SERAFIN WRAPS UP ADDITION
BUCYRUS, Ohio — Serafin Golf Course Design, Inc. is completing a nine-hole addition to the Bucyrus Country Club here. The builder for the project is Quality Golf, Inc. of Sunbury, Ohio. In addition, Serafin has begun construction on a nine-hole addition to Memorial Park Golf Course in Kenton, and The Links at Echo Springs, an 18-hole public course in Johnstown. Serafin Design also has been chosen by the city of Piqua to design a nine-hole addition to Echo Hills Golf Course. The Echo Hills project includes renovations to the existing nine holes as well as a new driving range and clubhouse.

WILLIAMSBURG GROUP MOVES
WILLIAMSBURG, Va. — Williamsburg Environmental Group, Inc., has relocated to 516 South Henry St., Suite B, here. The consulting firm of President Ronald Boyd and Vice President Mike Kelly will continue to have the phone number 804-220-6869.

RIDGWOOD LAKES TOUGH SEMI-PRIVATE
POLL COUNTY, Fla. — Ridgwood Lakes Golf and Country Club, a master-planned community near Haines City, debated as an 18-hole course in late November, 1993. "First and foremost, this new course promises to be lots of fun for golfers with challenge for all skill levels," said designer Ted McAnlis. "Though not severe, Ridgwood is no pushover." The 7,016-yard, par-72 layout stands as a semi-private club open for public play. Ridgwood is managed by GolfSouth, based in Greenville, S.C.

MUNI INDIAN PEAKS OPENS
LAFAYETTE, Colo. — Indian Peaks Golf Course, a Hale Irwin-designed municipal course, has opened for play. A 168-acre, 18-hole golf course located within a 650-acre residential community, Indian Peaks was built on the Beauprez and Pizek family farms. The development concept focused on outdoor living, sensitivity to the environment and a feeling of open space. "This is not going to be Colorado’s most difficult golf course. That’s not the intent," Irwin said. "This won’t be unplayable, it will be fun. It should have enough variety and challenge to appeal to people of all abilities."

Golf Course News: You and Shunsuke Kato formed Japanese Society of Golf Course Architects partly to improve members’ skills and improve golf in your country. How will you do that?

Takeaki Kaneda: We want to contribute to the Japanese golf world through our activities. The biggest problem Japanese golf has is, golfing expenditures are so high. The number-one priority is to improve municipal courses. We can do this with the help of government regulators.

Moreover, the new rules also call for government regulators to step in earlier to prevent a rush in action on environmental front

Wetlands regulations: revision gains support

By MARK LESLIE
WASHINGTON, D.C. — While developers await National Academy of Sciences (NAS) recommendations on wetlands delineation, Congress may move forward on legislation that could revolutionize construction in wetland areas.

The NAS study is due out at the end of 1994 and a new delineation manual might be implemented until 1995 or beyond, according to Mike Kelly, vice president of Williamsburg Environmental Group in Williamsburg, Va. But the Congressional bill (H.R. 3465) awaits action. It was introduced

The Quarry joins a new Tom Weiskopf/Jay Morrish resort course, LaConterra for USAA Insurance at Fiesta theme park, and the Art Hills-Keith Foster collaboration at Hyatt Hill Country Resort as additions to the city’s golfing scene. All public, daily-fee facilities, they could be a tourist boom for San Antonio.

“This hits the upscale market, which is really unaddressed in this area," said Bill Ellis, president of Club Consultants Inc., which is operating the course for developers Jack and Bill Parker and Jay Eddy. "There are 11 municipal courses and one daily-fee, but no one had addressed this particular need.

“We think with [theme park] Fiesta Texas, the Riverwalk and Sea World, continued on page 45

Kaneda: Putting Japan’s architects on golf’s map

At a time when golf construction is at a crossroads in Japan, golf course architect Takeaki Kaneda has stepped to the forefront with famed colleague Shunsuke Kato to form the Japanese Society of Golf Course Architects. They face major struggles but have the background needed to do so. Kaneda graduated from Waseda University and attended graduate school at Ohio State University and then the University of Maryland as a graduate assistant. He has been an architect and commentator for Japanese television and is an adviser for Golf Illustrated and Fortune magazine.

January 1994 43
CARRICK'S ANGUS GLEN GREENING UP

The 10th hole at Angus Glen Golf Club in the Toronto, Ontario, suburb of Markham is expected to open in August. Designed by Doug Carrick of Don Mills, Ontario, and built by Bruce Evans Ltd., the 18-hole public facility is on 200 acres of Arthur Stekyll's 700-acre dairy and raccoons form. The courses stretches from 5,400 yards on the forward tee to 7,100 yards from championship tee. The subtle front nine, routed through the valley of Bruce Creek, traverses gently rolling land, while the back nine is more spacious and sports holder features.

HILTON HEAD ISLAND, S.C.

Sea Pines Co., Inc. has selected famous Harbour Town Golf Links four courses at the Sea Pines redesign the Sea Pines Resort upgrading the greens to U.S. Golf boxes sculpted in a free form Cobb and constructed in the early Ocean Course here.

The Sea Pines Ocean Course is the second George Cobb design McCumber has been asked to remodel in the past two years. His firm recently completed the redesign and remodeling of Gainesville (Fla.) Golf & Country Club and plans to use the same comprehensive approach at Sea Pines, incorporating traditional and classical design principles into the context of the existing physical characteristics of the course.

McCumber lead designer J. Christopher Commins, will work with Cary Corbitt, Sea Pines director of sports and retail, to implement the redesign and upgrade program which is scheduled to begin in December 1994. The owners plan to reopen the course by Labor Day 1995.

Fight Slow Play

The First and Only Real Yardage Marking System Ever Developed

- Speeds up play - proven to save 30 minutes per round at many courses, therefore more income for the course. The Kirby Marker System can pay for itself with increased revenue in a few short weeks.
- Increases enjoyment of the game - no walking up and down looking for sprinkler heads, posts or bushes and then "pacing" them off.
- Unobtrusive - does not detract from the beauty of the course. Invention allows markers to depress under mowers and carts.
- Installed - at many of the World's finest courses - Pebble Beach, Spyglass, the Olympic Club and many more.

Scottsdale have a degree of elevation in their favor," said Nash, "Terravita is positioned in the thick of lush, intense vegetation enabling us to interact and enhance the indigenous vegetation and desert wash experience into the design of our golf holes.

"We have taken full advantage of the many dry washes, majestic saguaros, native vegetation and rolling desert hills that will make Terravita a special course."

Plans call for Terravita to be a par-72, 7,115-yard target-style desert course incorporating four teeing areas into each hole. With just one water hazard, Casper and Nash have integrated extensive grass, sand and waste bunkers along with lateral hazards throughout the location of existing desert washes on 13 of the 18 holes. Hybrid bermudagrass lines the fairways, tees and roughs; the greens feature bentgrass.

Proposed wetlands regulations could break stalemate

Continued from page 43

The revolutionary aspect of the bill, Kelly said, is its concept of "mitigation banking." Endorsed by the Bush and Clinton administrations, a mitigation bank puts into motion a system of wetlands debits and credits. A developer who must fill an acre of wetland on his site and has no good place to build a new one, could "buy" one or two acres from the mitigation bank on another property.

"It's exciting," said Kelly, a wetlands scientist who closely follows Congress. "Activist groups fear it is a way of buying a permit. But not if it's done properly. You'd still have to go through the guidelines and demonstrate that you intend to avoid and minimize impacts on wetlands to the greatest extent possible.

"Many times I've gotten a permit for a golf course developer to fill in four acres of wetlands and we have to create six or eight acres elsewhere on the site. But the wetlands won't be as functional as you intended, or as valuable. So you have mitigation elsewhere throughout the country and no one's monitoring or maintaining them, and they're not serving the function they were intended to. If you have a properly managed mitigation bank, you have a way to ensure the wetlands will be maintained, monitored and as functional as possible."

The Army Corps of Engineers is studying mitigation banking and how it could be administered. Banks could be state by state or watershed by watershed. ...

The Studds-de la Garza bill would speed up development, mandating that the Corps makes wetland permit decisions within 60 days for areas less than one acre or the permit will be approved automatically. The Clinton Administration had proposed a 90-day period with no automatic issuance.

Under the bill, the Soil Conservation Service would be made the lead agency. Ditching, draining and other wetland activities that were exempt from the wetlands program would be regulated — supporting the administration's regulations.

Kelly believes the final wetlands manual will stand somewhere between the restrictive 1989 manual and the less-restrictive 1987 manual. The 1987 regulations are now in effect, and Kelly said: "A lot of people feel this is a good time to move forward on projects and get them done. The new manual will encompass more land than the 1987 manual.

**Endangered Species Act expected to expand protected animals and plants**

"There is no doubt that species under the current act are often listed too late — rather than too soon — resulting in more expensive recoveries."

— Ecologist David Wilcove

Baucus' proposal would also strictly curtail any independent peer reviews of federal rulings on endangered species. For years, environmentalists have bitterly complained that these peer review panels have been nothing more than a delaying tactic used by businesses to postpone endangered species protection.

Says David Wilcove, a Washington, D.C.-based ecologist who wholeheartedly supports the Baucus proposal: "There is no doubt that species under the current act are often listed too late — rather than too soon — resulting in more expensive recoveries."

In the past, pro-business interests have always had a great fear of the Endangered Species Act because its rulings take precedence over all other environmental laws. It's also extremely frustrating, they say, because its implementation can be so fickle and unpredictable.

"Being suddenly subject to the Endangered Species Act could be as simple as a rare butterfly suddenly showing up on your land," said Lawrence Turner, a program manager for the EPA's Endangered Species Protection Program. "Or, if the EPA determines that an insect happens to be a pollinator of an endangered plant nearby, that could do it, too."

According to Don Knott, a senior vice president at Robert Trent Jones II in Palo Alto, Calif., the appearance of the checker spotted butterfly was enough to completely derailed plans for the development of a $10 million golf course in California's San Mateo County.

And in Washington's Puget Sound, he said, the discovery of an eagle scoloped development of a $30 million project that would have featured 36 holes and substantial tracts of housing.

"Unfortunately, there are a lot of anti-growth groups who are using the Endangered Species Act as an excuse to stop development like these," Knott said. "Existing golf courses are also constantly at risk, because the current act is often used by developers to block the development of new courses."

"And while 755 species are currently listed as endangered, we anticipate 400 more will soon be added." In all, 3,800 new species are being considered for listing under the act, Thorn said.

Those who believe the Endangered Species Act too often saddles rare bugs at the expense of human beings can take heart in HR.1490.

It's a House bill offered up by House Rep. Bill Tauzin (D-Louisiana), that is supposed to represent a middle ground between pro-growth and anti-growth forces.

Specifically, Tauzin said his approach would rewrite the act so regulators can take more of a preventive, rather than "emergency-room" approach to species preservation.

The new rules would accomplish this, he said, by developing cooperative management agreements between government and private landowners, environmentalists, and other interested parties which would track and attempt to protect at-risk species even before they are listed as endangered.

Moreover, Tauzin said he would only allow "verifiable science" to be used in classifying a species as endangered. And he wants to ensure that golf courses and other businesses have the right to independent peer reviews for any proposed ruling that would stop development, or limit the methods and tools they now use to fight pests.

In essence, Tauzin said his legislative alternative would create "an Endangered Species Act that works better for all species, including people."
