Hawaii council nixes impact fees

By Peter Blais

The Honolulu City Council has unanimously overridden Mayor Frank Fasi's veto and adopted a golf course development policy that rejects the mayor's suggested $100-million impact fees.

Instead the policy encourages developers to integrate the golf course project into the local community while setting strict social, economic and environmental requirements. Bill 129 establishes guidelines for judging among the numerous proposals submitted for review annually on the island of Oahu, where at least 60 courses are in preliminary planning stages.

But critics claim the ordinance still fails to address how many more courses should be allowed on the island or where they can be located. One of the primary areas of concern is near already crowded Kaneohe Bay on the northeast side of Oahu, where another 14 courses have been proposed and residents are concerned about the bay's water quality.

"The ordinance is rational and scientifically based," said Stuart Cohen of Environmental & Turf Services, a Wheaton, Md., based firm that has done environmental risk assessments in Hawaii. "It takes the proposals, provides a rational basis for making decisions, and requires that good people are available to manage the turf."

Cohen, who testified at an August workshop concerning Bill 129, agreed that the number of courses and where they should be located are important issues that still need to be addressed on the island of Oahu. "It takes the proposals, provides a rational basis for making decisions, and requires that good people are available to manage the turf."

Sherman Hollow dealt a blow by Vt. board

By Peter Blais

The Vermont Environmental Board has denied the latest attempt to obtain a building permit for the Sherman Hollow Golf Course in Huntington. But course developers, who have spent seven years and hundreds of thousands of dollars seeking approval for the multimillion-dollar resort under the state's strict Act 250 development law, are not giving up.

They feel the board made "substantial mistakes" and are asking it to reverse its ruling, according to Sherman Hollow President Paul Truax.

"It's a step we had to take within 30 days of the board's decision," said Truax, who submitted the appeal on the final day of the one-month deadline.

The board denied the latest reconsideration for a land-use permit — which included the developers' promise not to use chemical pesticides or fertilizers — because of problems regarding waste disposal, streams, water supplies and soil erosion.

USGA puts rebuffed TRACS on hold

By Peter Blais

The U.S. Golf Association Green Section has temporarily shelved plans for its new construction consulting service after receiving complaints from golf course architects and builders that it represents competition and unnecessary oversight.

Green Section Director Jim Snow still hopes to establish the program, but will delay its launch until some "unfortunate misunderstandings" are clarified.

Snow announced the introduction of Turf Renovation and Construction Services in mid-November.

Headed by Mid-Continent Section Director Jim Moore, TRACS is designed as a

quality control service, providing course owners and directors access to USGA professionals, who make sure course construction and renovation projects are done properly and to the developers’ specifications.

Some controversy arose when architects Mark Hayes and Jerry Slack invited Moore to explain the program during their presentation for a project at Oklahoma State University. Although Moore explained he was not endorsing the Hayes/Slack proposal, and that TRACS was available to anyone, some architects felt Moore’s presence could be interpreted as favoring one proposal over another, Snow said.

Rumors soon spread that the Green Section was hiring golf course architects and intending to compete with architectural firms for certain services, Snow said.

"Golf course architects were surprised, upset and I don’t blame them," Snow said. "Until the architects understand what we’re trying to do, we’ll wait on the program.”

Snow contacted American Society of Golf Course Architects President Tom Clark of Kensington, Md. Snow explained the program and gave Clark information on TRACS to circulate to his members. Clark said he has received some negative initial feedback from architects and builders.

I understand what the USGA is trying to do," the ASGCA president said. "But they have gotten off to a rocky start. They should have concentrated more on things like their views among builders, according to Clark.

"Some felt that a lot of what TRACS plans to do overlaps with what architects or superintendents already do.

"One member, who is probably one of the top three or four builders in the country, said ‘I build quality golf courses and I’ll continue to build them, whether the USGA is there or not.’”

Ecology short course offered at Virginia Tech

BLACKSBURG, Va. — A turfgrass ecology and management short course is scheduled Jan. 27-31 at Donaldson Brown Center for Continuing Education on the Virginia Tech campus.

Dr. David R. Chalmers, extension agronomist-turf at Virginia Tech, will direct the program. Thirteen faculty members from turfgrass-related disciplines will provide 36 lecture and laboratory contact hours of instruction.

Massacre Canyon reopens as Golden Era Golf Course

JAN JACINTO, Calif. — The Massacre Canyon Inn Golf Resort, closed more than a decade, has reopened as the redesigned Golden Era Golf Course.

Floods wiped out several holes when the San Jacinto River dike, which borders the course to the south, broke in the late 1970s.

The Church of Scientology bought the land in a bankruptcy auction in 1978. The course was closed in 1980.

The former 27-hole course has been seeded with winter rye grass and includes a newly-built 5,000 square foot clubhouse.

In 1987, Herbert Krauch, a retired editor of the Los Angeles Herald-Examiner, and others neighboring the golf course called for its return. The Scientologists agreed to build the golf course in a compromise with Riverside County officials that allowed operations of their studios beyond 1990.

The course is managed by Jeremy Duda of Golfcorp, a management firm headquartered in Dallas, Texas.

WATERTRONICS ENERGY SAVER

VARIABLE FREQUENCY DRIVES

ENERGY SAVING

By varying pump speed, the pump performance closely follows the operating system curve, using precisely the power needed and eliminating the need for a pressure robbing hydraulic regulating valve. Additionally, soft starting reduces costly utility demand charges.

SURGE FREE

Surges are eliminated by using the variable frequency drive (VFD) to start pumps slowly and vary their speed to match systems demands.

FLEXIBILITY

The VFD can be adjusted for additional capacity and pressure for future expansion.

EXPERIENCE

Watertronics, a pioneer in the use of microprocessors to control pump station functions, applies the same time proven technology to VFD systems.

ENGINEERING

Our sales engineers custom design every “ENERGY SAVER” pump station to meet your individual conditions.

Watertronics manufactures a complete line of fixed speed centrifugal, vertical turbine, submersible, and in-line booster stations that utilize our innovative electronic regulating valves. Watertronics also offers retrofit packages to bring state-of-the-art performance to your present pumping system.

For more information on how we can save you money call in USA 1-800-356-6686. From Europe call 00-1-414-367-5000 or fax 00-1-414-367-5551.
