biosys pact

Continued from previous page

personnel at ADM's new bioproducts manufacturing facility in Decatur, Ill., to provide production technology expertise and management of the fermentation and downstream processes. Palos Park-based biosys mass produces its beneficial nematodes and insect-killing micro-organisms (that constitute the active ingredient in biosys' biological pesticide products) at ADM. Products that biosys can produce under the new agreement include biopesticides and other industrial fermentation products which are not competitive with ADM's own product lines.

Great Western saddled with hefty fine

Continued from page 29

In addition to the fine, the state suspended Great Western's dealer's license for 30 days, a period which ended Sept. 17. The Agriculture Department also placed the business on probation for one year and revoked Great Western's OSU-certified warehouse status for two years.

The letter also addresses the two-year certification loss:

"The loss of certification status means that for two years we will not be able to produce certified mixtures or blends at Great Western.

"Arrangements have been made with approved warehouses to fulfill the needs of customers who require certified seed mixtures from Oregon. Certified mixtures under the interagency certification program are still available from New Jersey, Maryland and Ohio."
