers believe that the herbicide may be linked to cancer, but have been unable to prove it. They have also been unable to prove that 2,4-D is harmful to people who have been exposed to it.

The Task Force II-supported research, which is being performed at the University of Minnesota and the Canadian Centre for Toxicology, follows recommendations made in the Harvard report.

Dr. Jack Mandel of the University of Minnesota School of Public Health is exploring how well people can remember exposures to pesticides over an extended period of time. The data will be gathered in five-year increments through use of spray manuals and other records.

Dr. Ian Munro, director of the Canadian Centre for Toxicology, will document 2,4-D handling and spraying practices in Kansas, Nebraska and Saskatchewan. Munro will then call together internationally recognized specialists in epidemiology and farm extension work to re-analyze recent epidemiological studies.

Task Force II is composed of six companies supporting reregistration of 2,4-D. Industry officials feel part of the controversy surrounding 2,4-D is that it is often "mistakenly" caught up in the discussion over Agent Orange. 2,4-D was one of the constituents of Agent Orange but not the controversial one, which is 2,4,5-T. Plaintiffs in the Agent Orange case specifically excluded 2,4-D from litigation. They focused on an impurity known as 2,3,7,8-TCDD (dioxin), which was commonly found at trace levels in 2,4,5-T.

Hawaii asks developer for $15 million 'impact fee'

The state of Hawaii is seeking $15 million in "impact" fees from the developer of the luxurious Minami golf course on Windward Oahu, producing a howl of "Foul."

Minami attorney Ivan Lui Kwan said the notion of fair play" because the state is "changing the rules" in mid-stream on the extension on a construction permit first granted in March 1987. The developer had until Jan. 11 to work out ways to offset claimed negative effects of the golf course, originally scheduled for completion by June 1989.

One that's dependable, yet economical. One that won't color or your cart paths a sick

Weeds are to turfgrass what hot, sticky wads of gum are to astroturf.

They're aggravating, unyielding, and downright offensive.

So in order to keep weeds off of your turf, you need a tough preemergence herbicide.

It won't stunt or otherwise harm anything and your St. Augustine grass turfgrasses on awesome fairways as Apply Pennant

it won't stunt or otherwise harm anything and your St. Augustine grass turfgrasses on awesome fairways as Apply Pennant

Pennant is Pennant. And although it's brutal and Bermudagrass on stubborn weeds, beautiful, your course will be covered and Bermudagrass on stubborn weeds, beautiful, your course will be covered

Spend your time on other things - we'll take care of annuals, crabgrass - even yellow nutsedge, playing areas that meet Pennant's criteria for weed control. So you can use Pennant to keep Pennant's criteria for weed control.
Mass. officials consider ground water regulations

Pesticides could be banned near drinking supplies

By Peter Blais

Proposed ground water regulations in Massachusetts that could greatly affect the use of pesticides on Bay State golf courses have come under fire by the state's turfgrass industry.

The Massachusetts Pesticide Board last fall announced plans to ban 21 products from use within a half-mile radius of any drinking water supply. Among them are many used by the green industry, including the fungicide Chlorothalonil; herbicides Alachlor, Bentazon, Metolachlor and Simazine; nematicides Fenamiphos and Terbufos; and insecticides Dieldrin, Lindane and Terbufos.

The regulations are not based on scientific data, argued the Green Industry Council, which includes representatives from many of the state's golf courses. The organization made its feelings known in written comments and during three public hearings last fall.

"Research like the Cape Cod Study (which concluded there was no ground water contamination from golf course pesticides in that area) hasn't even been considered. There is so much research showing the positive effects of golf courses that should be looked at," said Charles Passios, vice president of the Golf Course Superintendents Association of New England and head superintendent at Hyannisport Club.

The regulation allows for a variance where no viable alternative is available. The variance requires extensive paperwork and can take up to 60 days to review. Variances must be renewed annually.

The council believes the 60-day decision period prevents an integrated or best management approach and hinders the monitoring of pest populations, timing of application and rotation of products. The expense of obtaining a variance could far exceed the price of the job, it contends.

And "on golf courses and nurseries, where records demonstrate the need for treatments involving the same material on the same site each season, the annual renewal period is an unwarranted burden," said Passios.

The council strongly urges the Department of Food and Agriculture to identify and regulate specific methods of application, practices and products rather than provide blanket regulation which simply affects our industry and our advances in such areas as Integrated Pest Management.

The lack of scientific data used to develop the proposed regulation is one of the Green Industry Council's major points of concern. The Council recommends a generic environmental impact report or a ground water monitoring program — considering current methods and rates of application and Massachusetts site conditions — be employed to determine the need and scope of the regulation.

The council is also bothered by the proposed regulations' use of the relatively new National Pesticide/Soils Database and User Decision Support System for Risk Assessment of Ground and Surface Water Contamination Program to determine leaching potential. "The year-old program is still in the developmental stages, having not yet been field tested or able to effectively incorporate pertinent site variables," the position paper reads.

The regulation allows for a variance where no viable alternative is available. The variance requires extensive paperwork and can take up to 60 days to review. Variances must be renewed annually.

The council believes the 60-day decision period prevents an integrated or best management approach and hinders the monitoring of pest populations, timing of application and rotation of products. The expense of obtaining a variance could far exceed the price of the job, it contends.

And "on golf courses and nurseries, where records demonstrate the need for treatments involving the same material on the same site each season, the annual renewal period is an unwarranted burden," said the position paper.

In terms of pesticide alternatives, the University of Massachusetts Cooperative Extension Service has provided the Department with a list of alternatives for the 21 pesticides. All the alternatives are another pesticide, the council found. And no alternatives were listed for a half-dozen of the would-be-banned products.

"The regulation fails to encourage Integrated Pest Management and, in many cases, puts the applicator and/or the environment at a significant risk by forcing the use of the alternative," the council stated.
FLORIDA GOLF COUNCIL DRIVE REACHES HALFWAY POINT

Seay, Yount, Pate, others in industry add time and expertise to initiate lobbying arm in state

WEST PALM BEACH, Fla. — The fledgling Florida Golf Council, about halfway to its seed money goal of $25,000, by the end of January had held 15 meetings statewide with organizations involved in Florida’s $5-billion golf industry. The meetings were a part of the council’s initial Florida Golf Summit in Orlando.

Meetings centered on issues most critical to the golf industry, and how the council, founded last October, might be most effective as a viable trade association representing course owners, operators and other golf-oriented organizations.

The council’s Nancy Oliver described these sessions as “very productive.” Particularly fruitful was a workshop session attended by representatives of each of the association’s major golf and related business groups.

They included PGA of America, North and South Florida sections, PGA Tour, LPGA, Florida Golf Course Superintendents Association, Florida Turfgrass Association, National Golf Foundation, American Society of Golf Course Architects, Florida State Association, and Florida Council of 100.

The broad range of interests was evident in the wide mix of attendees.

Ed Seay of Palmer Golf Course Design presided over the initial session at Jacksonville. Robert Yount, executive director of the Florida Turfgrass Association, and Tony Austin of Marriott Golf did the honors at Orlando.

Cal Korf, Florida State Golf Association executive director, chaired the meeting at Sarasota, while the law firm of Holland N. Knight hosted the meeting at Tampa, touring pro Jerry Pate the session at Sandestin, and the LPGA’s Becky Siners and Ron Safford, director of sports development for the state of Florida, the gathering at Killearn in Tallahassee.

The council’s next meetings were at Miami, Ft. Lauderdale, West Palm Beach, Ft. Myers, Naples, Sebring and Gainesville.

Council memberships now are being offered. People may contact Oliver at Florida Golf Council, 1401 Forum Way, Suite 100, West Palm Beach, Fl. 33401; telephone 407-688-0800.

N. CALIFORNIA GA OFFERS $8M FOR MATHER AFB GOLF COURSE

SACRAMENTO, Calif. — Soon after the Mather Air Force Base closes in 1993, its 18-hole golf course may double its wing span.

The Northern California Golf Association in offering to spend up to $8 million to purchase and eventually boost the course to 36 holes.

At the same time, the Sacramento County Department of Parks and Recreation is urging that the Pentagon convey the golf course free of charge to the county as part of a proposed 1,000-acre regional park at Mather.

Hugh A. Evans, retired Sacramento judge and NCGA immediate past president, said, “We can turn Mather into a truly outstanding golf course that the public could play for a reasonable fee.”

Evans said his group is prepared to offer the government $2 million to buy the facility, then immediately spending $6 million on improvements, including a new clubhouse and the design and construction of an additional 18.

According to the county proposal, an estimated $1.5 million would have to be spent to upgrade the golf course, with “perhaps a second golf course” built on adjacent undeveloped land.

$850M RESORT OFFERS 2 COURSES OK’D IN FLORIDA

The East Central Florida Regional Planning Council has approved an $850-million resort in Osceola County.

The 708-acre World Golf & Tennis layout, just southwest of a main entrance to Walt Disney World, would encompass two 18-hole golf courses, a 25-court tennis complex, 475 golf villas, and 325,000 square feet of commercial or retail space located along a 63-acre lake.

Scott Banta, president of Telesis Developments Inc., said World Golf & Tennis is backed by a group of U.S., German and Swiss investors, but declined to identify them.

Construction is scheduled to begin in July.

TURF-TRUCKSTER

We’ve developed some strong attachments for the Cushman Turf-Truckster.

And so will you.

No wonder golf course superintendents have grown attached to their Cushman Turf-Trucksters.

Nothing even comes close to fulfilling as many functions with such beautiful results.

It’s state-of-the-art turf maintenance machinery in a class by itself.

A superior system.

More than a dozen attachments and implements can be interchanged with a minimum amount of sweat, turning a Turf-Truckster into an entire fleet of turf maintenance vehicles. You can spray, aerate fence-to-fence, pick up cores, haul, dump, fertilize, spread, seed and top dress. And you can do them all with greater precision because of our unique ground speed governor control.

With the addition of our exclusive 540 PTO option with heavy-duty hitch, you can also turn your Turf-Truckster into a rotary cutter, flail cutter, shredder, grinder, sweeper/collector, roller, or fine-cut reel mower. Dollar for dollar, function for function, nothing is as versatile or economical over more years of heavy use.

Now with 3 engine options.

In addition to the time-tested Cushman 222 air-cooled engine, the Turf-Truckster is also available in liquid-cooled gas and diesel engines. The Cushman 327 gas and Kubota 950 diesel models now provide a range of options to fill all of your specific needs.

The Cushman Turf-Truckster is simply your best turf maintenance vehicle investment. Ask a superintendent who owns one. Better yet, call the Cushman dealer nearest you for a free demonstration or call toll free 1-800-228-4444 for more information today.

February 1991 5
EPA well water study finds little effect from courses

At least half of the nation’s drinking water wells contain detectable amounts of nitrate but few exceed health limits. That’s the conclusion of a five-year national survey of pesticides in drinking water wells by the U.S. Environmental Protection Agency. The survey is said to be the first and perhaps the most extensive monitoring effort ever to evaluate the presence of pesticides, pesticide degradates and nitrate in U.S. drinking water wells.

Only a small percentage of concentrations are higher than EPA’s regulatory and health-based limits for drinking water — about 1 percent of community water system (CWS) wells and about 2.4 percent of rural domestic wells.

Survey results indicate that about 52.1 percent of the 94,600 community water system wells in the U.S. contain nitrate, about 10.4 percent contain one or more pesticides, and about 7.1 percent may contain both.

Of the approximately 10.5 million rural domestic wells, EPA estimates that about 57 percent contain nitrate, 4.2 percent contain one or more pesticides, and about 3.2 percent contain both.

Only 0.6 percent of approximately 60,900 rural domestic wells contain at least one pesticide over a maximum contaminant level (MCL) or lifetime health advisory level (HAL). None of the detections of pesticides or pesticide degradates for CWS wells were above the MCL/HAL.

The pesticides detected most frequently were DCPA acid metabolites and atrazine. DCPA acid metabolites are degradates of DCPA, used primarily as a weed killer on lawns, turf and golf courses, and also on a variety of fruits and vegetables.

Concentrations detected usually were well below levels of health concerns.

Presence of a golf course within a half-mile of either community water system or rural domestic wells reflected negligible effect.

A Phase II report, to be released this year, will discuss EPA’s assessment of the causes and factors associated with the occurrence of pesticides and nitrate in drinking water wells.

Fertilizer spokesmen were among industry forces hailing most segments of the report.

Said Gary D. Myers, president of The Fertilizer Institute, “This should reassure Americans — particularly those in rural America — that their drinking water is safe.

“That may come as a surprise to some environmental groups that have been seeking to force farmers to change their production methods to protect groundwater. Our farmers have managed fertilizer well.

“A nitrate is a nitrate, regardless of source,” added Myers. “This data tells us nothing about the source of nitrates. Many states have conducted nitrate studies that indicate that nitrate occurrence above a natural background level usually can be traced to a poorly-constructed well or other point sources.”

Pete Dye’s first course in Hawaii gets go-ahead

HONOLULU, Hawaii — After years of controversy and delay, construction of the 36-hole golf course here — the first Pete Dye-designed layout in Hawaii — is moving right along.

The 1,096-acre parcel was sold in 1986 to Yasuo Yasuda, a Japanese vending machine executive. Yasuda formed Y.Y. Valley Corp., parent company for the $50-million golf project.

Only 450 acres will be used for golf. The rest will be conservation land.

The first 18 holes — nine of each of the eventual Makai and Mauka courses — are expected to be completed late this year.

Said Dye: “The challenge is to retain the natural vegetation and terrain while enhancing and preserving the environment for the future.”

Airport property course proposed in Marion, Ill.

MARION, Ill. — Former professional golfer Roy Glenn of Carterville proposes to build an 18-hole golf course on airport property at Marion.

He has submitted his plan, the first phase of a $1.2-million project, to the Williamson County Regional Airport Authority.

Glenn described his plans for “The Knolls” golf course as similar to desert golf courses, since the proposed site is in the mine spoils area north of the National Guard armory site and east of the main north-south runway.

Second phase of the project would be an additional nine-hole executive course.

Want proof of the effectiveness of Scotts TGR Turf Enhancer 50 WP?

Scotts® TGR® Turf Enhancer 50 WP not only improves the color, density and playability of turf.

It also reduces clippings (by up to 50%).

TGR Turf Enhancer controls turf growth control for tees, fairways and greens, encouraging tightly knit turf stand. As turf growth slows, clippings are reduced and water conserved — offering important economic and environmental advantages with regards to clipping disposal and water management.

When used with nitrogen fertilizers, TGR Turf Enhancer stimulates turf greening for...
Course a focal point for $400M N.Y. resort

An 18-hole golf course will be part of a $400-million all-season resort in Great Valley and Ellijayville, N.Y.

Preliminary planning and development work on the golf course will begin in the spring.

Developers may install a ski lift on part of the land envisioned for the ski area for use in the 1991-1992 season.

Part of that land used as a pasture has been cleared.

The project eventually would include a ski resort able to accommodate more than 6,000 skiers daily. Developer Vincent Bonerb said the resort would draw people from Canada, as well as the Cleveland, Pittsburgh, Chicago and Rochester areas.

About 62 percent of the Canadian population lives within a 500-mile radius of Buffalo. Utah-based Jack Johnson Co. is the project's master planner.

Developers may install a ski lift on part of the land envisioned for the ski area for use in the 1991-1992 season.

Part of that land used as a pasture has been cleared.

LAVALETTE, W.Va. — When the Lavalette Golf Club course opens, hopefully in May, fancied heavy hitters should be high on the starter's sheet.

These long-ball exponents are aching for a crack at the 14th hole, which measures 715 yards from the back tees and is listed as a back-breaking par 6.

The curious have been out in force since last July, when Albert Anderson, brothers Ken and Loren, father Pat and course professional Ken Lacy began their ambitious project.

While the unusual length of the 14th hole has attracted most attention, Lacy said there will be other tests at course opening this spring.

Stretched to the maximum, the course will be 6,500 yards, and only 5,500 from the white markers.

Tee shots will be played from elevated tees or blindly over a rise. There are eight lakes. Bankers are plentiful, along with strategically placed trees and mounds, and greens range from double-tier to one that serves two holes.

Owner Albert Anderson believes the variety of terrain and trouble will mean use of many more clubs than is customary at courses where driver and short iron are too frequently employed.

The Andersons said the 18-hole golf course here could begin next fall.

Golf course cost is estimated at $2 million.

Tom Hendrick of the Mariner Hotel Corp. said the hotel would include 130 rooms, all with patios. Half the rooms will overlook Carlyle Lake, the other half the golf course.

Hendrick said the West Access marina would be dredged to increase the size and to provide additional boat slips at the resort.

A new water plant is needed to serve the resort. The city of Carlyle has applied for a $1.125 million U.S. Economic Development Administration grant to cover half the project cost.

Grow-in delay means late start at Redhawk

Developers of the 18-hole Redhawk golf course in Southern California want things just right, so opening won't take place until early 1991.

The course was completed some time ago. Decision to delay opening was based on infrastructure improvements not yet complete — and Mother Nature.

"The grasses have not established themselves as firmly as we would have liked," said Larry Effner, senior executive vice president of Great American Development Co., developer of the course and surrounding 1,300-acre master-planned community off Highway 79 in the Temecula Valley area of southern Riverside County.

The 180-acre course was designed by Santa Rosa-based Golfplan/The Fream Design Group in conjunction with professional Mark O'Meara.
England's Howard Swan follows Jones' footsteps
Russia getting first golf course/academy facility

YALTA, USSR — Robert Trent Jones Jr. designed Russia's first golf course. Now British golf architect Howard Swan will help developers give this seaside resort in the Soviet Crimea the first location in the USSR to have a golf course and academy.

The nine-hole course is expected to attract both Russians and foreigners. It will have its own golf hotel, developed by a consortium of the local municipality and the Soviet airline Aeroflot.

"I was delighted to have been able to accept an invitation to Yalta," said Swan, of Essex, England, who has designed a number of courses throughout the United Kingdom and Europe. "Providing this resort with its first taste of golf is going to be a great challenge, and in such beautiful surroundings, I'm sure we can make a wonderfully attractive course."

Pennsylvania board grants course approval

NORTH COVENTRY, Pa. — John H. Albright Jr.'s request to build an 18-hole championship golf course on the Gruber estate along Route 724 here has received zoning hearing board approval.

Ground is expected to be broken next year. Preliminary plans for the private course call for using either tunnels or bridges over Route 724 and the Route 422 bypass, which transverse the property.

Albright also is considering placing one green on an existing island in the Schuylkill River.

Albright negotiated a deal with Edward Gruber in November 1989, giving him title to the Gruber Edgewood estate and more than 200 surrounding acres.

In August, Gruber filed a security loan against Albright after he failed to make his most recent payment on a $5-million loan. Albright is obligated to make quarterly payments to Gruber, who holds the mortgage, until October 1994.

Ft. Myers moves ahead with plan for course/houses

FORT MYERS, Fla. — Plans for the city of Fort Myers' proposed Westwood Golf Course and residential development are progressing nicely. The city holds options to purchase 367 of the 400 acres targeted for the project. Land cost is estimated at $4 million.

The city hopes to build and operate a third public course off Ortiz Avenue.

Fort Myers would sell the property to a developer, who would do a portion of the land back to the city in return for the city's assistance in building homes.

Sears, vice president of a local engineering firm, said building a housing development near a golf course would be designed by Rees Jones, with Mark O'Meara consulted. A major concern for a golf course is having water hazards," he said, "while a developer must be concerned with storm water drainage.

"The nearby golf course allows the developer to drain off water and create water hazards for golfers."
'Senior Golf' exhibit on view at USGA's Golf House until May 5

FAR HILLS, N.J. — A new exhibit, "Senior Golf: Collecting New Memories," is on display through May 5 at Golf House, the museum and library of the United States Golf Association.

The display is divided into three parts — "All-Stars," "Future Prospects" and "Legends."

"All-Stars" highlights memorabilia on loan to the USGA from Arnold Palmer, Jack Nicklaus, Gary Player, Chi Chi Rodriguez and Lee Trevino.

The display includes many trophies and medals won by Nicklaus, among those from his four U.S. Open, three British Open, six Masters, five PGA Championships, and two U.S. Amateur Championships. The trophy and medal Palmer won at the 1960 U.S. Open, along with a driver he used in that championship, are also featured.

"Future Prospects" displays items from those who will soon be eligible as senior players, such as Tom Weiskopf, Raymond Floyd, Isao Aoki and Hale Irwin.

"Legends" sections contains the story of the beginnings of the Senior Tour. It includes memorabilia of Jimmy Demaret, Sam Snead and Gene Sarazen.

The Demaret items are on loan from Onion Creek Club, in Austin, Texas, the home of the Demaret exhibit.

The exhibit features the use of enlarged baseball-card type displays and the museum's collection of cigarette cards. Some of the cigarette cards are more than 100 years old. Used to stiffen cigarette packs, they featured illustrations of royalty, actors and athletes.

Located on the grounds of the USGA, Golf House is open weekdays from 9 a.m. to 5 p.m., and weekends from 10 a.m. to 4 p.m. It is located near Far Hills, N.J., near the intersection of Interstate Routes 78 and 287.

Area degraded by cattle said prime site for California course

Cattle are being branded as culprits by a Santa Clarita Valley, Calif., land developer in beefing up arguments for a huge golf course and housing project in a sensitive wildlife habitat.

Newhall Land & Farming Co. said its cattle operations already have degraded the area, a 798-acre site west of the Golden State Freeway that includes 300 acres of a county-designated Significant Ecological Area (SEA) lying between Valencia Boulevard and McBean Parkway.

Newhall Land's plan calls for building 350 houses and part of the golf course in the SEA, while saving most oak trees.

Newhall Land officials say "a variety of factors... in addition to our company's cattle operation" have contributed to the SEA's decline — including the Golden State Freeway and other development in the area.

An SEA technical advisory committee member said damage from over-grazing is no reason to allow overdevelopment to destroy the habitat altogether. Frank Hovore said oak savannahs are highly resilient and quickly recover in habitat value when overgrazing stops.

JOIN THE TURF CLUB

Membership has its advantages. Kubota offers the most reliable mowing and vertical cutting unit on earth — the Verti-Reel.

Built for total turf maintenance whether you have golf courses, sports fields, sod farms or commercial mowing applications, the Verti-Reel provides vertical cutting and mowing in one proven unit.

Verticut 18 holes in less than a day. How your tractor performs can have a significant impact on the efficiency of your operations. Kubota excels with direct-injection diesel engines in both the M4030SU Turf Special and L3250F Turf Special for greater power, performance and economy.

The advantages of Turf Club membership are numerous. To find out more, write Kubota Tractor Corp., P.O. Box 7020-J, Compton, CA 90224-7020.
First domed golf course overcomes winter woes

FLINT, Mich. — Move over, ye giant all-weather creations for baseball and football games. And who said it never rained on the golf course?

"A real marriage of the art of golf and science" now allows golfers to play in a facility always dry and insect-free, with no wind and in comfortable temperatures.

A domed golf facility that permits golfers to play a nine-hole round during the winter months opened Jan. 5 in Flint Township.

The par 3 course, which features natural grass, is covered by a translucent dome trademarked "Turfdome," that allows natural light to pass through.

The course has been named Winter Greens Golf Club at King Par Golf.

Michael A. Thompson, president of American Golf Domes, Inc., of Mount Clemens, Mich., developed the concept and designed the air-supported structure.

Thompson said golfers "can play their game the same way they play during the summer months. The only difference, if any, at Winter Greens is that you're stepping up to your approach shot to the green."

Michigan PGA head golf professional George Morgan, pro manager at Winter Greens, said initial operating hours will be 8 a.m. through 9 p.m. daily. "The course, "challenging for the accomplished golfer," said Morgan, "also is ideal for beginners, women and seniors."

Winter Greens offers a driving range and full-service golf pro shop on the premises, as well as other attractions for the entire family. "American Golf Domes has been erecting air-supported structures for golf since 1968 in Europe and the U.S.," Thompson said. "But this is the first natural grass indoor course in the world, during the development of which we worked with the Sod and Turf Division of Michigan State University and Dupont Plastics."

Michael McElroy of Great Lakes Golf Renovations, the Michigan firm that shaped and grassed Winter Greens, said: "It has been a challenge to take the plan concept to the undulating terrain of a functioning golf course. I believe golfers will appreciate the test."

Maine super makes winter play possible

Maine's golf image nationwide perhaps is "beautiful courses beckoning in the summer and fall, but forbidding in the winter."

Webhannet Golf Club in Kennebunk Beach defies that description.

True, temporary greens and tees are in use from November through April, but play is fairly steady and there's added zest to the sport.

Member matches are spirited. After the action, when players move at a pace far more briskly than in languid summer months, coffee is the favorite 19th hole drink.

Course superintendent Roger L. Lowell annually cuts temporary greens from the fairways. They are cut with a hand greensmower at 1/2-inch height, and are about 300 square feet with an eight-inch cup in the very center.

Tee markers, one set of white only, usually are placed on a reasonably flat area nearest the tee.

The temporary course plays host to the annual Blue Ball tournament held either in January or February the past 10 years.

In this A.B.C.D. "one club" scramble, 30 and 40 players compete in temperatures as low as 5 degrees and as high as 40 degrees.

Snow is not a problem. Players simply clean the snow from the cups, then put out. Weather permitting, all 10 temporary holes are played, and always the minimum four.

All tournaments have been recorded on video. Wives accompany participants to act as caddies and to keep them comfortable.

You already know that aeration is a must for healthy greens.

But you may not know there's a new aerator that provides significant agronomic benefits without disturbing the surface. Or even disrupting play.

Meet Toro's revolutionary Hydroject 3000. The only aerator that injects water at high velocity to penetrate compacted soils.

Like most revolutions, this one started underground. With a need for deeper penetration than the normal 3" by conventional core aerators.

We designed the Hydroject 3000 to penetrate 4" to 6", and beyond 20" if needed. A decided coup for you. And it breaks through compactive layers for better infiltration.

A comfortable inside temperature is maintained at about 60 degrees Fahrenheit, regardless of outside conditions.

Broom makes do at ModSod layouts

Hardy souls who wish to stretch their season in the sometimes-bashful outdoors are managing a couple of months of extra swings in North and South Dakota and Minnesota.

Veteran pro tour player Fred Haas of Mpls., Minn., has installed his Mod-Sod at 10 courses in those three states.

"Play at the end of fall and the start of spring is extended," Haas noted. "Golfers need only sweep the snow off the greens. There are no soft bumps on the surfaces, a boon to course superintendents."

Golfers searching for ways to enjoy golf year-round may find domed and Mod-Sod answers.

Meet Toro's revolutionary Hydroject 3000...
Coeur d'Alene course faces dredging permit woes

By Bob Spiwak

A request by Hagadone Hospitality of Coeur d'Alene, Idaho to dredge a portion of Lake Coeur d'Alene is still wending its way through a permitting process.

The request was made to allow the resort course's floating green to reach its closest-to-shore location of 75 yards out during periods of low water.

The 5 million pound green draws 5 1/2 feet and was designed to be moored from 75 to 175 yards from the shore side tees. However, it was discovered that in the months essentially from September to June, the lake level drops and leaves only about 4 feet of water near the shore. The developer has sought permission to dredge an underwater trench up to 5 1/2 feet deep, 180 feet wide and 430 feet long to accommodate the shoreward location of the green.

According to Will Pitman, Lake Protection Act manager of the Idaho Department of Lands, the permitting process has gone before the Army Corps of Engineers. Developers have proposed putting large angular rocks on the slopes of the intended dredged area to prevent sloughing of the sides. As this constitutes "introduction of fill materials," it comes under Corps jurisdiction.

The rock fill was one of the precautions advised by the Kootenai Environmental Alliance, a citizen group which works independently, as well as with state environmental and wildlife agencies, to protect the local ecology.

Art Manley, an alliance member, said his organization is not "standing in the way of the project." He added that if the group had its choice, "it would rather not see (the dredging) done." He feels it sets a dangerous precedent, and cites individuals who have been refused dredging permits to deepen the water at their docks. "It's a matter of protecting the lake," he said.

On a recent newscast on KREM television, Spokane, Wash., John Barlow, who oversees the golf project at the Coeur d'Alene resort, stated that the original design (of the course) had the green some 400 yards from its final location, inferring that in the change of location the depth of the water was an unforeseen factor. Attempts to reach the same came up unsuccessful.

Likewise, an associate of course architects Scott Miller Design, Scottsdale, Ariz., would not commit further comment.

There was the feeling, in conversations with several persons involved with the golf course, that the local media were blowing the problem out of proportion, and particularly blamed Spokane's Spokesman-Review daily paper of a vendetta against developer Duane Hagadone, who controls rival newspapers across the state line in Idaho.

Pitman said the Kootenai Environmental Alliance had made a list of requests to be met before a permit to dredge was granted. These included: chemical analysis of the water to check for toxic chemicals or minerals, placement of the large rocks on the slope of the dredged area, drilling of core samples to be certain the lake bottom will be gravel and not silt, and the maintenance of a silt curtain around the dredged area.

All of these, according to Manley, have been, or are being done. He said the request for the rock fill was to ensure that dredging would not have to be done repeatedly in the coming years.

While attention has been drawn to the floating 14th green, Miller Design and Hagadone have taken great pains to protect the environment throughout the course. There is no doubt in the minds of anybody involved that what needs to be done on number 14 will be done properly.

The question that pervades the minds of golfers and officials alike is, "Why didn't they measure the water first?"

USGA honors Ben Crenshaw

MINNEAPOLIS — Ben Crenshaw received the 1991 Bob Jones Award for distinguished sportsmanship at the U.S. Golf Association annual meeting Jan. 26.

In establishing the award, the USGA wished to honor not Jones' accomplishments as a player, or his contributions to the game, but rather his spirit, his qualities as a human being, and his attitude toward the game and its players.

One of the finest players the last 20 years, Crenshaw's love of the game's history and traditions is reflected by his service for the last 11 years as a member of the USGA Museum and Library Committee.

Crenshaw wrote the introduction to "The Art of Golf," the second offering in the USGA Rare Book Collection, in 1982, and wrote an article for the 1988 U.S. Open program.

This means greens dry faster after rain or irrigation. And it causes less injury to the grass. Result? Deeper roots, as confirmed by four years of independent research at Michigan State University. This should lead to healthier, stronger turf.

No more cores either. Or paying a crew for cleanup and top-dressing. Just one operator is required. These savings can cut your aeration costs dramatically. And, best of all, your golfers can play without delay. Think how much that can mean in minimal loss of greens fees.

What's more, this remarkable machine can also be used on tees, fairways or anywhere you need aeration relief.

And your Hydroject 3000 is backed by our Direct Today 48 Hour Delivery program. Any part not immediately available from your Toro distributor can be delivered to you within 48 hours anywhere in the 48 contiguous United States.

Sound good? Call your Toro distributor for a revolutionary demonstration.
The recent article in Forbes (Dec. 24) reporting on the National Golf Foundation's (NGF) projections for the industry is a bust! But remember, the NGF never projected that 350 new courses would be built. The projection is that 350 new courses will be needed to meet the demand.

I responded to Forbes with the following letter: I'll look forward to your comments.

Dear Sir: It's a challenge to shoot a good score. You can compete with a single opponent or a whole field, have a friendly match, or try to lower your handicap. Golf is an eternal quest, changing daily and with each course, never completely learned or conquered.

Are there any solutions for this new golf course dilemma, a shortage that continues to grow near most large cities?

A way to reduce the size and cost of building courses would make it easier to provide the joys of the game to more people.

We certainly don't expect long hitters to start swinging easier or hitting 5-irons off every tee so that golf courses can be made shorter, but for the ranks of non-golfers, golf rules makers—the United States Golf Association and the Royal & Ancient Golf Club of St Andrews—seem ready to throttle back on how far today's "hot" golf balls can be hit.

A SOLUTION

Fortunately, a solution is already here and being used to accomplish these goals—playing modified distance ball on modified golf courses.

MacGregor Golf Co.'s "Mactec" ball goes about 60 percent of the distance a golf ball when driven by a long hitter. It weighs approximately 44 grams, a little more than half of the 1.62 ounce (45.93 gram) golf ball.

A modified golf course can be set up several ways. What many golfers and developers think is what housing developer Andy Combs opened in 1987, at Eagle Landing near Charleston, S.C. This is essentially a miniaturization of a conventional golf course, at a scale to fit the modified ball.

A second option is a par-3 course that can be played as a modified course with a modified ball. This is the route taken by Charles Pasternak in building his Missisquoi Links course near Milton, Vt. Joe Clark in remodeling the High-Note course when played with a golf ball, and the McLoughlin Group's transects, this steady growth is far from a bust!

Sincerely,

Charles E. von Brecht

AN
ADVERTISING
CLAIM THAT'S
CONTRARY TO
EVERYTHING
YOU'VE EVER
HEARD:
WE HOPE YOU’LL USE LESS OF OUR
PRODUCT THAN SOMEBODY ELSE'S.
Pests, or pesticide. It’s a difficult equation to balance.
As a manufacturer, our objective is to develop products which meet two qualitative requirements: Maximum results. And minimum environmental impact.
The result is you simply don’t need to use as much chemical. Compared to most products on the market, our effective rates are lower, and the number of applications less frequent.
To reduce the likelihood of misapplication, we’re especially dedicated to technical support, training, and continued education.
We’ve introduced water-soluble packets which reduce employee handling and exposure. This unique packaging also eliminates the problem of disposal and contaminated containers. We looked at storage and the risks of spills and leakage. We’ve added smaller containers to reduce stockpiles.
But it doesn’t end there. Where cultural controls are warranted, we stress their importance and advocate their use. In research and development, we’re exploring the use of biological agents. In some cases, replacing pesticides altogether.
At Ciba-Geigy, we’ll continue to do what is needed to protect the environment. It’s our concern as a company. And our responsibility as inhabitants.
The critical hire — superintendent — was omitted

To the Editor:
In the December 1990 issue of Golf Course News, the article "Golf Course Europe" contained comments by AGSCA (American Society of Golf Course Architects) President Dan Maples stating that "the key to a successful golf course development is assembling a professional team. Included should be an experienced land planner, civil engineer, golf course architect, housing architect, attorney and financial consultant."

I read that the golf course superintendent was omitted from his statement. Who is better qualified to assist in grass selection, determine initial start-up costs, labor requirements, maintainability and the necessary equipment, in addition to establishing budgetary demands?

Sincerely,
Mark J. Hoban, CGCS
Georgia GC SA

tons of thousands of people who would no more have Sundays with their families? Let's be golf-ologists and be a part of the solution.

Jerry Gelnas, vice president of marketing with Club Corporation of America, said potential club members "want benefits that fit their's and their families' needs. We've found a strong trend toward the entire family becoming part of the club environment."

Gelnas said families offer a major opportunity and a more stable membership for a club.

So, businesswise — as well as good neighborwise and plain good citizenship-wise — getting entire families involved in golf is a positive for golf courses everywhere.

Larry Rodgers"
ModCourses may resolve problems for some

Continued from page 12

as a nine-hole course with a regulation golf ball.

At Britannia, use of golf balls has pretty much won out because golfers visiting the resort bring with them on their vacations their old orientation towards golf. After all, the game of golf does have at least a five-century head-start over modified golf.

To date, the types of courses have not generated enough rounds to support themselves from modified golf. Or, as a nine-hole executive course. Five additional acres would be required to go from a driving range for modified balls to regulation balls.

A ModCourse, requiring fewer clubs and shorter distance, would make walking and carrying a bag easier than on a conventional course.

WHAT'S NEEDED

What does a ModCourse require? Thirty-five acres for a 12-hole course. Another five acres is ample for a driving range, and this can be a pond, since these balls float. With another 15 acres ModCourse can be designed so that it can be converted into a nine-hole executive course. Five additional acres would be required to go from a driving range for modified balls to regulation balls.

This backup approach gives a developer the option of converting or combining a ModCourse to play with golf balls. There would be an extra expense to this, mainly in preparing the extra area needed for expanding fairways and roughs, and lengthening some par 3 holes.

A ModGolf course could fit nicely as a second or third course, where space is too limited for another regular golf course and/or a mix of courses is desired to attract different types of players.

Creating a ModCourse is also an option due to highway encroachment, for more land to develop housing, or other reasons to reduce the size of an existing big golf course.

Lighting a ModCourse for evening and night play can be considered because it is so small. If a ModCourse has a good location, is well designed, efficiently built and maintained and operated, promoted properly, and the fees are right for enough of the player market, a lot of people should eventually find happiness playing such a course.

Bill Amick, of Daytona Beach, Fla., has had his own golf course architectural firm for more than 30 years. He is a past president of the American Society of Golf Course Architects and is the founding president of the American Modified Golf Association, a non-profit group promoting the development of this new game.

Daconil 2787.

Your best approach
to turfgrass diseases.

The cornerstone of your disease control program.

Daconil 2787 fungicide is the premier broad-spectrum, contact turf care product with good reason. It gives superintendents superior control of their most troublesome diseases. Especially Dollar spot, Brown patch and leaf spot.

Daconil 2787 gives you your money's worth on tees and greens, as well as fairways. And there's never been a documented case of disease resistance to Daconil 2787, either. That's why it should be part of your disease resistance management program.

The best approach is to make Daconil 2787 Flowable or WDG (water dispersible granular) the cornerstone of your program. Because only Daconil 2787 gives you consistent, first-rate protec-
Elmer Smith watches Perry Craver hit from sand to sand on 'the world's largest sand trap' — a stretch of beach in Maine that golfers use to keep their game in tune during winter months. Four-irons are normally the one club used.

Who has biggest trap?
Maine, a 3,500-yarder

By Vern Putney

Cynics might say that at the moment the world's largest sand trap is in Saudi Arabia, but for golf purposes such claim to fame is located about four miles from President George Bush's summer home at Kennebunkport, Maine. It's a stretch of sand that runs from the parking lot at Ogunquit Beach northeast along the beach (in the sand) to Moody Beach and back. "Course" yardage is 3,500 yards.

The retired General Electric Company executive and other members of Webhannet Golf Club, Kennebunk Beach, then must explore other options to stay close to the game they favor year-round.

Said George Young, just back from a brisk course tour and deep into his second cup of coffee, "Everyone knows that in Maine during the winter, at some point the regular golf course is going to pick up a snow cover which, to say the least, impairs the precision with which golfers produce their competitive game."

"Par for this course is whether the players have had a good time. It has little or nothing to do with how often they hit the ball."

The best part of winter golf, Young declares, is that snow is a negligible factor. "After the fiercest storm comes the tide, and we're ready to roll again."

Bob Lewis, 81, is Young's frequent playing companion. The Kennebunk resident, part of the York County golf scene for more than six decades, in his early teens caddied at a private New York state preserve owned by New York Tribune publisher Ogden T. Reid.

He was looping for world heavyweight champion Gene Tunney the day after Charles Lindbergh landed in France on his stunning solo stint.

While the rest of the world hailed Lucky Lindy's feat, Lewis was shocked by Tunney's observation, "What's so remarkable about staying awake for 39 hours?"

Lewis was further disenchanted when Tunney upbraided him for not finding his lone golf ball, belted deep into the woods.

Reid forked over a dozen new balls to Tunney. Lewis "heeled" four hit off the fairway so that they became lost balls, returning later to reclaim these souvenirs of a sour experience.

Time hasn't softened Lewis' outlook on Tunney, long a summer resident of Christmas Cove, Maine. He maintains toward the former Marine and Shakespearean scholar the fight night attitude of Jack Dempsey.
Introducing ONCE™ — A line of controlled release turf and landscape fertilizers that require only one application per season.

ONCE was developed using Grace-Sierra's Osmocote® resin-coated nutrient technology, the leading controlled release fertilizer worldwide.

ONCE is engineered for professionals who install or maintain high visibility landscapes. Whether on golf courses, sports fields, private residences, or around City Hall, ONCE insures optimum turf and ornamental performance month-to-month.

ONCE Delivers Performance:
• Produces Even Turf Growth — Uniform results month-to-month.
• Delivers Consistent Color — Eliminates the "feast or famine" color changes typical of conventional fertilizers.
• Insures Nutrient Availability — Delivers nutrients daily in the amounts needed for optimum growth.

ONCE Saves You Money:
• Lowers Labor Costs — Fewer applications needed per year.
• Increases Efficiency — Maintenance is easier to predict.
• Reduces Errors — Chance of over or under feeding with multiple applications is eliminated.

ONCE is available now in a variety of analyses and 5-6 or 8-9 month longevities.

Call us at 800-492-8255 for the name of the Grace-Sierra Landscape Distributor in your area.

ONCE, the first true season long fertilizer whose time has come!
Crackdowns expected against underground tank law violators

By John G. Casanova, Ron Steg and GCN Staff

Federal and state agencies are beginning to talk tough as deadlines for installing leak detection devices on underground storage tanks come and go.

"If your tank leaks you're going to get caught," warned federal Environmental Protection Agency scientist Michael Kalinoski, whose agency can fine the owner of a non-conforming tank up to $10,000 per tank per day.

"At the point you have a leak, you're in real trouble. Leaks don't go away. They can take from one to five years to discover and cost millions of dollars to clean up. It's better to confront the issue now rather than pay for it later.

Confronting the issue involves several steps. Federal law required all USTs to be registered with the appropriate state environmental agency beginning in May 1988. Newly installed systems must be registered within 30 days.

Kalinowski estimated 90 to 95 percent of all tanks have been registered. Ignorance of the law is likely responsible for most of the non-registered tanks, although a small percent are probably ignoring the law in the hopes they won't be caught, he acknowledged.

"We have fined tank owners in a couple of cases where (non-registered) tanks have leaked," Kalinoski said.

"At some point, ignorance of the law won't be a defense," added Chris Schulz, public information officer with the Ohio State Fire Marshal's Office, which is responsible for...

CCA beats winter kill before it hits

By Frances G. Trimble

The extensive winter kill suffered at Texas golf courses last year may have a positive effect on Texas Golfers this year.

One group of Southwestern superintendents intends to put the devastation in the past by taking a giant stride forward into the future.

Charles Fabian, regional superintendent for Club Corporation of America's 22 golf facilities in Texas and Oklahoma, calls CCA's recent decision to buy green covers at $700 apiece "a tough decision to make."

"Tough, because Fabian's region could just as easily not experience killer cold conditions this year. Or, the area — known for freakish weather — might have another damaging cold spell before April.

Lingering memories of "the hassle of re-planting and re-plating greens" at a cost of $250,000 led Fabian and CCA to buy protective blankets for all 22 facilities. He added, "The ones Quenton covered..."
Ward gives course feminine touch

By Vern Putney

Jo-Ann Eberle and John Ward met at the Playboy Resort, but it was all business. Down-to-earth business.

Their common interest was a love of the soil and Mother Nature.

John came to the Playboy Resort Golf Course in New Jersey in 1979 as the new assistant superintendent. Jo-Ann had been a "groundsman" there since 1975. Her fascination for the managerial part of the job brought her in closer contact with John, who liked to elaborate on the technical aspects of turf management.

He told her about Rutgers University turfgrass courses. It changed her life. She attended Rutgers in 1979 and 1980, and during that time was promoted to 27-hole supervisor at Playboy.

She became course assistant superintendent at High Mountain Country Club in Franklin Lakes, N.J., in late 1980, and early in 1982 became assistant superintendent at Americana Resort and Country Club in McAfee, N.J. Responsibilities included 27 holes, all hotel grounds and activity areas. Three supervisors and three mechanics reported to Jo-Ann. Total crew comprised 40 men and women.

Jo-Ann and John were married in 1981. He had been working as course super at Cedar Hill CC in Livingston, N.J. Daughter Kate was born Christmas Day, 1983, "in the off-season, of course," jokes Jo-Ann.

She switched to her present post, super at Sunset Valley Golf Course in Pompton Plains, N.J., in August 1984. Sunset has three years has been nominated for inclusion among Golf Digest's top 75 courses.

Since last August, Jo-Ann has been filling the vacancy of golf director, overseeing 36-hole Flanders Valley and 18-hole Pinchook as well as Sunset.

"At first, an 18-hole course and a 7 winter, 15 summer crew seemed like a vacation," Jo-Ann noted. "Then the push for public golf was on. Players came out in droves and continue to this day. I'm learning that communication and cooperation between professional golfers and the golf maintenance department is the key to mutual respect and a well-run organization.

"We try to put our best foot forward. Not only is pride the outcome, but excellent conditions for our customers. I'm often dubbed 'Unique Ward' thanks to a newspaper article referring to my pioneering as a woman in this field. I hadn't realized I was among a handful of women in the U.S. working in this position."

Jo-Ann's success meant some sacrifices for John. For 20 years, he'd managed golf courses, the last at Taminent Resort and Country Club in the Pocono Resort Region of Pennsylvania. Their home was on the Sunset Valley GC grounds, which meant a two-hour commute for John.

In the winter of 1988, he changed careers. He became superintendent of horticulture for three internationally acclaimed arboreums in Morris County, N.J.

Jo-Ann thrives on the outdoor life, and Kate is proud of her mother's special role.

"Jo-Ann is elevated to be part of an industry she feels has come out of the Dark Ages and is growing by leaps and bounds. She points to sophisticated irrigation systems, computers, newer and better equipment, and a business much more aware of and concerned with the environment. She never has encountered prejudice or discrimination among her peers and, except once, has been hired for key positions where she's applied.

Application to a private club in northern New Jersey went into the "round file," she said, because her resume indicated she was female.

Jo-Ann is a long-standing member of the Golf Course Superintendents Association of America, New Jersey Turfgrass Association, Metropolitan GCAS and the GSCA of New Jersey, in which she served as district director and chairperson for organizing state association meetings and speakers.

That post led to one memorable incident. She was conducting a state meeting at a private country club. The all-male superintendents were in the men's grill.

"I was not permitted to go in (according to the club charter) and hand out dinner tickets. I packed up my paperwork, drove two miles to the local driving range, and hit golf balls for a few hours. I returned close to dinner time, so as not to cause too much chaos.

"I never intended to go against the club's charter, but it was the first time I was flatty turned down and not able to run the meeting according to plan simply because I was a woman."

That-years-ago annoying episode, she feels, has yielded to an enlightened era.

Comments now are confined to course conditions. Feedback is largely positive, and the Good Earth doesn't seem to mind that feminine hands provide the gentle touch.

SURVIVAL OF THE FITTEST

ironROOTS, biostimulant plus chelated iron increases carbohydrate reserves in your plants to minimize the potential for winter freeze damage.

"When a biostimulant such as ROOTS™ has iron added to it, the biggest advantage would be an immediate color response that wouldn't be associated with a resulting flush of shoot growth. This could be very advantageous to turf managers in the spring when everyone is trying to get their grass to green up without promoting shoot growth at the expense of root growth."

Dr. Mike Goatley
Mississippi State University
Starkville, Mississippi

"I saw immediate results. We had a much earlier green-up in the Spring and a much deeper green color where the tank mix ROOTS™, AGRIPLEX 8% IRON, and SOLUBLE N was applied. The treated turf recovered much quicker from the winter damage, and those treated fields were ready to cut in April."

John Chapman
Craft Farms
Gulf Shores, Alabama

"There are now a few reputable scientifically-minded and sophisticated companies involved in the manufacture and sale of biostimulants. One good company that comes to mind is ROOTSine. This company is doing good, realistic advertising, has national marketing and research programs in place and is committed to the marketplace over the long run."

Eliot C. Roberts
The Lawn Institute
Pleasant Hill, Tennessee

To order ironROOTS call your local ROOTS distributor. For university research and technical questions call us toll free at 1-800-342-6173.

IF IT WERE ONLY THIS SIMPLE

Quality irrigation systems are anything but simple. Your golf course irrigation system is unique and it requires unique solutions to its water management needs. Textbook irrigation designs simply won't do.

Certified Consultants, Ltd., is a water systems management/consultant/design firm with extensive experience in golf course irrigation systems.

We are committed to the proper use, management and conservation of water within the horticultural environment. We provide our customers with a superior product that is sensitive to budget without sacrificing function.

We have the experience and the knowledge to handle your water management needs effectively and professionally.

GOLF COURSE NEWS
Continuing from page 17

"If people honestly didn't understand the law we still encourage them to register their tank," said Michael Nimocks during December's Ohio Turfgrass Conference and Show. "Contractors are busy and aren't always available whenever you want them. But that isn't an excuse for missing the deadline."

Several tank owners have been fined between $5,000 and $20,000 for failing to meet the Dec. 22, 1989 leak detection device deadline for tanks installed before 1965, Kalinoski said. "We've tried to keep the fines in proportion," the EPA official said. "We're also concerned about a company's ability to pay. We don't want anyone to go bankrupt. But we are serious about this."

Another deadline occurs this spring when insurers that are required for tank owners and operators to cover the clean-up costs of a release and third-party properties contaminated by a spill.

Several groups have sponsored insurance programs, including the Golf Course Superintendents Association of America and the National Club Association.

Historically, storage tanks were buried for lack of space and fire protection. Little consideration was given to preventing leaks. More than 2 million tanks are buried in the United States. Many are old and lack corrosion protection. An estimated one-third leak and sometimes contaminate ground water supplies.

Leakers are potentially explosive as are septic tanks, sewers and basements where petroleum vapors from leaking storage tanks are septic tanks, sewers and basements where petroleum vapors from leaking storage tanks. Cleanup soil contaminated by a spill generally ranges from $10,000 to more than $100,000. The cost can exceed $1 million when petroleum must be extracted from ground water. Releases extending to neighboring properties may result in additional tort liabilities.

Golf courses commonly have buried steel tanks containing petroleum and other chemicals. USTs are subject to EPA regulations and, in some cases, even tougher state and local standards.

Prior to the new EPA regulations, a Versar, Inc. study of 12,000 tank releases in 50 states showed:

- The median tank age was 17 years.
- Pipe failures caused more than a third of the releases.
- In 80 percent of the cases, substantial damage occurred before the release was discovered.

The EPA later set the following goals:

- Preventing and finding leaks.
- Correcting subsequent problems.
- Making certain owners and operators of USTs can pay for corrective activities.
- Requiring each state to adopt a regulatory program as strict or stricter than the EPA's.

The EPA regulations include a detailed tank registration system and a release reporting system for leaks and spills from overfilling tanks. Inspections, investigations and harsh fines reinforce control and correction.

Owners and operators are liable for re-leaches and are required to obtain insurance or provide proof of financial responsibility.

Some states have imposed requirements that exceed EPA's. For example, the federal agency requires a suspected release to be reported within 24 hours. Maryland has cut that to two hours.

Other states have placed special criteria on tanks, pipes and components, including the cathodic protection subsystem, monitoring devices and tank testing elements. Many tank owners find the regulations overwhelming and seek professional help.

Federal law requires tanks placed in operation after December 1988 to be properly installed, protected from corrosion, equipped with leak-detection devices and to have spill and overfill protection.

A tank installed before December 1988 must have tank-filling procedures to prevent spills and overfills. By December 1988 it also must have corrosion protection along with spill and overfill prevention devices.

Leak detection requirements can be met with continuous automatic devices, monthly monitoring, or tank integrity testing combined with inventory control. The choice and duration depends upon factors such as corrosion protection, tank upgrading and installation date.

Regulations for removing or closing a tank differ from state to state. Refitting an existing tank requires evacuating liquids and vapors, cleaning the tank and disposing of accumulated sludges. These are potentially hazardous activities that should be undertaken only by professional companies.

"Our only fine to date involved a tank removed by someone other than a professional installer and remover," said Schul of the Ohio State Fire Marshal's office. Companies unfamiliar with remediation methods or specific local clean-up standards may face rejection at the work site. Selecting the best and most economical alternative is a high-dollar decision. For example, the cost difference between aeration, displacement or incineration of soils can be enormous.

The worst-case scenario is employing a contractor who is unable to complete the job. Most small testing or "yank-a-tank" firms are unable to handle environmental clean-ups. Switching firms in midstream can be very expensive and time consuming.

The American Petroleum Institute has developed standard practices for tank removal, disposal and installation. Associated General Contractors of America is developing a handbook on methods for different geographical locations. Such publications are useful but do not remove the subjective judgments of local officials who ultimately determine whether a clean-up is acceptable.

John G. Casaus is corporate director of tank programs and Ron Steg manager of golf course environmental programs at Versar, Inc., an environmental risk management company in Springfield, Va. Versar has opened a toll-free inquiry line at 800-283-7727.
Future fairly bright for biological disease controls...

By Peter Blais

CINCINNATI — The future looks fairly bright for biological controls of insects and disease as an alternative to pesticides, according to Dr. Hank Wilkinson, a turfgrass pathologist at the University of Illinois.

With chemicals coming under increasing fire from environmentalists, biological controls (one living organism that controls the growth of another) are being touted as an alternative to the battle to control turf diseases.

"We're not there, yet," Wilkinson said at last month's annual Ohio Turfgrass Conference and Show. "But it's coming.

"I don't think there's any alternative to using chemicals, although golf course applications are still five to 10 years away, Wilkinson said.

"If there is anything that will drive biology, it's the environmentals," he explained. "As they push on chemicals and they are gradually reduced or eliminated, that increases the interest in the dollar value and the money behind biological controls."

Biological controls are not expensive to produce, but they take a long time to develop. The reason is there are hundreds of turf diseases and many different types of turf (bluegrass, bentgrass, Bermudagrass, etc.). But each organism and each turf type must be dealt with singly.

"It may not be efficient to develop one biological control that controls many diseases. Two diseases may require different controls. In fact, the same disease in different parts of the country may require different biological controls," Wilkinson said.

For every pathogen there exists at least one naturally occurring biological control, the Illinois researcher said. Disease occurs when one pathogen temporarily gets out of hand. Most diseases will eventually disappear, which is the natural biological control.

"Research tries to understand how nature does it, and then speed up the process. What we'd like to do is take the control that is naturally established in five to 10 years, and make it take hold in one or two on your course," Wilkinson said.

There are three ways to achieve a biological control system — managing a healthy turfgrass; maintaining a balanced, living biomass; or reducing the effective pathogen population.

Managing a healthy turfgrass by changing the turf type that is better suited to naturally occurring biological controls is the best way to develop disease resistance. But ripping up one type of grass in favor of another is often impractical.

The second option — maintaining a balanced, living biomass — is more practical, especially in the soil. The soil tries to keep all organisms in balance. It is called general suppression and is accomplished by many organisms working together. Dying or dead soil has low general suppression leading to more disease. Cultural practices like core cultivation, proper fertilization and others can make the soil more active in fighting disease.

Soil amendments with organic materials and organisms can also be added to the soil to help improve the biomass and control disease. But there are so many products on the market that it is difficult for any researcher to determine if the introduction of any one significantly reduces disease, Wilkinson said.

That leaves the third method of biological control, reducing pathogens, as the easiest to research and perhaps most promising biological control of turf disease, Wilkinson said.

Specific suppression is the technical term for one organism attacking and actually suppressing another organism. The controls work in different ways on the pathogen — directly attacking it, reducing its food supply, secreting toxins on it.

The control works best when it is present in the turf when the pathogen attacks. It is much less effective if applied after the pathogen establishes a foothold.

"They are more protective than curative," Wilkinson said.

Soils tend to keep all organisms in balance. Foliage is constantly reproduced and replaced. That means biological controls introduced at the roots rather than soil or foliage level will be most successful and will likely be the first available to the golf course market, Wilkinson predicted.

"The protection, if it needs to be there before the pathogen, has to continuously grow and respond to cover up those new tissues," Wilkinson explained of the likely success of root-level controls.

"Using biology will force superintendents to re-think how they deal with disease. While eliminating the disease-causing pathogen may seem the best response, "it's basically a better idea to suppress a disease than eliminating it," said Wilkinson.

"If you eliminate the organisms that cause disease, you create imbalances in the soil. Other things can happen. Other pathogens may fill in that niche and give you bigger problems. The goal of biological control is to reduce disease to acceptable levels and hold it without eliminating it."

Biologics (usually in the form of bacteria) respond to discussed grass. The cycle works like this: A disease root develops, bacteria grow on it, pathogen numbers are reduced, less disease develops and the situation eventually stabilizes.

"You get a little disease and no symptoms," Wilkinson explained of the natural cycle.

An organism must not only survive, but also grow to be successful as a biological control. Competition with other organisms that are already in the soil, plus the constant reproduction of grass foliage, make that difficult.

The control must also continue effective against constantly changing pathogens. Pythium blight and dollar spot are two diseases, for example, that can change and become resistant to a certain biological control.

Some diseases and grasses are more receptive to biological control than others. Warm-season pythium is one that has proven extremely difficult to control.

Warm-season pythium can consume grass within a few hours. Bentgrass and ryegrass are very susceptible to it. Bluegrass is more resistant. As the turf's resistance increases, the biological control has less work to do.

More susceptible the grass, the more effective the biological control must be. So the integration of a resistant grass with a strong biological control is important.

How do researchers find effective controls? Considering there are thousands of different organisms in a single handful of soil? It is time-consuming process that involves scraping bacteria from on foliage and smearing it on a petri dish where the pathogen is also present. In most cases, the bacteria has no effect in limiting the pathogen's spread.

In the rare instances it does inhibit pathogenic growth, the bacteria is subjected to further...
The world of biostimulants has taken the giant step from snake oil-type doubts to science-supported legitimacy. While testimonials are still coming in, golf course superintendents are catching on to the years of research done on biostimulants to improve or accelerate plant growth.

"It's another tool that if golf courses aren't using nowadays they'd better, or the person in charge is behind times," said Melvin B. Lucas Jr., former president of the Golf Course Superintendents Association of America. "You can do a lot more with biostimulants than you can with just putting out fertilizer...." said Lucas, who operates Round Hill in South Dartmouth, Mass., after 25 years at two Long Island golf courses. "You have fairly good control of your growth of turf. You never seem to get a flush as you will with nitrogen fertilizers. You can maintain a nice even quality of turf without using these biostimulants.

Superintendent Dean Graves, of Bethesda (Md.) Country Club, site of the Mazda PGA Championship, said he has used biostimulants to encourage root growth and develop a stronger plant for three years. At the same time, Graves said, the biostimulants green up turf, making it aesthetically pleasing for the tournament cameras.

Unlike nitrogen or fertilizer, it gives a green color but not a flush of growth, he added. Dr. Michael Goehley, an assistant professor of agronomy researching Roots biostimulant at Mississippi State University in Starkville, said golf courses where superintendents are managing sand-based greens, are a good "fit" for biostimulant use.

"In this situation, biostimulants could be a valuable management tool during stressful times of the year, as in the case of severe drought, because of stronger, more developed root systems," said Goehley, who is testing Roots Root Growth Enhancer and PGR IV.

"There are testimonials from a lot of people," said Dr. Richard E. Schmidt of Virginia Tech in Blacksburg, who has researched biostimulants for more than a decade. "I think a lot of people see what they want to see. But it's there. It's for real. It's like an insurance policy.

"We're now trying to get them into the 90th percentile, so that when you apply them, 90 percent of the time they will have positive results."

The word "biostimulant" itself has brought debate. According to Schmidt, "Biostimulators stimulate growth biologically. A lot of people want to call them 'growth regulators,' but growth regulators can either enhance or inhibit growth.

"Schmidt said his research shows biostimulants can be a good insurance policy. If a turf manager gets in an adverse situation caused by moisture, heat or cold stress, the treatment might help him through."

Biostimulants are not a cure-all, Schmidt warned. "Our research has shown that these materials work well under some conditions," he said. "We know we can stimulate growth — especially roots — with some materials, and we are also getting better tillering and initiating of buds."

"However, under certain conditions results of our research infers that growth stimulation with biostimulants is not necessarily associated with nutrient uptake."

Dr. Elliot C. Roberts, director of The Lawn Institute in Pleasant Hill, Tenn., said: "We have to do something to help build more stress-resistance within the plant other than simply watering practices and trying to control the rate of nutrient release within the plant so they don't get oversucculent."

"These growth substances do this. They help to regulate cell division so that it slows down growth. They also help to control cell elongation. And growth is either a function of cell division or elongation, or a combination of both. When you apply fertilizers ... more nutrients mean more cell division and cell elongation, more hydrated cells, and thus they are more sensitive to stress environment."

"If you can control this growth in a way that will make the plant hardy, you have a turf that will withstand more play on golf courses, more traffic on greens, more soil compaction, and withstand the adverse high summer temperatures. When you try to put bentgrass in the South, anything you can do to make it more hardy during the summer the easier you're going to make it on the superintendent."

Lucas, who designed and built Round Hill, said he gained state Conservation Commission approval largely because of his promise to use biostimulants. "The No. 1 consideration here was that the course was being built in and around wetlands," Lucas said. He said the commission was "highly receptive and openly taken by the abilities of biostimulants ... in providing our research with the scientific approach."

"It's another tool that if golf courses aren't using nowadays they'd better, or the person in charge is behind times.'

— Melvin B. Lucas Jr.

Wilkinson said. Wilkinson predicts the first wave of turf, not in the laboratory, "logical control. The proof is on your laboratory-tested in terms of a bio-laboratory. Even if it survives this pythium have done little controls tested on warm-season second round of lab tests, it must still test positively in the field.

Continued from page 20

Don't buy anything that is only logical controls have been only half as successful on mature turf as grass-less soil. Biological controls have been only half effective or even ineffective or even harmful to turf. Perhaps the biggest obstacle to full-scale development of biologics is the bacteria's ability to change, Wilkinson said. A researcher can give an agro-chemical company a bacteria that is more resistant to disease, and the company's method of growing the biologic is even slightly different than the researcher's, the control could change into something ineffective or even harmful to turf.

So what is the future of biological controls? "We'll probably never be able to rely completely on biologicals," Wilkinson concluded. "They're not designed to do the whole job. But with an integrated approach of biologics and other combinations of chemical, managerial and fertilizer solutions, we'll probably be able to reduce the impact of pesticides into the system and gain very acceptable levels of control."

Ohio Turfgrass Foundation gives out scholarships

CINCINNATI — OSU senior Robert King received the $2,000 George Biddulph Memorial Scholarship from the Ohio Turfgrass Foundation at its annual show.

OSU junior Carolyn Fisk was given the $1,000 Dick Duke Award. The $1,000 Glen Hudson Scholarship went to OSU junior Michael Fast. Fast worked most recently at Sycamore Hills Golf Club in Fort Wayne, Ind., and would like to become a superintendent.

OSU junior Carolyn Fisk was given the $1,000 Dick Duke Award. The $1,000 Glen Hudson Scholarship went to OSU junior Michael Fast. Fast worked most recently at Sycamore Hills Golf Club in Fort Wayne, Ind., and would like to become a superintendent.

CINCINNATI — OSU senior Robert King received the $2,000 George Biddulph Memorial Scholarship from the Ohio Turfgrass Foundation at its annual show.

OSU junior Carolyn Fisk was given the $1,000 Dick Duke Award. The $1,000 Glen Hudson Scholarship went to OSU junior Michael Fast. Fast worked most recently at Sycamore Hills Golf Club in Fort Wayne, Ind., and would like to become a superintendent.

Fast also received a $1,000 Central Ohio District Golf Scholarship, as did fellow OSU students Dawson Thoms, Gary Post and David Zahniser. The $1,000 Nor Am Award went to Thoms.

Recipients of $1,000 OTF scholarships were ATI seniors Ron Swing and James Krachek as well as sophomores Monty Hale, Clark State University sophomores Mark Scitz and Joseph Wichard and OSU seniors Zahniser and Donna Barlow along with junior Timothy Kelley. Kelley also received a $1,000 scholarship from the Trans-Mississippi Golf Association.

Michigan State adds specialist

Frank S. Rossi has been appointed to the new position of environmental specialist in turf at Michigan State University. Rossi will be responsible for developing and teaching material concerning safe pesticide use, and concepts of integrated pest management. He also will develop and coordinate seminars dealing with environmental stewardship and turf management.

He holds bachelor's and master's degrees from the University of Rhode Island. He is finishing his Ph.D dissertation at Cornell University.

Wherever Golf Is Played

Courses on every continent recognize the quality and value we build into every Par Aide product. Sometimes, the Classic Touch of Par Aide is enough to make the gallery show up in tuxedos. very impressive," Berlyn said. 

He added that the material seems to work best in sandy soils because they are so permeable.

"The biostimulant promotes rapid uptake of nutrients and other beneficial compounds before they have a chance to leach out of the soil," he said.

Goatley found different responses from root growth in between warm- and cool-season grasses. He said warm-season varieties respond more under stress conditions. Cool-season grasses, he said, have a measurable response regardless of growing conditions.

Goatley recommended applications for warm-season grasses in early fall, "as turf begins to prepare for winter dormancy. In this situation, we see more enhanced root development late in the growing season, which could result in better carbohydrate storage and preparation of plants for winter. There is also evidence that biostimulants could enhance spring green-up as temperatures warm up and spring dormancy breaks."

"When a biostimulant...has iron added to it, the biggest advantage would be an immediate color response that wouldn't be associated with a resulting flush of shoot growth. This could be very advantageous to turf managers in the spring when everyone is trying to get their grass to green up without promoting shoot growth at the expense of root growth."

"The hast growth of turf following an early-season nitrogen application is very susceptible to injury from late frosts."

Graves applies biostimulants in March, April and September. And Lucas agreed they should be applied "from mid-March to spring when the roots are growing like crazy—March, April, May. If you've got these materials available, you create and enhance a root system that is used better than your normal dormant feeding of milorganites or sulfur coated ureas, which are somewhat of a norm these days."

He added current research has revealed that minute amounts of sulfur-coated ureas are getting "somewhat of a flushing effect" in dormant feeding. "You're losing a very small percentage, but a percentage that could basically be used by the plant at a more optimum growing period," he said.

Virginia Tech's Schmidt added that biostimulant use might improve salt tolerance.

He said in one experiment he irrigated turfgrass heavily with salt water trying to create an artificial drought. "Salts hold back turf," Schmidt said, "and we're offsetting it. We're actually stimulating these roots with biostimulants whether we're irrigating with salt water or not."

Schmidt said he believes enzymes in biostimulants are doing something to the plant so that it can take water up that is normally not available to it. Normally when the water gets that low, the plant wilts.

But we are still seeing it grow. "We think it has something to do with the fatty acids and we're investigating that; but it's a story that will have to be told later."

Among the biostimulants on the market are Roots and ironRoots, made by Roots, Inc., 25 Science Park, New Haven, Conn. 06511, telephone: 203-786-5295; Panaccea, produced by Emerald Isle, Ltd., 2153 Newport Road, Ann Arbor, Mich. 48103, telephone 313-692-2777; and Bovarnure, made by PHI/Gordon Corp., 1217 W. 12th St., Kansas City, Mo. 64101, telephone 816-421-4070. This story was prepared with assistance from the people at Roots, Inc., of New Haven, Conn.

### Danger ahead without organization — Roberts

Legitimate biostimulant manufacturers must address ways to regulate the industry or see charlatans enter the marketplace, according to The Lawn Institute director.

"Research interest in biostimulants is keen and will continue, and will be competitive. But the bottom line is, ultimately, this industry is going to have to look at policing itself through regulations and controls, just like the seed and fertilizer and pesticide industries," said Dr. Eliot C. Roberts.

"The companies that really have legitimate products have to agree among themselves on procedures they can follow for analytical purposes so they can label products and then advertise based on the label," he said.

Roberts said the fledgling biostimulant industry is not regulated, posing a threat to companies financing university research.

"A company forms and advertises its product. How do you know what's in that product?" Roberts asked.

"There's not much information on the label that helps you know if it contains cytokinin, or gibberellin, or some other growth substance. And there's not much that tells you how much there is of these."

"In time...there will be a better means of identifying and describing contents, just as we now have procedures to identify pesticides, their active ingredient, amount, etcetera."

"In the long haul we are going to have to have state and federal agencies involved. Of course, any industry hates to be controlled. But there isn't enough (law) at the present time so that any company has to meet any criteria in the marketing process.

February 1991 23
Faubel signs off after exciting year as president

Continued from page 17

"We're determined to show that superintendents want to do the right thing and are good stewards of the land. If we ever find something we're doing is hurting the environment, we'll stop those practices."

Faubel and PGA President Patrick Reilly also stressed the need for the members of their organizations to cooperate. "The superintendent and pro can work together to let the club's members and the community know what is happening environmentally. It's not something the superintendent should do alone."

A meeting of the major industry organizations is being planned later this year to discuss each organization's responsibilities regarding the environment, Faubel said.

Satellite classes — Continued from page 17

the continued high quality standards being set for golf courses around the world.

Golf contractors, archi

tects and owners may find particularly useful the latest techniques in management of warm-season grasses, he said.

Bowyer has been nominated to serve on Lake City's golf and landscape operations industry advisory committee, which offers advice on new academic programs in the sports field.

Va. project OK'd

CHARLOTTESVILLE, Va. — Construction of a private golf course in the Glenmore subdivision east of this community, near Shadwell, will begin in the spring and should be playable in 1993.

The development on 1,195 acres bordered by U.S. 250 to the north and the Rivanna River to the south and west will include a clubhouse, equestrian center and 750 homes.

"If we ever find something we're doing is hurting the environment, we'll stop those practices."

— Gerald Faubel

Manufacturers have answered the needs of superintendents, Faubel said, by developing equipment such as the rotary groomer that allows for a higher cut with no drop-off in putting conditions, and the water jet aerifier that permits aerifying of rocky soils.

Faubel has been on the road 160 days in the past year. His travels have taken him to Canada for the annual golf tournament between the two countries' superintendent organizations; England to visit BIGGA headquarters and the Sports Turfgrass Research Institute; and Spain to help develop the Volderdana Masters Scholarship for a Spanish student to study at a U.S. turf school.

The GCSAA and our industry have really elevated the superintendent to a position of respect. Wherever I've gone, I've always been treated with respect by people who want to know what is happening. The environmental issue has really brought the superintendent to prominence," Faubel said.

While no one can surpass superintendents in technical knowledge, they need improvement in managerial skills, Faubel said.

"Meeting the challenges of the coming decade while staying competitive is our greatest challenge. We will meet the environmental challenges. But we have to be good managers, especially on the business side," the outgoing president said.

Now that his term is done, Faubel is looking forward to spending more time watching over his home course, Saginaw (Mich.) Country Club. He is also starting a new business, a search firm matching courses with superintendents. His partners are former Michigan State University Turf Program Director Ken Payne and Robert Trent Jones Jr.

As for his successor, new GCSAA President Stephen Cadenelli, Faubel said: "He'll do a tremendous job. He has a great vision of where this organization should go. He comes from a teaching background and he already has had a big impact on our educational system. He'll be a tremendous benefit to the GCSAA."

Texas courses covered against threat

Continued from page 17

no matter what you do to protect it. We feel this is insurance against the widespread, neo-
rust-type damage we suffered," he said.

Nevertheless, he said he has "every confidence the covers will work."

To make certain the covers do the job, Fabyan called all CCA superintendents in the region together for a how-to-use, when-to-use session at Kingwood Country Club near Houston.

"Quenton Johnson put together a slide presentation that showed a crew performing each step of the deployment task. We also recommended a trial run on every green at every golf course, so that when the temperature was dropping and the wind was gusting to 30 miles per hour the guys wouldn't be out there trying to figure it out for the first time."

There is a trick to deploying a 200-pound polyester cover so that the entire putting surface is protected and a minimum amount of the rectangular-shaped blanket is wasted.

"How you lay the rolled cover down and which way you roll it out determines how precisely the green is covered," Fabyan said.

Once the best way is ascertained, Fabyan asked his colleagues to write instructions for deploying each blanket on the specific green for which it was designed.

Though there are several methods for anchoring the blankets, the CCA superintendents are strongly considering the covers. If the forecast is for a 20-degree low tonight, followed by a freeze the next day, just do it!"

Fabyan added that, while conditions will determine when the covers are used, the demands of golfers will most likely determine when covers are rolled back or removed completely in this area of year-round golf.

"Why would Fabyan go to so much trouble to recommend covering greens when, in the past, Bermudagrass winterkill was considered just one more greencutting headache with no cure?"

Fabyan measures the cost and extent of the devastation in his region against the purchase price, labor cost, and deployment problems associated with covers, and still finds ample justification for use of technology new to his region.

"If the covers last about six years, as they should, they are worth the initial cost even if only have to use them one year out of six," he said.

The superintendent also believes in a modern, aggressive approach to an old situation.

"Twenty years ago, one-quarter inch was as low as greens were cut. Now we cut at one-eighth inch during some of the growing season. We are putting more stress on greens with lower cutting heights and more play," he said.

"With less play and higher mowing heights, we may have had less damage and no need for blankets at all. But this isn't 20 years ago and we don't have to just sit and hope for the best."

was a very difficult process choosing the final projects," said Snow, the committee chairman. "We started with 83 proposals and whittled that down to 29 before selecting the final ones."

We spent two days looking at the final proposals. (Green Section Research Director) Mike Kenna plastered big sheets about each project along the walls. We kept going around and around the room.

"We tried for geographical diversity, especially in the pesticide and nutrient fate projects, since conditions can vary so much around the country."

The USGA chose not to release the amounts awarded to individual projects while contracts are being negotiated.

PESTICIDE AND NUTRIENT FATE STUDIES

Eight pesticide and nutrient fate projects are being funded. The project titles and schools involved are:

- Pesticide and Fertilizer Fate in Turfgrasses Managed Under Golf Course Conditions in the Midwestern Region — University of Nebraska, Iowa State University and Kansas State University.
- Groundwater Contamination Potential of Pesticides and Fertilizers Used on the Golf Course — Michigan State University.
- Mass Balance Assessment of Pesticides Applied to Golf Turf — Cornell University, Pennsylvania State University and University of Massachusetts.
- Fate of Pesticides and Fertilizers in a Turfgrass Environment — University of California, Riverside.
- Mobility and Persistence of Turfgrass Pesticides in a USGA green — University of Florida, Fort Lauderdale.
- Evaluation of the Potential Movement of Pesticides Following Application to Golf Courses — University of Georgia.
- Pathogenicity and Biological Control of Gaeumannomyces-like Fungi — Univ. of Fla., Ft. Lauderdale.
- Damage Thresholds, Risk Assessment and Environmentally Compatible Management Tactics for White Grub Pests of Turfgrass — University of Kentucky.

The one project in the Golf Course Benefit category awarded funding in December was a Texas A&M University study entitled "Quantification and Validation of the Beneficial Contributions of Turfgrasses to Our Environment and Quality of Life."

"A couple of projects were funded for one year. They could get more funding if the preliminary results show promise," Snow said.

Erosion Control
has never been more advanced

Controlling erosion is an essential element in golf course operations. Erosion left unchecked while construction is in progress will cause extensive rework and delays. NORTH AMERICAN GREEN erosion control/vegetation blankets add a new dimension of confidence in seeding activities. Constructed with netting containing Ultraviolet enhancers, NORTH AMERICAN GREEN DS150 is ideal for professional turf installations. DS150 degrades in about 45 days. DS150 is one in a series of products to control erosion and to establish vegetation. With their unique design, NORTH AMERICAN GREEN blankets stay in place controlling erosion where other methods fail.

For more information contact your NORTH AMERICAN GREEN distributor.

NEW MODELS:
Just bolt or clamp onto mower
YOU SPEND UPWARDS OF $16,000 to buy a new greensmower, also thousands of dollars each year to maintain it and your golf greens and when you get that hydraulic oil leak it means nothing. Don't have your Pro or Greens Chairman ask what happened!

FITS TORO, JAC, LESCO, & LF-100 (7 to 14 oz.)

Don't let this happen to your green!

CLAIMS:
1. Alarm sounds with a loss of only three to five ounces of oil.
2. Uses a uniquely patented floating chamber system
3. Allows for pitch and roll of greens.
4. Easily bolted or clamped into your hydraulic system.
5. Indicates when oil pump has air leak (aeration of pump) on suction side of pump. Air in oil causes float to drop on contact points.
6. Comes fully equipped to mount onto your mower.
The new board of directors for this Massachusetts organization, which has been prominent in environmental and legislative issues, comprises Vice President James B. Conant of Kings Way Golf Club in Yarmouthport; Treasurer Dennis F. Fenner of Town of Dennis Golf Courses; and Secretary Eric E. Newell of Rockland Golf Course.

Directors are Thomas Colombo of New Seabury Golf Course, JeffreyCarlson of Ocean Edge Golf Course in Brewster, and Charles T. Passios of Hyannisport Club, immediate past president.

SUBERS, PGA OFFICIALS MEET

Topics varied in these sessions, and the end result has been much-improved communications between the professions, officials say.

The annual joint educational seminar has brought the memberships of the two groups together to share experiences and concerns within the game.
under pressure.

Your high-value turf will never need to withstand the punishment of a cattle drive, but there’s another kind of pressure your turfgrasses are facing right now: increased traffic. And it can make even the hardiest varieties more vulnerable to disease damage.

That’s why more turf pros rely on CHIPCO® brand 26019 fungicide than any other disease control.

Even turf-killer diseases like Helminthosporium Leaf Spot and Melting Out, Dollar Spot, Brown Patch, Fusarium Blight, Red Thread, Pink and Gray Snow Mold and Fusarium Path knuckle under to the power of CHIPCO® brand 26019.

And the long-lasting protection of CHIPCO® 26019 makes it the perfect foundation for a season-long disease management program. Just one application protects turf for up to four full weeks.

This year, invest in the best: CHIPCO® brand 26019 fungicide.

License Fees Escalate

Testing and renewal fees for Florida Restricted Use of Pesticides licenses are on the rise. Fees reportedly will jump from $10 to $75 beginning next year.

Florida Green Expands

The Florida Golf Course Superintendents Association’s publication, The Florida Green, will expand from four to six issues annually beginning this year.

Educational Seminars

Chemical application and turfgrass diseases will be featured topics at three-day mini-courses offered through the Donaldson Brown Center for Continuing Education at Virginia Tech in Blacksburg, Va.

The chemical application program, Feb. 25-27, will be directed by S. Wayne Bingham, professor of weed science, and David R. Chalmers, Extension agronomist in turf. Houston B. Couch, professor of plant pathology at Virginia Tech, will direct the turfgrass disease course, Feb. 27-March 1.

Chemical application topics include fertilizer and pesticide formulations, equipment selection and calibration, application hazards to non-target plants, nozzle tip and pump selection, tank additives, fertilizers plus pesticide combination products, fate and environmental safety of pesticides, factors improving pesticide effectiveness, tank mixing, pesticide safety and integrated pest management.

Turfgrass disease coverage will include nature of turfgrass disease, epidemiology, environment-management-disease interactions, diagnosis and life cycles of specific turfgrass diseases, pesticide formulations, phytotoxicity, compatibility and application techniques, and development of a balanced disease control program.

MECHANICS WORKSHOP

The Georgia Golf Course Superintendents Association held its mechanics workshop on Jan. 22 at The Landing Club in Savannah. Speakers were John Oldenburg from Jacobsen, Eddie Cox from The Toro Co., Ed Combest and B. J. Cannon from Lake City Community College.

Southwest

Biggers Elected

Georgians Vote

Mark Hoban of The Standard Club, Duluth, has been elected president of the Georgia Golf Course Superintendents Association.

William Shirley, Idle Hour Club, Macon, is the new vice president, Karen White, Watkinsville, executive secretary.

Directors are Steve Davis, immediate past president, Noh North Golf Course, Colubata; Mike Hamilton, Lanier GC, Cumming; Mike Martin, Berkeley Hills CC, Norcross; Paul Peirce, Pine Tree CC, Kennesaw; Bob Ferry, Griffin CC; Eddie Escola, Atlanta CC; Ralph Hinz, The Landings Club, Savannah; Chuck Underwood, Northwood G and CC, Lawrenceville; Hoban and Shirley.

Test Plots in Orlando

Cary N. Lewis has established test plots at his Country Club of Orlando, Fl.

A new family of Bermudagrasses propagated by Oklahoma State researchers will be studied.

midwest GCSA Election

Bruce R. Williams of Bob O'Link Golf Club in Highland Park, Ill., will head the Midwest Association of Golf Course Superintendents.

Ray Schmitz of Flossmoor (Ill.) Country Club, is vice president, Timothy Kelly of Village Links of Glen Ellyn, Ill., secretary-treasurer.

Board of directors members are Michael Bavier, Inverness GC, Palatine, Ill.; Larry Blevin, Woodmar CC, Hammond, Ind.; Ed Braunsly, Geneva, Ill.; CC; Donald Cross, Skokie, Ill.; CC; Alan Fierst, Oak Park CC, Glenoak, Ill.; Joel Purpur, River Forest GC, Elmhurst, Ill., and Dave Meyer, president emeritus, Prestbury GC, Sugar Grove, Ill.

Kansas GCSA Elections

The Kansas Golf Course Superintendents Association has elected A.J. Panter of Junction City Country Club as its new president. Panter, who replaces Immediate Past President Cliff Dipman of Manhattan Country Club, heads a new slate of officers that includes Vice President Ron Reese of Marysville Country Club and Secretary-Treasurer Jack Tripp of Terradyne Resort Hotel and Country Club.

Directors elected to two-year terms are John Wright of Reflection Ridge Golf Course and Robert Eichenberg of O.M. Scott. Jim Pyle of Great Bend Petroleum Club is fulfilling his second year as a director.

Jeff Kreie of Bentwood Golf Club will begin his second year as editor of Kansas City Roost, the association’s newsletter.

Desert, Water Topics

LAS VEGAS, Nev.—Dennis Underwood, Commissioner of the U.S. Bureau of Reclamation, set the framework for the recent three-day Desert Turfgrass/Landscape Conference here.

He focused on the maintenance needs of the desert and the water shortages afflicting the southwestern United States.

The Reclamation Bureau operates the Colorado River, from which a significant portion of water is supplied for the metropolitan areas of Las Vegas, Phoenix and Tucson, Ariz., and Los Angeles and San Diego, Calif.

Underwood discussed the concept of new project landscaping which produce desirable surroundings in desert areas without intensive use of water. Sixty percent of Colorado River water transported into the Las Vegas Valley is for external use — landscaping, lawns and golf courses.

When water quality isn’t up to par, algae and sludge can quickly turn your golf course waterway into a greenish, foul-smelling eyesore. What’s more, when water is not managed properly in irrigation ponds, algae can actually travel through irrigation pipes and start growing on the course itself. The TRITON Otterbine subsurface floating aerator gives nature a boost, simulating natural water cleanup processes to keep your waterways clear of foul odors, aquatic weeds, and algae.

The TRITON, designed to work in architectural and conservative settings where no enhanced water features are desired, is virtually undetectable as it creates a strong current to produce oxygen that cleans and purifies your water. This high performance subsurface aerator is extremely efficient, compact and self-contained. It requires no external pump or other costly fixtures, and, like all Otterbine Aerators, is safety tested and approved by the Electrical Testing Laboratory.

Call or write, today, to find out how the TRITON can help you to keep the green out of the water and on the course where it belongs.
By Vern Putney

HUNTINGTON, VI. — The proposed golf course at Sherman Hollow, here, which since 1984 has suffered more rejections than 56 Atlanta Hawks guard Spike Webb attempting a scoop shot on basket-guarding Patrick Ewing of the New York Knicks, tried for the umpteenth time to live up to the Tenth Commandment of the state Environmental Board.

The board held rigid to its dictum, "Thou shalt not permeate the ground with pesticides not meeting our standards."

Developer Paul Truax and Sherman Hollow Inc. associates, cleared on nine counts, have been relentless in pursuit of golf course approval, considered a necessary first phase to transform this chosen land into a destination resort, bedecked with a hotel, restaurant, conference center and swank condominiums.

The original project price tag was $22 million. Truax and partners, while declining to be specific on costs aimed at obtaining approval, won't quibble with a "hundreds of thousands of dollars" guesstimate. The current cross-country ski area can not survive unless allowed to expand, Truax ventured.

Town officials, hard-pressed for the Yankee dollar, can break their expenditure down to pennies.

Residents fighting Sherman Hollow claim the town has spent $13,422.76 on legal expenses defending and supporting the project since 1985. That kind of coin buys a lot of hay and maple syrup in the belightened Green Mountain State.

Project opponents find it especially galling that their taxes are being used to further the pro-golf course lobby. Despite this, Huntington

The opportunities for overseas golf course development are excellent in most of the 126 countries where golf is played, according to a panel assembled at November's Golf Summit 90.

The panel was moderated by Gary Wren, president of Golf Around the World and master teacher at PGA National Golf Club.

Panel members included John Gordon, managing editor of Score magazine, Canada's largest monthly golf publication; Jillian Yorke, editor of the magazine Japan Golf Report and vice president of International Golf Research Institute; Australian journalist Douglas Mason; Lage Engebo of the Swedish Golf Federation; and John Laupheimer, staff vice president of International Management Group.

CANADA

Canada's population of 25 million, about the same as California, is spread over a land mass larger than the United States, Gordon said. Yet, 95 percent of Canadians live within 100 miles of the U.S. border.

Gordon said there are 5.1 million golfers in Canada that represents 21 percent of its citizens, giving Canada the highest participation rate in the world.

Canada has 12 courses with 200 more under construction or planning. The hotbeds are southern British Columbia and Alberta in the west and southern Ontario farther east.

In the past 15 years, the number of golfers and courses has doubled.

Canada has a rich golf history. The Royal Montreal Golf Club founded in 1873 was the

Japanese owners plan to remodel Woodlake

SAN ANTONIO, Texas — The Woodlake Golf and Country Club here has been sold to a group of Japanese investors, headed by Kiyonori Higa of Osaka, who plan to spend close to $1 million in capital improvements. San Antonio-based CCI Inc. will manage Woodlake. CCI manages 16 golf courses around the country, including the Club at Sonterra in Tapatio Springs and Woodlands at Canyon Lake.

Woodlake, which opened in 1972, hosted five-straight Texas Open tournaments during the 1970s. All 18 greens will be completely rebuilt and replanted.

Charlottesville course to break ground

CHARLOTTESVILLE, Va. — Construction of a private golf course in the Glenmore subdivision east of this community, near Sardwell, will begin in the spring and should be playable in 1993.

The development on 1,195 acres bordered to the south and west will include a clubhouse, equestrian center and 750 homes.
Limerick GC adding 210 condominiums

LIMERICK, Pa. — Limerick Golf Club property is being targeted for a housing development. The township planning commission recommended sketch plan approval for John Benson of Exton, who wants to build a 210-unit condominium complex on 31 acres once part of the club.

Meanwhile, nearby Waltz Farms Inc. wants to create an 18-hole golf course and build 58 single-family houses at its miniature golf course and turf farm site on Ridge Pike. The homes would be built on 13 acres of the 200-acre tract.

Contending that it is preserving open space with the installation of a golf course, Waltz Farm through Collegeville attorney Robert L. Brant Jr. has submitted a proposed zoning change. Although the plan outlined only 58 houses, it did not eliminate the possibility of building on the remaining acreage if the golf course proposal fell through.

Ground broken

UNION TOWNSHIP, Ohio — Ground has been broken for a new 18-hole golf course in this township, 25 miles north of Cincinnati. Course opening at the $300-million private country club community is due in the spring of 1992. General Electric Capital Corp. of Dallas, has approved $19.7 million in financing for the first phase of Wetherington.

River, islands add zest to Hills’ Tenn. course

A private course that plays on both sides of the French Broad River and crosses it on two islands will open in June in Kodak, Tenn. Co-owner Tony Hagwood of Associated Benefits Corp. of Greenville, Tenn., said, “It’s unbelievable. All the credit goes to (architect) Arthur Hills and the lay of the land. It’s not gimmicky at all — just a fantastic layout.” Hagwood said getting the project off the ground was a feat that included dealing with six different landowners, one year acquiring environmental permits, and an archaeologi-

Eight years of planning will finally pay off this spring when the Galena Resort begins construction in Reno, Nev.

The 3,000-acre resort will include a 18-hole, Alpatec-designed golf course, 107 ski runs, underground parking for 1,000 cars, hotels, 1,460 condominiums, 100 single-family homes and housing for 500 employees.

The ski area is scheduled to open in 1992 or 1993 contingent upon financing. The golf course and the rest of the project will be phased in over the next 15 years.

The Reno-Lake Tahoe area was under a building moratorium for large projects from the mid-1970s through the mid-1980s. Developing plans and obtaining permits for Galena Resort began eight years ago, according to Bruce Erickson, resort design manager for The Sear-Brown Group, the engineering firm that spearheaded the project.

Twenty-two federal, 10 state, four regional and 13 local government agencies had to be satisfied before construction could begin. Their concerns included wetlands, traffic, water quality, flooding, water supply, air quality, cultural resources, erosion and geologic hazards (earthquakes and avalanches).

The final agency, the U.S. Army Corps of Engineers, gave its approval by issuing a permit last November to fill in 5.5 acres of wetlands, about two percent of the 252 acres of wetlands at the Galena site.

"We started working on this project in 1983 — the conceptual plan, cost work, identifying potential problems," Erickson said. "We got all the federal, state and local permits we needed, except for wetlands, in six months. It took from 1984 to 1990 to complete the wetlands work."

"The regulations changed halfway through the process. President Bush promised when he took office there would be no net loss of wetlands. We had to go back and evaluate eight alternative locations for the project, some of which we didn't even own. None were better than this site."

The keys to obtaining approval, Erickson said, were doing a complete engineering study as early in the design phase as possible; tapering the approval process, meaning the approvals for each issue are built on previous approvals; sharing information with the public; the refusal of Galena partners Bob Weise, Bob Wells, Alpine Meadows of Tahoe, Doug Clyde, Redfield Land Co. and Jerry Smith to be involved; and using the Development Standards Handbook to provide enough technical data so that agencies could make decisions.

To minimize changes to the terrain, some ski runs were laid out along fairways. Erickson said skiers should have little impact on turf quality because of the area's snow conditions.

First, the Reno-Lake Tahoe area receives 400 inches of snow a year, providing a deep cushion between skin and grass. Second, the snow is much drier than that found in the East, meaning it won't ice over and further damage the turf. Pre-season turf treatments should also help reduce wear.

"There will be some compaction, but it should be minimal," Erickson said.

The ski runs were also aligned so they didn't come into contact with the most sensitive areas of the course, the greens and tees.

"Galena promises to be a challenging resort golf course that appeals to both the high-level amateur and beginning golfer," Pulley said. "It will represent the state-of-the-art in golf course design with minimal irrigated and fertilized areas and an overall layout that offers a strategic game."

Water will be supplied from as many as seven wells drilled on the property. Studies showed they would have little measurable impact on the surrounding water table. Eluent was considered as a source of irrigation water, Erickson said. But it was rejected because of the area's 6,000-foot altitude and its long, cold winters.

Of great benefit during the water supply discussions, Erickson said, was having all the water needed for the project (and substantial reserves) in the direct ownership of the partners as early as possible, but definitely before the public approval process.
Kids make Mr. Mac's retirement years golden

By Vern Putney

Retired phone worker George R. McGrory would brush aside mention that he must have a hot line to Heaven, but he'll beam affectionately when one of his golf pupils happily shouts, "Look, Mr. Mac!" after a good shot.

The North Palm Beach, Fla., resident has seen his weekly teaching program for handicapped kids mushroom from one grade school and nine students in September 1988, to eight schools and nearly 500 boys and girls.

Said McGrory: "We have seen tremendous changes in their outlook on life, school work and attitude toward other persons. They are aware that they can do some things with their lives and bodies once believed out of reach. They recognize 'somebody cares.'"

That particular somebody is McGrory, who stashed his electronic equipment in his native Rhode Island a few years ago and made tracks for Florida and "the good golf life" in what Palm Beach County claims is the "Golf Capital of the World."

He found a better way to spend his "golden years." The world of the handicapped was awaiting a kind man with a warm heart. "Mr. Mac's Kids" are those with learning disabilities, cystic fibrosis, multiple sclerosis and other crippling diseases.

Barbara Blank, a teacher at Grove Elementary School in Palm Beach, planted the program idea in McGrory's mind.

How might she provide her autistic students something besides reading, writing and arithmetic? she inquired of McGrory.

McGrory suggested golf. A program was launched the next week. McGrory dug into his pocket to provide clubs, tees and balls.

Youngsters' handicaps range from learning and language disabilities, to cerebral palsy, muscular dystrophy, multiple sclerosis and other ailments.

Jan Beljan of North Palm Beach, one of a handful of women golf course architects in the world and prominent in the kids' program, has her own grand design for the children's golf future.

"I'd like to help George attain his goal of a three-hole golf course for these special youngsters," she said, "and if I can, through my contacts across the country, scrounge old clubs that can be cut down for use, fine."

Meantime, McGrory will continue to apply his never-ending devotion to a great cause. Sure, at 64 he and wife Alice could be relaxing at the 19th hole of some club, sipping a cool one and savoring the so-called finer things.

Instead, they spend most Sunday afternoons washing clubs and golf balls at the kitchen sink as he prepares for the week's instructional programs.

At Christmas time, the recipients of McGrory's generosity have a grateful hug for their year-round Santa and his unsung helpers.

NEW POTASH PRE-EMERGENT POWER.
Blenders see technology, innovations improving golf course construction

By Mark Leslie

Major improvements loom ahead in golf course green construction as soil blenders mix their imaginations and technology.

Quicker maturity and less disease during the grow-in period of a course are the biggest benefits as blenders look to adding fertilizers, micro-organisms and other materials into the root-zone mix for certain projects.

"The chemical and soil laboratories are the doctors and (blenders) are the pharmacists," said Troy McNeill of Transamerican Soil Blenders of Lubbock, Texas. "They write the prescription for the blending to fit a given golf course and given conditions. We fill that prescription."

The future of blending is scrutinizing the chemical as well as physical properties of the soil, he said.

McNeill said the industry will see micro-organisms added to the blending process where greens won't be gassed with methyl bromide.

Adding bacteria to the sterile media will help prevent disease and will push the green to maturity much quicker.

"This is extremely important," said Dr. Michael Hurdzan, a golf course architect in Columbus, Ohio, who holds a PhD in agronomy. "The first one to two years, you get some weird diseases. You have a sterile mix (sand) and organisms can just move in there. Putting micro-organisms into the blend can significantly reduce that from happening."

McNeill added: "Maturity increases the productive capability of turf. It helps it to heal from spikes and compression ... and rounds played on the course is the bottom line — getting a return on the investment on the course."

"They can open a course a lot faster this way," agreed Christine Faulks of Greensmix in Waupaca, Wis.

Architect and builder Jim Fazio of Juno Beach, Fla., said this procedure would depend on soils and climate, adding he recommends putting fertilizer on top afterward in the South, "but up North it's a different story."

Faulks said products that are dry and free-flowing, such as water absorbents, can also be added.

"In Gainesville (University of Florida's Ben Hill Griffin Stadium) we blended in lime to help the pH. You will see different amendments that will enhance the root-zone mixture," she said.

Another "additive" of the future will probably be fibers for reinforcement.

"Unlike tablet applicators, the new Pro-Ap delivers quick and accurate application. It's unique. You can adjust rates and apply liquids. The Pro-Ap is sold with Hydro-Wet RTA, a Ready-To-Apply formulation."

Now you can treat small areas with Liquid Hydro-Wet Turf Wetting Agent.

See your Hydro-Wet distributor or call us.

KALO
Kalo, Inc. Overland Park, KS 66211 800-255-5196
Continued from page 29

"Contractors are more quality-conscious than they were before... Plus, players are more demanding; there's a lot more traffic, and members want shorter grass and firmer greens" — so more perfect conditions are required.

"Everybody's looking for perfection," Fazio said. "If an owner doesn't get perfection, then he blames the architect, who blames the contractor, who blames the architect for recommending the mix. It's a matter of who does not want to get sued..."

Faulks said that while most blending is done for the root-zone on greens, there have been more calls to mix for tees the last couple of years. "The sports turf field is also taking a harder look at blending now," she said.

When a golf course is under construction, the architect has a soil laboratory test the sand and other material to be used in the root-zone mixture. The lab recommends the mix — say, eight parts sand to two parts sphagnum/peat moss. 

Fazio recalls when he worked with his uncle George and the firm bought the first four Royer shredders built by The Toro Co. in the early 1960s, then

Dakota Peat defies the odds, scientists testify

By Mark Leslie

While soil blenders are normally considered the tool of choice for golf course construction, spokesmen for university athletic departments, football teams and racetracks agree at least one peat on the market needs no blender.

They say Dakota Peat is so fine and mixes so well with sand that it can be blended by front-end loader with the same accuracy as a mechanical blender.

Mike Powell, construction administrator for the University of Florida at Gainesville, hired a blender to mix Dakota Peat for the new Ben Hill Griffin Stadium. When the university builds its 2-1/2 new practice fields, Powell will most likely bucket-mix Dakota and sand, he said.

"K.W. Brown (laboratory) and Powell (Gaines at Tifton Laboratories) were enthusiastic in recommending Dakota Peat as a superior product. My paid agronomist and two volunteer agronomists agreed it was the one to use," Powell said.

Since the Griffin Stadium field was built, the mix has lived up to expectations. Louisiana State University and Mississippi State University representatives "were amazed at the condition of the field" when they visited it after three successive home games, Powell said. "It was worn but not destroyed."

Ross Kurcab, turf manager at the Denver Broncos training facility which used Dakota Peat for its two full-size and one half-size workout field, said a few months after construction: "We have 10 inches of roots already, which is amazing. And it has held water way better than I thought it would. It mixed beautifully. It rates out at 97 percent organic.

"We did exhaustive research. Everyone I talked to that used reed-sedge just love it." At Santa Anita racetrack in Los Angeles, rebuilt with Dakota Peat, five speed records were broken in the first 30 days.

Soil scientist Chuck Dixon, formerly with K.W. Brown and now at International Sports Turf Research Center, Inc. in Olathe, Kansas, said:

"Dakota Peat is really different from other reed-sedge peats. A lot are really muck... I have not seen anything that compares with Dakota Peat.

"The only thing close to Dakota's carbon-to-nitrogen ratio is city sludge, but that is loaded with heavy metals or ash. Every bag of Dakota..."
growth after eight weeks... And it is because it holds moisture so well. really good in low water-use areas

Continued from page 35

Dakota Peat —
and also had the highest cation exchange capacity and humic acid content," he said, adding the ratios were 68:1 for Canadian sphagnum, 80:1 for rice hulls and 100:1 for fir bark.

"Dakota really falls in with 'peat humus' rather than 'reed-sedge,'" Dixon said.

Dixon found that "all the mixes met the USGA (U.S. Golf Association) criteria for water holding and decreased bulk density. Based on the C:N ratio and total carbon content, the rice hull compost does not fit USGA criteria. The fir bark product contains a better total carbon content but has a high C:N ratio. "The lowest infiltration rate, still almost 20 inches per hour, was a 10-percent reed-sedge peat and 90-percent sand. It is interesting to note this mix had a better infiltration rate and water-holding capacity at a 10-percent volume than the other amendments at a 50-percent volume."

Tom Briddle, director of marketing for Tectonic, Inc., of Denver, has used the Dakota reed-sedge since he ran a test on it five years ago and "was amazed at the results." He said, "The greens we have built with the reed-sedge peat are far superior to any of the greens we did with the others."

Briddle described Dakota as an older peat that is further decomposed, "and it mixes to the consistency that every single grain of sand has a little grain of peat clinging to it. We run it through a mechanical mixer and I would categorize that as 10 percent of our sand has a little grain of peat clinging to it... The closest you could come is with an amalgamated mix of sphagnum, which runs 60:40."

He said soil laboratories that have received samples of Dakota have sometimes claimed the bag was hand-mixed. "We did the Denver Broncos training facility, which consisted of 15,000 cubic yards of root-zone mix, and we were within plus-or-minus 1 percent throughout the entire project. There is not a single soil in the sand business in the entire U.S. that can do that," Briddle said.

"We have a bent- grass nursery. The guy from USGA looked at my turf and wanted to know where I got it. He didn't believe it was reed-sedge.

Briddle estimated the cost of peat for a normal 18-hole course between $25,000 and $50,000.

"The cost involved in a new golf course in building new greens — one with inferior peat and one with top-grade peat — is almost equal. It doesn’t cost that much more to make a top-notch one. But it costs 10 times more to redo them," he said.

With others in the industry raving about his product, Mike Pierce is a happy man.

The president of Pioneer Peat of Mesa, Az., and Grand Forks, N.D., Pierce agreed he is blessed to have a unique material that is unlike any other, except one in Russia. He added that his material’s success is also partly due to his processing, which has also been cited with outputting a "clean" product minus twigs and other debris.

Pioneer unveiling three blenders

Pioneer Peat, Inc. President Mike Pierce has announced that his company is manufacturing two models of compact soil blenders, and is designing a third, that will sell for a fraction of the cost of other machines on the market and make it possible for golf courses and other facilities to buy their own machines. "These will make blending more affordable," Dixon said. They are designed for any contractor or sand company that needs to blend. And the baby blender that we’re working on, which we hope to have at the (GCSAA) Las Vegas show, will be sized and priced so every golf course or sports turf facility can have its own, just like mowers."

The larger models are the two-hopper “Dakota 2200” and three-hopper “Dakota 3200.”

Pierce said 90 percent of all mixing jobs use one type of sand and one other material. The 2200 model — measuring 8½ feet wide by 20 feet long and 10 feet high, and selling in the $33,000 range — has two hoppers and its own stacker. It can be hauled behind a pickup truck and is powered from a tractor’s PTO. The 3200, measuring 17 feet long, has three hoppers and its own payloader. It can be hauled with a trailer and is powered by a truck’s hydraulic unit.

The 1200 “baby” will probably measure around eight feet long by five feet wide and high and cost around $80,000, Pierce said.

Pierce, whose firm has headquarters in Grand Forks, N.D., and Mesa, Ariz., said the biggest complaint he hears is that “certain golf courses want a mix (of sand and peat) that’s not available in their area. With their own blender, they can buy small portions of the materials they want when they’re available and do the blending themselves.”

Introducing a smoother rake at a smoother price

Notice anything different about Tour Smooth™, the new and affordable bunker rake from Standard Golf? We’d be surprised if you didn’t. It’s the all-American answer to Canada’s popular Accuform. And a much better buy! It’s the perfectly affordable tool for raking sand into perfect playing condition!

leaves the sand in perfect playing condition. Why get trapped with an inferior — or more expensive rake?

Contact your nearby Standard Golf distributor and ask about Tour Smooth. They’re the smoothest bunker rakes in the business.

The Standard of Excellence

**Golf Course News**

February 1991
Monday and Tuesday, Feb. 4-8

MONDAY AND TUESDAY
FEB. 4 AND 5
GCSAA Golf Championship in Scottsdale, Ariz., at the Palm and Pine courses at McCormick Ranch Golf Club; Stonecreek, The Golf Club; Orange Tree Golf Resort; and Papago Golf Course.

TUESDAY
FEB. 5 (RIVERIA)
8 A.M.-5 P.M.
• Developing your hazard communication program
• Safe pesticide management

USGA golf course rating system

TUESDAY AND WEDNESDAY
FEB. 5 AND 6 (R)
8 A.M.-5 P.M.
Two-Day Seminars Continue
One-Day Seminars

• Basic principles of turfgrass management
• Golf course construction techniques and management
• Basic turfgrass botany and physiology
• Golf car fleet operations
• Golf course construction techniques and management
• Integrated pest management
• Introduction to soil science
• Irrigation system component technology
• Landscape design and plant materials
• Weed control

Wednesday
FEB. 6 (R)
8 A.M.-5 P.M.
Budgeting and forecasting Effective business writing Maximizing job satisfaction

Thursday
FEB. 7 (R)
8 A.M.-5 P.M.
Calculations and practical mathematics in golf

PULLOUT SHOW SECTION

Saturay and Sunday, Feb. 9-10

Saturday
FEB. 9
8:30 a.m. - Noon — Concurrent Educational Sessions (20 minutes per topic):

• Golf Course Management Techniques — Part I, chaired by Dave Hegardt of O.M. & Scott Sons: You are only as good as your interpreter; Tees and me; Bunker renovation for course remodeling; Development of a driving range; Management skills that lead to success; Building a jewel in the desert; Creation of "the mirage" landscapes; Water issues; The ins and outs of deep irrigation; The facts: Vermont model regulations for golf course management plans.

• Southern Turfgrass Management — Chair: Dr. Gary Bennett of Cricketers Country Club in Columbia, S.C.: Developing improved Bermuda grass and centipede grass; Developing the optimum cultivation program; Color retention in warm-season grasses; Trends for potassium use on bermudagrass; Managing turf to maximize cold tolerance; Bermuda encroachment into bentgrass greens; Turf management on the slope and in the shade; Modified USGA greens: Why they're not working; Rolling turf: Effects of irrigation techniques; Manage job stress; Trade frustration for results.

• Golf Course Management Techniques — Part II, chaired by Harold J. Loke of Quail Hollow Inn and Golf Course in Mentor, Ohio: Water-hogging turf: Fact or fancy? Turf growth regulators for pea annua; Rolling turf: Effects of irrigation techniques; Managing a short green; Varieties for converting fairways to bentgrass; Subsurface application of pesticides and biological controls; Leaching of organics; Fertilizer and pesticides; Animal pest problems and recommended controls; Microbiology of minor root pathogens and nonpathogens in high-sand content greens; The right plant for the right location; New concepts on tree planting.

• Legal Questions and Concerns — Chair: Dave Nielsen of Ohio State University: Legal questions about job contracts; Wrongful termination; Avoiding a lawsuit; Using retirement funds for golf; Changes in tax laws made easy; The liabilities of owning and operating a golf course; Liability for chemical damage; Tree hazards and professional liability; Educational golf officials on regulations and liabilities.

• Water Issues — Chair: James R. Watson of The Toro Co.: Golf course irrigation the 1990s; Flood management; Efficient irrigation of turfgrass; Surviving the California drought; Building a water coalition; How to handle your friendly local regulator; Landscape water audits: Helping good water managers become better; Developing a plan to reduce water usage; Methods for complying with water allotments; "Water, water everywhere and not a drop...." 11 A.M. — Luncheon for certified superintendent.

Sunday
FEB. 10
7 A.M. — Prayer breakfast with Dr. Houston Couch speaking.
9 A.M. — The CGCA examination will be given at 9 a.m. Sunday.
9 A.M. — 5 P.M. — Trade Show open in the Las Vegas Convention Center.

Monday and Tuesday, Feb. 11-12

Monday
FEB. 11
9 A.M. — Motivational speaker Richard Rube presents the renowned training program, "The One Minute Manager," an in-depth analysis of practical managerial skills, at the Convention Center.

9 A.M. — The Golf Course Builders of America meets at the Convention Center. "Building Today for the Future" is the theme.

9 A.M. — 5 P.M. — Trade Show open in the Las Vegas Convention Center.

1 P.M. — Duane E. Patton, superintendant at Lawrence, Kansas, Country Club, is the facilitator for a computer special interest group, meeting at the Convention Center. Superintendents can share the latest computer methods, ideas and software.

1 P.M. — Donald E. Hearn, superintendent at West Golf Course in Chelmsford, Mass., will chair a symposium on underground storage tanks at the Convention Center.

Panelists include Robert R. Elliott, superintendent at Inverrary Country Club in Coral Springs, Fla; Dr. Ed Scherr, professor of Advanced Environmental Consultants; Robert Yoo of Franklin Associates, Lee Daniels of EPA Region VII; and Rick Shank of Jardine Insurance Brokers.

4 P.M. — "Can We Co-exist with the Environment?" is the questioned members of the American Society of Golf Course Architects will explore at 1 p.m. Monday at the Convention Center.

Dan Maples of Pinehurst, N.C., USGA president, will introduce these speakers and their subjects: Brian M. Silva of Whitinsville, Mass., "Overview of the current environmental situation;" Roger Rulewich of Montclair, N.J., "Planning — The vital first step on an environmentally sensitive site;" J. Michael Poole of Saratoga, Calif., "United States standards for design considerations worldwide;" John LaFoy of Taylor's, S.C., "Remodeling — What environmentalist sees in a project;" and Tora Foss of Orlando, Fla., "Case history of a 'megaground.'"

Tuesday
FEB. 12
8 - 11:45 A.M. — The U.S. Golf Association's Green Section program will address "Environmental Opportunities in the 1990s" at the Convention Center.

Raymond B. Anderson, Green Section committee chairman and USDA Executive Committee member, will welcome attendees.

Regional directors speaking on the "Best Turf Tips" from the Green Section staff will be Larry Gilhuly, Western; John Foy, of Florida, and Dave Oatis, Northeastern.

Looking at the environment from three angles will be Richard Klein, president of Environmental Defense Associates; Rees Jones, Montclair, N.J., golf course architect; and James T. Snow, national director, USGA Green Section.

George Thompson, superintendent of Pine Lakes Golf Club in North Carolina, Pinehurst, will speak on Canada geese — waterfowl or just plain foul?" Providing more top turf tips from the Green Section staff will be region directors, Jim Latham, Great Lakes, and Jim Moore, Mid-Continent, and region agronomists Jim Skorski, Northeastern, and Tim Moraghan, Championships.

Gerald L. Faubel, GCSAA president and superintendent at Saginaw, Mich., Country Club, will discuss responsible stewardship of the land — an opportunity, and Steve Wynn, board chairman of the Mirage Hotel, Las Vegas, will outline the story of Shadow Creek CC, Las Vegas.

Green Section region directors Pat O'Brien, Southeastern, and Jim Connolly, Northwestern, will provide "Top Turf Tips," as will region agronomists Paul Vermeulen, Western, and Jim Connolly, Northwestern.

9 A.M. — 1 P.M. — Trade Show open in the Las Vegas Convention Center.

7 P.M. — Midnight — The Banquet and Show at the Riviera Hotel will close out the conference with awards, dancing and entertainment with singer Neil Sedaka.
GCSAA honoring industry's best at banquet

Old Tom Morris, Distinguished Service and Leo Feser awards being presented at international conference

LAS VEGAS, Nev. - When an expected 16,000 or more people from all segments of the golf industry gather here Feb. 5-12, the host Golf Course Superintendents Association of America will bestow its annual honors to a wide range of experts who have helped the game of golf and the science of course maintenance.

At its closing Tuesday (Feb. 12) evening banquet and show the 9,000-member organization will cite William C. Campbell of the United States Golf Association as its 1991 recipient of the GCSAA's Old Tom Morris Award for lifetime contributions.

"No one has given more to the game than Mr. Campbell," said outgoing GCSAA President Gerald Faubel. Faubel said that as USGA president from 1985-84 Campbell strived to tighten the bonds between the USGA and GCSAA.

The GCSAA will also present its Distinguished Service Award to three men in the industry. University of Rhode Island plant pathologist Dr. Noel Jackson, The Lawn Institute Executive Director Dr. Eliot C. Roberts of Pleasant Hill, Tenn., and long-time golf course architect W. Bruce Matthews of Grand Haven, Mich., will receive the honor.

Jackson has taught and done research in turfgrass at URI since 1965. Roberts founded The Lawn Institute in 1962, keeping track of the conference. Mr. Campbell, said outgoing GCSAA President Gerald Faubel. Faubel said that as USGA president from 1985-84 Campbell strived to tightening the bonds between the USGA and GCSAA.

The GCSAA will also present its Distinguished Service Award to three men in the industry. LAS VEGAS — “Green Education” for golf course superintendents will be in the spotlight at the 62nd International Golf Course Conference and Show. Thousands of superintendents and other turfgrass professionals will attend more than 40 educational sessions, many focused on sound environmental practices.

New this year is an in-depth Environmental Management Program (EMP) developed by the Golf Course Superintendents Association of America. This will provide specialized instruction in six environmental areas: Integrated Plant Management; Underground Storage Tanks (USTs); Employee Safety and Right-To-Know; Water Quality and Application; Golf Course Development; and Storage, Disposal and Recycling.

Superintendents may earn “specialist” certificates in each area. To achieve such status, a superintendent must complete as many as seven courses designed specifically for a particular area.

Three EMP seminars — “Protection of Water Resources,” “Scouting, Sampling and Monitoring Golf Course Pests” and “Underground Tank Selection and Installation” — will premiere. The one and two-day seminars include:

- Developing Your Hazard Communication Program, Feb. 5
- Safe Pesticide Management, Feb. 5
- Water Quality and Irrigation Scheduling, Feb. 7
- Integrated Pest Management, Feb. 5-6
- Protection of Water Resources, Feb. 7-8
- Environmental Considerations in Golf Course Management, Feb. 7-8
- Underground Storage Tank Selection and Installation, Feb. 7-8
- Scouting, Sampling and Monitoring Golf Course Pests, Feb. 8

Donald E. Hearn, GCSAA past president, will moderate special UST symposium at 1 p.m. Monday, Feb. 11. The panel will feature Robert Klitz, superintendent at Inverrary Country Club in Coral Springs, Fla.; Ed Kettensbrink, senior consultant at Advanced Environmental Specialists; Robert Yoos, environmental scientist at Franklin Associates; Lee Daniels, superintendent from EPA Region VII; and Richard Shankas, president of Jardine Insurance Brokers in Kansas City.

The panel will discuss UST selection, installation, closure and monitoring. Information will be presented on legal requirements that affect an estimated 85 percent of all golf facilities.

CHEYENNE

A seeded turf-type,ower-growing bermudagrass with the quality and uniformity of sod... at a fraction of the cost

“On September 25...temperatures down into the mid 30s...local common Bermuda is completely browned out and dormant...Cheyenne Bermuda...still green.”

Cheyenne is the answer to areas where bermudas are winter-killed and cool grasses exhibit disease problems. Cheyenne is significantly more compact, more dwarf-like and more cold tolerant than common Bermudas or any other seeded Bermuda available. It is uniform in texture, dark green in color and offers rapid rhizome production.

Available for Spring Planting

CHEYENNE

Ideal For:

- Lawns
- Golf Fairways
- Road Sides
- Parks
- Cemeteries
- Athletic Fields

GOLF COURSE NEWS
Plenty of trips, shows planned for spouses

Wives of golf course superintendents will have rare time off from accustomed daily chores during the annual International Golf Course Conference and Show, but a variety of events should keep them entertained and busy.

Choosing attractions could be challenging.

The round of activities starts at 10 a.m. Saturday Feb. 9, with a filmed introduction to Las Vegas. Questions about dining, shopping and entertainment are welcomed.

The program at 10:45 a.m. has the intriguing title, "Peek Into The Life of a Las Vegas Showgirl." The transformation from serene to siren is demonstrated. This one-woman introduction to Las Vegas reveals the secrets of one Las Vegas Showgirl." The latter session features the techniques and etiquette of gambling and is designed to eliminate the symptoms of "casino intimidation."

"Styles for Smiles" is the offering from 3 p.m. to 5 p.m. It's a new twist in fashion — dressing to create the illusion of a well-proportioned figure. A fashion consultant demonstrates the art of adapting styles to enhance individual body shapes.

Sunday morning choices are a seminar on basic principles of horticulture on the golf course (as they apply to turfgrass management), a bus tour through Red Rock Canyon, 20 miles from Las Vegas, and a bus tour of Hoover Dam.

Evolution of a 400-million-year-old sea bed highlights the Red Rock Canyon experience. The brilliantly-colored sandstone rock formations sculpted by water and wind decorate the desert magnificently.

Holding back the Colorado River to form Lake Mead, Hoover Dam is considered an engineering wonder, a project that lifted the spirits of a troubled land during the Great Depression. It's 25 miles from Las Vegas.

"Our Love Is Here to Stay; Marriages That Last" is a seminar from 3 p.m. to 4:30 p.m., is a powerful presentation that will provide inspirational concepts and creative techniques. It's tailored to help realize personal strengths and use one's own natural resources.

You know the story. The guys who swing an iron the way a lumberjack wields an ax are the same guys who yell the loudest when weeds give them a bad lie. So, with all the abuse your turf takes, the last thing you need is root-pruning from your herbicide. That's why you need CHIPCO® RONSTAR® G herbicide. University root pull studies show that CHIPCO® RONSTAR® G works without pruning turf roots. That means healthier roots and stronger, more durable turf. Best of all, just one pre-emergence application provides season-long control of 25 tough broadleaf and grassy weeds — including goosegrass, crabgrass and Poa Annua.

You'll also appreciate the fact that CHIPCO® RONSTAR® G won't leach out or move laterally through the soil and is labeled for use on a wide variety of ornamentals, so you can keep more of your course weed-free with each application. CHIPCO® RONSTAR® G herbicide. It can't improve the quality of play on your course, just the quality of weed control.

CHIPCO® RONSTAR® G Herbicide

With All The Abuse Your Turf Takes, Who Needs Root Pruning?

First-ever session being translated

LAS VEGAS — A profile of U.S. golf course superintendents for Japanese will highlight special educational and informational sessions at the annual International Golf Course Conference and Show here, Feb. 5-12.

For the first time ever, the host Golf Course Superintendents Association of America will present a special Japanese educational session in English that will be simultaneously translated into Japanese.

The session will profile U.S. superintendents, give an overview of warm-season turfgrass disease control and introduce the GCSAA's benefits for potential Japanese members. A panel discussion will conclude the program.

The Japanese educational session, beginning at 1 p.m. Monday, Feb. 11, at the Las Vegas Convention Center, will be open to all GCSAA Conference and Show registrants.

Meanwhile, the conference will also be the site for the annual International Golf/Turfgrass Round Table sponsored by GCSAA.

Leaders of golf course superintendents' and greenkeepers' associations in 18 countries have been invited to meet with GCSAA leaders to discuss common problems, opportunities and goals.

Last year, participants from GCSAA and national associations from 10 countries discussed the environmental challenges facing golf course managers.

Now, Peters brings cutting edge technology to turf and landscape managers.

Peters® Water Soluble Fertilizers are engineered with purer, higher quality ingredients to rigorous standards. This guarantees safer, more effective performance—from bag to bag, application after application. And Peters is 100% soluble, with no residuals to clog or damage equipment.

Regardless of the formulation you choose, each application of Peters provides the exact ratio of all necessary nutrients. So you can quickly and safely make your best looking greens and tees look even better. And, turn problem areas into lush, green expanses.

For more than 40 years, Peters technicians have perfected the development of high quality soluble fertilizers. Now, Peters is the standard of excellence for turf and landscape managers, too.

Contact your Grace-Sierra distributor or call us toll-free at 1-800-492-8255. And get the edge of Peters technology working for you.

Municipal courses proving profitable across U.S.

Continued from page 1

From 1983 to 1989, the number of municipal courses in the United States grew from 2,032 to 2,166 — an increase of 6.6 percent. Daily fee courses grew from 5,915 to 6,296, an increase of 6.4 percent, while private courses grew from 5,137 to 5,276, an increase of only 2.7 percent.

Palermo said 60 percent of golfers are public course players.

"Daily fee and municipal golf courses will never stop," said P.B. Dye, a West Palm Beach, Fla., architect involved with four municipal projects. 'There are more people out there than there are golf courses."

"Golf is no longer the sport of the wealthy," said architect Rees Jones of Montclair, N.J., who is designing the Ladies Professional Golf Association's new municipal course in Daytona Beach, Fla. "It's the sport of everybody."

There's a growing demand for lower-level, lower-cost public courses," said Robert Muir Graves, a Walnut Creek, Calif.-based architect involved with four municipal courses. "We don't need higher-end courses. We need a good old-fashioned public course you can play for 10-15-20 bucks."

MONEY-MAKERS

Municipal courses can be money-making machines "if they're properly run and maintained," said Robert Muir Graves, a Walnut Creek, Calif.-based architect who has designed 22 munis. "Years ago, you referred to the municipal course with disdain. Now, you try to give them country-club courses."

Graves feels munis should also present a country club-type atmosphere by offering such things as good practice facilities, a convenient clubhouse and plenty of parking.

Dye said there should be such extras as

Low supply, high demand ideal mix at Salt Lake City

By Bob Seligman

When officials of Salt Lake City, Utah, began planning to build the city’s newest municipal golf courses—Winged Point and Mountain Dell—they were faced with a low-supply, high-demand situation.

Scott Gardner, the city’s director of golf and recreation, said all four of the city’s 18-hole municipal courses were doing more than 100,000 nine-hole rounds annually. The city’s two nine-hole courses totaled 50,000 to 70,000 rounds a year. With a population of 165,000 in Salt Lake City, and 800,000 to 900,000 people within a 20-square-mile radius, there weren’t enough golf holes.

“In Salt Lake City, you can hardly get a tee time,” said Gardner. “Years ago, it pretty much slacked off after Labor Day. Now, people will play in November if there’s no snow on the ground, no matter how cold it is. We just ran out of golf courses.”

Gardner added that Winged Point also was built to improve the city’s west side region, and to attract new businesses.

The new courses are being funded by municipal revenue bonds under the Municipal Building Authority of Salt Lake City, thereby keeping taxpayers from being responsible for payment of the bond. The debt payment is $7.75 million over the next 10 years.

Despite the demand for public golf, Gardner doubts the courses would have been built if they were tax-supported.

Yet the public, or at least the golfing public, still is paying the way. To be eligible for the bonds, the municipality had to show that enough money was being generated by the existing “munis.”

So, greens fees were raised two years ago by $1 per nine holes.

“The greens fees are paying back the bond. If our revenue doesn’t best our expenditures, we’ll have to raise the greens fees,” said Gardner. “We can not go after the renewal fund to bail us out if we don’t make our payments.”

Winged Point, an 18-hole course, opened last July. Mountain Dell, which opened in 1968, is adding 18 holes. The first nine is expected to open this spring, and the second nine is expected to open by July 1. Gardner said Salt Lake City will not build a new course for 10 years because of the debt. Existing courses also will be affected, at least for the time being, he added.

“Right now, all the money is going to pay off the debt,” Gardner said. “We are still grooming and taking care of the other courses, but you won’t see any major capital improvements until we make sure we’re bringing in the revenue to pay off the debt.”
Munis
Continued from page 45

...and shoe shine boys. But no matter what they offer, munis are not just a strong recreation lure for citizens within a community, but also for businesses looking to locate or relocate into an area. "With the rapid pace of the world today, people are counting on the green space for a leisurely stroll or a competitive game, and that's what golf does," said Gardner. "We are encouraging people to know that life is more than just a job."

Architect Patrick Wyss, of Rapid City, S.D., who has designed more than 20 munis, added: "Public golf is one of those images of quality of life for a community. Businesses that are looking to locate or relocate are very conscious of the environment and don't disturb the natural habitat," declared Harrington, who won his successful mayoral campaign.

Beard declares: Inform the misinformed

Continued from page 1

don’t have the facts and the turf group does. A lot of the stuff they put in the newspaper is being proven incorrect and their credibility is going down the drain.”

“\textit{It’s important you speak out on behalf of the turfgrass industry and its contributions to counter some of the unfounded accusations and fantasies concerning turfgrass. If you people don’t start doing it out in your own communities, I don’t know who is.”}

\textbf{FUNCTIONAL BENEFITS}
Turf has many functional benefits in addition to being attractive, the college researcher said. Among them are soil erosion control; dust stabilization; heat dissipation; noise abatement; glare reduction; reduced runoff of precipitation; ground water discharge; entrapment and biodegradation of pesticides and other chemicals; atmospheric pollution control; conversion of carbon dioxide emissions; safety in vehicle operation; facility security for military and other key installations; reduced fire hazards; reduction of nosious pests.

Turf opponents tend to focus on a single issue when they attack the grass industry rather than looking at the whole picture, Beard said. Specifically, turf is the most inexpensive and durable ground cover available, Beard said. Recent Pennsylvania State University studies show lawns absorb rainfall six times better than a wheat field and four times better than a hay field, being exceeded only by a virgin forest in its ability to trap water. A study of a 200-acre Eastern U.S. golf course showed it contributed more water to the water table than the extended turf irrigation.

Turf is especially valuable in urban areas as a filter for the chemicals and residues that wash off the maintenance chemicals and soil that is applied. Turf also uses much less water than trees, shrubs or flowers.

“Where are the great grass lands of the world? They are located in the semi-arid climates. The extensive tree growth is in the higher rainfall areas. If anything, it’s man who wastes water. And that’s where the solution is, not in cutting back on turf areas,” Beard said.

The overall temperature of urban areas is 10 to 12 degrees Fahrenheit warmer than surrounding rural areas. Grass, through the cooling process of evapotranspiration, helps dissipate the higher heat levels and cool urban areas. On a typical August day in College Station, Texas, irrigated turf temperature was 88 degrees, dry bare soil 102 degrees, unirrigated turf 126 degrees and artificial turf 158 degrees, he said.

“The value of evaporative cooling is very, very substantial. No other surface offers that type of capability. It’s been calculated that a football field has the cooling capacity of a 70-ton air conditioner. The cooling capacity of turf can result in substantial energy savings,” Beard said.

Being a rough surface area, turf absorbs noise and reflects light in many directions, reducing glare. A 70-foot grassed area mowed at four inches along a roadway reduces noise by 40 percent, Beard said.

Turf is very effective in trapping runoff and airborne particulate matter. “Nothing, other than a virgin forest, is better,” Beard said.

Turf’s extensive, fibrous root system adds organic matter to improve the soil. That supports living organisms in soil that reduce pesticides and improve ground water quality. Most of the nitrates added to soil are taken up by the fibrous root system, except when the plant is dormant.

Nuisance pests like snakes, rodents, chiggers and mosquitoes are reduced in maintained turf areas. They prefer higher grass and woodlands, reducing the need for pesticides and other chemicals to control them in maintained turf areas. Organisms living in turf areas also provide a good food source for birds.

In terms of economics, lawns have a positive impact on employes that translates into higher productivity, Beard said.

Holland, the most densely populated and one of the more productive countries in the world, makes extensive use of turf, trees and ornamentals, Beard pointed out.

“They then go to other countries that are far, far less productive and harmonious,” he said. “You see the

\textbf{WHEN CREATING THE PERFECT GOLF COURSE, THERE’S ONLY ONE PLACE TO GET THE GREEN.}

Call on Textron Financial’s Vendor Finance Division for the money you need to acquire and maintain a beautiful golf course from the club house through to the 18th hole, we specialize in all aspects of golf course financing. Competitive finance rates and low monthly payments put the latest golf course equipment well within your reach. E-Z-GO golf cars, Jacobsen turf equipment and Rain Bird computerized irrigation systems are easily available for you to enjoy today through Textron Financial. Our payment plans can be structured to save capital during the off season. And with Textron financing, you’ll benefit from years of field experience in selecting models and services to suit your specific application.

Don’t waste strokes in the rough. Instead, let TFC get you to the green with the most complete golf-related financing and equipment recommendations.

See us in booth #624 at the GCSAA Show

\textbf{GOLF COURSE NEWS}
Beard

By Peter Blais

The U.S. Navy plans to seek bids from private companies to build and operate an 18-hole, championship golf course at the Naval Air Station at Lemoore near Fresno, Calif.

If Congress approves the project, which Navy Golf Program Manager Roger Patrick expected it to do in late January, the Navy will send out requests for proposals on the course, clubhouse and driving range.

The master jet base at Lemoore was selected for this unusual joint military/civilian venture because of the base's stable population, the area's shortage of public golf opportunities and the availability of land along the base's perimeter, which could allow for civilian access to the course.

The Navy hopes the project will excite private developers, despite their lack of interest in renovating and managing the course at the Naval Air Station at Cecil Field near Jacksonville, Fla.

"Things just didn't match up at Cecil Field," Patrick said. "What the industry wanted back was more than we were willing to give up."

The major sticking points at Cecil Field involved greens fees, civilian access and the timetable for renovations.

"We wanted the capital improvements up front rather than phased in slowly. The course did 47,000 rounds last year, so it wasn't a fire sale. The course will just make the improvements itself," Patrick said.

The Cecil Field project became less attractive to private developers because courses recently built in the Jacksonville area diluted the market, Patrick said.

Too many courses shouldn't be a problem at Lemoore, where the nearest public course is a 45-minute drive.

Building a new course eliminates any capital improvement problems. And the possibility of civilian access should make Lemoore more attractive to private developers, Patrick said.

Golf is a profitable business for the Navy. The service's 59 courses showed a net profit of $5.2 million in 1990, up 16.5 percent from the year before.

"...Watertronics saved us money and time."

"On behalf of the West Bend Country Club, a special thank you is in order. Particularly for the hard work Watertronics did investigating our requirements and designing a Horizontal Centrifugal (HC) Pumping Station suitable for our needs. The thorough preparation by Watertronics saved us money and time."

"The synchronization of the pumps, the smooth cycling of the system and the absence of expensive line breaks have made my job easier as well as making our overall operation more economical."

"The correct and efficient way of using irrigation for recreational purposes was a great concern not only to us but to environmentalists as well. The design, workmanship and care with which Watertronics carried out the installation of our Horizontal Centrifugal Pumping Station proved to be a very acceptable solution for everyone."

"Again, thank you for all you have done for West Bend Country Club."

Sincerely,

Bruce Worzel, CGCS
West Bend Country Club

(Wisconsin, call 414-782-6688)
The new Multi-Pro 418 features a breakthrough in engineering. A sophisticated new front suspension isolates the operator from the "Hard Knocking" of the job. The system utilizes transversely mounted leaf springs and load-bearing stabilizers in conjunction with heavy-duty shock absorbers to provide an exceptionally smooth ride while maintaining unparalleled stability.

From a precision liquid application system to an accurate pendulum action dry applicator to a dependable cargo carrier, the Multi-Pro 418 work vehicle is the standard to which all others are compared. A commitment to building the perfect work vehicle. From Hahn, the leaders in application equipment.

The Canadian Golf Foundation was formed in 1979 and 10 years later the first Canadian Golf Summit was held. The second summit will be held in 1991. Geography varies greatly over the 10 provinces. Golfer's play year round in southern British Columbia, but are limited to two months in the far north. Memberships at some of the better clubs in the Toronto area cost as much as $25,000 to join and have 10-year waiting lists. Equity memberships in Ontario's largest city range up to $75,000, although equity clubs are virtually non-existent elsewhere.

Unparalleled interest in golf exists in Canada. A Score magazine survey revealed that courses throughout the country were at or beyond capacity. "But there is disinterest at all levels of government in supporting the foundation of the game or new courses," Gordon said.

Agricultural land preservation and environmental concerns "that sometimes border on hysteria" are other barriers to new development, Gordon said. Many years and millions of dollars are sometimes required to get the necessary permits.

What is done in the United States affects its northern neighbor. Canadian golfers watch U.S. television and expect the PGA conditions they see to be available at their courses, Gordon said. They also want courses built by well-known U.S. architects.

On the plus side, Canadian golfers, like Dave Barr, have benefited from scholarships at American colleges. Companies like Taylor Made, Links and Ram have opened wholly-owned subsidiaries in Canada instead of the traditional distributor system. The Canadian Open is the only foreign stop on the PGA Tour, although many Canadians are displeased with the lack of television coverage given the world's fourth oldest national championship.

Canadian courses are looking to the United States for expertise in running their operations, Gordon said. For example, Fairway Capital Partners issued a $216 million public share offering last summer to build 10 golf courses designed by Canadians but managed by Club Corporation of America. The offer didn't cover the economic problems similar to those in the United States.

Canada has some of the best golf courses in the world, Gordon said. Among them are Jasper Park Golf Course in Alberta which Cypress Point designer Alister Mackenzie called the finest golf course he'd ever seen. Jasper Park, Banff Springs and other western courses draw thousands of Japanese visitors every year.

But Canada has done little to promote itself as a golf destination, said the author of The Great Golf Courses of Canada. Canadians are restrained and low key, for the most part. We need schooling in the hospitality industry and the financial realities of attracting tourism," Gordon said.

A Canadian Golf Foundation study is looking at Ontario as a tourist destination for golfers. British Columbia has been designated a PGA Tour destination.

As for the recession overtaking the United States, "There is no doubt we are in one, too, particularly in Ontario and Quebec," Gordon said. He predicted the current downturn will force some courses to close and membership rolls to decline at others over the next few years.

Equity clubs have been a success, economic investment since coming on the Canadian market four years ago. Before the recession, it was a good way for a developer to build a course and get out quickly. But that's changed with the economy.

Investors used to buy multiple equity club memberships as investments. A membership at Toronto's National Golf Club, the country's top-rated course, jumped from $39,000 in 1987 to $65,000 today. Devil's Pulpit memberships that sold for $17,000 in 1989 are now listed at $54,000.

"But both of those have line-ups to sell," Gordon said. "And buyers are around, especially from the Far East."

Buying farm land near a metropolitan area for a golf course and then "flipping it" has become common, Gordon said.

"One Toronto architect I know is dealing with his fourth set of owners for a project he started two years ago," he added.

In the Vancouver area, Gordon said golf course restrictions have been eased and 80 projects proposed. "The question arises: 'Once these projects are cleared, how many will stay in the hands of the original developers?'"

But economic trends are cyclical and the recession won't be around.
planned in every corner of the world

forever, Gordon said. One need only look at Toronto to see the demand is still there.

A provincial study rated Toronto the third largest golf market in the world after San Diego and Chicago in rounds played annually per capita. The 5-million round demand is rising into a 3.5-million round capacity at Toronto's 100 courses, meaning everyone who wants to play won't be able to.

**JAPAN**

Asian golf dates back to 1829 with the founding of India's Royal Calcutta Golf Club, making it the oldest golf club outside the British Isles, Yorke said. There were 12 clubs in India by 1900 and 140 today.

The growth of golf in Asia was influenced by the British and other colonial powers who helped build the first courses in Sri Lanka, Hong Kong, Singapore, Malaysia and Thailand in the 1880s and 1890s.

During the American occupation after World War II, the Japanese were forbidden to play on courses, although the Americans kept the facilities in good shape.

Golf has been a game for the rich in Asia, but is gaining popularity among ordinary people, Yorke said.

There is a course boom in Asia, particularly in Singapore, Malaysia and Indonesia. Thailand has 58 courses with 50 more in the works and memberships costing up to $30,000.

"While the boom is very good for golf as a whole, it has very little to do with the vast majority of Asian people for whom there are far more pressing problems, like survival," she said.

Other golf course development problems in Asia include lack of land, difficulties locating water, heat, monsoons, snakes, lack of knowledge, few professionals to educate the people and the difficulty in obtaining equipment, Yorke said.

On the plus side is a greater awareness of Asia as a golf market: upcoming Asia Golf 91 which will bring equipment manufacturers to Singapore in April; and the growth of professional golf. Golf has returned to Communist China, where seven courses have opened and several more are under construction.

While the game is growing throughout Asia, Japan is the country most people think of when discussing the game.

Japan's first course was built in 1901 by an English tea merchant. It remained a game played mainly by foreigners during the early 20th century.

The country is enjoying its third golf boom. The first was in 1957 when the Japanese won the Canada Cup, now the World Cup. From 1957 to 1981, the number of courses grew from 74 to 263.

The second boom lasted from 1973 to 1976 when 100 new courses were added to the Japanese landscape.

The recent upswing has brought the course total to 1,700 with another 500 planned or under construction.

Many of the new courses are being designed by famous American architects. While the American presence has resulted in many beautiful facilities, it has also jacked up the price of golf course design, Yorke said.

Memberships in Japan are an investment generally made by corporations rather than a recreational expense incurred by an individual as in the West. Memberships are bought and sold on the stock market like stocks and bonds. The average membership price for newly built courses is $320,000.

The high prices are directly related to the high price of land. But the combined effects of the Middle East crisis, the high price of oil, the coming of winter and the general slowdown of the Japanese economy have led to a drop in the Japanese stock market and a 20 percent decline in the cost of golf club memberships over the last few months.

"We feel that the economy of the past few years is a bubble that will decrease in the near future," Yorke said. Yorke called this a positive development that could bring prices down to a more realistic level.

Yorke predicted the recent rise in interest rates for Japanese bank loans will slow golf course construction over the next few years. The tightening of regulations concerning golf course development, environmental restrictions, the movement against the use of agricultural chemicals on golf courses and the lack of land will also brake new development, she added.

But practice facilities should remain a hot commodity. Since the first driving range was built in 1922, the number of Japanese practice facilities has grown to 4,600. Many Japanese play only at driving ranges.

While the three-tiered ranges are well-known, most practice facilities are far smaller. The average driving range has 48.2 bays and a hitting distance of 169.3 yards.

The numbers of women golfers are growing in Japan. Of the 60,000 students enrolled in golf schools, 51 percent are women. Still, only 10 percent of the golfers at courses and 25 percent at practice ranges are women.

As for those interested in investing in Japan, Yorke said, "It is..."
possible to succeed in the Japanese market if you take the time and effort to do your homework, study your market and build good relations with Japan.

AUSTRALIA AND NEW ZEALAND

The number of courses in the two countries has grown steadily over the past 20 years, Mason said. Australia went from 1,218 to 3,141 facilities during that time. New Zealand's course total rose from 365 to 602.

There are slightly more than 1 million golfers in Australia and 276,000 in New Zealand.

Resort courses have grown significantly, particularly in northern New South Wales and Queensland. Australia. New Zealand's growth has averaged just two to three courses a year and the number of golfers has remained static.

The game is booming in Australia thanks, in part, to the success of professional golfer Greg Norman, Mason said. There are waiting lists to join private clubs, although memberships are much less expensive than in the United States.

Apart from resort courses, few new facilities are being built — 10 to 12 annually in Australia and one or two in New Zealand. There is potential for greater growth in Australia and moderate growth in New Zealand through the year 2000, Mason said.

"The down side to that growth is the two Es. The economy of both countries and the environment. The economy in New Zealand has been static for several years... The economy in Australia is quite depressed, although it seems not to be having any effect on the golf industry," Mason said.

In terms of the environment, Australia is the driest of the continents and has serious water problems that must be addressed before more courses are built, Mason said.

The main thing the U.S. and Australian governments can do to help the Australian game is reduce the high tariffs in both countries, Mason said. Because of tariffs and taxes, a $700 set of golf clubs in the United States costs $2,000 in Australia.

On the plus side, it is less expensive to play golf in Australia than in the United States. The speed of play is much faster Down Under.

"While golf may be inexpensive to play down there, it is very expensive to equip yourself," Mason said.

As for maintaining Australian and New Zealand courses, Mason said: "They aren't trammicled down there to within an inch of their lives. A par 3 in Australia and New Zealand consists of a tee and a green. In between is rough. It's expected that if you're on a par 3 you hit it onto the green or into the bunkers. "On the par 4s and par 5s the first 100 yards is rough. "That cuts down on maintenance and is one of the reasons golf Down Under is relatively cheap," Mason said.

It's the pumping confidence that comes from providing quality pumping stations to satisfied customers for over 30 years. The evaluation of a proven design philosophy provides you with the most cost effective pumping station. The Childers design includes a pressure relief valve that protects the pumps from excess heat and low flow conditions. The longevity of our pumps are enhanced even further by assembling them with 416 stainless steel shafts and straightening them to stricter tolerances than the original manufacturer. We are dedicated to providing you with pumping confidence.

SCANDINAVIA

The recent success of Scandinavian golfers like 1988 Ladies' U.S. Open winner Liselotte Neumann and the four-man Swedish team that won this fall's world amateur championship in New Zealand is largely responsible for making Scandinavia one of the fastest growing golf markets in the world, Engebo said.

Sweden, Norway and Denmark make up Scandinavia. If golf is booming in the United States, it is exploding in those three countries. While the number of golfers is growing at seven percent annually here, it increased in Sweden by 130 percent from 1985-90.

The Nordic countries, including Finland and Iceland, boast 380,000 professional golfers.

Of those, 290,000 are in Sweden, 41,000 in Denmark, 30,000 in Finland, 15,000 in Norway and 5,000 in Iceland. The biggest increases have been in Sweden and Finland. In Sweden, 54.72 percent of the population plays golf.

Approximately 460 courses are in operation in the Nordic countries with another 200 on the drawing board. Sweden has the most, 290, giving it an average of 1,900 people per hole.

Predictions call for an annual increase in golfers of 10 to 15 percent through 1992 and three to seven percent for the remainder of the 1990s. That would project out to 560,000 golfers and 600 courses by the year 2000.

There are barriers to reaching those goals, Engebo said. The primary one is the lack of land, particularly near the cities. Lack of political will, environmental problems and lack of financing will also hinder growth. In Sweden, where most everything is government-subsidized, only five of the country's 290 courses have received any government assistance.

Building a course in Scandinavia costs between $1.5 million and $6 million. Most new courses are coming in under $4 million, Engebo said.

"This is what we need, ordinary courses for the ordinary man," he said. "We would really like to share the results of your research in the areas of new architecture, construction, environmental issues and how to run a course. We would also like you to continue to provide us with good golf equipment."

There are five things anyone interested in the Scandinavian golf market should know, Engebo said. They are:

• Organizing sports is done by local, non-profit organizations, creating commitment and many leaders at all levels. In Sweden you might find 200 to 300 volunteers picking stones to make way for grass on a new course.

• The Swedish Golf Federation is one of 62 members of the Swedish Sports Federation. Similar organizations exist in the other Nordic countries. Cooperation between countries is done within the Nordic Golf Union.

• To play on a Swedish course you must be a member of a golf club associated with the SGF and must have completed practical and theoretical tests to get a club handicap.
Sherman Hollow faces pesticide hurdles

Continued from page 29

selectmen have sent out another round of letters to Chittenden County’s state senators, declaring that the controversial Act 250 process has let them down. They contend that “during the Sherman Hollow permitting debacle, several other (golf courses) are now operating with little or no opposition and/or scrutiny.” Truax concedes, accusing the District Commission of holding Sherman Hollow to tougher environmental standards than other Vermont golf courses.

Michael O’Connor, serving as representative on the Vermont Industry Policy Board, an executive board under the Vermont Golf Association, strongly disagrees.

O’Connor, course superintendent at Basin Harbor CC, Vergennes, perhaps is the most knowledgeable and informed on the Sherman Hollow fighting. He’s been president of the Vermont superintendents and prominent on area and state environmental boards. Said O’Connor: “Currently the industry, comprising 54 golf facilities in Vermont, has expended more than $250,000 just in meeting the current pesticide regulations adopted Oct. 25, 1990. The Vermont Industry Policy Board has raised an additional $250,000 just to comply with the industry’s need to hire a turfgrass position within the Vermont Department of Agriculture.”

O’Connor is concerned with golf’s good name in the wake of developments. While it bothers him that Vermont is perceived by the rest of the country as the villain, he applauds the applicant’s decision to appeal.

Decisions like this, left untouched, he said, set a precedent that others might have to overcome. He hopes for a settlement soon in a case that has become known as “Politics, Pesticides and a Permit.”

Opponents contend they must come up with their own Stamp Act and propaganda campaign to counter “official” mailing. “They (town fathers) might as well have a fund-raising pledge,” commented one dissenter.

While project opponents lack the impressive array of scientists enlisted by Sherman Hollow advocates, they have a distinguished voice. Dr. Hugh Brown from the University of Vermont, representing nurseries, testified that when he used his input data, he found three times as much runoff and 40 to 50 times more leaching than the model had shown by Sherman Hollow.

If the state board overturns the second and latest District 4 Commission veto, Sherman Hollow can proceed with course construction.

Should the Board dash Sherman Hollow hopes, the Vermont Supreme Court appears the next step. Or, Truax could start from scratch with a new set of hearings studying all potential impacts of the golf course.

This is no place for second best.

THE OPTIMUM CRABGRASS CONTROL STRATEGY IS ACCLAIM®

EARLY POSTEMERGENCE. All you need to control crabgrass safely, effectively and economically is Acclaim® Herbicide. Acclaim controls crabgrass, goosegrass and other annual grasses all season long in perennial ryegrass, fescues, bluegrass and zoysia grass. It can be used on bermudagrass fairways and tees. It suppresses bermudagrass. It won’t build up in the soil, so you can reseed following an Acclaim application.

You’ll save time and money with Acclaim. By using Acclaim postemergence when and where you need it, instead of your pre, you can fit Acclaim into an I.P.M. program perfectly. This season, all you need is Acclaim. Save $100/gallon this season on Acclaim. See your distributor.

Agriculture - Scientists Review. The buzzword "landscape sustainability" is very meaningful. Agriculture today is linked with use of chemical fertilizers that are alleged to poison the soil and increase disease and insect problems of plants so that more pesticides are required. The proposed alternative is use of natural organic fertilizers and elimination of all pesticides.

Agricultural Experiment Stations across the country have not demonstrated undue risk from normal use of chemical fertilizers. Nor is there evidence that use of natural organic fertilizers can reduce weed, insect and disease problems to the point where pesticides are no longer needed. Thus, sustainability is widely accepted in general agriculture and in landscape horticulture. This does not mean that there haven't been overuses of fertilizers and pesticides in isolated instances. As with all excessive use, risk increases.

Q — What is really the goal of most new landscape ordinances? A — It's difficult to understand the meaning of many of them. The bottom line often seems to involve use of water, fuel for equipment, pesticides, and in landscape construction and maintenance, some group must feel that there are excesses in one or more of these inputs. If this is so, landscape professionals should recommend changes. If policies and guidelines are left to the political system, the landscape quality of the community will surely suffer.

A successful landscape improves the functional and aesthetic environment. Cost/benefit studies may show some landscapes are more costly than others, but what does this have to do with success as long as someone is willing to pay? Some people drive Lincolns, others Fords. The landscape creates and/or modifies space. It makes better places to live, work and play. Remove it and the inert environment of the central city is left.

Now, some people prefer this environment and live in areas devoid of interiorscapes or external landscaping. Most residential development favors a well-planned landscape. If a certain landscape imposes environmental costs, such as pollution, then it is conceived. It is not helping the environment, although it may look good.

These landscapes require modification so the functional environment is improved. Often this means sound soil-plant management and not elimination of water, fertilizer, pesticides, fuels or labor.

Many times it seems the community plans "to throw out the baby with the bath water." It is worth emphasizing "this ordinance must involve and combine larger issues if the environmental foundation for landscape development is to be integrated into cultural, political, aesthetic and economic factors of positive urban development." The landscape enhances the aesthetic and functional life for people, animals and plants. This is environmental health. However, there are limits. In high-population areas, the landscape may fight a losing battle in maintaining environmental quality. Use of accounting procedures to measure the magnitude of decisions and practices is valid. Interpretation of data must be handled with care. Performance standards are difficult to come by for living entities. It's a good objective, but must be administered by technically well-qualified horticulturists and agronomists.
Functional and aesthetic aspects of landscapes support many activities. When this is done, a non-living mulch is often substituted for a living mulch. Landscape horticulturists often view turfgrass as an enemy rather than the cure. The real issue in all highly populated parts of the country is population density. The problems faced by many metropolitan areas are not those common in rural America. They are desirable but the momentum inherent in natural systems is more likely to foster on a neighborhood, town, city, county or state.

Landscape specifications cannot be so tightly administered without the ultimate demise of the intended plant material. Each site and case is different.

Surveys of professionals make a value judgment that should not be fostered on a neighborhood, town, city, county or state. The problems faced by many metropolitan areas are not those common in rural America. They are desirable but the momentum inherent in natural systems is more likely to foster on a neighborhood, town, city, county or state. The problems faced by many metropolitan areas are not those common in rural America. They are desirable but the momentum inherent in natural systems is more likely to foster on a neighborhood, town, city, county or state.

Landscape horticulturists often view turfgrass as an enemy rather than the cure. The real issue in all highly populated parts of the country is population density. The problems faced by many metropolitan areas are not those common in rural America. They are desirable but the momentum inherent in natural systems is more likely to foster on a neighborhood, town, city, county or state.
Mitsubishi Mighty Mits. One Size Fits All.

It may be small. But it delivers big. Mitsubishi Mighty Mits. When your work takes you off-road, it picks up, delivers, hauls and moves out. In 2WD or 4WD. Over flat or varied terrain. And handling? Easy. At the airport, beach, golf course, park. Or just about any place in between.

Mitsubishi Mighty Mits. Built strong. With extra headroom. And the power to perform.

So right for whatever you do, you'll think we built it just for you.

**Briefs**

**Recession presents opportunities**

*By Peter Blais*

A recession like the one most of the country is experiencing can be a time of opportunity for private golf clubs if managers listen and respond to their members. “Don’t run scared,” advised Jerry Gelinas, vice president of marketing with Club Corporation of America, which operates 200 private clubs nationwide.

“Opportunities are out there. If you take advantage of them, you will have a better club. In good times, clubs tend to relax. In a recession, you have to be targeted.”

At the center of the target is the club member. Private clubs have a big advantage over public facilities when it comes to member loyalty. Most private club members are financially secure. They are better able to weather an economic downturn and keep their memberships than are their public club counterparts, Gelinas said.

“You’re not dealing with a member who can’t afford your club, even in tough times,” he added.

But you are dealing with a member who has priorities. If a club is not meeting his needs, he’ll go elsewhere.

“The question is: How do you make your club more valuable so he’ll give you his club a higher priority?” Gelinas said. More on that later.

Recessions are generally not broad-based. Some people will be hurt during an economic slowdown, while others will be unaffected, or even prosper.

“For a manager to understand how economic conditions in his area will affect his club, he must know certain things, like what

**Japanese continue U.S. buying spree**

Continued from page 1

primarily courses that have already been built. Ninety-three were complete, 14 under construction and 15 in planning stages at the end of 1990.

Christopher Mead, who has been tracking the transactions, said there are probably many more Japanese-owned courses in the United States, "some of them bought under U.S. corporate names and others purchased under Japanese names but not known to Mead Ventures or the executives and industry experts we consulted."

In a 180-page report released in mid-January, Mead said Japanese companies own less than 2 percent of the country’s 14,000 courses. But, he said, because they own such "trophy courses" as Pebble Beach in California and Grand Cypress Resort in Florida, the market value of Japanese-owned courses may comprise as much as four or five percent. Cosmo World paid around $800 million for the Pebble Beach complex alone.

Mead predicted Japanese firms would own between 500 and 1,000 U.S. courses by the year 2000. He added that although that is still a small percentage of total U.S. ownership, it is "a major portion of the newer and trophy courses and of those not only in Hawaii but also in California, Oregon, Washington, Arizona and certain other states."

Japanese firms own nearly all Hawaii courses and public courses — 37 or 38 in all. "With no more courses left to buy (in Hawaii), Japanese have been forced to build, and they appear to be doing so with surprising speed," Mead reports.

He said in his report that most of the 40 or more courses planned or under construction on the Big Island of Hawaii, Oahu and Maui, are being built with Japanese funds or with the expectation of a sale to Japanese buyers. Meanwhile, Mead said Japanese own at least 32 courses in California, eight in Texas, seven in Oregon, six in both Arizona and Georgia, five in New York, four in Florida, three each in Nevada, North Carolina and

**CARMEL, Calif. — Daiichi Real Estate Co., Ltd. of Tokyo, Japan, in joint venture with senior management personnel of locally-based Landmark Land Company, Inc., and international Pacific Rim and European investors have plunged heavily into the United States golf course market.**

Golf course and resort areas on both coasts, plus Oak Tree Golf and Country Club, Edmond, Okla., will be bought for $739 million.

Closing date for the first phase of the transaction is March 31. If options are fully exercised, Landmark would receive an additional $106, then $82 million.

Golf courses include three rated among the top 100 in the world.

Properties are spread among such Landmark developments as Kiawah Island, South Carolina; Palm Beach, Fla., Polo & Country Club, and California courses Carmel Valley Ranch, Moreno Valley, PGAWEST, LaQuinta, Oak Valley and Mission Hills in Rancho Mirage.

Gerald G. Barton, Ernest O. Yossler and Joe W. Walser, Jr., of Landmark will be new team members.

The transaction is subject to approval by shareholders and the Office of Thrift Supervision.

CCA official: Recession 'beatable' for private clubs

Continued from page 57

his members do for a living and how often they visit his club," Gelinas said.

Even private clubs in a relatively depressed area are in generally good shape. As the 1990s unfold, the oldest of the massive Baby Boom generation are heading into their late 40s and early 50s, the age when most people join clubs. The 45-to-54 age group is expected to add 11.7 million people during the decade.

"That's a pretty big market," Gelinas said. "The demographics should overshadow any cyclical economic problems."

Finally, private club members are value conscious and media sophisticated. They demand clubs offering prestige and value suited to their particular needs. Clubs must position themselves accordingly to be successful.

"Potential members will usually reject a canned sales pitch or standard set of benefits," Gelinas said. "They want benefits that fit theirs' and their families' needs. We've found a strong trend toward the entire family becoming part of the club environment."

Families present a significant opportunity and a more stable membership, the CCA executive said.

"It's easier to resign from a club if there's just one person involved, say a golfer. But if the wife is in the tennis league, the son in the junior golf program and the daughter on the swim team, it's less likely the club will lose a member," he explained.

Whatever a member's involvement, it must be meaningful. In some cases, a member may want relaxation. For others, it may be self-improvement. Still others may want competition.

"Tennis clubs, because of the different skill levels in the game, have been hurt among those wanting relaxation. Relaxation is a little easier in golf, although some clubs are competition driven," Gelinas said.

Once a club figures out what members want, it can position itself to fill those needs. Positioning involves listing what the club has to offer, figuring out what the market is and determining what members want.

Focus groups are one of the best ways to discover what members desire from their club. While the term "focus group" may sound technical, it can be as simple as inviting 20 members to lunch (hoping at least 10 will show) at the club's expense and asking them what changes they'd like to see.

Focus groups give a sense of what members want. They should be followed up with written questionnaires for specific recommendations.

Another source of information is local real estate brokers and developers. They are the ones bringing residents, and thus potential members, within distance of the club.

"The whole point is to listen," Gelinas said. "And then respond."

One of the responses at some CCA facilities has been to provide an atmosphere in which members can conduct business. That could mean building a private meeting facility with audio-visual equipment or simply making business guests feel welcome by giving a free sleeve of balls to a guest playing with a member.

The dining area can fill another need. CCA has traditionally priced its a la carte menu at or below neighboring restaurants.

"Clubs can subsidize the a la carte menu with their private party business. The parties are the real money-maker," Gelinas said.

If a club does its homework, aggressive advertising is unnecessary to keep and recruit members, Gelinas said.

"It will happen naturally. The key is to develop the product first. If it's good, word will get out. And you can't beat word-of-mouth advertising," he added.

CCA's experience in its corporate home state of Texas is a good example of what private clubs can accomplish during lean economic times. Despite an economic slump that lasted most of the 1980s in the Lone Star State, Club Corporation closed none of its country clubs during the last decade. In fact, the number of Texas clubs grew to more than 40.

Texas is on the road to recovery, while much of the country is gearing for an economic slowdown. But even in difficult economic times, Gelinas said: "There are enough opportunities out there for private clubs. They should have positive plans that count on revenue generation rather than cost cutting."

NO INTEREST
FINANCING TILL APRIL 1

No Interest financing till April 1 by financing as little as 30% of the purchase price of your new ClubCorp Golf Cart or 4-Wheeler. If your谓ы show is closed by March 31, 1991, you will not be charged interest on the amount financed until April 1, 1991. The 30% minimum financing is available on new golf carts and 4-wheelers from any of ClubCorp's three national golf cart dealers. The term of the loan will be determined by the dealer. Charge a credit report will be run. This offer is not transferable and is subject to credit approval. The lender is a third party and not associated with ClubCorp. The offer is not available in all states. Offer expires April 30, 1991. For additional information, giving sales office nearest you or call 1-800-251-0590.
Club Corp. of America starts capital expansion

DALLAS — Club Corporation of America has started a major expansion push by buying its first two properties with its newly funded $50 million of expansion capital.

CCA paid an undisclosed amount of cash for The Club at Cimarron in McAllen, Texas, and the Club at Mission Dorado in Odessa, Texas — both held by First City Texas Bank in Houston.

CCA is considering five other acquisitions. It expects to use the funding, with some debt, to add 12 to 15 golf properties to its operations over the next six to 12 months.

"CCA has commitments for approximately $50 million worth of equity funding from internal and external sources to be used primarily for all-cash acquisitions of existing, profitable country clubs and public fee golf courses," said Randy Williams, executive vice president of business development. "And up to 20 percent of the funding may be used for to-be-developed golf operations."

The Club at Cimarron is part of an 800-acre planned community that opened in 1982. CCA's purchase encompasses approximately 204 acres of the community, which includes a 34,000-square-foot clubhouse, 18-hole golf course, pro shop, racquetball center, six outdoor lighted tennis courts and Olympic-sized pool. The club has about 1,100 members.

The Club at Mission Dorado is located within the 2,000-acre Mission Dorado Master Planned Community.

CCA bought the 32,000-square-foot clubhouse, pro shop, 18-hole golf course, tennis and swim center, which make up approximately 200 acres of the development. There are approximately 800 members at Mission Dorado.

Myrtle Beach National and Litchfield strike a deal

MYRTLE BEACH, S.C. — Myrtle Beach National Golf Club, Inc. struck what officials called "an natural business match" when it finalized an agreement to buy four Waccamaw Neck resort properties from The Litchfield Co. of South Carolina, LP and Litchfield Golf Co., Inc.

The agreement is for the 18-hole River Club, 18-hole Willbrook Plantation Golf Club, 96-suite Waccamaw House, and Litchfield Country Club, with an 18-hole course and 19-court racquet club. The sale does not include various Litchfield By The Sea real-estate developments owned by The Litchfield Co. and Litchfield Golf Co.

"The combination of Myrtle Beach National's extensive golfing resources and our offering of quality real estate properties is an natural business match," said Russ Campbell, executive vice president and general manager of The Litchfield Co. "We look forward to joining marketing and promotion forces with Myrtle Beach National."

Myrtle Beach National has been open to the Litchfield properties since Sept. 19, when a purchase agreement was signed. The operating company is Litchfield National Co.

Japanese

Continued from page 57

Washington, two in South Carolina and one each in Colorado, Illinois and Mississippi.

Donald Wizeman, president of Dai-Ichi Corp., in Myrtle Beach, S.C., said his company is negotiating on behalf of Japanese buyers for purchase of 50 courses in the Southeast.

This trend of Japanese investments is a creature of the last six years. With increased spending power and foreign "bargains," their real-estate spending in the United States soared from $1.86 billion in 1985 to $7.53 billion in 1986, $12.77 billion in 1987 and $16.54 billion in 1988, according to Kenneth Leventhal & Co. Purchases dropped off to $14.77 billion in 1989, with a further 20-percent drop anticipated last year.

While real-estate investment was tapering off the last two years, golf course buys increased, emerging as "one of the most promising aspects of their investment activity in the U.S.," Mead said. "In this period, companies began to search for investments that made sense not merely from the standpoint of currency benefits or long-term capital gains, but from an income or short-term gain perspective. Golf courses and the resorts that included them often fit the new requirements.

Moreover, Japanese frequently had a substantial edge over rival American bidders for golf course properties," Mead said that while Japanese real-estate investments may decline again this year, over the long run most experts expect them to be an important force in U.S. real estate.

"Moreover, certain types of investment remained very strong in 1990... Golf course investment, too, rose substantially from the level of 1989," he said.

Leading factors indicate that Japanese interest in golfing abroad is "far from its peak," Mead cited figures showing that Japanese have per-capita showing factors..."A Japanese Holdings Corp. spent $856 a day while traveling abroad each year — in-
Briefs

ANDERSEN HEADS UP NASM

LAKE ZURICH, Ill. — Ken Andersen, vice president of product service for Echo, Inc., is the new president of the National Association of Service Management (NASM). NASM represents all aspects of the product service industry. It includes service professionals from the business equipment and appliance industries, as well as outdoor power equipment.

Andersen has been president of NASM's Atlanta, Ga., and Chicago chapters, and also treasurer of the national organization.

AQUATROOLS ADDS TECHNICAL REP

PENNSAUKEN, N.J. — Jim Ellis of Flint, Texas, has joined Aquatrols as technical sales representative.

A graduate of Tyler Junior College, Ellis has more than 15 years of experience in horticulture sales and customer service, representing a distributor and manufacturer.

Ellis will work with Aquatrols distributors and horticulture and turf professionals in a territory covering the South Central and Southwestern states and California.

FISHER HEADS TURF SALES

MADISON, Ga. — Pennington Seed has promoted J. David Fischer to director of turfgrass and governmental sales and marketing, and named Russell Nicholson turfgrass agronomist.

Fischer has been with Pennington in several capacities of sales and marketing for five years. He will be responsible for marketing Pennington's growing line of specialty turfgrasses from the firm's new production and shipping facilities for cool-season turfgrasses in Lebanon, Ore., and the Cactus Seed Co. facility in Roll, Ariz., for Bermuda grass and other warm-season varieties.

Nicholson will be responsible for support and consultation to customers on the use of specialty turfgrasses. Nicholson has a degree in agronomy with more than 10 years of experience in the golf course and turfgrass industry.

KEARY GETS REGIONAL POST

SAN MARCOS, Calif. — Mike Keary has been named Hunter Industries regional golf sales manager.

Gard Craw, golf sales and marketing manager, said Keary will coordinate the regional sales program of new Hunter golf course irrigation products, and will provide technical and educational support. He was formerly Hunter's district manager in Florida for three years.

Prior to his affiliation with Hunter, Keary operated a landscape contracting business in Texas. He is a graduate of North Texas State University.

Lesco opens new distribution center in North Carolina

Lesco Inc. has opened a regional distribution center/warehouse in Charlotte, N.C., to serve golf course and lawn care customers throughout the Mid-Atlantic states. The facility is 38,400 square feet with six loading docks, and is served by a rail spur.

Dave Alexovich, previously manager of purchasing in the Rocky River, Ohio, head-quarters, is facility manager.

The center will stock fertilizers, turf and horticultural control products, seed, turf care equipment, replacement parts and golf course accessories.

Irrigation Association president

Emmerich foresees many changes

Robert Emmerich, National Golf Accounts Manager of The Toro Company, Riverside, Calif., is the new Irrigation Association president.

Emmerich, in a recent address to the membership, said: "We learned two years ago during the national drought that our industry is water, not just irrigation. "We'll see more change in our industry the next 10 years from regulations and technology than it has seen since its inception. We'll have to be environmentally minded and externally oriented."

Emmerich's goals include increasing the organization's membership and revenue, and developing a strong water conservation program under the auspices of the IA Educational Foundation.

Emmerich first was elected to the IA board of directors in 1985. He was graduated from St. Norbert College, De Pere, Wis.

YAMAHA USA
Better in the long run.
VanderHave buys Adikes, to enter N'east

WEST FARGO, N.D. — VanderHave USA, Inc. has bought the 125-year-old Long Island firm of J. L. Adikes, Inc., manufacturer of Gro-Well Garden Products.

VanderHave USA is a division of Royal VanderHave Group of Kapelle, The Netherlands. Robert A. Russell, chairman of the board of J. & L. Adikes, Inc, and Mike Hughes, executive vice president and COO of VanderHave USA, Inc., announced the sale.

Adikes distributes turf products, lawn and garden fertilizer, and lawn and garden chemicals on the East Coast and from Maine to Minnesota. It is one of the oldest seed firms in the United States. But one of its main strengths will be its Gro-Well label, said Hughes. It is a newly designed, premium label, and will be used exclusively with proprietary lawn and garden products.

Adikes owns two proprietary grasses — Adelphi, which is a proprietary bluegrass, and All-Star, a proprietary perennial ryegrass.

Adikes will promote the VanderHave varieties into its new system, as well as incorporate newly released turf products from the VanderHave grassesearch program.

The main reasons for the VanderHave USA acquisition was entry into the Northeastern market and purchase of the Gro-Well label, Hughes said.

Previously owned and managed by Robert Russell, Adikes will be managed by Tom Corell. The company consists of 21 other employees and works out of facilities in Jamaica, N.Y.

VanderHave USA now has two Agronomic Divisions and The Turf and Forage Division.

Salter Rain Bird marketing head

GLENDORA, Calif. — Scott Salter has been appointed marketing manager for the Golf Division of Rain Bird Sales, Inc., according to Steve Chris-tie, director of sales and marketing.

Salter is responsible for product development, creating and implementing marketing and market development programs, and the division's complete communications activities. Salter joined Rain Bird in 1988 as a product manager for the Turf Division.

Prior to joining Rain Bird, he held sales and management positions with The Toro Co. and Pacific Products Inc. (now Ewing Irrigation). Salter holds an MBA from the University of La Verne and a bachelor's degree in marketing from San Diego State University.

Cohen

Continued from page 60

physical organic chemistry with emphasis on hydrolysis reactions. Nash termed Cohen "extremely helpful while with the EPA in jump-starting and implementing the Cape Cod Study."

Charles T. Passios, Hyannisport CC super, echoed Nash's comment and added, "Cohen is a highly-skilled technician of superb scientific background."

Before concentrating on the golf course aspect of business, Cohen managed ground water and environmental programs for Biospheres, Inc., Beltsville, Md.

The company's four major areas are targeted as risk assessment for runoff and leaching of pesticides; turf agronomy and development of integrated golf course management plans; ground water monitoring studies, and environmental site assessment in real estate transactions.

Cohen said hottest golf course development action may be in Hawaii, though he has worked on projects in North Carolina, Michigan, Vermont, Rhode Island, New Hampshire and, of course, Massachusetts. His new firm recently won a major contract in Hawaii.

It takes a real professional to recognize the benefits of a superior turfgrass. These superintendents are pros at growing grass. Their expertise is invaluable in evaluating new turfgrass cultivars. When we worked in Providence and SR 1020, we went straight to them. We realized that university data was useful but that evaluation by outstanding superintendents under varied golf course conditions was more important.

These superintendents have all used Providence and/or SR 1020. Their comments have been enthusiastic about the performance of both cultivars: the color, texture, density, disease resistance, and heat and drought tolerance are outstanding.

Providence and SR 1020 also produce excellent putting quality. That's important to the superintendent and to the golfer. Especially, a professional golfer like Ben Crenshaw. Ben knows golf greens and appreciates a bent that can provide a fine textured, uniform surface with an absence of grain for true putting quality.

Both cultivars produce this outstanding turf and putting quality with reduced maintenance. That's important to superintendents, golfers, architects, and greens committees.

So nationwide the pros agree, Providence and SR 1020 really are exciting new cultivars. They represent the new generation of creeping bentgrasses.
Southern Turf Nurseries announces appointments

ATLANTA, Ga. — Southern Turf Nurseries has named James Bridges Jr. general manager of its Fredericksburg, Va., production farm and appointed Don W. Roberts consulting turf agronomist.

Bridges has more than 26 years experience in turfgrass management and has worked in golf course construction. Bridges received a bachelor's degree in agronomy from Mississippi State University in 1966, and in 1978 completed the Golf Course Superintendents Association of America certification program. He has served as president of the Tennessee Golf Course Turfgrass Association and Tennessee Turfgrass Association. Prior to joining Southern Turf on Nov. 1, Roberts worked for Pennington Enterprises Inc., where he served as senior agronomist in charge of research and development, fine turf seed marketing, and as golf course consultant for the U.S. Air Force. Roberts has worked with the University of Georgia Extension Service, and Clemson University Horticulture Department as coordinator of their turfgrass integrated pest management program.

He holds a bachelor’s degree in horticulture from the University of Georgia College of Agriculture, and a master's degree in horticulture and turf pathology from Clemson University.

Southern Concrete Pavers is Proud to Announce Our Installation Service is Now Offered Worldwide.

Thinking about redoing or installing a cart path system on your course? Whatever your cart path needs are, we can do it! SOUTHERN CONCRETE PAVERS, with its experienced crews using the PATHPAVER™, can install a complete cart path system with scoring and brooming on your course, in most cases, in less than 30 days for less than the cost of asphalt construction! Rental and leasing programs are available. Don't delay... Call today.

Vigoro names Smith president of specialty items

John R. Smith has been appointed president of the specialty products division of Vigoro Industries, Inc., Fairview Heights, Ill. Smith, a graduate of the University of Notre Dame, will be based in Winter Haven, Fla. Irv Stacy will remain as division vice president.

The division markets proprietary fertilizer products under brand names Par Ex and Woodace. This line of environmentally-oriented products features exclusive IBDU and Escute slow release nitrogen sources for the professional turf and ornamental industry.

Southern Concrete Pavers is Proud to Announce
Our Installation Service is Now Offered Worldwide.

Thinking about redoing or installing a cart path system on your course? Whatever your cart path needs are, we can do it! SOUTHERN CONCRETE PAVERS, with its experienced crews using the PATHPAVER™, can install a complete cart path system with scoring and brooming on your course, in most cases, in less than 30 days for less than the cost of asphalt construction! Rental and leasing programs are available. Don't delay... Call today.

Vigoro names Smith president of specialty items

John R. Smith has been appointed president of the specialty products division of Vigoro Industries, Inc., Fairview Heights, Ill. Smith, a graduate of the University of Notre Dame, will be based in Winter Haven, Fla. Irv Stacy will remain as division vice president.

The division markets proprietary fertilizer products under brand names Par Ex and Woodace. This line of environmentally-oriented products features exclusive IBDU and Escute slow release nitrogen sources for the professional turf and ornamental industry.

Subjects will include: how to finance your deal; who’s paying top dollar for courses; who will joint venture with you; major trends; how to use golf to create value, and cost to build and operate.

There will be in-depth talks on construction costs, special district bonds for low-cost money, assembling market study and feasibility analysis, land loans and raising equity for golf projects, next steps by big developers, mistakes others have made that can be avoided, overcoming environmental obstacles, selling a golf course twice, and recycling waste water for irrigation.

Also, how to get Japanese money, public, private or semi-private course, club house expenditure, best way to tie in with a hotel, negotiating a development/management agreement, hot spots for new development, maximum value through master land planning, economics of golf deals, and solving water problems.

A wealth of golf experience is embodied in these speakers:

Rees Jones, president, Rees Jones Inc.; Thomas Sasser, executive vice president, Golden Bear; Tony Kindred, president, Kin-dred & Company; Tim Hiets, golf course manager, Johns Island Club; Patrick Fister, vice president, development, Hare Irish Golf Services; William Horne, president, Club Operations & Property Management; Al Bechtel, president, Golf Course Advisors; Kent Curley, president, AquaTurf; Bland Pittman, president, Pittman-Poe & Associates; Kent Crippin, director, Grant Thornton; Jack Sheaffer, partner, Sheaffer & Roland; Donald Breckenridge, president, Breckenridge Development; Joe O’Brien, senior developer, Marriott Golf Management; Russ Maloney, president, Maloney Golf Finance; Gary Derck, vice president, Edward Stone Jr. & Associates; Allan Reich, senior partner, McDermott Will & Emery; Paul Courtneel, attorney, Gunster, Yoikley & Stewart; Rob- ert Von Hagge, president, Von Hagge Design; William Home, president, Maloney Golf Finance; Donald Carpenter, senior vice president, American Golf, and Bran Fanning, president, American International Golf Resorts.

Interested people may contact Crittenden News Service, Inc., P. O. Box 1150, Novato, Calif. 94948.

Get the benefits of

Wildflowers! They’re a beautiful, low-maintenance alternative to mown turf. And no one can help you choose wildflowers better than Marie Pompei at Lofts.

As a wildflower specialist, Marie will consider your geographical area, the soil moisture, height of growth and time of flowering. She’ll even consider colors. Then she’ll recommend the specific mix to provide the best results.

If soil erosion or weed invasion are problems in your area, Marie can suggest the best companion grass. She’ll also suggest how to properly manage the field for optimum floral display in the years to come.

Wildflowers need very little care. So they’re perfect for roadsides, parks, golf courses, estates or industrial sites. They’re ideal for areas that are hard to mow. Or any place that needs color. Try low-maintenance, natural wildflowers as your colorful alternative to high-maintenance turf.

And get your wildflowers from Lofts.

Lofts has been a leader in the seed business since 1923. In fact, Lofts introduced Pinto as one of the first commercial wildflower mixtures.

Call Marie at Lofts today. She’ll help you select the wildflower mix suited to your needs.

Rutgers gets $98,000 from seed royalties

Seed Research of Oregon has given more than $98,000 in royalty payments to Rutgers University.

The royalty payments were based on sales of SR4000, SR 4100, and SR 4200 perennial ryegrasses; Titan tall fescue and SR3000 hard fescue. All of these varieties came out of Dr. Reed Funk’s turfgrass breeding program.

Royalty payments in excess of $4,000 and $6,000 were also made to the University of Rhode Island and Arizona State University, re- spectively, for sales of the improved creeping bentgrasses, Providence and SR 1020.

Architects to see Britain’s best at conclave

A 10-day tour of English golf courses will constitute the bulk of the American Society of Golf Course Architects’ annual meet- ing.

Beginning April 20, the North American architects will visit some of England’s great courses, meet with English architects, greenkeepers and historians, and discuss the future of the game with European counterparts.

The annual Donald Ross Dinner will be held at the Broughton Park Hotel in Broughton, Preston, on April 23. Each year the society presents the Donald Ross Award to someone who has made a sig- nificant contribution to golf, es-pecially in focusing attention on the contributions its architecture has made to the success of the game.

ASGCA President Dan Maples said the architects have included Royal Birkdale, Royal Lytham and St. Anne’s, Southport, Ainsdale, Royal Liverpool, Sunningdale, Wentworth, Royal Cinque Ports and Royal St. George’s on their English tour.

Officials of each course will provide historical and architec- tural information. ASGCA mem- bers toured Scotland in 1980 and Ireland in 1989.
Spanish/English maintenance tape cuts training time

"Introduction to Golf Course Maintenance," a new video tape in Spanish or English, is a modern training tool that covers cup changing, cart maintenance, greens cutting and sand trap raking.

Author Jerry Mach, course superintendent at Lake Bluff Golf Club, Wauconda, Ill., believes the tape will cut two to three weeks from the initial training period, and help avoid costly mistakes.

After 24 years of golf course involvement (12 at private clubs and 12 at public courses), Mach realized that something was needed to reduce the training time of new seasonal employees.

The tape explains the team concept and what the total picture is before new employees begin work.

The tapes are available for $39.95 apiece plus $8 shipping and handling or $80 for the pair with free shipping. For more than four tapes add $1 per tape for shipping and handling.

To order copies write Mach IV Productions, P. O. Box 543, Wauconda, Ill. 60084; phone at 708-526-9122 or 708-254-6788.

Booklet discusses pumping stations

A multi-page presentation booklet used by Rick Reinders of Watertronics, Inc., at the recent Myrtle Beach, S.C., Turf Expo may prove useful to golf course operators.

The booklet was developed as a leave-behind primer on electronically controlled, electrically actuated pressure regulated pumping systems versus conventional hydraulic and relay logic types of pumping stations.

Watertronics, prominent in the irrigation pumping industry, is located in Elm Grove, Wis.

MINNEAPOLIS — C. Grant Spaeth, of Palo Alto, Calif., faced re-election to a second one-year term as president of the United States Golf Association when the Executive Committee voted here Jan. 26.

Nominations of officers and members of the Executive Committee were announced by William J. Williams Jr., chairman of the 1991 Nominating Committee and a former president of the USGA.

Others nominated as officers were Stuart F. Bloch, of Wheeling, Ill., as vice president; Eugene M. Howerdd Jr., of Atlanta, as treasurer; and Judy Bell, of Colorado Springs, Colo., as secretary in 1984 and 1985, vice president from 1986 through 1989, and president in 1990.

Two new members were nominated: Trey Holland, of Zionsville, Ind., and Paul G. Jenkins, of Palm Desert, Calif.

B.P. Russell, of Morristown, N.J., left the Executive Committee after six years of service, including one as treasurer and one as secretary, and Richard F. Rankele, of Los Angeles, after three years.

Holland, 41, is a member of the board of directors of the Western Golf Association and the Evans Scholars Foundation. He has been a member of the USGA Sectional Affairs Committee since 1987.

A physician with Associated Urologists Inc., in Indianapolis, he was graduated from Wabash College and the Indiana University School of Medicine.

Jenkins, 63, is a former president of El Dorado Country Club, in Rancho Santa Fe, Calif. He has served as vice president of the Southern California Golf Association and as director of the Pacific Coast GA.

Hunter Moves Into Golf

Join Hunter at the International Golf Course Conference and Show and see the most technologically-advanced golf course irrigation equipment in the field. After years of research, Hunter introduces ETC, an intelligent control system that stores historical evapotranspiration data.

Along with ETC, you'll also see an innovative new line of golf course sprinklers with precision distribution control.

Hunter moves into golf, and golf course irrigation technology moves into the 21st century.

See the future at booth No. 2611 February 9 - 12 in Las Vegas

Golf Course News
Spray safety kit makes pesticide applications safer

Parkway Research has introduced a new "Spray Safety Kit." The kit contains supplies of all necessary safety equipment for safe pesticide, herbicide, fungicide or fertilizer applications. Kits include respirators, replacement filters, disposable suits and gloves, and eye and dust protection. Contact Parkway Research, P. O. Box 5441, Kingwood, Tex., 77325 or call 800-356-3668.

New pumping system available

SyncroFlo Eagle Series irrigation pumping systems now are available for golf, turf and irrigation markets. The new Eagle systems are self-contained water pump stations that meet special requirements of golf course superintendents and other turf and irrigation professionals. Kits include the PC-based controls for completely automated operation. Special features include NEMA 3R rated enclosures and UL Listed electrical systems, a programmable logic controller which eliminates adjustments for routine operations and minimizes system downtime, and optional RS 232 port for online data communications to remote terminals or peripherals. Contact SyncroFlo Inc., 6700 Best Friend Rd., Norcross, Ga. 30097 or call 404-447-4443.

Target green added

Playfield Industries Inc. has added synthetic turf target green to its golf product line. Playfield manufactures all-weather, athletic caliber playing surfaces, golf car paths, clubhouses, locker rooms, entryways and pool areas are typical applications for Playfield products. It has furnished and installed 500,000 square feet of synthetic turf on 23 courses with 100% positive feedback from clients and customers. Contact Playfield Industries Inc., 115 N. Branchwood Dr., Elkhart Lake, Wis. 53069 or call 920-658-7000.

The Most Advanced Is Merely A Product

If you’ve been looking for a lightweight fairway mower that can deliver unsurpassed performance now and well into the future, your search is over. Introducing the Toro Reelmaster® 223-D. No other mower knows your fairways better. And through conditions of all kinds, the Reelmaster 223-D gives you the productivity and consistent quality of cut you’ve been striving for.

To meet golfers’ rising standards, the 223-D combines superior technologies: It begins with an exclusive positive down pressure system. The system, adjustable at 4 positions in 8 lb. increments, helps to maintain the reels in position over varying contours for a smooth, consistent cut.

Next is the exclusive design of the cutting units. An easy rear roller adjustment changes height of cut from 1/2 to 3/4 while maintaining the correct bedknife angle. This assures consistent cutting quality throughout the height of cut range. Quality golfers can’t help but notice.

Toro’s patio kit is designed to meet the needs of those who need to mow close to walls or other obstructions. Landfills no longer accept yard waste, and composting is not considered feasible. Forward rotation maximizes acreage mowing capacity. Reverse rotation provides even finer shredding. A full-width rear gauge roller mounts close to the blades to provide positive cutting height control and prevent scalping on uneven ground. Flails swing back to pass obstructions and can be reversed to extend use life.

For more information on the Toro heavy-duty Model 918H flail mower contact Ford New Holland, Inc., 500 Diller Ave., New Holland, Pa. 17557.

Flail mower now in three widths

The new Ford heavy-duty Model 918H flail mower is available in 60-, 72- or 88-inch cutting widths. Designed for tractors up to 72 PTO horsepower, the mower fits either Category I or II hitch and can be centered behind the tractor or offset to mow close to walls or other obstructions. It has lateral float for more accurate work on uneven ground.

The new mower’s ability to groom lawns and mulch clippings avoids the need for removal. Landfills no longer accept yard waste, and composting is not considered feasible. Forward rotation maximizes acreage mowing capacity. Reverse rotation provides even finer shredding. A full-width rear gauge roller mounts close to the blades to provide positive cutting height control and prevent scalping on uneven ground. Flails swing back to pass obstructions and can be reversed to extend use life.

For more information on the Ford heavy-duty Model 918H flail mower contact Ford New Holland, Inc., 500 Diller Ave., New Holland, Pa. 17557.

Feldmann makes hitch adapter

Feldmann Engineering and Manufacturing Co., Inc. has announced a new aeration accessory — the 3-point hitch adapter for use with Model 2340-32 or Model 2340-48 core plug pull-behind aerator.

Optional accessory No. 2510 enables use of the tractor’s hydraulic power to lower and raise the aeration tines for cutting or for over-the-road transport. The adapter is sized for category "0"/"1." Built of steel angle and bar stock, it is fastened with four bolts to the aeration frame and does not interfere when adding or removing weights for more or less core plug penetration.

Feldmann’s new portable hydroauger will drill through tough soils. It mates directly to the Feldmann power head, using a section of 3/4-inch pipe, and the socket head set screw. The hydrodrilling method employs the erosion principle of moving earth together with mechanical drilling. The kit used with the powerhead eliminates the need to trench through lawns and across streets.

Flail mower now in three widths

Landscape rakes level top soil

The new PLR Series of pull-type landscape rakes from Worksaver, Inc., can be used for landscaping, soil preparation, leveling and a variety of maintenance jobs.

The rakes permit close work around fences, walls and other objects. Engineered with an adjustable clevis type hitch, the rakes fit most tractor hitch points and are designed for 10- to 22-hp tractors.

Other features include five angle positions, heavy-duty, heat-treated tines, transport/gauge wheels and an easy-to-reach lever that allows adjustment from tractor seat. A retractable grader blade assembly that locks out of the way when not in use is optional.

Available in four, five- and six-foot models, the grader blade is constructed from 1/4-inch steel and has bolt-on end plates that allow the blade to be used for leveling.

The rakes are available in three models. Model PLR-24 is a four-foot configuration designed for tractors up to 18 hp. Model PLR-25 is a five-foot unit designed for 10- to 22-hp tractors, and Model PLR-26 is a six-foot configuration for 10- to 22-hp tractors.

Contact Worksaver Inc., P.O. Box 1000, So. State St, Litchfield, Ill. 62056 or call 217-324-9973.

Amiad unveils new water filters

Amiad U. S. A. Inc. has unveiled a new line of electrically operated, automatic 8- to 14-inch filters for use primarily at golf courses.

Filtration is accomplished when particles are trapped by the stainless steel screen. Partial blockage causes a pressure differential between the filter inlet and outlet, activating the self-cleaning mechanism when the differential reaches 4 psi. During the cleaning operation a hydraulic valve automatically opens while revolving brushes dislodge the particles trapped on the screen. They are flushed out through the open valve for 15 seconds without disrupting the continuous water flow through the filter.

Contact Amiad U. S. A., Inc., P.O. Box A, Reseda, Calif. 91337 or call 800-969-4055.

Con/Span lowers maintenance cost

The load-carrying capacity and structural performance of Con/Span’s patented arch-box shape is particularly significant in the new 28-, 32- and 36-foot series.

The precast units are custom manufactured for site and loading requirements, then delivered and set in place within hours. The buried concrete structure and clear waterway opening eliminates most bridge maintenance costs.

Contact Con/Span Culvert Systems, 1563 E. Dorothy Lane, Dayton, Ohio 45429 or call 800-526-3999.

Ransomes adds safety equipment

Seeking to enhance safe equipment operation practices, Ransomes Inc. has designed operator present controls for Bob-Cat Mid-Size machines manufactured before 1989.

When the blades are engaged, the controls automatically stop the engine if the operator’s grip on the handle is released. This stops the motion of the blade. The new controls help assure the operator uses good safety practices.

Conversions are available through authorized Ransomes/Bob Cat dealers.

Mulcher adapts to Deere mowers

A new leaf mulcher kit from John Deere & Co. can be placed in the mower discharge opening. The attachment holds dry leaves in the mowing chamber so the cutting blades can chop them into tiny particles. The leaf particles are then blown into the turf.

The new attachment can be added to the 48- and 54-inch walk-behind mowers and the mowing decks of F710 and F725 foot mowers.

Contact Deere & Co., John Deere Roud, Moline, Ill. 61265.
John Deere introduces four new tractors

John Deere & Company, Moline, Ill., has introduced a series of four premium lawn tractors providing many unusual features.

Three hydrostatic "no-clutch" models include two foot pedals to control direction and speed—an industry exclusive. One model is powered by a liquid-cooled v-twin-cylinder gasoline engine. Another model is teamed with a 48-inch mower deck designed for easy on and off.

All four models are powered by John Deere K-Series overhead valve engines with full-pressure lubrication and oil filters for long engine life. Overhead valve design delivers more power from a compact engine and improved fuel economy.

The two-pedal foot control relieves fatigue on a long mowing job because operators can rest their heels on the deck platform and pivot easily between pedals.

A new hydro interlock system provides an extra margin of safety by prompting the operator to lock the parking brake and shut off the mower drive (PTO) before leaving the seat when the engine is running.

The new series has been designed with comfort in mind. A comfortable seat provides more low back support. Leg room has been increased, and an operator platform free of obstructions makes the tractor easy to mount and dismount. Steering effort and turning radius have been reduced, and control switches and levers have been redesigned to make them handier.

A new 48-inch mower deck is said to increase productivity dramatically on the 17-hp model. Deere also has announced two new front mowers, the 17.5-hp F710 and the 20-hp F725.

On both models, a hydrostatic transmission controlled by two foot pedals allows the operators to keep both hands on the steering wheel and both eyes on the job.

A hydraulic weight transfer system permits the operator to transfer mower deck weight from the deck's casters to the unit's drive wheels for improved traction and reduced caster wheel tracking. A differential lock increases traction on hillsides and in wet areas. The operators can change mower cutting height by turning a single crank handle at the front of the mower deck.

Other features include power steering with 2-1/2 turns lock to lock for responsive handling. The power plant is an overhead valve Kawasaki for fast starting, increased power from a compact engine, and improved fuel economy.

The F25 front mower engine is liquid cooled for quieter operation, consistent performance in hot weather, and for longer engine life. The F710 is teamed with a 48-inch mower, the F725 with a 54-inch mower. Cutting height may be adjusted from 1 to 4 inches.

For more information contact Deere & Co., John Deere Rd., Moline, Ill. 61265.

CIRCLE NO. 340

Toro improves mower traction

The Toro Co. has introduced a new hydrostatic-drive option for 14-horsepower and 18-horsepower mid-size, walk-behind mowers as part of an expansion that includes new products in the ProLine lineup.

Hydrostatic drive improves traction because there are no belts. Other key benefits include zero radius turning, instant reverse and lower maintenance.

The Toro hydrostatic drive features two Sundstrand pumps and two Ross wheel motors with ball bearings and tapered output shafts for increased durability. The unit also features a hydraulic oil cooling system for longer life.

Another development for mid-size walk-behinds is a new operator presence control, which automatically places the traction system in neutral and disengages the blade. The engine remains running.

For more information write Toro Company, ProLine Products, 8111 Lyndale Ave. South, Minneapolis, Minn. 55420.

1-800-547-0255
Irrometer system has four zones

Irrometer Co., Inc. has introduced a new soil moisture control system for automatic landscape irrigation systems.

The Watermark four-zone moisture control panel interfaces with any standard 24 VAC irrigation controller.

An irrigation can divide the valves on a controller into as many as four "zones" representing various irrigation needs, such as turf versus shrubs, full sun versus shade and top of a slope versus toe of a slope.

Each "irrigation need" zone then has its own moisture sensing station, which in turn controls the valves which irrigate that "irrigation need" zone.

Each zone can be independently adjusted and fine-tuned at the panel for desired moisture level.

The panel also features a bypass capacity switch for manual override of the sensor control.

Contact Irrometer Co., Inc., Dept. WCP, P.O. Box 2424, Riverside, Calif. 92516-2424 or call 714-689-1701.

New bio-fertility product available

Turftech II, a new bio-fertility product, will be introduced by Soil Tech at the Golf Course Superintendent's Association of America Conference and Show Feb. 9-12 at Las Vegas, Nev.

Consisting of dormant microorganisms in a water-soluble powder, it can be used with any type of grass to enhance soil-plant relationships.

When applied to the soil, these legume-like microbes produce organic compounds which include nitrogen from

nitrogen fixation, polysaccharides, organic acids and plant growth stimulating hormones.

The product is spray-applied at 45- to 60-day intervals during the growing season.

This natural process is ecologically safe and poses no threat of phytotoxicity.

Combining nitrogen-fixing bacteria with the soil-aggregating agent polysaccharide, Turftech II is considered a breakthrough in soil management.

Contact Soil Technologies Corp., P.O. Box 745, Fairfield, Iowa 52556 or call 515-472-3963.

Kubota mower gets new engine

Kubota's new F2400 front mower is equipped with a 24-hp, vertical, liquid-cooled, 4-cycle, 3-cylinder diesel engine.

The F2400's hydrostatic transmission (HST) works together with the front differential lock and 4WD to provide powerful traction and allow for smoother operation on uneven or slick terrain.

A tight 60-degree rear wheel turning angle and off-set cutting ability makes it easy to mow around the base of bushes and trees.

The new mower ensures good visibility and ease of operation. Main levers and indicators are conveniently located. The F2400's tilt steering wheel, combined with power steering, reduces operator fatigue.

Contact Kubota Tractor Corporation, 550 West Artesia Boulevard, Compton, Calif. 90220.

To Get Better Pythium Protection You'd Have To Take In The Turf At Night.

When Pythium conditions are right, you can either take in the turf or take out the best Pythium control money can buy: CHIPCO® ALIETTE® fungicide. CHIPCO® ALIETTE® brand fungicide is unlike any other Pythium-prevention fungicide. Its true systemic action spreads protection throughout every blade of turfgrass, including the roots. Protection that lasts up to 21 days from a single application.

Plus, the unique chemistry of CHIPCO® ALIETTE® brand actually stimulates turf's natural ability to fight off infection.

So you get two-way protection that can't be beat. Now add to that the fact that a foliar application of CHIPCO® ALIETTE® brand prevents Phytophthora and Pythium on a wide variety of ornamental and landscape plantings, and you've got the most versatile fungicide on the market today.

But when conditions are right for Pythium, don't roll up the turf, lay down CHIPCO® ALIETTE® brand fungicide.

New cab now available for Cushman utility vehicle

Cushman has announced a new fiberglass cabin for its GT-1 utility vehicle. The cab provides security for the operator and his equipment, plus protection against inclement weather. The durable one-piece fiberglass cab, designed specifically for the GT-1, is available with galvanized steel doors and high quality paint finish to minimize rust and fading. The doors have double-catch safety latches, lockable for improved security. Doors also have sliding, safety glass windows, to eliminate the problem of scratching.

A front air vent permits flow-through ventilation. An optional roof vent is available. Acoustic foam insulation in the roof, back and floor panels reduce noise. The GT-1 cab attaches so that the vehicle box can be easily tilted for inspection and service.

New Ditch Witch trencher ready

The first all-hydraulic modular trencher/plow has been introduced by Ditch Witch. The 50 HP class Model 5020 has a hydraulic digging chain/vibratory plow drive.

The 5020 is available with a full complement of Modularmatic work modules, including backhoe, vibratory plow and combo attachments. Digging attachments use power-efficient hydraulic components that maximize torque for greater productivity.

The digging module drive uses a double reduction gearbox and is available in three speed options for hard, standard or easy digging conditions.

The vibratory plow module requires no daily maintenance because of its dry rotating eccentric weights. A hydraulic plow swing adds controllability when working on slopes.

For more information contact The Charles Machine Works, Inc., P. O. Box 66, Perry, Okla. 73077 or call 800-654-6481.

Dol overseeder quickens job

Dol Brothers has introduced the DB-200 commercial overseeder. The OV 200 will overseed up to 20 acres per day. Incorporating a double row of staggered seeding discs has made possible seed row spacing of 1-1/2 inches.

Each of 43 seed planters is individually sprung so that the seeding depth remains constant, regardless of ground contours. The double-disc seed placement system ensures precise seed placement for maximum germination.

This system will cut through thatch or compacted soil without the necessity of being preceded by a vertical mower. This leaves the playing surface virtually undisturbed and ready for immediate use. The machine is easily calibrated for all types of turf seeds and may be used for subsoil placements of granular materials such as insecticides.

For more information contact Dol Brothers Ltd., R. R. #4, Cookstown, Ont., LLO1LO or call 705-458-6533.

Dol overseeder quickens job

You've designed the ultimate floor!

Compared to all the work that goes into building a golf course these days, choosing the seed and fertilizer is simple.

You simply choose the proven, the failsafe, the best. Scotts® HD Starter® Fertilizer and PennPals® bentgrass seed.

HD (for high density) Starter Fertilizer gives new seedlings everything they need, except sunshine and water. It provides controlled-release nitrogen in proper balance with readily-available phosphorus and potassium to promote vigorous seedling growth and root development. And its homogenous, free flowing, high density particles provide even distribution of required nutrients.

You don't have to worry about it burning or quitting early, either. HD Starter uses a readily-available phosphorus source (monoaammonium phosphate) to stimulate rapid response and safely transform newly seeded areas into thick, attractive turf. While controlled-release nitrogen assures sustained, vigorous top growth.
Steel buildings store hazardous materials safely

A new line of prefabricated steel buildings designed for the storage and handling of hazardous materials is available from X. S. Smith, Inc.

The buildings qualify as secondary containment structures to comply with federal, state and local regulations to prevent spills or leaks from contaminating groundwater. The buildings are suited for storing pesticides, herbicides, growth retardants, fertilizers and other horticultural and agricultural products. Heavy-duty, reversible blades with close spacing for efficient thatch removal ease vertical cutting.

The 7-gang mower heads have eight blades and 7-1/2-inch diameter reels that clip every 1/4-inch of turf. Reel speed is adjustable from 210 to 1400 rpm, independent of ground speed. Contact Kubota Tractor Corporation, 500 West Artesia Boulevard, Compton, Calif. 90220.

But, of course, no matter what fertilizer you use, you have to start with the best seed. Penncross, Oregon Blue Tag Certified Seed, is the standard of the industry. For thirty-five years it's proven itself through heat, drought, snow and flood as the premium surface for greens, tees and fairways.

Your Scott Tech Rep—a trained agronomist—can help you design a seeding and fertility program to fit your exact floor plan and your budget. Which makes it seem silly to consider anything else. Because the way we see it, designing a golf course and skimping on the turf is like designing a swimming pool and skimping on the water.

Kubota launches Verti-Reel product

Kubota Tractor Corporation has launched the Verti-Reel product line, complete mowing and cutting units for total turf maintenance. Ideal for golf courses, sports fields, sod farms and other commercial mowing applications, this line features 5-gang and 7-gang units.

The 5-gang unit is designed for use with the L3250F turf special tractor, the 7-gang unit with the M4006SU turf special tractor. The power pack, mounted on the tractors' 5-point hydraulic hitch, enables the operator to clearly view clearly the cutting reels. The 5-gang reel has a cut blade reel mower easily converted to a vertical cutting unit. Heavy-duty, reversible blades with close spacing for efficient thatch removal ease vertical cutting.

The 7-gang mower heads have eight blades and 7-1/2-inch diameter reels that clip every 1/4-inch of turf. Reel speed is adjustable from 210 to 1400 rpm, independent of ground speed. Contact Kubota Tractor Corporation, 500 West Artesia Boulevard, Compton, Calif. 90220.

Kwik-Trench improves trencher

Kwik-Trench Earth Saw has introduced an all-new model K-T 200 double V-belt drive portable trencher. The V-belt drive system eliminates engine vibration and any PTO damage due to operator abuse in problem digging areas. It will cut a 6-inch root in seconds and still leave a clean trench. Contact Kwik-Trench Ditch Digger, P.O. Box 987, Lehigh Acres, Fla., or call 800-327-4997.

Club washer cleans irons fast

Par Aide has introduced a simple, versatile club washer for dirty irons. The club is scrubbed front and back by a pair of brushes that remove dirt and grime in seconds. The washer is ideal for par 3's, mounted below the ball washer in tandem with a spike brush or shoe cleaner. They are appreciated on driving ranges and practice tees, mounted right on the ground. Mounted on any rigid, vertical surface, many courses have installed them near the clubhouse or locker rooms. They even mount on golf carts.

Each washer comes with a flanged base for mounting on horizontal surfaces. For mounting on vertical surfaces, there is an optional mounting bracket.

Contact Par Aide Products Company, 5565 Hoffman Rd. East, St. Paul, Minn. 55110 or call 612-779-9851.

HP markets new rotary mower

Howard Price Turf Equipment has introduced its 1280 Turf Blazer rotary mower. A combination of a 40-inch mower out front and two 38-inch hydraulically operated wings provides 75-percent capacity over a standard 72-inch mower.

The wings are strategically located in line with drive wheel pivot point for maximum trimming capabilities, even under trees and bushes. It has a 4-cylinder, water-cooled, 40-hp diesel engine in conjunction with hydrostatic transmission.

Contact Howard Price Turf Equipment, 18150 Edison Avenue, Chesterfield, Mo., 314-532-7000.

Lofts introduces new bluegrass

Lofts Seed Inc. has introduced an unusually aggressive Kentucky Bluegrass. Princeton, P-104 is so vigorous that only five to 15 percent completely dominate a seed blend in two to three years. Only five percent seeded today can be 100 percent within a few years. Contact Loft Seed Inc., Bound Brook, N.J. 08805 or call 732-356-7700.
**Dixon mower speeds work on course**

Two 56-inch cut ZTR riding mowers, the ZTR 592 and ZTR 503 HG, mark the Series 500 mowers, the ZTR 502 and ZTR 503 HG. Independent hydro-gear units on each drive wheel are sealed in a self-lubricating assembly. The combination delivers a smooth, quick turning radius operation.

ZTR 502 is powered with an 18-hp Kohler engine and chain drive to the rear wheels. Contact Dixon Industries, Inc., P. O. Box 1569, Coffeyville, Kan. 67337-0945 or call 800-635-7500.

**Cutless reduces mowing, watering**

Cutless 50W, a foliar-applied plant growth regulator originally introduced for use on warm- and cool-season golf course fairways, also may be used on putting greens, bunkers, tees, green collars, around traps and cart paths, and on hard-to-mow areas.

It can reduce turfgrass water use. A Type II plant growth regulator, it suppresses vertical turf growth but has little effect on other processes such as seedhead development.

Vertical foliar growth is reduced due to suppression of gibberellic acid. Turfgrass grows thicker and more competitive.

Cutless is absorbed by the plant's leaves and roots after irrigation or rainfall.

Contact DowElanco Specialty Products, 4040 Vincennes Circle, Indianapolis, Ind. 46268-3030 or call 317-870-7126.

**Lawnhaire has several options**

New Ryan Lawnhaire IV aerators come in a choice of engines. The Lawnhaire IV is available with an optional 3.5-hp Honda air-cooled engine. The aerator can be ordered with the standard 5-hp Briggs & Stratton 1/C air-cooled engine. Both are gasoline powered.

The Lawnhaire IV is a self-propelled, robotype aerator that can core a depth of 3/4 inches, with a 30-inch operating swath that leaves a hole pattern of 33/4 inches by 7 inches.

The Lawnhaire IV is equipped with 55-pound capacity polyethylene water drum which, when filled, adds weight for better line penetration in dry or hard soils. The unit also comes with a removable 38-pound weight bar for additional downward pressure.

Other improvements for the newest models include engine-protecting frontguard, protective shields for drive chains, heavier lift handle with locking hardware, a stainless steel throttle cable and two lubrication fittings on the tine axle.

Contact Cushman, Inc., P. O. Box 82409, Lincoln, Neb. 68503 or call 800-228-4444.

**Bermudagrass seed available**

Cheryne "turf type" bermudagrass seed will be available to the professional and home lawn market in the spring of 1991.

Arizona certified production fields at Pennington's affiliate Cactus Seed Company near Roll, Ariz., produced seed as scheduled, and production acreage will be expanded quickly.

It features compact growth, dark green color, excellent cold tolerance and ease of establishment for seed. It stays green significantly longer in the fall and greener in spring.

Contact Pennington Seed, P. O. Box 290, Madison, Ga. 30650 or call 404-342-1234.

**Improved Walk-R-Ide on market**

Terracare has introduced a redesigned Walk-R-Ide, WR 11.

The revised model has 70 aerating tines or deepspiking tines. Tines are free swinging and are mounted on an individual disk for easy turning with a minimum of turf damage.

The Walk-R-Ide has an aerating width of 10 inches and is powered by an 8-HP Briggs & Stratton engine.

A quick lift from aerating position to transport is a special feature.

Contact Terracare Products Co., Inc., P. O. Box 506, Pardeeville, Wis. 53954 or call 608-342-3402.

**THE BEST PUMP STATION ON THE MARKET IS NO LONGER BEST.**

It's Flowtronex International.

So why did we change our name? Simple. Because we wanted to better serve the turfgrass industry with a division solely dedicated to it. And the name had to reflect the technical expertise and global experience already established under Best. Therefore, the creation of our new name: Flowtronex International.

But you'll discover that's the only thing we've changed. We still offer you the world's most dependable Variable Speed Pumping Systems. And we still include our powerful, energy-saving Smoothflow control software with every Flowtronex VSPS. But most importantly, we still give you the personal attention that insures your new pump station is perfect for your course.

Perhaps that's why twice as many superintendents use our VSPS's on their golf courses as all our competitors variable frequency drive stations combined.

So if you're in the market for the best pump stations available, remember Flowtronex International: It's the name that's better than best.

For more information call 1-800-557-8778 or write Flowtronex International, P.O. Box 7895, Tyler, TX 75711.

**FLOWTRONEX International**

(Announcing a new division of Best Equipment)
New attachments from Bobcat

The Melroe Company has introduced two earth auger attachments for use on its Bobcat loaders.

A unique knuckle-joint style of linkage makes it easy to position the auger with plum-line accuracy, regardless of the terrain or position of the machine.

The Bobcat auger is available in model 12, for standard applications, and 18, for tougher digging applications that require higher torque.

Auger bits range from six to 30 inches in diameter, with a digging depth of more than four feet.

The model 843B skid-steer loader is Melroe Company's latest product.

The 843B features a four-cylinder, 169-cubic-inch, liquid-cooled Isuzu diesel engine rated at 54 hp. A rated operating capacity of 1,700 pounds and tipping load of 3,420 pounds makes the 843B useful in markets ranging from construction, rental and industry to agriculture and athletics.

More than 20 attachments are available.

Contact Leroy Anderson, Marketing Communications, Melroe Company, P. O. Box 6019, Fargo, N. D. 58108 or call 701-241-8700.

Invention
Continued from page 78

Casey and his family saw commercial opportunities in the tee and began showing the tee to golf course superintendents, asking for suggestions about how to improve the product.

One immediate result was deleting the grass seed and fertilizer from the mixture. "Superintendents didn't like that idea," Casey said. "There are a lot of different types of grass on different courses, and we didn't want bentgrass growing on a bluegrass course because of the tee.

After consulting with Hansen Laboratories in Boulder, Colo., all ingredients were changed.

"The new version doesn't have any of the original ingredients," said father John. "Superintendents were unhappy with the idea of fertilizer on the course that they didn't apply, or the thought of bent shooting up through Bermuda, so we came up with a new formulation." The lab also helped ensure that the end product met all the strength and rigidity requirements necessary to make the tee usable during a round of golf.

The commercial finished product, BIO-T, is produced by Bio Dynamics Ltd., the company formed by the Goldens to manufacture Casey's invention.

BIO-T is virtually indistinguishable from a conventional golf tee, except for its enhanced biodegradability. Broken and imersed in water, a BIO-T will dissolve in about 24 hours.

The tees are treated with an ultraviolet-sensitive chemical that ensures that even intact tees will break down if left exposed to the elements.

"The result is priced competitively with personalized tees," said John Golden. "And it offers obvious environmental appeal. As a golf tee can be sexy, we're sexy."

Casey's talent as an inventor has earned him considerable media attention and a trip to Japan, but he has no plans to turn his hand to any new projects right away.

"I kind of want to see this invention all the way through before I start another one," he said.

He hasn't let the possibility of entrepreneurial success distract him from his two primary concerns, which remain school and improving his golf game.

The youthful inventor leaves the details of running Bio-Dynamics to his father.

"I'd better not make him mad," said John Golden. "He'll fire me."

Patrick Quinn is a freelance writer based in Lawrence, Kansas.

Mechem takes reins from Blue at LPGA

DAYTONA BEACH, Fla. — Charles S. Mechem Jr. has replaced the fired Bill Blue as commissioner of the Ladies Professional Golf Association.

Mechem, 60, retired last June after 24 years with the Great American Broadcasting Co., formerly called Taft Broadcasting Co., and remained until joining Taft in December 1976 until he retired. He then assumed the chairmanship of Great American Broadcasting Co.'s executive committee.

A native of Nelsonville, Ohio, Mechem graduated in 1952 from Miami University in Oxford, Ohio, then attended Yale Law School, graduating in 1955. He joined the law firm of Taft, Stettinius & Hollister, where he became a partner and remained until joining Taft Broadcasting Co.
Boy turns care for environment into innovation

By Patrick Quinn

A well-learned lesson in golf course etiquette and an idle question during a summer round with his father has turned into a world of commercial opportunity for 12-year-old Casey Golden.

Casey's father, John Golden, always has required that his son pick up and dispose of his broken tee after a drive. The Evergreen, Colo., seventh-grader, who aspires to be a PGA Tour player, asked his dad what happens to broken tees left on the course.

That struck Casey as wasteful. Working in his mother's kitchen, he created a mixture of flour, peat moss, fertilizer, grass seed and applesauce. "The applesauce makes it stiff," he said. "I molded it into a little cylinder and cooked it in the microwave oven. Once it was hard, I sanded it down into a tee."

The result was a biodegradable golf tee — the perfect accessory for the Green Decade.

"Kids today are much more environmentally aware than we were when we were growing up," said Casey's father. "And he's always been creative."

Casey improved the appearance of the finished product by molding the next prototype through the tip of a caulking gun.

He entered that tee in Invent America, a contest for creative grade-school students sponsored by the Commerce Department. Casey's tee won the state, regional and national competitions, earning him a savings contest for creative grade-school students sponsored by the Commerce Department. Casey's tee won the state, regional and national competitions, earning him a savings

As part of his prize, Casey's elementary school received a grant of computer equipment from the government.

GOLF COURSE NEWS
E-Z-GO Turf Vehicles are versatile enough to handle all your grounds maintenance chores. At golf courses. Colleges. Parks. Farms. Campgrounds. Even at construction sites or hospitals. Anywhere there's grounds to cover.

They'll carry up to 1500 pounds. And are available in gas and electric powered models with either 3 or 4 wheels.

And E-Z-GO's durable diamond-plate steel loadbeds and body panels are the toughest in the industry.

Call E-Z-GO, toll-free, at 1-800-241-5855. It's the smartest move you'll ever make.

©1990 E-Z-GO Division of Textron Inc., Box 388, 1451 Marvin Griffin Road, Augusta, Georgia 30913-2699, (404) 798-4311, FAX (404) 796-4540
Fairway Champion.

Superior fairway mowing. In head-to-head comparisons, the LF-100 delivered superior fairway mowing, in all kinds of grasses.

It starts with exclusive Jacobsen heavy-section, 22" reels. They stand up to challenging fairway conditions and follow ground contours closely for a smooth, manicured cut at production mowing speeds of more than 5 mph.

Exclusive down-pressure system. For the ultimate in cutting performance, add the unique, dual-spring down pressure system. It puts the pressure at the rear rollers, where it's needed, to show off your fairways' best features.

Lightest footprint. The LF-100 has the lightest footprint in the industry. It delivers minimal compaction even on the softest fairways.

Prove it to yourself. Contact a Jacobsen distributor for a demonstration on your course against any fairway mower. Let the LF-100 give you and your fairways a superiority complex.
