

Red tape in Minnesota ... Weenies on parade

Several times during the course of writing my story on Jeff Brauer's project in Biwabik, Minn. (see page 1), I fell into deeper, more broad conversations with various people involved in the erstwhile development. More than once they posed the question, "Geez, from now on, do you think every project in Minnesota will be so fiercely opposed?"

Invariably, the long-delayed Homestead project came up and the same question was bandied about in reference to Michigan.

It's important, I believe, to consider these examples of bogged down projects on their own and not as indicators of any larger trends — positive or negative — relating to golf course development.

Even more important is making the separation between the reality of politics and actual opposition.

There's a journalist here in Maine who writes a column each week entitled "Politics and Other Mistakes." Readers would be wise to remember that politics sit at the core of nearly all such disputes, whereas the fates of various endangered marigolds and ladybugs usually show up once the battle has been joined.

On the surface, the Biwabik project looks to be a large-scale hoo-hah over rare strawberries, pesticide fates and the decline of Minnesota's song bird population. But after a few calls to the half-dozen people driving each side of the controversy, the political struggle comes shining through.

To wit: The course was approved by the St. Louis county Planning Commission. Bigwigs at the state Department of Natural Resources, miffed they were not consulted thoroughly, motioned for an Environmental Impact Study (EIS) prior to construction.

Again, this doesn't seem unusual. However, in Minnesota, never has a golf course project been subjected to the scrutiny of

Bravo! Browner and EPA tackle muddled peer-review process

It is said that Oliver Wendall Holmes once led President Lincoln through the battle lines. At one point, the President exposed himself to enemy fire and Holmes shouted, "Get down, you fool!"

Now, I don't think Holmes was disrespectful of the President. He was just reacting to the dangerous situation. In the same way, for years scientists have been saying to the U.S. Environmental Protection Agency (EPA): "Get down, you fools!"

Now, it appears, EPA has finally "gotten down." EPA Administrator Carol Browner has, for instance, declared that science peer-review procedures (until now non-existent) will be in effect Sept. 30 (See story, page 1). She has apparently dedicated her administration to "good science" and directed her division leaders to the process of getting the peer-review mechanism done. Could this be a sign of better things to come?

Let's hope so, because whose information have the leaders at EPA been relying on, anyhow?

Obviously not their own research. They seem unaware of the Cape Cod Study, for instance, and they were in charge of that effort. Remember the Alar scare? The dioxin misinformation? The 2,4,5-T fallacy?

Indeed, a panel of scientists appointed by the General Accounting Office told the EPA in March 1992: "The science at EPA is of uneven quality, and as a result, the agency's policies are frequently perceived as lacking strong scientific support." Lack of a solid peer review process has held the agency hostage to that "uneven science," the GAO said.

While some people may call our friends at EPA "eco-gestapo," I don't think these maligned folks are "bad people." There are explanations for the sometimes muddled, sometimes baffling, sometimes curious, sometimes unrelentingly foolhardy behavior emanating from the offices of EPA. At times, some of them may have been misinformed or misled, and did not realize what they were doing. Some may have been blinded by power and/or political ideology. Some may have been pawns.

Letters

AN ENVIRONMENTAL APPEAL

To the editor:

I have been in the golf business as a course owner for 15 years. I have always tried to keep up with golf course equipment, chemicals and environmental developments.

It irritates me to hear or read "the sky is falling" comments regarding the application of chemicals on golf courses and how bad golf courses are on the environment. It's frustrating to read that golf course operators don't care about the environment.

I have not personally applied any chemicals to my golf course. I've always left that to my expert golf course superintendent. I've never directed him to apply more of any chemical than was absolutely necessary.

I'm involved with a small group who is making a golf facility proposal to the city council of a small California city. The proposal includes a large driving range and nine short golf holes ranging between 80-150 yards. All the top soil will be imported.

This project would be a good possibility as a long-term test site to study the residue from chemical application to turf grasses. It is possible to engineer the entire site to collect the excess water for testing and reuse. Please understand I know just enough about this to get myself into lots of trouble.

I have a question for you.

Can you please direct me to companies, universities, associations, environmental groups and/or individuals who may be interested in participating in such a project?

Incidentally, I read every copy of *Golf Course News* almost cover-to-cover.

Dan James
Foster City, Calif.

Ed. If readers have ideas on where Mr. James should look for answers, contact the *Golf Course News* office.

VERTI-DRAIN PRESIDENT ADDRESSES ATTACHMENT

To the editor:

As a long-time reader and advertiser in *Golf Course News*, we have always had respect for the timeliness and appropriateness of the articles that appear in your publication.

However, we would like to clarify some points regarding an article that appeared in your April issue by Patrick O'Brien [director of the USGA Green Section, Southeast Section] entitled "Burns' invention greatly increases deep aeration."

Mr. Burns developed an attachment that fits on our Verti-Drain and has had great success with it; we applaud his initiative. We have numerous other accounts of satisfied customers who have

adapted the Verti-Drain to unusual applications and developed special attachments. Not all of these cases are as successful as Mr. Burns' case seems to be.

To be clear to our other customers and to our many distributors around the country, we must state that we have never tested or physically seen Mr. Burns' invention. Therefore we cannot, with certainty, attest to its results or its compatibility with our machines. As you can well imagine, the tolerances for a machine that drives tines deep into the soil, and then pitches (heaves) the tines forward is very critical. Therefore it is our policy to field test and have our engineering staff review all attachments so that we can stand behind our products with confidence.

Of course, we would be happy to test Mr. Burns' invention for approval, but until that time it cannot be officially endorsed or authorized as a factory-approved product attachment.

As you can imagine, many superintendents rely on our machines to relieve severe turf problems, so we are very critical of ourselves because we know thousands of customers are depending on us and the Verti-Drain.

Thanks for your understanding of our position on this issue.

Charles J. Otto, president
Emrex, Inc., North American Representatives for Verti-Drain

BOAT MISSED ON LEGENDS GROUP STORY?

To the editor:

Before I chastise you for what I believe to be major omissions in an extremely important story, I want you to know that I have been a big fan of *Golf Course News* for quite a while, and will continue to be.

My concern is that your writer, Peter Blais, and you, really missed the boat in reporting the announcement by The Legends Group, of Myrtle Beach, S.C., that they are starting construction on, not one, but two golf courses in Williamsburg, Va. (*Golf Course News*, June 1994). Furthermore, they went on to say that they will continue to build golf courses there, until they have built as many as seven new courses.

With the continued sad state of golf course financing and new starts for golf courses, especially resort courses, this story should have been a front-page feature article, with editorial support. Instead, your piece came across, at least to me, as rather "Ho hum! Some guys from Myrtle Beach are going to build a couple of courses with some big landowner in Williamsburg."

Mr. Blais did include the basic facts of the story, and he obviously made an attempt at interviewing the principals. There are,

Leslie commentary

Continued from page 8

But, hey, everyone is "savable," and we should stand ready to believe the best of all people.

Listen, you-all. Can't we give them credit as good, upstanding Americans with no political agenda? Plain justice-for-all folks? Ladies and gentlemen who would not ever distort or ignore the facts? Neighbors who stand tall and stand straight and stand for righteousness?

Historical evidence is damning. After all, Henry Kissinger once quipped: "The illegal we do immediately. The unconstitutional takes a little longer."

Historically, this could be the ultimate axiom for some bureau-brokers (that's bureaucratic power brokers) in the world of environmental activism. Note: I'm speaking historically, and I did not say all, or

Continued from previous page

even most bureau-brokers, because I believe most do wear white hats.

But Jonathan H. Adler declared: "Most classroom environmental information, including most that is listed at the EPA clearinghouse, comes from literature and teaching guides drafted and distributed by the major environmental groups."

But, that was more than two years ago and Carol Browner seems bent on rectifying the situation. Let's give her the benefit of the doubt. Remember, the EPA-ites in the past have not even believed in deadlines. Now they have one — Sept. 30 — set by their own commander.

"When you consider that EPA deals with the two most process-oriented professions — science and law — it's almost a wonder we ever get anything done," defended EPA golf liaison officer Mike Scott. "And at the same time, it's a testimony to the competence and diligence of EPA employees that we work relatively fast, given the fact that we're dealing in the context of law and science. It's not like dealing with economics, particularly monetary policy where things come and go in 30-day cycles, you can move pretty quick."

The EPA may never get down to those 30-day cycles to get things done. But what Browner has done is a step in the right direction.

•••

A leader in the turfgrass industry said New Zealand and Australia use the United States as a "dumping ground" for bad grass seed. On hearing this, my wife said: "And we've given them Coca-Cola, blue jeans and The Grateful Dead. You reap what you sow, don't you?"
