Dependable, economical post-emergent control

Crabgrass, Nutsedge

Plus the truly hard-to-control broadleaves

Read how Trimec® Plus, with its unparalleled broad spectrum control, fast action, and gentleness to desirable grass, is helping turf professionals improve their environmental stewardship and reduce their chemical costs.

Everett Mealman
Chairman and Chief Executive Officer
PBI/Gordon Corporation

The environmental age weed control program being used by Roger Albrecht is typical of progressive turf professionals. Albrecht is president of Nitro-Green Corporation, which has 38 lawn care franchisees scattered over 15 different states, and he manages two locations in California for his own hands-on experience.

“Our goal is to eliminate all broadcast spraying of herbicides on the ornamental turf we manage, and replace it with spot treatment as necessary,” says Albrecht. “We want to be proactive on environmental issues and be able to assure our customers that we are using the absolute minimum requirement of chemicals.”

Albrecht goes on to explain that such a program takes time to implement because the turf needs to be so healthy and thick that weeds cannot easily germinate.

“The elimination of the broadcast applications of pre-emergent herbicides is the critical step,” says Albrecht, “because, no matter what, some crabgrass is going to appear, and since crabgrass is a major cause of complaints, we must be able to eliminate it fast with no discoloration.”

Trimec Plus provides the safety net that enables Albrecht to eventually eliminate broadcast applications of pre-emergent herbicides. “We have absolute confidence in Trimec Plus to handle any crabgrass or nutsedge that shows up,” says Albrecht.

And, of course, the same spot sprayer filled with Trimec Plus that Albrecht uses to control crabgrass and nutsedge also controls the other grassy and broadleaf weeds that can germinate throughout the year. “Having one herbicide for all of our spot treatments is a major factor in our program,” says Albrecht.

But if Trimec Plus is ideal for spot treatments, it is also unsurpassed for broadcast applications when the need exists. Listen to George Toma, the executive turf consultant for the Royals, Chiefs, and NFL:

“My son, Chip, the groundskeeper for the Truman Sports Complex, used broadcast applications of Trimec Plus on the out-of-sight, unirrigated perimeters of the complex which was loaded with every conceivable weed, and Trimec Plus absolutely took out everything except the bluegrass.”

According to Toma, it would have taken four different selective herbicides to do the job that Trimec Plus was able to do . . . but even more important, Toma says that Trimec Plus did a better job on all of the individual species than a narrow spectrum selective could have done.

Now also approved for use in zoysia and tall fescue

Trimec Plus is a unique formulation of Trimec Broadleaf Herbicide and MSMA in a stable, uniform suspension that is as easy to work with as any other Trimec Complex.

And now it is labeled for use in turf-type tall fescues and zoysiagrass, as well as established bluegrass and bermudagrass.

So, by all means, give Trimec Plus a trial this season . . . especially on crabgrass, nutsedge and clover. We assure you that your experience with Trimec Plus will give you the confidence you need to start working toward the elimination ofbroadcasting.
Things That Don’t Work Well Together.

Some things just aren’t meant to go together. For example, well-hit baseballs and windows, Bush and broccoli, postal delivery persons and neighborhood dogs. No matter how hard you try, they just don’t fit together.

On the other hand, some things are meant to go together: beer and pretzels, football and Thanksgiving, peanut butter and jelly, kids and puppies.

When it comes to disease control on turfgrasses—especially brown patch, leaf spot, dollar spot, and summer patch—there are two products that go together pretty well, too.

Diseases Controlled By A Tank Mix Of Banner and Daconil 2787.

</tbody>
</table>

So well, that it’s as if they were almost created especially to be used in a tank-mix combination: Banner* and Daconil 2787.*

They Work Better Together.

When these two remarkable products are used together in a tank mix, they provide even more remarkable results on turf diseases. Such as:

- Broader control
- Longer control
- Lower rates

Banner and Daconil 2787, when used at their lowest labeled rates, provide excellent control of all major turf diseases (except Pythium) when used on a typical 14-to 21-day program.

Better control, in fact, than you can get with the highest rates of either product when used alone.

Use Less Active Ingredient.

These low rates minimize the amount of active ingredient that you have to apply to the turf, yet provide both longer disease control and a spectrum of control that would not have been possible with either one of the products alone.
Because this tank mix offers two different modes of action, there is less chance of disease recurrence. It also minimizes the development of insensitivity.

Results for the performance of this tank mix are based on extensive research conducted at universities and golf courses all across the country.

Stay Ahead Of Disease.

The results are conclusive: Tank mixing Banner and Daconil 2787 can let you stay effectively ahead of diseases—while allowing you to use the lowest labeled rates for more cost efficiency.

If disease becomes established, you often have to throw a lot of money at the problem to make it go away. This is because treating diseases once they are established usually requires using a lot of different individual products to control the various diseases.

Preventive Vs. Curative.

A preventive approach works better.

Using a preventive instead of a strictly curative approach to disease control has several advantages.

Turf that has not been weakened by disease is stronger, and better able to handle other stresses during the year. The turf generally stays healthier, as well.

But perhaps the main advantage of the preventive approach is that undamaged turf looks a whole lot better than turf that has suffered an attack by disease.

This alone is reason enough to try a Banner plus Daconil 2787 tank mix to prevent disease from ever getting a foothold on your turf. And it’s available for use on both golf courses and residential lawns.

A More Practical Approach.

A tank mix of Banner and Daconil 2787 is so economical and effective, it makes taking a preventive approach to controlling turf diseases totally practical—whether on a private or public golf course, or on residential lawns being serviced by a lawn care professional. Even on a tight budget.

In fact, this new tank mix is so practical, we’re sure you’ll believe as we do that Banner and Daconil 2787 applied in combination are the greatest thing since sliced bread (and butter!).

Who would have thought this combination would revolutionize the fight against brown patch and dollar spot? Yet a tank mix of Banner® and Daconil 2787® at their lowest rates, will give you superior control. More than either fungicide can alone at their highest rates. And with longer residual. Which means brown patch and dollar spot won’t just go away. They will stay away.

CIRCLE #104
For years, Fungo® has met your needs for effective control of key turf and ornamental diseases.

Now Fungo is in water soluble bags, responding to your demands for safety and ease of use.

And Fungo WSB is an ideal replacement for Benlate. Its active ingredient, Thiophanate-Methyl, is a direct substitute.

Thanks to its systemic action, a single application of Fungo WSB provides up to 14 days of control of major turf and ornamental diseases, including Brown Patch, Summer Patch, Necrotic Ring Spot, Red Thread, Dollar Spot, Diplodia, and Anthracnose.

And Fungo WSB is very versatile. It's labeled for use on major turf varieties along with spray applications for roses, shade trees and woody ornamentals. You can also use it as a drench on annuals and perennials.

Get Fungo WSB from your Scotts distributor today. Or call us toll-free at 1-800-492-8255.

Fungo in water soluble bags—the perfect package for controlling disease.

Note: Fungo WSB is not yet registered for sale in California. ©1994 The Scotts Company, Marysville, Ohio 43041. Fungo is a registered trademark of The Scotts Company.
Troubled Waters?

Before water can enhance a landscape, it has to be healthy. The results of poor water management can be unsightly, smelly and costly. Otterbine quality water management keeps ponds and lakes sparkling, clear and odor-free. Naturally, efficiently, and beautifully.

Otterbine CONCEPT\textsubscript{2} surface aerators give nature a boost by stimulating natural water cleanup processes. They offer interchangeable spray patterns for almost unlimited versatility.

And our TRITON and AIR FLO subsurface aerators are virtually undetectable as they create strong currents to produce oxygen that cleans and purifies.

Rugged and built to last, all Otterbine aerators are simple to install. Efficient. Compact. Self-contained. Safety tested. And approved by the Electrical Testing Laboratory.

Our comprehensive product line ranges from the highest technology in aeration systems to OTTERSHADE, the new environmental lake dye. And we stand behind a 35-year tradition of quality, pride and fast, effective service.

Call or write, today, to find out how Otterbine can help make your water work, beautifully.

Water works with Otterbine.

Announcing
the premier national trade show and conference just for superintendents, owners, and managers of public-access golf course facilities

It's called Golf Course Expo, the premier national expo and conference for daily fee, municipal, semi-private and resort courses—and it's sponsored by Golf Course News.

The Expo features:
• More than 200 companies with products and services on the trade show floor
• A one-stop marketplace for all you need to profitably build, manage, maintain and market the public access course
• Practical solutions for superintendents, owners, managers and developers of public access courses
• A two-day educational program with three-tracks featuring industry leaders speaking on agronomy, management, and development

Plan now to be there

Mark your calendar NOW and send for more information—what could be easier?

YES!
- Send me information about Golf Course Expo—including free VIP admission to the show floor
- I'm also interested in information on the three-track conference
- My company would like to purchase exhibit space—please send me more details

CIRCLE #150
Advanced Applicator is a Cost-Effective Solution for Spot Treatment.

The Pro-Ap* is the only hose-end, liquid siphoning applicator specifically designed for golf course use. The refillable Pro-Ap container holds one quart of Hydro-Wet RTA, the "Ready-To-Apply" wetting agent formulations. Hydro-Wet RTA alters water’s behavior while interacting with water repellent surfaces found in the soil. The superior ingredients in Hydro-Wet RTA are attracted to organic soil coatings known to produce hydrophobic conditions. The result is increased water infiltration, absorption, and reduced severity of localized dry spot.

The Pro-Ap makes accuracy easy. Its adjustable metering dial lets the applicator choose nine additive settings or syringe only. And there's no need to water-in because the Pro-Ap's needle valve meters just the right amount of Hydro-Wet into the water flow.

For more information on the Pro-Ap application system, circle the number below, or call Kalo, Inc., toll-free: 1-800-255-5196.

Simple Test Identifies Hydrophobic Soils.

It is nearly impossible to visually identify hydrophobic soils, but there are several simple tests for determining their presence. The following was included in a 1989 article by Keith Karnok and Kevin Tucker of the University of Georgia.

“...simply involves the placement of small drops of water along the length of intact soil cores at 1/2 inch intervals. The length of time (seconds required for the droplet to penetrate into the core) is recorded. Penetration times greater than 10 to 15 seconds usually indicate a hydrophobic condition.”

(Golf Course Management, August 1989.)

CIRCLE #160

Convenient, cost-effective Pro-Ap delivers consistent, measured quantities of Hydro-Wet RTA—treats 1,000 sq. ft. in less than one minute.

Cure Dry Spots.

Call Kalo now at 1-800-255-5196 to find out how you can qualify for a free Pro-Ap* applicator with the purchase of Hydro-Wet RTA.

Jacobsen exclusives help deliver a smooth as silk cut.
In head-to-head comparisons, the LF-100 delivered superior fairway mowing, in all kinds of grasses.

Our exclusive heavy-section, 22" reels, combined with our unique, dual-spring down pressure system, follow ground contours closely for a smooth manicured cut. Even at production mowing speeds of more than 5 mph.

**Lightest footprint.**
The LF-100 has the lightest footprint in the industry for minimal compaction even on the softest fairways.

Yet it's heavy on quality features. Including a durable, high efficiency diesel engine. Rugged, field-proven chassis with heavy-duty lift arms. High capacity catchers. Plus, "on demand" 4WD, exclusive Turf Groomer® fairway conditioners and vertical mowers are available.

**All-new GreenSentry™ helps you maintain a spotless reputation.**
Our new oil leak detector option —GreenSentry— helps prevent nasty little oil leaks from staining your reputation in a big way. There simply is no better way to ensure one flawless swing after another on fairways. Contact a Jacobsen distributor today and prove it to yourself with a demonstration.

THE PROFESSIONAL'S CHOICE ON TURF.

FAIRWAY CHAMPION.
