Most utility vehicles are swell, provided your cargo fits perfectly in a four-foot box at all times. A quick reality check tells us that’s just not the case. We can help.

We’ve designed our Yamahauler with real life in mind. That’s why we made it a convertible. Its easily removable sides disappear in a scant 90 seconds, giving you all the loading freedom of a flatbed. Or leave the sides on and fold down the tailgate. Or leave it all up. Or one side up and one side down. You get the idea. All conveniences aside, this is a lot more than a souped-up golf car. Here’s proof: channel-over-tube frame design to support additional payload, stiffer coil springs and heavy-duty shocks for added durability, more rear axle spline diameter for more reliable greater loads. And that’s just a start. The heavy duty wrap-around, shock-mounted front steel bumper and Metton molded polymer front cowl give you extra protection against obstacles that might cross, or fall into, your path. And the frame-mounted trailer hitch lets you add even more haul to your Yamahauler. So, if you’re looking for a utility vehicle you can truly utilize, go ahead and give us a call. We’ll hook you up with a dealer who can get you better acquainted with the utility vehicle whose name says it all.

Manage This Water Problem Before The Heat Hits

Localized dry spot (LDS) describes the occurrence of an irregular area of turfgrass that for no reason begins to show signs of drought stress. Common symptoms are loss of plant rigidity, dark blue coloring, severe wilting and death of turf. Most perplexing is that symptoms may occur even after irrigation. Localized dry spot appears to be most prevalent on greens built mainly of sand and established to bentgrass. It is now thought that these dry spots are the result of hydrophobic soil. This condition is one in which water is repelled and not absorbed. Evidence points to a non-wettable organic coating of sand particles as the cause. Infrequent or reduced watering of golf greens has increased the problem. Once soil moisture levels decrease in hydrophobic soils, wetting the soil becomes difficult. University studies confirm that wetting agents are effective in reducing the severity of localized dry spots. Preventive applications give the best results, but curative applications can also be effective.

Advanced Applicator Saves Time and Money.
The Pro-Ap® is the only hose-end, liquid siphoning applicator specifically designed for golf course use. The refillable Pro-Ap container holds one quart of Hydro-Wet RTA, the new "Ready-To-Apply" wetting agent formula. The Pro-Ap and Hydro-Wet system makes accuracy easy. Its adjustable metering dial lets the applicator choose nine additive settings or syringe only. And its needle valve meters just the right amount of Hydro-Wet into the water flow; no need to water-in.

Unlike pellet wetting agent applicators, the Pro-Ap with liquid Hydro-Wet delivers consistent, measured quantities of active ingredient in less than one minute per 1,000 sq. ft. Applicators will spend less time syringing and less money on inert binders found in competitive pellets.

For more information on the Pro-Ap application system, circle the number below, or call Kalo, Inc., toll-free: 1-800-255-5196.

The Hydro-Wet® Story Still Holds Water After 20 Years.

NEW READY-TO-APPLY FORMULA! GREAT FOR TROUBLESHOOTING DRY SPOTS!

No other wetting agent can match the staying power of Hydro-Wet. So no wetting agent does as much to increase water efficiency.

This staying power is shown in this test. Fourteen months after application, turf treated with Hydro-Wet delivered 53% more moisture to the root zone. What's more, Hydro-Wet had 23% greater staying power than AquaGro.

And the quality of the Hydro-Wet treated turfgrass was significantly better. Hydro-Wet rapidly moves water into the soil, where it belongs. Hydro-Wet ensures uniform infiltration and reduces runoff and evaporation. Hydro-Wet boosts soil moisture, which is so important to turfgrass during periods of moisture stress.

Best of all, the same Hydro-Wet formulation has been successful in university trials and on America's golf courses for 20 years.

KALO
Kalo, Inc. 4550 W. 109th Street Overland Park, KS 66211

Hydro-Wet®
Kalo is a registered trademark of AQUATRAX CORPORATION of America, Inc.
Jacobsen exclusives help deliver a smooth as silk cut. In head-to-head comparisons, the LF-100 delivered superior fairway mowing, in all kinds of grasses.

Our exclusive heavy-section, 22" reels, combined with our unique, dual-spring down pressure system, follow ground contours closely for a smooth manicured cut. Even at production mowing speeds of more than 5 mph.

**Lightest footprint.**
The LF-100 has the lightest footprint in the industry for minimal compaction even on the softest fairways.

Yet it's heavy on quality features. Including a durable, high efficiency diesel engine. Rugged, field-proven chassis with heavy-duty lift arms. High capacity catchers. Plus, "on demand" 4WD, exclusive Turf Groomer® fairway conditioners and vertical mowers are available.

**All-new GreenSentry™ helps you maintain a spotless reputation.**
Our new oil leak detector option—GreenSentry—helps prevent nasty little oil leaks from staining your reputation in a big way. There simply is no better way to ensure one flawless swing after another on fairways. Contact a Jacobsen distributor today and prove it to yourself with a demonstration.

**The Professional's Choice On Turf.**
