Kansas golf industry eyes golfers as donors

By Mark Leslie

Lawrence, Kan. — The Kansas green industry has embarked on a novel endeavor with "enormous" potential, attempting to tap into the good will of golfers to raise support for turfgrass research.

Golfers using the GIN Handicap system are being asked in their billing document to donate $2 above their $9 payment to the Kansas Golf Association (KGA). In Kansas, 19,000 golfers use GIN, according to Dick Stuntz, superintendent at Alvamar Country Club in Lawrence, Kan., who has coordinated the effort through the Kansas Turfgrass Foundation (KTF) and KGA.

"We're small," Stuntz said. "But in states like Michigan, which has 80,000 GIN users, the potential is enormous."

Money raised in Kansas will fund research at Kansas State University. But research facilities around the country are starved for support, having been struck with major decreases in government aid in recent years. Success in Kansas could bode well for similar efforts elsewhere.

KTF members have privately discussed this project for four or five years, Stuntz said. He presented it to the KGA board last December.

Since handicapping services are competitive and therefore price-conscious, the KGA hesitated to mandate this blind test of soil laboratories to the public. He'd also like to work with them to make sure the public understands the protocol. "We're small," Stuntz said. "But in states like Michigan, which has 80,000 GIN users, the potential is enormous."

To heck with golfers, cut grass higher, Jackson urges supers

By Mark Leslie

Umberto, Maine — Saying every cultural, biological and chemical practice possible should be used to manage turfgrass, yet stressing that fewer pesticides are available, Dr. Noel Jackson has urged golf course superintendents to broaden their cut of grass.

"Everyone," he said, "now at 3/16 inch and no less and to heck with the golfer. Do this and you'll grow great grass."

"Think about 1/8 inch," Jackson told the Maine Golf Course Superintendents Association. "A grass plant manufactures [by photosynthesis] sugars and carbohydrates in its leaf tissues. How much tissue have you left on a bentgrass blade cut to 1/8 inch? Very little. So here it is, trying to photosynthesize to generate reserves so it can push up more leaf, and you come along and knock it down to 1/8 inch again — every day of the week and 20-some Sundays. And you tell me I'm an idiot for telling you not to mow it at 1/8 inch."

"You're trying to impress on your Neighbors to manage turf to the quality people expect nowadays, without pesticides."

Yet, he asked: "What's happening to the fungicides? Where has Dyrene gone? Where's Tersan 1991 gone? Where have the mercury fungicides gone? What are your alternatives against Takeall Patch, the immensely effective PMA [phenyl mercuric acetate]?"

Against gray snow mold, mercury fungicides "work like a charm." But again, no more will be for sale after December.

Against leaf spot, one of the best fungicides is Dyrene, but it is "dead." Jackson said the lab tests have indicated no mercury fungicides against gray snow mold. Against leaf spot, one of the best fungicides is Dyrene, but it will not be sold any more. It would cost $5 million to re-register Dyrene, but only $1 million worth of the product is sold a year.

Inclined to change

Superintendent Gary Skolnik and Director of Golf Mike Hair have spearheaded renovations at nationally ranked Incline Village in Lake Tahoe. (See Super Focus feature, page 16.)

Soil labs far apart on pH in blind tests

By Hal Phillips

Far Hills, N.J. — Soil-testing laboratories have, for the most part, fared well in a blind test procedure nearly completed by the United States Golf Association (USGA) Green Section.

"The majority of the labs were very close on all of the characteristics," said Green Section Director Jim Snow. "Certain labs are off on some characteristics. In some cases, they're making some simple mistakes because they're off on both samples."

"A lot of people were off on pH, and it's hard to imagine why they would get that wrong."

The USGA is funding and conducting this blind test of soil laboratories to determine which firms are abiding by USGA protocol, and which are not.

"These are the labs that have agreed to abide by our protocols," noted Snow. "This is the first time we have tried to check and see what they're up to. We want to be sure they're following protocol. We'd also like to be sure they understand the protocol."

Some 13 labs were sent the same two soil samples, independently, from soil mixing firms cooperating with the USGA. Laboratories were asked to evaluate the samples in terms of infiltration rates, porosity, moisture retention, pH and other factors.

Most of the return is in, said Snow. Once both sets of samples have been processed and returned, the USGA will compile all the results and take the appropriate action.

"We're not going to kick labs off the list if their results don't add up," he said. "We want to work with them to make sure the

Professors say mixing can broaden benefits

Greensboro, N.C. — Tank mixing fungicides is not a new concept for many turf managers, but they may not be aware of the variety of benefits that the right combination can provide, according to turf industry researchers.

According to Dr. Karl Danneberger, professor of turfgrass science at Ohio State University, tank mixing can solve a number of turf management problems. For example, Danneberger noted that a tank mix

Electronic Pesticide Reference

New York City — Electronic Pesticide Reference, a computer program consolidating the 3rd Edition Turf & Ornamental Chemicals Reference and two books on crop protection chemicals, has been released by C&P Press, Inc. The program's key features are full-text labels for more than 800 products and more than 1,000 full-text MSDSs; interactive indexes and product summaries; hazardous chemical reporting information by product; and Department of Transportation hazardous information by product. More information is available from C&P at 888 Seventh Ave., Suite 2890, N.Y., N.Y. 10001; telephone 800-544-7377.

More Bans on Leaf Blowers

Connecticut and Illinois municipalities are leading the nation's movement toward banning leaf blowers. Passed as gas-powered models, the laws sometimes to certain months of the year. Among the communities with bans are Greenswich, Conn., Highland Park and Wilmette, Ill., and Los Altos, Calif.

Turf 'N Surf

Fort Lauderdale, Fla. — The Florida Turfgrass Association's annual conference and show will be held Sept. 18-21 at Broward County Convention Center here. Golf and fishing will be highlights to this four-day event featuring educational sessions, workshops, research technology and exhibits.

Green Expo Management Unchanged

Despite months of searching for a new management firm, Green Industry Expo officials have retained the Professional Lawn Care Association of America (PLCAA) as show manager. The show combines the trade shows and conferences of the Professional Grounds Management Society, Associated Landscape Contractors of America and the PLCAA, which has managed it since 1990.
Great expectations for Kansas' new research funding method

Continued from page 13

of raising large sums of money."

"It's an easy way for all golfers to participate in making the game better by doing their part to support research," he added.

There are a number of avenues to raise these moneys, he said, adding: "We've talked about soliciting donations club-by-club; or the Arizona method [assessing golfers 10 cents per round for research]; simple voluntary donations at clubs; or tacking on a fee at tournament activities."

Early indications of Kansas' success will come soon.

The last of three mailings alerting clubs and superintendents of the fund-raising program went out with the GIN Handicap billing in early May. "I believe by mid-June we will have a feel for the participation," Stuntz said.

"If we can develop a high percentage of response, perhaps the KGA the following year, would be willing to make it [$2] mandatory... The whole idea behind this is that the costs get passed on to the golfer—the guy who gets the benefit from the research."

"If you tell them exactly where the money is going, I believe a lot of people would support it."

The major obstacles to the Kansas process, Stuntz found, were:

• There is no access to individual GIN users. ("And that's the same in every state").

• And, when the bill goes out, "who's going to be aware of it and who's going to make the decision? Maybe the wrong person is getting the mailing. We have no way of knowing. So the superintendents' support is crucial."
