By Mark Leslie

BANGKOK, Thailand — Wetlands may be an environmental obstacle for golf course development in the United States, but not so in Thailand, according to architect Gary Roger Baird of Memphis, Tennessee, U.S.A.

Baird says Thailand is concerned, rather, with developers "randomly cutting into its hardwood forests."

While confrontations take place over the valued forests, wetlands abound in the monsoon region and a golf course only enhances the value of the land.

Baird was involved in a major case in point — the $100-million Royal Gems Golf and Sports Complex in western Bangkok. Built on a site that was once mostly under water, Royal Gems officially opened last Dec. 21 and has already hosted the Asian Women's Championship and is being hailed as perhaps the best course in Bangkok.

Baird said the site is 1.1/2 miles long and about 500 yards wide. The first phase of preparation was to build a levee three meters (10 feet) tall around the entire project. That protected the property from flooding when the monsoons hit.

The property was drained of water by 8,000-gallon-per-minute pumps placed at each corner of the site. Four to five months of preparation was needed as wide-track tractors peeled off the earth a little at a time to dry it out and allow rough earthwork to be done.

The 200-acre golf course was then built so all fairways would drain into the 40 acres of lakes within the course. Baird says the special preparation and work paid off. The course is under consideration for World Cup play. And the rest of the development is special to behold. Waterfalls are everywhere, he said, and plans call for 260 homesites, four towers of condominiums, a 100-room hotel, 110-square-foot clubhouse, two restaurants, an observatory tower, conference center with library, and a ballroom that seats 350.

For athletes, the project boasts a 100-meter pool, jogging track, acrobatics center, tennis courts, moosel, billiards, and much more, including 24-hour medical aid.

Wetlands areas no issue where monsoon season strikes

Inexperience means odd cures

Continued from page 34

Inexperience means odd cures that would reduce chemical use and justify less intensive pesticide monitoring.

"The biggest concern is to help the Guam EPA identify and recognize all the potential chemical use mitigation practices available to reduce chemical use, then cut the monitoring requirements accordingly for the developers who implement the reduced chemical use practices," Noble said.

Inexperience means odd cures

Turf Diagnostics & Design, Inc.

CHARLES 'Chuck' DIXON, a nationally recognized scientist in the sports turf industry, joins with his partner, Stephen McWilliams, in announcing the opening of TURF DIAGNOSTICS & DESIGN, INC. We are the best equipped and staffed physical evaluation laboratory serving the turf industry. We offer the best turnaround time in quality testing at fair prices using the accepted test methods of the American Society of Test Methods and the American Society of Agronomy.

Our services include:

• Competent USGA physical evaluations by graduate level agronomists for golf course construction & renovation
• Consulting in the design & diagnostic testing for high performance turf systems
• Technical support to the environmental community in soil science & physical testing

For a FREE Tablet Sample
and the name of your local distributor.

PRECISION LABORATORIES, INC.
P.O. Box 127, Northbrook, IL 60065

Available in three convenient styles to meet every need.

• Tablet — Effervescent tablet to be used with hand-held or backpack sprayers. One tablet treats one-to-three gallons.
• SoluPak — Water-soluble, quick dissolving packet for use with all spray equipment. One packet treats 100 gallons.
• Liquid — Reliable, proven, economical. Available in quart and one gallon containers.
